

ECE-2025

Spring-04

LECTURE #1 Sinusoids 5-Jan-04

INFORMATION

- LABS
 - Room 216 in Bunger-Henry Building
 - MATLAB based computer projects
 - MATLAB Help: in the evenings
 - Tentative Times:
 - VanLeer, room 361: Wed & Thurs at 6pm
 - Next week: Mon, Tues & Wed at 6pm in VL-361
- RECITATIONS (always in VL-361)
 - EMPHASIS on Problem Solving
- GRADING ?

1/4/2004

webct.gatech.edu

The screenshot shows the webct.gatech.edu interface for the course "Spring 2004: Intro-Signal Processing (ECE-2025)". The page includes a navigation menu on the left with options like "Home", "View", and "Designer Options". The main content area displays course information for "SPRING 2004", including the lecture time (M & F 11:05-11:55), instructor (Dr. Jim McClellan), office location (BH-325 Bunger-Henry), and office hours (Mon, Wed, Fri 12-1pm). There are also announcements about office hours, help sessions, and lab start dates. The bottom of the page features a grid of icons for various resources such as Syllabus, Information, Lectures, Lab Assignments, Quiz Solutions, Resources, Grades, and AM Signals.

READING ASSIGNMENTS

- This Lecture:
 - Chapter 2, pp. 9-17
- Appendix A: Complex Numbers
- Appendix B: MATLAB
- Chapter 1: Introduction

CONVERGING FIELDS

COURSE OBJECTIVE

- Students will be able to:
- Understand **mathematical** descriptions of signal processing **algorithms** and express those algorithms as computer **implementations** (MATLAB)
- What are your objectives?

WHY USE DSP ?

- Mathematical **abstractions** lead to generalization and discovery of new processing techniques
- Computer implementations are **flexible**
- Applications provide a **physical** context

Fourier Everywhere

- Telecommunications
- Sound & Music
 - CDROM, Digital Video
- Fourier Optics
- X-ray Crystallography
 - Protein Structure & DNA
- Computerized Tomography
- Nuclear Magnetic Resonance: MRI
- Radioastronomy
- Ref: Prestini, "The Evolution of Applied Harmonic Analysis"

1/4/2004

EE-2025 Fall-2003 jMc

9

LECTURE OBJECTIVES

- Write general formula for a "sinusoidal" waveform, or signal
- From the formula, plot the sinusoid versus time
- What's a **signal**?
 - It's a **function** of time, $x(t)$
 - in the mathematical sense

1/4/2004

EE-2025 Fall-2003 jMc

10

TUNING FORK EXAMPLE

- CD-ROM demo 
- "A" is at 440 Hertz (Hz)
- Waveform is a SINUSOIDAL SIGNAL
- Computer plot looks like a sine wave
- Here is a mathematical formula:

$$A \cos(2\pi(440)t + \varphi)$$

1/4/2004

EE-2025 Fall-2003 jMc

11

SPEECH EXAMPLE

- More complicated signal (BAT.WAV) 
- Waveform $x(t)$ is NOT a Sinusoid
- Theory will tell us
 - $x(t)$ is approximately a sum of sinusoids
 - FOURIER ANALYSIS
 - Break $x(t)$ into its sinusoidal components
 - Called the FREQUENCY SPECTRUM

1/4/2004

EE-2025 Fall-2003 jMc

12

DIGITIZE the WAVEFORM

- $x[n]$ is a SAMPLED SINUSOID
 - A list of numbers stored in memory
- Sample at 11,025 samples per second
 - Called the SAMPLING RATE of the A/D
 - Time between samples is
 - $1/11025 = 90.7$ microsec
- Output via D/A hardware (at F_{samp})

1/4/2004

EE-2025 Fall-2003 jMc

13

STORING DIGITAL SOUND

- $x[n]$ is a SAMPLED SINUSOID
 - A list of numbers stored in memory
- CD rate is 44,100 samples per second
- 16-bit samples
- Stereo uses 2 channels
- Number of bytes for 1 minute is
 - $2 \times (16/8) \times 60 \times 44100 = 10.584$ Mbytes

1/4/2004

EE-2025 Fall-2003 jMc

14

SINES and COSINES

- Always use the COSINE FORM

$$A \cos(2\pi(440)t + \varphi)$$

- Sine is a special case:

$$\sin(\omega t) = \cos(\omega t - \frac{\pi}{2})$$

1/4/2004

EE-2025 Fall-2003 jMc

15

SINUSOIDAL SIGNAL

$$A \cos(\omega t + \varphi)$$

- FREQUENCY ω
 - Radians/sec
 - Hertz (cycles/sec)
$$\omega = (2\pi)f$$
- PERIOD (in sec)
$$T = \frac{1}{f} = \frac{2\pi}{\omega}$$
- AMPLITUDE A
 - Magnitude
- PHASE φ

1/4/2004

EE-2025 Fall-2003 jMc

16

EXAMPLE of SINUSOID

- Given the Formula

$$5 \cos(0.3\pi t + 1.2\pi)$$

- Make a plot

PLOT COSINE SIGNAL

$$5 \cos(0.3\pi t + 1.2\pi)$$

- Formula defines A, ω , and ϕ

$$A = 5$$

$$\omega = 0.3\pi$$

$$\phi = 1.2\pi$$

1/4/2004

EE-2025 Fall-2003 jMc

18

PLOTTING COSINE SIGNAL from the FORMULA

$$5 \cos(0.3\pi t + 1.2\pi)$$

- Determine **period**:

$$T = 2\pi / \omega = 2\pi / 0.3\pi = 20/3$$

- Determine a **peak** location by solving

$$(\omega t + \phi) = 0 \Rightarrow (0.3\pi t + 1.2\pi) = 0$$

- Zero** crossing is $T/4$ before or after
- Positive & Negative peaks spaced by $T/2$

PLOT the SINUSOID

$$5 \cos(0.3\pi t + 1.2\pi)$$

- Use $T=20/3$ and the peak location at $t=-4$
