

Citizen Science and Policy Development to Reduce Environmental Exposures and Foster Environmental Justice

Monday, June 14 from 1245 - 1345 pm.

Dr. Ellen Hahn is an environmental health nurse researcher from the University of Kentucky College of Nursing. Her work on tobacco control changed policy so that cigarettes, cigar, and vaping use was banned in restaurants, bars, and other public venues in Kentucky. At the time, it was the largest tobacco-producing state in the country. While she still focuses on tobacco control, she is now researching the effects of radon. Dr. Hahn is on the OHN advisory board for the Deep South Center for OHS, is the OHN Director for the Central Appalachian ERC, and will be speaking next week via ZOOM at the UAB SON PhD Program Intensive.
