DIGITIZING HIV TESTING GUIDELINES

Developing CDS Tools for HIV Testing Guidelines.

PROJECT OBJECTIVES

Create a digitized guideline package that includes a structured, human-readable document as well as shareable, machine-readable artifacts (CDS tools, clinical apps etc.) that can be incorporated in an EHR. By using informatics support to enhance guidelines, we want to ensure that clinical recommendations are implemented in a more accurate, consistent and timely manner to improve the nation's health.

SUCCESSFUL PROJECT

We will work with the students to see what artifacts are feasible for them to develop (e.g. an app or decision support artifact or other informatics tools)
