

**GEORGIA INSTITUTE OF TECHNOLOGY**  
SCHOOL of ELECTRICAL & COMPUTER ENGINEERING  
QUIZ #1

DATE: 1-Feb-02

COURSE: ECE 2025

NAME: \_\_\_\_\_ STUDENT #: \_\_\_\_\_  
  LAST,  FIRST

---

Recitation Section: Circle the day & time when your Recitation Section meets:

L02:Tues-9:30am (Bordelon)    L04:Tues-12:00pm (Yezzi)    L05:Thurs-1:30pm (Williams)  
L06:Tues-1:30pm (Bordelon)    L07:Thur-3:00pm (Williams)    L08:Tues-3:00pm (Smith)  
L11:Mon-3:00pm (Glytsis)    L14:Mon-4:00pm (McClellan)    RPK: (Abler)

---

- Write your name on the front page ONLY. **DO NOT** unstaple the test.
- This exam is closed book. However, one page ( $8\frac{1}{2}'' \times 11''$ ) of HAND-WRITTEN notes (front and back) and a calculator are permitted.
- Justify your reasoning CLEARLY to receive partial credit.  
  Explanations are also required to receive full credit for any answer.
- You must write your answer in the space provided on the exam paper itself. Only these answers will be graded. Circle your answers, or write them in the boxes provided. If space is needed for scratch work, use the backs of previous pages.

<i>Problem</i>	<i>Value</i>	<i>Score</i>
1	25	
2	25	
3	25	
4	25	

**Problem Spring-02-Q.1.1:**

Simplify the following complex-valued expressions. In each case reduce the answers to a **simple** numerical form.

Let  $Y = 1 + j\sqrt{3}$  and  $Z = e^{-j\pi/6}$ .

- (a) If  $A = Y + Z$ , what is its numerical value expressed in rectangular form? **Plot the vectors  $Y$ ,  $Z$ , and  $A$  in the complex plane.**

$A =$ -----

- (b) If  $B = ZY^*$ , what are the numerical values of the magnitude and phase associated with the polar form representation?

$|B| =$ -----,  $\angle B =$ -----

- (c) If  $C = (jZ)^{66}$ , what is its numerical value expressed in rectangular form?

$C =$ -----

**Problem Spring-02-Q.1.2:**

Consider the sinusoidal signals  $x(t)$  and  $y(t)$  plotted below.

- (a) Determine  $A$ ,  $f_0$ , and  $\phi$  in the representation of  $x(t)$  as  $x(t) = A \cos(2\pi f_0 t + \phi)$ .

$A =$ -----       $\phi =$ -----       $f_0 =$ ----- (in Hz)

- (b) Now suppose that  $B \cos(\omega_0 t + \psi) = x(t) + 0.375 \cos(\omega_0 t)$ . Determine  $B$ ,  $\omega_0$ , and  $\psi$ .

$B =$ -----

$\omega_0 =$ -----

$\psi =$ -----

- (c) The signal  $y(t)$  can be expressed in terms of  $x(t)$ . That is, we can write  $x(t) = C y(t - t_1)$ . Determine the numerical values of the scale factor  $C$  and the time shift  $t_1$ , where  $t_1 \geq 0$ .

$C =$ -----       $t_1 =$ -----

**Problem Spring-02-Q.1.3:**

A real signal

$$x(t) = A \cos(160\pi t + \phi) + B \cos(\omega_1(t - \tau)) + C \cos(\omega_2 t) + D$$

has the following two-sided spectrum:

- (a) Determine  $A$ ,  $B$ ,  $C$ ,  $D$ ,  $\omega_1$ ,  $\omega_2$ ,  $\phi$ , and  $\tau$  the signal  $x(t)$  with the above spectrum.

$$A = \text{-----}$$

$$B = \text{-----}$$

$$C = \text{-----}$$

$$D = \text{-----}$$

$$\phi = \text{-----}$$

$$\omega_1 = \text{-----}$$

$$\omega_2 = \text{-----}$$

$$\tau = \text{-----}$$

- (b) The signal  $x(t)$  is periodic. Determine the fundamental frequency  $f_0$ , of the signal  $x(t)$ .

$$f_0 = \text{-----}$$

**Problem Spring-02-Q.1.4:**

A signal  $x(t)$  is given by the equation

$$x(t) = 2[A + \cos(200\pi t)] \cos(2000\pi t + \pi/2).$$

The signal  $x(t)$ , which is given above as a *product*, can also be expressed as a *sum* of sinusoids of the form

$$x(t) = \sum_{k=1}^N D_k \cos(\omega_k t + \phi_k), \tag{1}$$

where the  $\omega_k$ 's are different frequencies.

- (a) Determine the number of cosine terms in  $x(t)$ , i.e. the value of  $N$  in Equation (1).

$N =$  \_\_\_\_\_

- (b) What are the lowest and highest frequencies of all the sinusoids in the sum form [Eq. (1)] of  $x(t)$ ?

lowest  $\omega_k =$  \_\_\_\_\_

highest  $\omega_k =$  \_\_\_\_\_

- (c) The spectrum of  $x(t)$  contains a component at frequency  $2000\pi$  rad/sec with complex amplitude  $6j$ . What is the numerical value of  $A$ ?

$A =$  \_\_\_\_\_

- (d) Plot the two-sided spectrum of  $x(t)$  on the graph below. Be sure to label all components of the spectrum with their frequency (in radians/sec) and their complex amplitude. You may need to use your result from part (c) to label the plot properly.

frequency in rad/sec
