### Precast Prestressed Concrete Pavement (PCPP) Demonstration Showcase Routes 40 and 896 Intersection, Newark, Delaware May 21 & 22, 2009

The Delaware Department of Transportation (DelDOT) hosted an audience of some 130 at a two-day workshop and nighttime demonstration of the developing PCPP technology, also referred to as Precast Concrete Pavement Systems (PCPS). The Delaware T<sup>2</sup> Center and the Florida T<sup>2</sup> Center coordinated logistics for the workshop and demonstration, which was funded by Federal Highway Administration's Highways for Life program.

Attendees included visitors from across the country, as well as engineering students from the American Society of Highway Engineers at University of Delaware (ASHE at UD). For more photographs of the workshop at Embassy Suites and the nighttime construction demonstration, see the photo overlay file, which should launch automatically if you have Google Earth installed on your computer.

If you have any questions about the PCPP demonstration or other Delaware T<sup>2</sup> events, browse our website (<http://www.ce.udel.edu/dct/t2/t2.htm>) and contact us at (302) 831-4094.
