

Find the unknown variable:

$n \times 3 = 15$        $n = \underline{\quad}$

$6 \times p = 36$        $p = \underline{\quad}$

$5 \times 8 = t$        $t = \underline{\quad}$

$56 \div k = 7$        $k = \underline{\quad}$

$45 \div 5 = b$        $b = \underline{\quad}$

$m \div 2 = 9$        $m = \underline{\quad}$

$7 = w \div 3$        $w = \underline{\quad}$

$30 = 6 \times z$        $z = \underline{\quad}$

My car gets 20 miles per gallon of gas. If Grandma's house is 100 miles away, how many gallons of gas would it take to get to her house?

Explain how you know:

---

---

---

---

---

---

Multiply.

$1 \times 70 = \underline{\quad}$        $10 \times 70 = \underline{\quad}$

$3 \times 2 = \underline{\quad}$        $30 \times 2 = \underline{\quad}$

$9 \times 3 = \underline{\quad}$        $90 \times 3 = \underline{\quad}$

$4 \times 6 = \underline{\quad}$        $4 \times 60 = \underline{\quad}$

Divide.

$42 \div 7 = \underline{\quad}$        $420 \div 7 = \underline{\quad}$

$30 \div 5 = \underline{\quad}$        $300 \div 5 = \underline{\quad}$

$45 \div 5 = \underline{\quad}$        $450 \div 5 = \underline{\quad}$

$16 \div 8 = \underline{\quad}$        $160 \div 8 = \underline{\quad}$

Write a word problem to match this fact:  $4 \times 9 = 36$
