EE-2025 Fall-2000

Lecture 5

Periodic Signals, Harmonics & Time-Varying Sinusoids

8-Sept-00

Web-CT Info

- Check the Bulletin Board for msgs
  - OFFICIAL
- Old Quizzes & Problems are linked
  - Quiz #1 on 18-Sept (Monday)
- Prob Set #2 due NEXT WEEK

Lab Info

- Lab #2 Report
  - Turn in during your lab time
  - Write-up lab report on multipath
  - Discuss lab report standards with your TA
- Miscellaneous
  - ERRORS ? ALWAYS Check Bulletin Board
  - Complete INSTRUCTOR VERIFICATION in Lab

The Rules

- Quizzes
  - NO make-ups given
  - Next Quiz would count for the one missed, IF excused
- Excused Absence
  - Must be written (by an "official")
  - Notify ahead of time via e-mail
- Consult Web-CT for more details

LECTURE

EE-2025 Georgia Tech

Lecture 5

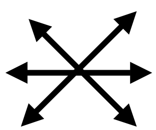
Periodic Signals, Harmonics & Time-Varying Sinusoids

READING ASSIGNMENTS

- This Lecture:
  - Chapter 3, pp. 57-61
  - Chapter 3, pp. 66-77
- Next Lecture: **Notes**
  - **Fourier Series ANALYSIS**
  - Replaces pp.62-65 in DSP First

Problem Solving Skills

- Math Formula
  - Sum of Cosines
  - Amp, Freq, Phase
- Recorded Signals
  - Speech
  - Music
  - No simple formula



- Plot & Sketches
  - S(t) versus t
  - Spectrum
- MATLAB
  - Numerical
  - Computation
  - Plotting list of numbers

LECTURE OBJECTIVES

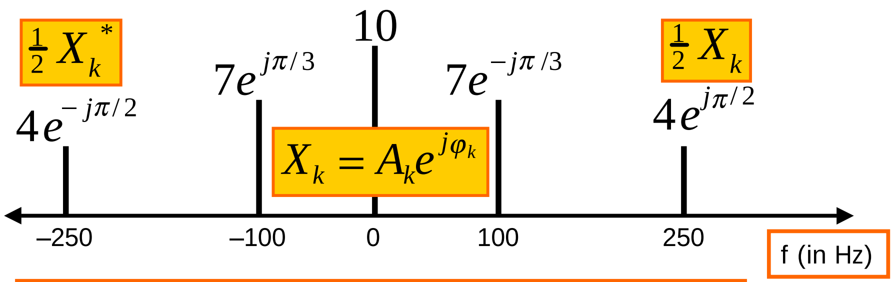
- Signals with HARMONIC Frequencies
  - Add Sinusoids with $f_k = kf_0$

$$x(t) = A_0 + \sum_{k=1}^{N} A_k \cos(2\pi k f_0 t + \varphi_k)$$

- FREQUENCY can change vs. TIME
  - Chirps: $x(t) = \cos(\alpha t^2)$
  - Introduce Spectrogram Visualization **(specgram.m)** **(plotspec.m)**

SPECTRUM DIAGRAM

- Recall Complex Amplitude vs. Freq



$$x(t) = 10 + 14\cos(2\pi(100)t - \pi/3) + 8\cos(2\pi(250)t + \pi/2)$$

Summary: GENERAL FORM

$$x(t) = A_0 + \sum_{k=1}^{N} A_k \cos(2\pi f_k t + \varphi_k)$$

$X_0 = A_0 e^{j0}$

$$x(t) = X_0 + \sum_{k=1}^{N} \Re e\left\{X_k e^{j2\pi f_k t}\right\}$$

$X_k = A_k e^{j\varphi_k}$

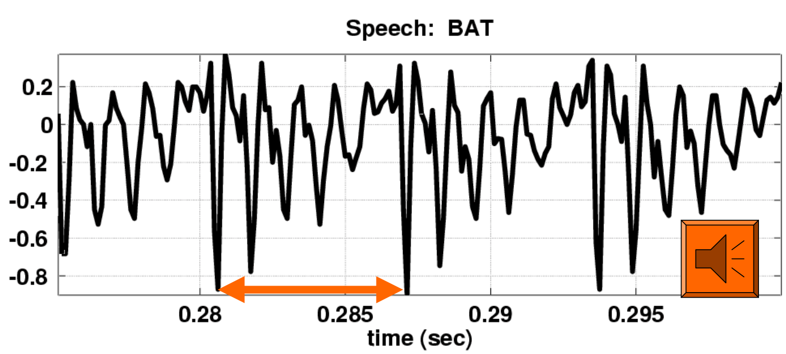
Frequency $= f_k$

$\Re e\{z\} = \frac{1}{2}z + \frac{1}{2}z^*$

$$x(t) = X_0 + \sum_{k=1}^{N} \left\{\tfrac{1}{2} X_k e^{j2\pi f_k t} + \tfrac{1}{2} X_k^* e^{-j2\pi f_k t}\right\}$$

SPECTRUM for PERIODIC ?

- Nearly Periodic in the Vowel Region
  - Period is (Approximately) T = 0.0065 sec



PERIODIC SIGNALS

- Repeat every T secs
  - Definition

$$x(t) = x(t + T)$$

  - Example:

$$x(t) = \cos^2(3t)$$

$T = ?$

$T = \frac{2\pi}{3}$ $T = \frac{\pi}{3}$

  - Speech can be “quasi-periodic”

Period of Complex Exponential

$$x(t) = e^{j\omega t}$$

$$x(t+T) = x(t)\ ?$$

Definition: Period is T

$$e^{j\omega(t+T)} = e^{j\omega t}$$

$$e^{j2\pi k} = 1$$

$$\Rightarrow e^{j\omega T} = 1 \quad \Rightarrow \omega T = 2\pi k$$

$$\omega = \frac{2\pi k}{T} = \left(\frac{2\pi}{T}\right)k = \omega_0 k$$

k = integer

Harmonic Signal Spectrum

Therefore, we can only have: $f_k = k f_0$

$$x(t) = A_0 + \sum_{k=1}^{N} A_k \cos(2\pi k f_0 t + \varphi_k)$$

$$X_k = A_k e^{j\varphi_k}$$

$$f_0 = \frac{1}{T}$$

$$x(t) = X_0 + \sum_{k=1}^{N} \tfrac{1}{2} X_k e^{j2\pi k f_0 t} + \sum_{k=1}^{N} \tfrac{1}{2} X_k^* e^{-j2\pi k f_0 t}$$

DEFINE FUNDAMENTAL

$$x(t) = A_0 + \sum_{k=1}^{N} A_k \cos(2\pi k f_0 t + \varphi_k)$$

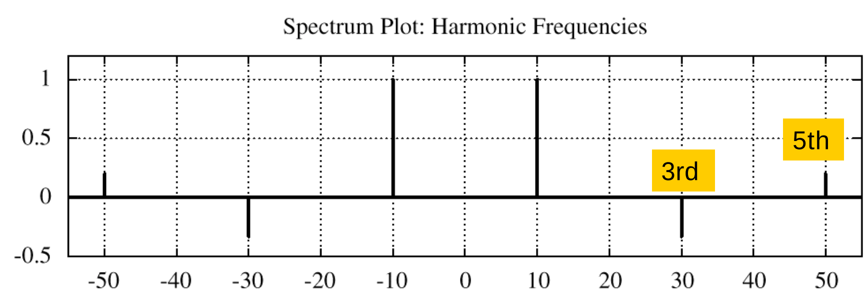
$$f_k = k\, f_0 \qquad (\omega_0 = 2\pi\, f_0)$$

$$f_0 = \text{fundamental frequency}$$

$$T_0 = \text{fundamental Period}$$

$$f_0 = \frac{1}{T_0}$$

Harmonic Signal (3 Freqs)

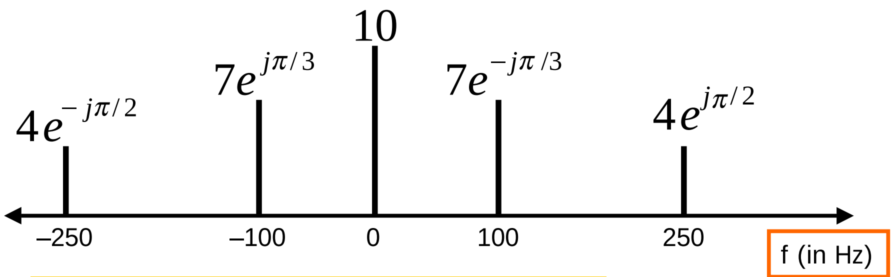


What is the fundamental frequency?

10 Hz

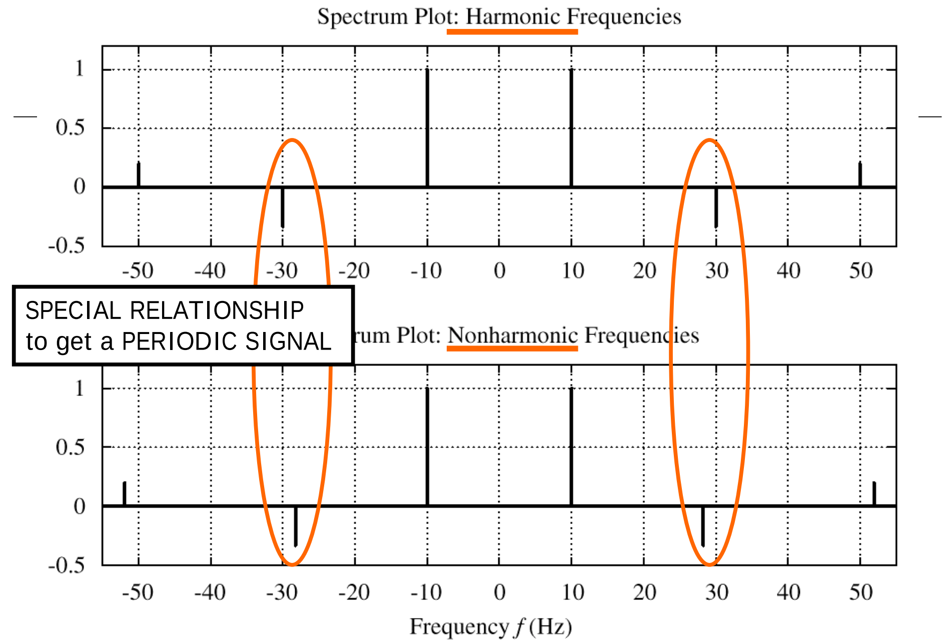
POP QUIZ: FUNDAMENTAL

- Here's another spectrum:

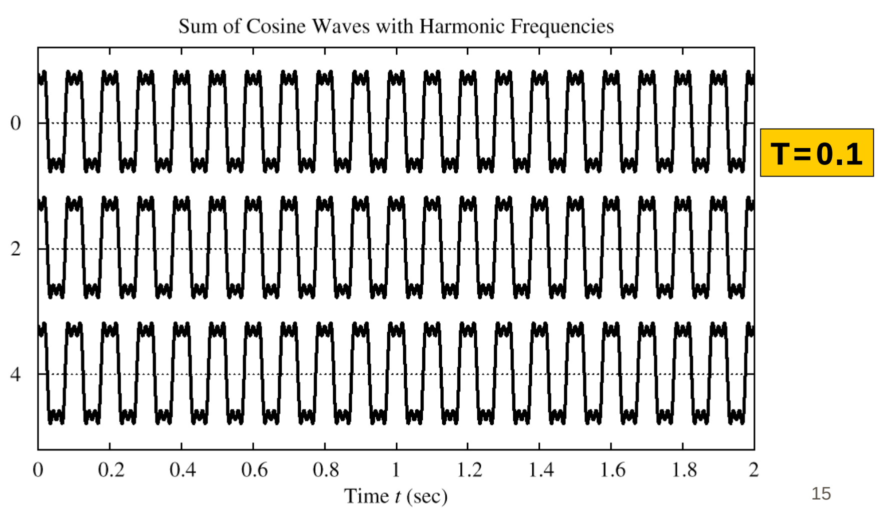


What is the fundamental frequency?

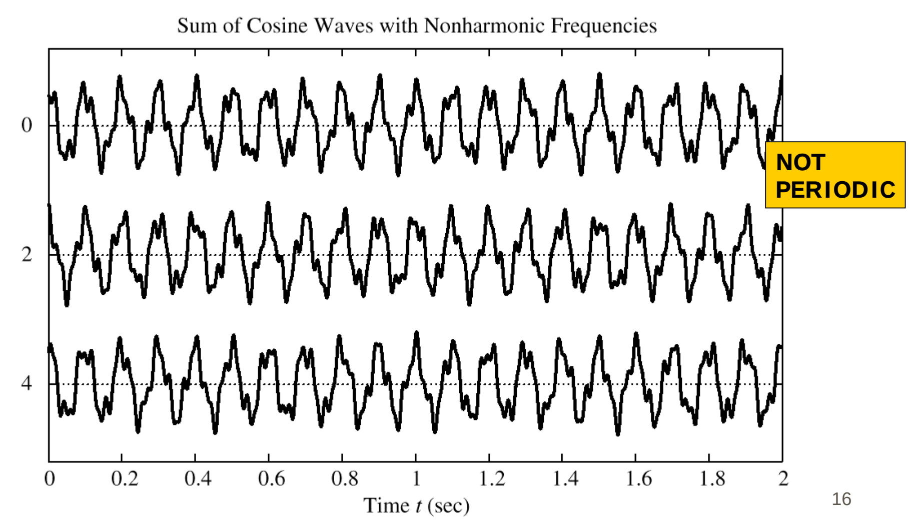
100 Hz ?   50 Hz ?



Harmonic Signal (3 Freqs)



NON-Harmonic Signal



FREQUENCY ANALYSIS

- **Now, a much HARDER problem**
- Given a recording of a song, have the computer write the music
- Can a machine extract frequencies?
  - Yes, if we COMPUTE the spectrum for x(t)
    - During short intervals

Time-Varying FREQUENCIES Diagram

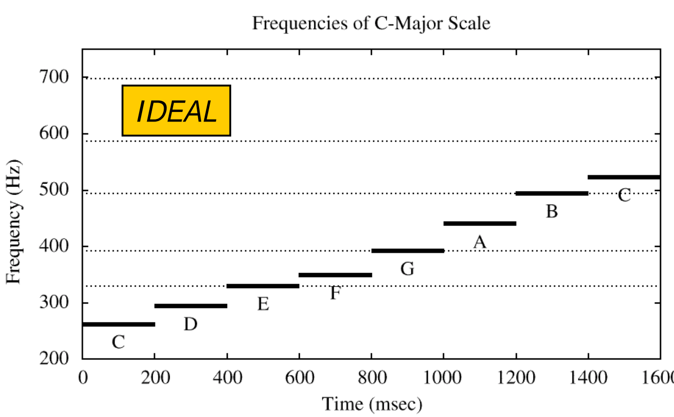
Frequency is the vertical axis

Figure 3.18 Sheet-music notation is a time–frequency diagram.

Time is the horizontal axis

SIMPLE TEST SIGNAL

- C-major SCALE: stepped frequencies
  - Frequency is constant for each note

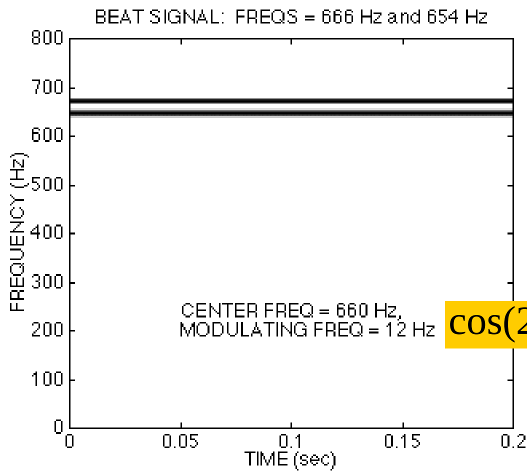


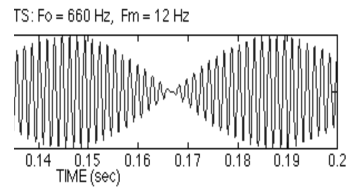
R-rated: ADULTS ONLY

- SPECTROGRAM Tool
  - MATLAB function is specgram.m
  - DSP First has spectgr.m (no plotting)
- **ANALYSIS** program
  - Takes x(t) as input
  - Produces spectrum values X_k
  - Breaks x(t) into SHORT TIME SEGMENTS
    - Then uses the FFT (Fast Fourier Transform)

SPECTROGRAM EXAMPLE

- Two **Constant** Frequencies: Beats





$\cos(2\pi(660)t)\cos(2\pi(12)t)$

AM Radio Signal

- Same as BEAT Notes

$$\cos(2\pi(660)t)\cos(2\pi(12)t)$$

BEATS: Fo = 660 Hz, Fm = 12 Hz

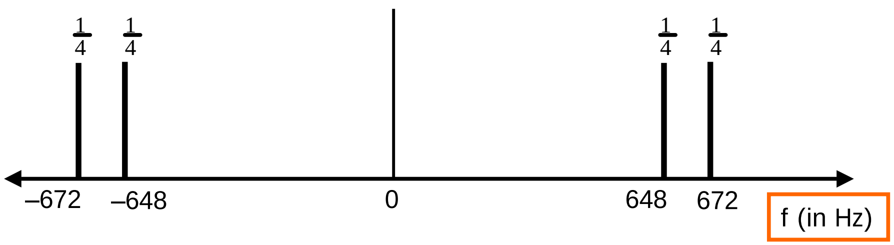
$$\tfrac{1}{2}\left(e^{j2\pi(660)t}+e^{-j2\pi(660)t}\right)\tfrac{1}{2}\left(e^{j2\pi(12)t}+e^{-j2\pi(12)t}\right)$$

$$\tfrac{1}{4}\left(e^{j2\pi(672)t}+e^{-j2\pi(672)t}+e^{j2\pi(648)t}+e^{-j2\pi(648)t}\right)$$

$$\tfrac{1}{2}\cos(2\pi(672)t)+\tfrac{1}{2}\cos(2\pi(648)t)$$

SPECTRUM of AM (Beat)

- 4 complex exponentials in AM:



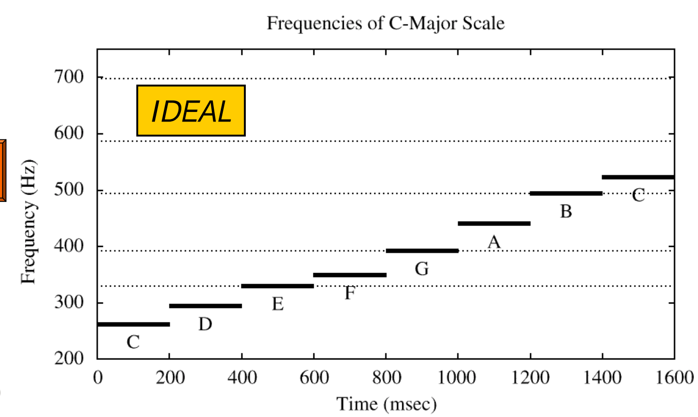
What is the fundamental frequency?

648 Hz ?

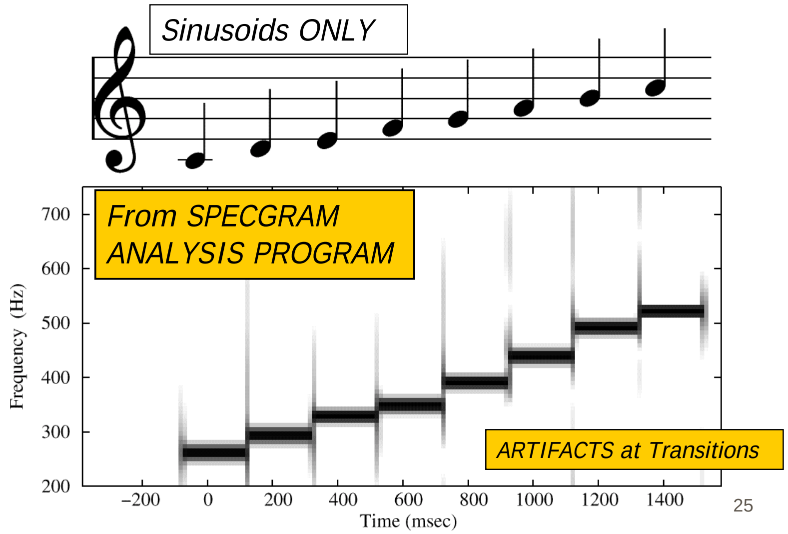
24 Hz ?

STEPPED FREQUENCIES

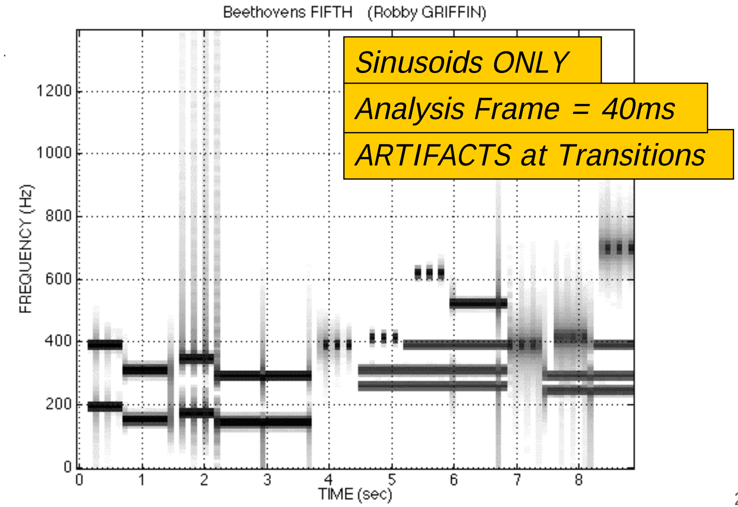
- C-major SCALE: successive sinusoids
  - Frequency is constant for each note



SPECTROGRAM of C-Scale



Spectrogram of LAB SONG



Time-Varying Frequency

- Frequency can change vs. time
  - Continuously, not stepped
- **FREQUENCY MODULATION (FM)**

$$x(t) = \cos(2\pi f_c t + v(t))$$

VOICE

- CHIRP SIGNALS
  - Linear Frequency Modulation (LFM)

New Signal: Linear FM

- Called Chirp Signals (LFM)
  - Quadratic phase

QUADRATIC

$$x(t) = A\cos(\alpha t^2 + 2\pi f_0 t + \varphi)$$

- Freq will change LINEARLY vs. time
  - Example of Frequency Modulation (FM)
  - Define “instantaneous frequency”

INSTANTANEOUS FREQ

- Definition

$$x(t) = A\cos(\psi(t))$$

$$\Rightarrow \omega_i(t) = \tfrac{d}{dt}\psi(t)$$

Derivative of the "Angle"

- For Sinusoid:

$$x(t) = A\cos(2\pi f_0 t + \varphi)$$

$$\psi(t) = 2\pi f_0 t + \varphi$$

$$\Rightarrow \omega_i(t) = \tfrac{d}{dt}\psi(t) = 2\pi f_0$$

Makes sense

INSTANTANEOUS FREQ of the Chirp

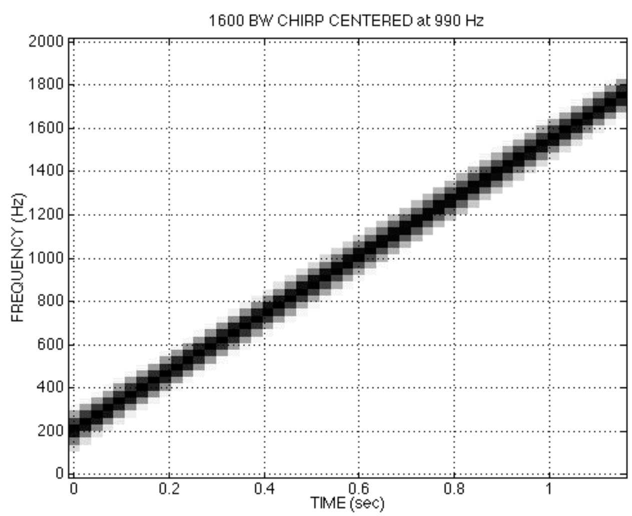
- Chirp Signals have Quadratic phase
- Freq will change LINEARLY vs. time

$$x(t) = A\cos(\alpha t^2 + \beta t + \varphi)$$

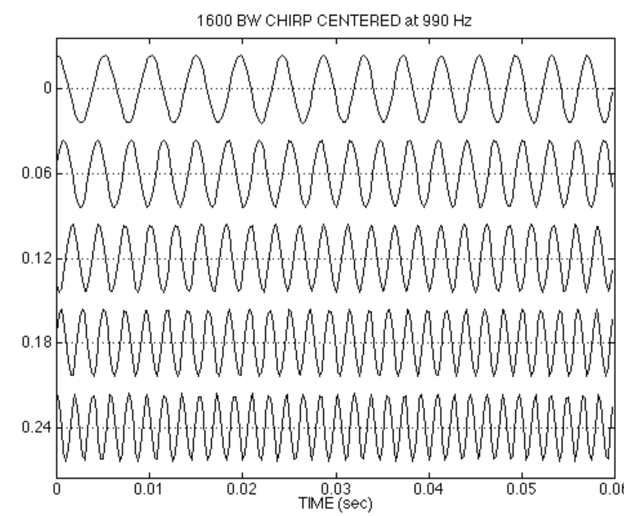
$$\Rightarrow \psi(t) = \alpha t^2 + \beta t + \varphi$$

$$\Rightarrow \omega_i(t) = \tfrac{d}{dt}\psi(t) = 2\alpha t + \beta$$

CHIRP SPECTROGRAM



CHIRP WAVEFORM



OTHER CHIRPS

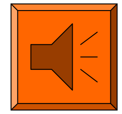
- $\psi(t)$ can be anything:

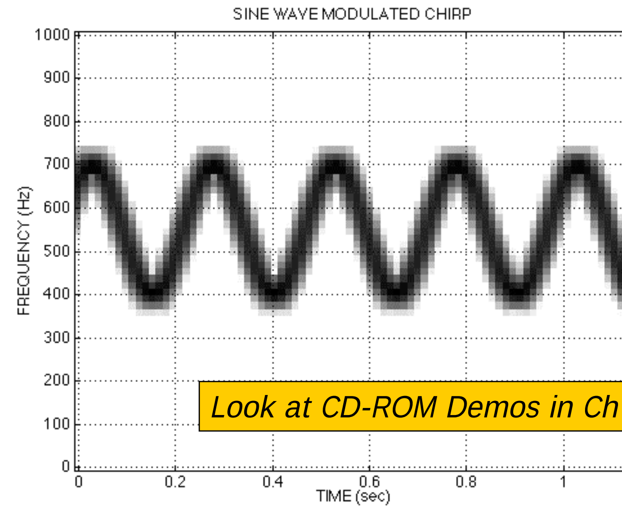
$$x(t) = A\cos(\alpha\cos(\beta t) + \varphi)$$

$$\Rightarrow \omega_i(t) = \frac{d}{dt}\psi(t) = -\alpha\beta\sin(\beta t)$$

- $\psi(t)$ could be speech or music:
  - FM radio broadcast

SINE-WAVE FREQUENCY MODULATION (FM)





Look at CD-ROM Demos in Ch 3

FYI: Demo on CD-ROM

- Beat Control GUI
  - Found in DSPFirst Toolbox
  - Must be on MATLAB's path
    - DSPFIRST/beatcon.m
