

Jimmy Carter: "Address to the Nation on Energy and National Goals" (The "Malaise Speech"), July 15, 1979, excerpt.

...

Ten days ago I had planned to speak to you again about a very important subject--energy. For the fifth time I would have described the urgency of the problem and laid out a series of legislative recommendations to the Congress. But as I was preparing to speak, I began to ask myself the same question that I now know has been troubling many of you. Why have we not been able to get together as a nation to resolve our serious energy problem?

It's clear that the true problems of our Nation are much deeper—deeper than gasoline lines or energy shortages, deeper even than inflation or recession. ...

In a nation that was proud of hard work, strong families, close-knit communities, and our faith in God, too many of us now tend to worship self-indulgence and consumption. Human identity is no longer defined by what one does, but by what one owns. But we've discovered that owning things and consuming things does not satisfy our longing for meaning. We've learned that piling up material goods cannot fill the emptiness of lives which have no confidence or purpose.

The symptoms of this crisis of the American spirit are all around us. For the first time in the history of our country a majority of our people believe that the next 5 years will be worse than the past 5 years. Two-thirds of our people do not even vote. The productivity of American workers is actually dropping, and the willingness of Americans to save for the future has fallen below that of all other people in the Western world.

...

We ourselves are the same Americans who just 10 years ago put a man on the Moon. We are the generation that dedicated our society to the pursuit of human rights and equality. And we are the generation that will win the war on the energy problem and in that process rebuild the unity and confidence of America.

We are at a turning point in our history. There are two paths to choose. One is a path I've warned about tonight, the path that leads to fragmentation and self-interest. Down that road lies a mistaken idea of freedom, the right to grasp for ourselves some advantage over others. That path would be one of constant conflict between narrow interests ending in chaos and immobility. It is a certain route to failure.

All the traditions of our past, all the lessons of our heritage, all the promises of our future point to another path, the path of common purpose and the restoration of American values. That path leads to true freedom for our Nation and ourselves. We can take the first steps down that path as we begin to solve our energy problem.

Energy will be the immediate test of our ability to unite this Nation, and it can also be the standard around which we rally. On the battlefield of energy we can win for our Nation a new confidence, and we can seize control again of our common destiny.

In little more than two decades we've gone from a position of energy independence to one in which almost half the oil we use comes from foreign countries, at prices that are going through the roof. Our excessive dependence on OPEC has already taken a tremendous toll on our economy and our people. This is the direct cause of the long lines which have made millions of you spend aggravating hours waiting for gasoline. It's a cause of the increased inflation and unemployment that we now face. This intolerable dependence on foreign oil threatens our economic independence and the very security of our Nation.

The energy crisis is real. It is worldwide. It is a clear and present danger to our Nation. These are facts and we simply must face them:

What I have to say to you now about energy is simple and vitally important.

Point one: I am tonight setting a clear goal for the energy policy of the United States. Beginning this moment, this Nation will never use more foreign oil than we did in 1977--never. From now on, every new addition to our demand for energy will be met from our own production and our own conservation. ...

Point two: To ensure that we meet these targets, I will use my Presidential authority to set import quotas. I'm announcing tonight that for 1979 and 1980, I will forbid the entry into this country of one drop of foreign oil more than these goals allow. ...

Point three: To give us energy security, I am asking for the most massive peacetime commitment of funds and resources in our Nation's history to develop America's own alternative sources of fuel--from coal, from oil shale, from plant products for gasohol, from unconventional gas, from the Sun.

I propose the creation of an energy security corporation to lead this effort to replace 2 1/2 million barrels of imported oil per day by 1990. ...

Just as a similar synthetic rubber corporation helped us win World War II, so will we mobilize American determination and ability to win the energy war. Moreover, I will soon submit legislation to Congress calling for the creation of this Nation's first solar bank, which will help us achieve the crucial goal of 20 percent of our energy coming from solar power by the year 2000.

These efforts will cost money, a lot of money, and that is why Congress must enact the windfall profits tax without delay. ...

Point four: I'm asking Congress to mandate, to require as a matter of law, that our Nation's utility companies cut their massive use of oil by 50 percent within the next decade and switch to other fuels, especially coal, our most abundant energy source.

Point five: To make absolutely certain that nothing stands in the way of achieving these goals, I will urge Congress to create an energy mobilization board which, like the War Production Board in World War II, will have the responsibility and authority to cut through the red tape, the delays, and the endless roadblocks to completing key energy projects.

We will protect our environment. But when this Nation critically needs a refinery or a pipeline, we will build it.

Point six: I'm proposing a bold conservation program to involve every State, county, and city and every average American in our energy battle. ...

I ask Congress to give me authority for mandatory conservation and for standby gasoline rationing. To further conserve energy, I'm proposing tonight an extra \$10 billion over the next decade to strengthen our public transportation systems. And I'm asking you for your good and for your Nation's security to take no unnecessary trips, to use carpools or public transportation whenever you can, to park your car one extra day per week, to obey the speed limit, and to set your thermostats to save fuel. Every act of energy conservation like this is more than just common sense--I tell you it is an act of patriotism.

...

So, the solution of our energy crisis can also help us to conquer the crisis of the spirit in our country. It can rekindle our sense of unity, our confidence in the future, and give our Nation and all of us individually a new sense of purpose.

You know we can do it. We have the natural resources. We have more oil in our shale alone than several Saudi Arabias. We have more coal than any nation on Earth. We have the world's highest level of technology. We have the most skilled work force, with innovative genius, and I firmly believe that we have the national will to win this war.

I do not promise you that this struggle for freedom will be easy. I do not promise a quick way out of our Nation's problems, when the truth is that the only way out is an all-out effort. What I do promise you is that I will lead our fight, and I will enforce fairness in our struggle, and I will ensure honesty. And above all, I will act.

We can manage the short-term shortages more effectively and we will, but there are no short-term solutions to our long-range problems. There is simply no way to avoid sacrifice.

...

I have seen the strength of America in the inexhaustible resources of our people. In the days to come, let us renew that strength in the struggle for an energy secure nation.

...
