[mjromano3@gmail.com](mailto:mjromano3@gmail.com)

484-477-9245

---

### **Required Skills:**

No Preference, Web Application, UI Design

### **Preferred Team**

#### **Communications:**

Skype

### **Data Sources:**

This is obviously not a new idea, so there are many articles on the web along with some implementations. Again though, I want you to take a clean approach to this and come up with something fresh and new.

### **Other Items:**

### **Team Info:**

Developer, Analyst, Project Manager, DBA

---

## EMPOWERING OLDER ADULTS TO STAY CONNECTED

---

As we know, a common challenge for older adults is maintaining a sense of connectivity to the outside world as they age. That loss of connectivity can be due to a number of factors - mobility, lack of technical acumen, health, etc. That being the case, I'm looking for someone to develop an application that can easily keep this ever growing demographic connected. While access to their health records and things of that nature can certainly be part of this, I don't want to constrain the effort to just that sector. So I'd really like to see some sort of holistic app, website, etc. that has the ability to keep them linked in to social media, health, or i.e. anything that would be hindered by a potential lack of mobility.

---

### PROJECT OBJECTIVES

---

Develop an application, site, etc. that is a true demonstration of the above. I'm more concerned with your ideas and the overall thought process here, so don't feel the need to constrain yourself in any way at all - think big and do big. If there is a feature that is merely implemented but not fully functional, that is ok.

---

### SUCCESSFUL PROJECT

---

Delivery of an application that has some form of base functionality. As I said before, not all aspects need to be fully functional, but those that are not should be noted accordingly and have a road map to completion.
