

YOUR MEDICINE: Amlodipine _____mg

Why am I taking this medicine? You have high blood pressure. High blood pressure is dangerous if not treated. It can cause strokes and heart attacks. You can die from having high blood pressure that is not treated.

Take 1 tablet first thing every morning. You do not have to eat before taking the tablet.

What will I feel when I take this medicine? Sometimes there are side effects from taking medicine. A side effect is something you might feel that is not normal. Some side effects from taking Amlodipine happen as your body gets used to the medicine and could include dizziness, lightheadedness, swelling of the feet/ankles.

These are not common side effects but could happen very often but can be very serious. **Call 911 or go to the Emergency Room immediately if you develop: nausea/vomiting that doesn't stop, dark urine, or stomach/abdominal pain; hives, swelling of the face, lips, tongue or throat or trouble breathing; chest pain or symptoms of a heart attack including chest/jaw/left arm pain, shortness of breath, or unusual sweating.**

What else do I need to know?

1. You must take this medicine every day even if you feel well.
2. You must refill this medicine every month.
3. If you visit a different doctor's office, medical clinic or the emergency room, you must tell them you have high blood pressure and are taking Amlodipine.
