131 Ralph McGill Blvd Apt #7 Atlanta, GA 30308
BSc Computer Science, Human-Computer Interaction
Georgia State University

I really enjoy working in groups to solve problems. Troubleshooting and communication is one of my strong points, and I tend to utilize it the most in the workplace. Coding has always been a joy for me, and I always enjoy mixing that technical skill with my eye for design. I have a lot of experience in the Adobe suite, as well as Java IDE's and text editors.

Over my college career and time of self teaching, I have used numerous web design frameworks and techniques, and am very interested in expanding on that by being given specific projects. I am an open book when it comes to learning new specific skills. During my 3 years working at the Andrew Young School of Policy Studies, a college at Georgia State University, I have learned a vast amount about the upkeep and administration of web pages and user roles. A few of my responsibilities include but were not limited to:

- User Access Control (LDAP).
- Creating wireframes for new research and college departments based on face to face and written requirements.
- UX/UI responsibilities to create intuitive and highly functional pages for a diverse audience that fluctuated to some 30,000 unique users (GSU Google Analytics)
- Photo Editing (Photoshop, Illustrator, After Effects)
- Graphics by use of Vector art.

Previous work experience through summer internships and contracting work have also given me insight into businesses that specialize in E-Commerce and sending/recieving.

- Linux CentOS system maintenance and updating.
  - Creating backup images on locally hosted and remote servers
  - Running timely updates on and off site with use of Cron.
  - Updating SSL, TLS, other security preferences to keep up to date on all security concerns.
- Manage storage and transmission of information, and implement PHP and XML files to maintain and update client information and product specifications.

Being punctual is very important to me, and with whatever I set my mind to , I give it my undivided attention. I would really enjoy seeing the process that your company takes in creating tools and resources that are intuitive and useful for client use.

I am going to be graduating in December , and am looking for a new opportunity outside of my home town. I'm ready to take the plunge into new challenges socially, and technically. I have always works best in new situations, as it keeps me on my toes and continually adapting to my surroundings. Thank you for taking the time to read through my cover letter and perhaps glace at my detailed resume, I look forward to speaking with you about future business endeavors.
