

How to connect to cofc-guest on your Android device

Guests of the College of Charleston can make use of the complimentary Internet access provided through the “cofc-guest” wireless network. It has limited bandwidth of 2Mbps and will disconnect the user after one hour. You are welcome to rejoin the network after this timeout.

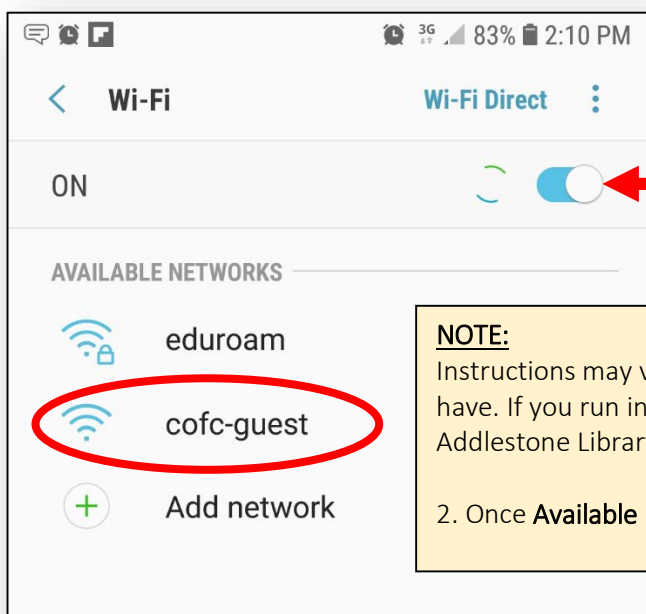

Important:

Campus community members should NOT use this network. This network does NOT grant access to internal network resources and is NOT encrypted.

This network is not secure; therefore, it is not recommended that sensitive data be transmitted, but if you do, ensure that any sensitive data is encrypted before transmission.

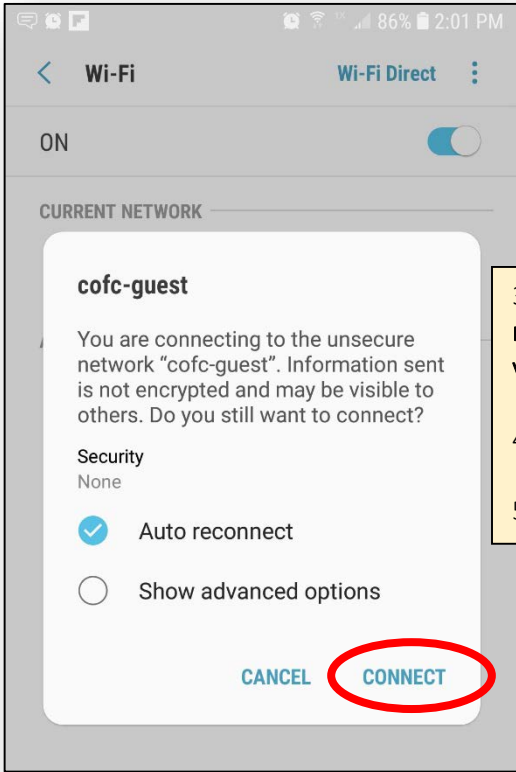

The College of Charleston cannot guarantee the security of your data on this network and does not monitor all data connections.

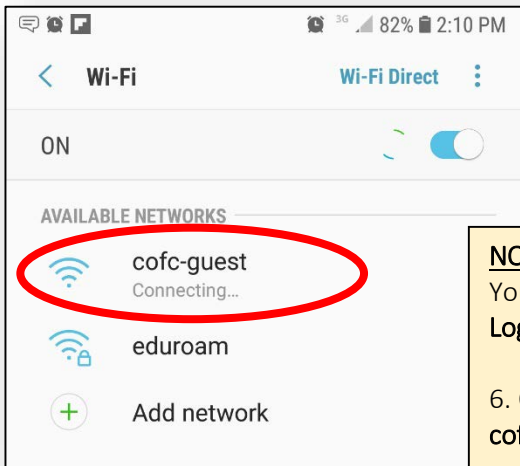

NOTE:

Instructions may vary depending on the type of Android device you have. If you run into issues, visit the Access & Instruction Desk in the Addlestone Library.

2. Once **Available Networks** are listed, select **cofc-guest**.

- 3. A pop-up message may display “You are connecting to the unsecure network “cofc-guest”. Information sent is not encrypted and may be visible to others. Do you still want to connect?”
- 4. Select **Auto reconnect**.
- 5. Click **Connect**.

- NOTE:**
You may be prompted to authenticate through **Facebook Login, Google Login, Email Registration, or SMS Registration**.
- 6. Once you have authenticated your information, you will see that the **cofc-guest network is Connecting...and** once the process is completed, you will see that network is **Connected**.
