

## Databases list has moved to Quicksearch

On September 6<sup>th</sup>, the library released new features in Quicksearch (<http://search.library.yale.edu>) the library's single search interface for library catalogs, articles, and digital collections.

The **Find Databases** list is now part of Quicksearch with the heading **Databases**: <http://search.library.yale.edu/databases>. This new version of the Database List combines the alphabetical browsing of the former list with the search capabilities of Quicksearch. You will find links on the Quicksearch page (<http://search.library.yale.edu>), as well as on the library home page (<http://web.library.yale.edu>) labelled *Find Databases by Title*.

Users will now be able to easily find and access online databases by searching for exact titles, subjects, or keywords. The database list includes collections of e-journal and e-books, primary sources, sound and video collections, and abstract and indexing services. You will also find these database records in Books+, in particular when you engage in subject searching.

Access to other online resources has not changed:

**E-journals:** You can search for online journals within [Quicksearch](#) or on the library homepage under [Find eJournals by Title](#).

**Journal articles:** Articles+, which can be used as part of [Quicksearch](#) or [on its own](#), brings back article-level search results from across a wide range of journals that are available to the Yale community.

**E-books:** Find records for all of Yale's online books in [Quicksearch](#).

As always, licensed online resources are accessible from off-campus only while using VPN.

If you need help, have a question about a specific database, or have some other feedback on this new service, you can contact me directly or our AskYale service.
