ANTH 2463

The Science of Our Past: Introduction to Archaeology

Fall 2018 – TBD

How do scientists study human societies and ancient civilizations? What types of evidence do they use? What do their findings indicate about how people lived in the past? This class examines how and why archaeologists study evidence of past human behavior. We will learn through lecture, videos, as well as hands-on labs that emphasize analyses and interpretations of artifacts and other archaeological materials. ***Satisfies Science and Engineering Breadth, Historical Context Breadth, and Information Literacy Proficiency.***
