
DAVID LANIER

david_w_lanier@uhc.com

Required Skills:

(List skills needed) – Web (HTML / JS / CSS), Native iOS, Native Android

Preferred Team Communications:

Conference Call, WebEx / GoToMeeting

Data Sources:

To Be discussed.

Other Items:

Project has time zone flexibility. Mentors and students will determine a good time for virtual meeting

Team Info:

Needs a Developer, Analyst, Tester, Project Manager. Allows two teams of 4-6 members.

INDIVIDUAL HEALTH RECORD (IHR) PROTOTYPE

The Individual Health Record (IHR) provides individuals with their own digitally accessible, detailed health data, centered around them – not around a particular health system or component of care. Today, data exists in many fragmented places, making it very difficult to assemble a complete view of an individual's health. The IHR uses a patented approach to receive, organize and share information from numerous internal and external sources. Members/Patients can then choose to make their information available to their caregivers and providers.

PROJECT OBJECTIVES

Make information and records regarding the patients' health more actionable and understandable as well as easier to share with a patient/member health care team.

SUCCESSFUL PROJECT

To Be Discussed

Intellectual Property: None
