

**Postdoctoral Researcher, Chemical and Biomolecular Engineering, University of Delaware**

**Doctor of Philosophy, Chemical and Biomolecular Engineering, Rice University**

Thesis Title: *“Investigation of Interfacial and Rheological Properties of Asphaltenes at Solid-Liquid and Liquid-Liquid Interfaces”*

**Bachelor of Science, Chemical Engineering, National Taiwan University**

**Research Interest:**

**Microfluidic Investigation on Stability of Colloidal Suspensions in Viscoelastic Fluids**

Colloidal products take the form of freshening sprays, detergents, cosmetics, and various other forms. These products, which are encapsulated particles/emulsions, must be delivered properly under flow (e.g. through a high-shear spray nozzle). I intend to use microfluidics to create a well-controlled platform for studying various physicochemical conditions relating to the flow of encapsulated particles/emulsions in viscoelastic fluids.
