
MARIA BOWIE

mbowie@uga.edu

Required Skills:

Web Application, HTML, JavaScript, CSS

Preferred Team Communications:

Conference Call, to be discussed

Data Sources:

To be Discussed.

Other Items:

Project has time zone flexibility. Mentors and students will determine a good time for virtual meeting

Team Info:

Developer, Project Manager. Allows one team of 4-6 members.

APP FOR WALK GEORGIA WEBSITE

We need a smart phone app (ideally for I-Phone and Android, but prefer I-Phone done first) to integrate with the Walk Georgia website (www.walkgeorgia.org). We would like for the app to have the full functionality of the website, but at a minimum to allow for users to actively track their exercise anytime, anywhere. We currently have about 70 different types of physical activity in our tracking system that users can choose from to log time and earn points to unlock counties on a virtual map of Georgia. Walk Georgia has served over 140,000 users since 2013 through the mobile friendly website www.walkgeorgia.org. Administered by UGA Cooperative Extension, program staff facilitate using Walk Georgia as part of employee wellness programs with city and county governments across Georgia, schools, businesses and other community-based organizations. The goal is to provide access to a free, easy to use web-based platform that supports and encourages users with a variety of tools- fitness tracking, nutrition tips and healthy recipes made using Georgia Grown products, healthy lifestyle tips, weekly health feature articles, fitness related event promotion and state park profiles.

PROJECT OBJECTIVES

Provide an app to expand the reach and accessibility of the Walk Georgia website for users to log exercise and engage from their smart phones.

SUCCESSFUL PROJECT

To be Discussed.
