

The System was unable to unlock local Keychain

The system was unable to unlock your **login keychain**. Next, tap on the **Update keychain Password** button, and type your earlier **SHU password**.

Message appears to unlock local items and **no password you type in works**.

Select the **Cancel button**, or the **OK button**, until the menu closes.

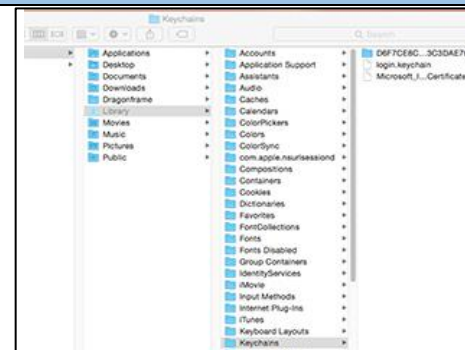

If the iMac keeps asking for Keychain password

Select on the **finder menu**, which is found on top of your desktop. (If the finder menu is not showing up, select one time with your mouse on the desktop, until finder menu appears. Under the **Go** menu you need to open your Library folder.

Simultaneously select the **Option key** on the keyboard, from the **Go menu** until the **library folder** appears from the drop-down menu. Select your **Library** folder. Next, select your **keychains folder**.

Move to the Trash

Move all the **folders**, and **files** from the **Keychains folder** to the trash. **Empty** the trash can.
