*Prescription drugs includes steroids, over-the-counter medication, prescription uppers (diet pills, Ritalin, Concerta, Adderall), downers (Xanax and other benzodiazepines) and painkillers.

Certain zip codes were combined to protect the confidentiality of the participating schools and districts.

The prevalence rates in this map represent valid cases, which for this purpose means that the participants included their zip code on their response and indicated whether or not they used the referenced substance. It is important to note that in instances where the total responses were less than 30 per zip code, the prevalence rate is not reported.
