NS Solutions

NS Solutions Corporation (NSSOL) is the leading system integrator and solution provider in Japan today. Since our inception as the Information System Division in Nippon Steel, we have deployed various bleeding-edge technologies for companies in Japan, from the first Computer Integrated Manufacturing System in the 1960s to Oracle database systems in the 1990s.

NS Solutions deploys IT to raise its clients' business value. We build systems to solve business challenges and help those on the operational side make the most of them.

NS Solutions provides a wide range of solutions in three main domains: applications, infrastructure, and services. Our customers hail from a gamut of industries such as manufacturing, retail, distribution, transportation, finance and telecommunication and the public sector.

NS Solutions has branches in China (Shanghai, Dalian, Shenzhen), Southeast Asia (Singapore, Bangkok, Jakarta), USA (San Mateo, New York) and Europe (London) to fulfill the needs of our global customers

Your Career

For the first few years after being hired, the employee will receive basic training and acquire fundamental skills for future development as technical experts and skilled professionals. The basic training covers not only technological skills but also client business operations and the consultation and sales skills needed by employees to function as independent, problem-solving professionals.

Once a solid foundation has been acquired, specialist expertise is developed by various means to develop employees into expert professionals.

We provide opportunities such as

- Overseas study
- Overseas rotation
- Intensive language training
- Technological certification

Summer Internship*

IT R&D

Researchers at System R&D center develop next-generation IT technologies for enterprise usage by researching, evaluating, verifying and implementing new products, IT services, processes, techniques, architectures and concepts.

Through this internship program, students will work together with researchers on on-going projects. Possible projects include various topics relating to software and hardware engineering. All interns receive ongoing mentorship and training throughout their program.
