**Required Skills:**

no preference

**Preferred Team**

**Communications:**

Conference Call, to be discussed

**Data Sources:**

FHIR server data, GT synthetic data

**Other Items:**

Project has time zone flexibility.  
Mentors and students will  
determine a good time for virtual  
meeting

**Team Info:**

Developer(s),Project Manager,QA

---

MYMEDS

---

The project will build a customized tool for each patient to help with information for their medications. The idea is to make patients more informed about their conditions and medications and make an interactive application.

---

**PROJECT OBJECTIVES**

---

The project can achieve the following objectives:

1. Give detailed information of the medications a patient is on.
  2. Make them understand side effects of each med.
  3. Can also act as medication reminder and also restocking (we can also add a plugin to suggest nearest pharmacies and make an order).
- 

**SUCCESSFUL PROJECT**

---

A successful project would entail building an intuitive user interface for the application which ideally implements the project objectives outlined above. Currently the scope is broad and we can narrow it down with discussion once the project starts.
