

EE-2025

Spring-03

LECTURE #2

Phase & Time-Shift

Complex Exponentials

10-Jan-03

INFORMATION

- ◆ **MATLAB: evening in VL-361 (6pm) ???**
- ◆ **LABS start NEXT week (MONDAY)**
 - ◆ Attend correct section (in VanLeer-257)
 - ◆ ECE Computer acct: **gtxxxx**, password: **SSN**
 - ◆ Verification must be signed during Lab
 - ◆ **Pre-Lab & Post-Lab ON-LINE Questions**
- ◆ **RECITATIONS**
 - ◆ Attend your assigned time

Web-CT Info

- ◆ Check the Bulletin Board for msgs
 - ◆ **MAKE YOUR OWN POSTINGS**
- ◆ Web-CT Login: activate yours
- ◆ PDF Files on WebCT
 - ◆ Lectures are being posted (4 per page)
 - ◆ Get PDF file of Lab #1 from WebCT
 - ◆ Hard copy of Instructor Verification Sheet
 - ◆ HW #1 posted as PDF
 - ◆ HW #2 soon
 - ◆ Adobe Acrobat Reader version 4 required

Fall Semester 2002: ECE2025 (Spring) All Sections: L...
Home

SPRING 2003

Lecture Time: M & F 11:05-11:55 **Room:** W200 Van Leer (Auditorium)
Instructor: Dr. Jim McClellan **Email:** jim.mcclellan@ece.gatech.edu
Office: E475-C Van Leer, or 363 GCATT **Phone:** (404) 894-6863 or (404) 894-8325
Office Hours: Mon, Fri 12-1, Wed 10:30-11:30, or email to schedule an appointment

For information about recitation instructors and TAs, please refer to the course Information section.

Labs start on Monday, 13-Jan, in VanLeer room 252

New Chapters for SP First and DSP First "WORD" Bulletin Board Information

HW Lectures HW and Solutions Lab Assignments Resources

Homework Info

- ◆ HWs will be posted on Friday/Sat
 - ◆ Covered in Rec during the following Week
 - ◆ Due the week after that (9+ days later)
- ◆ Format info on WebCT
- ◆ Prob Set #1 due **in RECITATION**
 - ◆ **At the beginning of class**
 - ◆ Solutions will be posted after last Recitation

Homework Formatting

- ◆ Include a Cover page with
 - ◆ Name
 - ◆ Lab section, ie, L05, L20, etc.
 - ◆ Recitation Prof's name
 - ◆ **Download example from Web-CT**
- ◆ Write on **ONE** side only
 - ◆ Use Engineer's paper or plain paper
- ◆ STAPLE

JUMP

Signal Processing First

LECTURE #2 Phase & Time-Shift Complex Exponentials

READING ASSIGNMENTS

- ◆ This Lecture:
 - ◆ Chapter 2, Sects. 2-3 to 2-5
- ◆ Appendix A: Complex Numbers
- ◆ Appendix B: MATLAB
- ◆ Next Lecture: finish Chap. 2,
 - ◆ Section 2-6 to end

1/9/2003

EE-2025 rws/jMc

2

LECTURE OBJECTIVES

- ◆ Define Sinusoid Formula from a plot
- ◆ Relate TIME-SHIFT to PHASE
- Introduce an **ABSTRACTION**:
 - Complex Numbers **represent** Sinusoids
 - Complex Exponential Signal

$$z(t) = X e^{j\omega t}$$

SINUSOIDAL SIGNAL

$$A \cos(\omega t + \varphi)$$

- ◆ **FREQUENCY** ω
 - ◆ Radians/sec
 - ◆ or, Hertz (cycles/sec)
 - $\omega = (2\pi)f$
- ◆ **AMPLITUDE** A
 - ◆ Magnitude
- ◆ **PERIOD** (in sec)
 - $T = \frac{1}{f} = \frac{2\pi}{\omega}$
- ◆ **PHASE** φ

1/9/2003

EE-2025 rws/jMc

3

1/9/2003

EE-2025 rws/jMc

4

PLOTTING COSINE SIGNAL from the FORMULA

$$5 \cos(0.3\pi t + 1.2\pi)$$

- ◆ Determine **period**:

$$T = 2\pi / \omega = 2\pi / 0.3\pi = 20/3$$

- ◆ Determine a **peak** location by solving

$$(\omega t + \varphi) = 0$$

- ◆ **Peak at t=-4**

ANSWER for the PLOT

$$5 \cos(0.3\pi t + 1.2\pi)$$

- ◆ Use $T=20/3$ and the peak location at $t=-4$

TIME-SHIFT

- ◆ In a mathematical formula we can replace t with $t-t_m$

$$x(t - t_m) = A \cos(\omega(t - t_m))$$

- ◆ Then the $t=0$ point moves to $t=t_m$

- ◆ Peak value of $\cos(\omega(t-t_m))$ is now at $t=t_m$

TIME-SHIFTED SINUSOID

$$x(t + 4) = 5 \cos(0.3\pi(t + 4)) = 5 \cos(0.3\pi(t - (-4)))$$

PHASE <--> TIME-SHIFT

- ◆ Equate the formulas:

$$A \cos(\omega(t - t_m)) = A \cos(\omega t + \phi)$$

- ◆ and we obtain:

$$-\omega t_m = \phi$$

- ◆ or,

$$t_m = -\frac{\phi}{\omega}$$

1/9/2003

EE-2025 rws/jMc

9

SINUSOID from a PLOT

- ◆ Measure the period, T
 - ◆ Between peaks or zero crossings
 - ◆ Compute frequency: $\omega = 2\pi/T$
- ◆ Measure time of a peak: t_m
 - ◆ Compute phase: $\phi = -\omega t_m$
- ◆ Measure height of positive peak: A

3 steps

1/9/2003

EE-2025 rws/jMc

10

(A, ω , ϕ) from a PLOT

$$T = \frac{0.01 \text{ sec}}{1 \text{ period}} = \frac{1}{100} \quad \longrightarrow \quad \omega = \frac{2\pi}{T} = \frac{2\pi}{0.01} = 200\pi$$

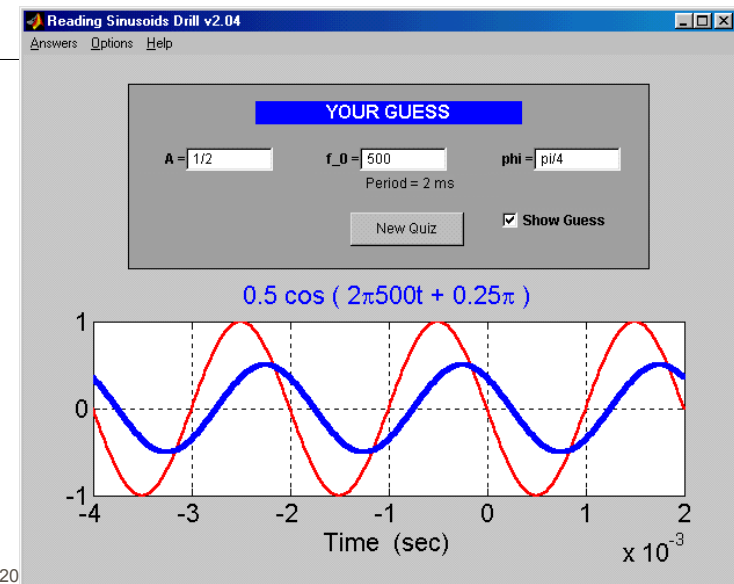

$$t_m = -0.00125 \text{ sec} \quad \longrightarrow \quad \phi = -\omega t_m = -(200\pi)(t_m) = 0.25\pi$$

1/9/2003

EE-2025 rws/jMc

11

SINE DRILL (MATLAB GUI)

1/9/20

12

PHASE is AMBIGUOUS

◆ The cosine signal is periodic

◆ Period is 2π

$$A \cos(\omega t + \varphi + 2\pi) = A \cos(\omega t + \varphi)$$

◆ Thus adding any multiple of 2π leaves $x(t)$ unchanged

if $t_m = \frac{-\varphi}{\omega}$, then

$$t_{m_2} = \frac{-(\varphi + 2\pi)}{\omega} = \frac{-\varphi}{\omega} - \frac{2\pi}{\omega} = t_m - T$$

COMPLEX NUMBERS

◆ To solve: $z^2 = -1$

◆ $z = j$

◆ Math and Physics use $z = i$

◆ Complex number: $z = x + jy$

Cartesian coordinate system

PLOT COMPLEX NUMBERS

COMPLEX ADDITION = VECTOR Addition

*** POLAR FORM ***

◆ Vector Form

◆ **Length** = 1

◆ **Angle** = θ

◆ Common Values

- ◆ j has angle of 0.5π
- ◆ -1 has angle of π
- ◆ $-j$ has angle of 1.5π
- ◆ also, angle of $-j$ could be $-0.5\pi = 1.5\pi - 2\pi$
- ◆ because the PHASE is **AMBIGUOUS**

POLAR <--> RECTANGULAR

◆ Relate (x,y) to (r,theta)

$$r^2 = x^2 + y^2$$

$$\theta = \text{Tan}^{-1}\left(\frac{y}{x}\right)$$

$$x = r \cos \theta$$

$$y = r \sin \theta$$

Most calculators do Polar-Rectangular

Need a notation for POLAR FORM

Euler's FORMULA

◆ Complex Exponential

- ◆ Real part is cosine
- ◆ Imaginary part is sine
- ◆ Magnitude is one

$$e^{j\theta} = \cos(\theta) + j \sin(\theta)$$

$$re^{j\theta} = r \cos(\theta) + jr \sin(\theta)$$

COMPLEX EXPONENTIAL

$$e^{j\omega t} = \cos(\omega t) + j \sin(\omega t)$$

◆ Interpret this as a **Rotating Vector**

- ◆ $\theta = \omega t$
- ◆ Angle changes vs. time
- ◆ ex: $\omega = 20\pi$ rad/s
- ◆ Rotates 0.2π in 0.01 secs

$$e^{j\theta} = \cos(\theta) + j \sin(\theta)$$

cos = REAL PART

Real Part of Euler's

$$\cos(\omega t) = \Re\{e^{j\omega t}\}$$

General Sinusoid

$$x(t) = A \cos(\omega t + \varphi)$$

So,

$$\begin{aligned} A \cos(\omega t + \varphi) &= \Re\{Ae^{j(\omega t + \varphi)}\} \\ &= \Re\{Ae^{j\varphi} e^{j\omega t}\} \end{aligned}$$

1/9/2003

EE-2025 rws/jMc

22

REAL PART EXAMPLE

$$A \cos(\omega t + \varphi) = \Re\{Ae^{j\varphi} e^{j\omega t}\}$$

Evaluate: $x(t) = \Re\{-3je^{j\omega t}\}$

Answer:

$$\begin{aligned} x(t) &= \Re\{(-3j)e^{j\omega t}\} \\ &= \Re\{3e^{-j0.5\pi} e^{j\omega t}\} = 3 \cos(\omega t - 0.5\pi) \end{aligned}$$

1/9/2003

EE-2025 rws/jMc

23

COMPLEX AMPLITUDE

General Sinusoid

$$x(t) = A \cos(\omega t + \varphi) = \Re\{Ae^{j\varphi} e^{j\omega t}\}$$

Complex AMPLITUDE = X

$$z(t) = Xe^{j\omega t} \quad X = Ae^{j\varphi}$$

Then, any Sinusoid = REAL PART of $Xe^{j\omega t}$

$$x(t) = \Re\{Xe^{j\omega t}\} = \Re\{Ae^{j\varphi} e^{j\omega t}\}$$

1/9/2003

EE-2025 rws/jMc
