

Lecture 11
Frequency Response of FIR
5-Oct-01

Info: Web-CT, Lab, HW

- Lab #6: FIR Filtering of Images
- Prob Set #6 due **next week**
- Quiz #2 on 22-Oct (Monday)
 - Coverage: HW #3, #4, #5, #6, and #7

Schedule around Fall Break

	Wed Lab Mon Rec	Thurs Lab Tues Rec	Mon Lab Wed Rec	Tues Lab Thur Rec
Lab 6 start	3-Oct	4-Oct	8-Oct	9-Oct
Lab 6 report due	10-Oct	11-Oct	22-Oct	23-Oct
Lab 7 start	10-Oct	11-Oct	22-Oct	23-Oct
Lab 7 report due	24-Oct	25-Oct	29-Oct	30-Oct
Rec: FIR Filters	1-Oct	2-Oct	3-Oct	4-Oct
Rec: Freq Resp	8-Oct	9-Oct	10-Oct	11-Oct
Rec: Z-Trans	17-Oct	18-Oct	17-Oct	18-Oct
HW #6 due	8-Oct	9-Oct	10-Oct	11-Oct
HW #7 due	17-Oct	18-Oct	17-Oct	18-Oct
HW #8 due	24-Oct	23-Oct	24-Oct	25-Oct
Quiz #2	22-Oct	22-Oct	22-Oct	22-Oct

DEBUGGING

- “Any Fool” can write code
- Debugging is the interesting part
 - It takes talent and **DEDICATION** !!!
- HOWEVER,
 - Assume the **stupid** mistake is the problem

READING ASSIGNMENTS

- This Lecture:
 - Chapter 6, pp. 157-165, 169-176
- Other Reading:
 - Recitation: Ch. 6, pp. 176-188
 - FREQUENCY RESPONSE EXAMPLES
 - Next Lecture: Chapter 6, pp. 188-194

10/4/2001

EE-2025 Fall-2001 jMc/rmm

5

LECTURE OBJECTIVES

- **SINUSOIDAL** INPUT SIGNAL
 - DETERMINE the FIR FILTER OUTPUT
- **FREQUENCY RESPONSE** of FIR
 - PLOTTING vs. Frequency
 - MAGNITUDE vs. Freq
 - PHASE vs. Freq

The diagram shows the frequency response equation $H(\hat{\omega}) = |H(\hat{\omega})|e^{j\phi(\hat{\omega})}$. An orange arrow points from the text 'PLOTTING vs. Frequency' to the equation. Two black arrows point from the equation to yellow boxes labeled 'MAG' and 'PHASE'. The 'MAG' box points to the magnitude term $|H(\hat{\omega})|$ and the 'PHASE' box points to the phase term $e^{j\phi(\hat{\omega})}$.

EE-2025 Fall-2001 jMc/rmm

6

DOMAINS: Time & Frequency

- **Time-Domain: "n" = time**
 - $x[n]$ discrete-time signal
 - $x(t)$ continuous-time signal
- **Frequency Domain (sum of sinusoids)**
 - Spectrum vs. f (Hz)
 - ANALOG vs. DIGITAL
 - Spectrum vs. ω -hat
- Move back and forth **QUICKLY**

10/4/2001

EE-2025 Fall-2001 jMc/rmm

7

LTI SYSTEMS

- LTI: **L**inear & **T**ime-**I**nvariant
- COMPLETELY CHARACTERIZED by:
 - **IMPULSE RESPONSE** $h[n]$
 - **CONVOLUTION**: $y[n] = x[n]*h[n]$
 - The "rule" defining the system can ALWAYS be re-written as convolution
- FIR Example: $h[n]$ is same as b_k

10/4/2001

EE-2025 Fall-2001 jMc/rmm

8

POP QUIZ

- FIR Filter is "FIRST DIFFERENCE"

- $y[n] = x[n] - x[n-1]$

- Write output as a convolution

- Need impulse response

$$h[n] = \delta[n] - \delta[n-1]$$

- Then, another way to compute the output:

$$y[n] = (\delta[n] - \delta[n-1]) * x[n]$$

DIGITAL "FILTERING"

- CONCENTRATE on the **SPECTRUM**

- SINUSOIDAL INPUT

- INPUT $x[n] = \text{SUM of SINUSOIDS}$

- Then, OUTPUT $y[n] = \text{SUM of SINUSOIDS}$

GENERAL FIR FILTER

- FILTER COEFFICIENTS $\{b_k\}$

- DEFINE THE FILTER

$$y[n] = \sum_{k=0}^M b_k x[n-k]$$

- For example, $\{b_k\} = \{3, -1, 2, 1\}$

$$y[n] = \sum_{k=0}^3 b_k x[n-k]$$

$$= 3x[n] - x[n-1] + 2x[n-2] + x[n-3]$$

FILTERING EXAMPLE

- 7-point AVERAGER

$$y_7[n] = \sum_{k=0}^6 \left(\frac{1}{7}\right) x[n-k]$$

- Removes cosine

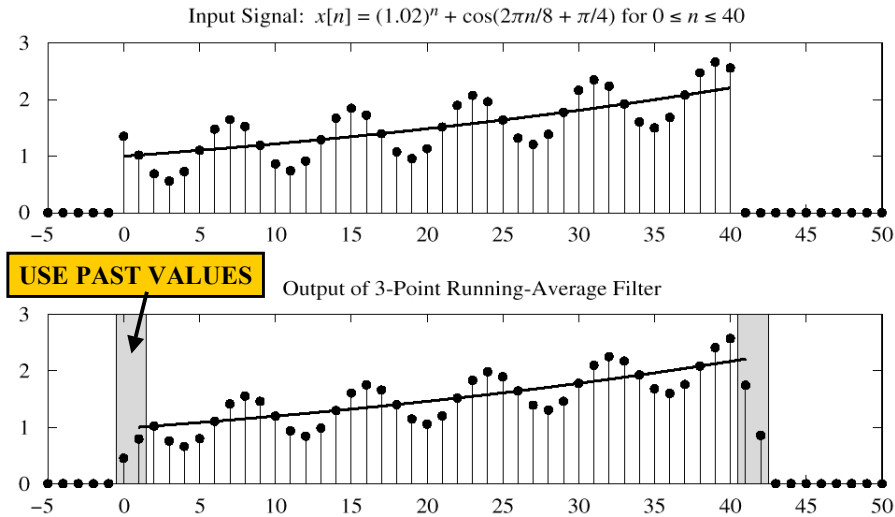

- By making its amplitude (A) smaller

- 3-point AVERAGER

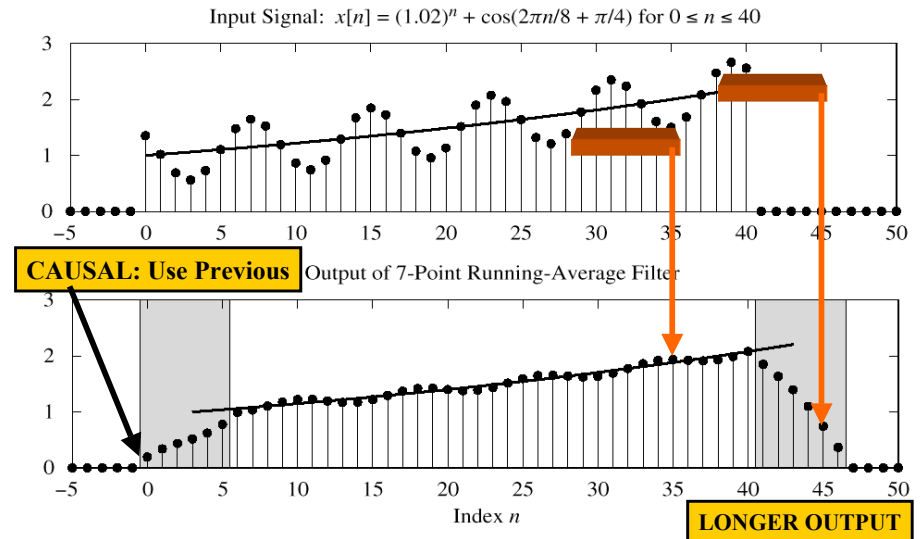

$$y_3[n] = \sum_{k=0}^2 \left(\frac{1}{3}\right) x[n-k]$$

- Changes A slightly

3-pt AVG EXAMPLE

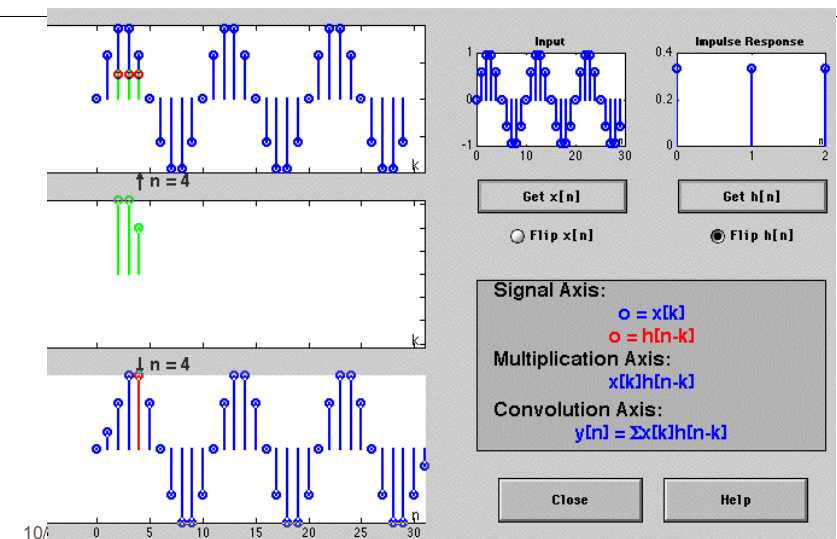

7-pt FIR EXAMPLE (AVG)

SINUSOIDAL RESPONSE

- INPUT: $x[n] = \text{SINUSOID}$
- OUTPUT: $y[n]$ will also be a SINUSOID
 - Different Amplitude and Phase
 - **SAME** Frequency
- AMPLITUDE & PHASE CHANGE
 - Called the **FREQUENCY RESPONSE**

CONVDEMO: MATLAB GUI

COMPLEX EXPONENTIAL

$$x[n] = Ae^{j\phi} e^{j\hat{\omega}n} \quad -\infty < n < \infty$$

$x[n]$ is the input signal—a complex exponential

$$y[n] = \sum_{k=0}^M b_k x[n-k] = \sum_{k=0}^M h[k] x[n-k]$$

FIR DIFFERENCE EQUATION

COMPLEX EXP OUTPUT

- Use the FIR “Difference Equation”

$$\begin{aligned} y[n] &= \sum_{k=0}^M b_k x[n-k] = \sum_{k=0}^M b_k Ae^{j\phi} e^{j\hat{\omega}(n-k)} \\ &= \left(\sum_{k=0}^M b_k e^{j\hat{\omega}(-k)} \right) Ae^{j\phi} e^{j\hat{\omega}(n)} \end{aligned}$$

$$= H(\hat{\omega}) Ae^{j\phi} e^{j\hat{\omega}(n)}$$

FREQUENCY RESPONSE

- At each frequency, we can **DEFINE**

$$H(\hat{\omega}) = \sum_{k=0}^M b_k e^{-j\hat{\omega}k}$$

FREQUENCY RESPONSE

- Complex-valued formula
 - Has **MAGNITUDE** vs. frequency
 - And **PHASE** vs. frequency

EXAMPLE 6.1

Example 6.1

$$\{b_k\} = \{1, 2, 1\}$$

$$\mathcal{H}(\hat{\omega}) = 1 + 2e^{-j\hat{\omega}} + e^{-j\hat{\omega}2}$$

To obtain formulas for the magnitude and phase of the frequency response

$$\mathcal{H}(\hat{\omega}) = 1 + 2e^{-j\hat{\omega}} + e^{-j\hat{\omega}2}$$

$$= e^{-j\hat{\omega}} (e^{j\hat{\omega}} + 2 + e^{-j\hat{\omega}})$$

$$= e^{-j\hat{\omega}} (2 + 2 \cos \hat{\omega})$$

EXPLOIT SYMMETRY

Since $(2 + 2 \cos \hat{\omega}) \geq 0$ for frequencies $-\pi < \hat{\omega} \leq \pi$,
the magnitude is $|\mathcal{H}(\hat{\omega})| = (2 + 2 \cos \hat{\omega})$
and the phase is $\angle \mathcal{H}(\hat{\omega}) = -\hat{\omega}$.

Magnitude of Frequency Response of FIR Filter with Coefficients [1, 2, 1]

$$H(\hat{\omega}) = (2 + 2 \cos \hat{\omega})e^{-j\hat{\omega}}$$

Phase Angle of Frequency Response of FIR Filter with Coefficients [1, 2, 1]

MATLAB: FREQUENCY RESPONSE

■ **HH = freqz(bb, 1, ww)**

■ VECTOR **bb** contains Filter Coefficients

■ DSP-First: **HH = freekz(bb, 1, ww)**

■ FILTER COEFFICIENTS $\{b_k\}$

$$H(\hat{\omega}) = \sum_{k=0}^M b_k e^{-j\hat{\omega}k}$$

10/4/2001

EE-2025 Fall-2001 jMc/rmm

22

LTI SYSTEMS

■ LTI: Linear & Time-Invariant

■ COMPLETELY CHARACTERIZED by:

■ **FREQUENCY RESPONSE**, or

■ IMPULSE RESPONSE $h[n]$

■ **Sinusoid IN -----> Sinusoid OUT**

■ **At the SAME Frequency**

Time & Frequency Relation

■ Get Frequency Response from $h[n]$

■ Here is the FIR case:

$$H(\hat{\omega}) = \sum_{k=0}^M b_k e^{-j\hat{\omega}k} = \sum_{k=0}^M h[k] e^{-j\hat{\omega}k}$$

IMPULSE RESPONSE

EE-2025 Fall-2001 jMc/rmm

25

UNIT-DELAY SYSTEM

Find $h[n]$ and $H(\hat{\omega})$ for $y[n] = x[n-1]$

10/4/2001

EE-2025 Fall-2001 jMc/rmm

26

FIRST DIFFERENCE SYSTEM

Find $h[n]$ and $H(\hat{\omega})$ for the Diff. Eqn:

$$y[n] = x[n] - x[n-1]$$

10/4/2001

EE-2025 Fall-2001 jMc/rmm

27

EXAMPLE 6.2

Find $y[n]$ when $x[n] = \text{complex exp.}$

Example 6.2 Consider the complex input $x[n] = 2e^{j\pi/4}e^{j\pi n/3}$.

$$|\mathcal{H}(\pi/3)| = 2 + 2 \cos(\pi/3) = 3 \text{ and } \angle \mathcal{H}(\hat{\omega}) = -\pi/3.$$

Therefore, the output of the system for the given input is

$$\begin{aligned} y[n] &= 3e^{-j\pi/3} \cdot 2e^{j\pi/4}e^{j\pi n/3} \\ &= (3 \cdot 2) \cdot e^{(j\pi/4 - j\pi/3)}e^{j\pi n/3} \\ &= 6e^{-j\pi/12}e^{j\pi n/3} = 6e^{j\pi/4}e^{j\pi(n-1)/3} \end{aligned}$$

EE-2025 Fall-2001 jMc/rmm

28

CASCADE SYSTEMS

- Does the order of S_1 & S_2 matter?
 - NO, LTI SYSTEMS can be rearranged !!!
 - WHAT ARE THE FILTER COEFFS? $\{b_k\}$
 - WHAT is the overall FREQUENCY RESPONSE ?

Figure 5.19 A Cascade of Two LTI Systems.

CASCADE EQUIVALENT

- MULTIPLY** the Frequency Responses

DLTI Demo with Sinusoids
