Setting Trust Certificates on iPhone Solution

For Educational and Business e-mail Accounts
If you get the "**Cannot Verify Server Identity**" message

**Pending on what version you have for iPhone for solutions listed below:
Recommend for Educational and Work e-mail accounts**

Solution One:

Only set your **iCloud e-mail account on the Apple settings e-mail.
Remove the rest of any other mail setup on your iPhone except your iCloud
account.** Set the rest of your **e-mail accounts** by using mail named app through the
Apple store and download the apps and setup on your iPhone.

Exchange account- **Outlook App**
Gmail account-**Gmail App**
AOL account- **AOL. App**
Yahoo account – **Yahoo Mail App**
Hotmail account -**Millburn App**

Solution Two:

On your iPhone, tap on **Settings**, then tap on **General,** tap on **About,** and then scroll
down and tap on the **Certificate Trust Settings.**
Next, there is a section called "**ENABLE FULL TRUST FOR ROOT CERTIFICATES**".
turn on the **trust for the certificate**.

Solution Three:

Tap on the **details** of the "**Cannot Verify Server Identity**" **menu**, that pop up on iPhone
with the error message, and tap on the **Red Trust** link, in the right corner of the
certificate menu and close the certificate.
