Findings

Two thirds of the clients admitted to publicly funded substance use treatment (n=7,727) in 2018 lived in urban areas.

Individuals in Publically Funded Substance Use Treatment: Rural & Urban, 2018

- Urban: 67%
- Rural: 33%

**Engagement with Social Support Programs, NA and AA**

- Clients from urban areas were more likely to state that they had accessed social support programs, like NA and AA, than clients from rural areas.
- Of clients that reported they had engaged in social support programs, clients from urban areas reported more frequent attendance of social support programs than clients from rural areas. More clients from urban areas reported attending 12-30 times in the past month.

**We Learned...**

1. Few differences but....
   Initial analyses did not show many differences in substance use treatment between rural and urban clients. This can perhaps be attributed to Delaware’s small geographic area, how the geographical regions were operationalized, or gaps within the data.

2. ...Heroin and Other Opiates
   Of note, there were differences in reported heroin use and opiate use at time of admission for rural and urban settings. Data indicated that heroin and opiate use was higher among clients in rural areas.

3. ...And Social Support
   More clients from urban areas reported that they frequently engage with social support programs than clients from rural areas. This could be due to more availability of social support programs in urban areas.

4. Next Steps:
   Further analysis will be done to determine what may be leading to differences in treatment settings for urban and rural populations and whether this difference persists despite the system-wide changes taking place.

Introduction

- The opioid epidemic has led to increases in state and federal funding to provide additional substance use treatment.
- Prior research shows that geographic location may influence treatment accessibility.
- Limited data exists on who accesses treatment and at what rates.
- This poster highlights who accessed publicly-funded substance use treatment in both rural and urban areas.
- Using the Social Ecological Model, we hypothesize that access to treatment will vary by geographic area.
- Delaware has embarked on a system change to increase access to care at multiple points of entry. Further analysis will be done to determine if this had an effect on treatment setting disparities and the availability of support programs.
- This analysis adds to the research on substance use and treatment access based on geographic area.

Methodology

**Client Level Data**
- Client Level Treatment Data is collected through the Consumer Reporting Form (CRF) which asks questions about demographics, substance use, and mental health.
- Data are from publicly funded substance use treatment providers in Delaware, funded through Delaware’s Division of Substance Abuse and Mental Health.
- Data are collected at entry and discharge. The time between the two data points varies based on treatment and client. Some clients have multiple treatment admissions and discharges during this timeframe.
- Data are geocoded using the person’s zip code.

**Rural & Urban**

- "U.S. Census Bureau identifies two types of urban areas: 1. Urbanized Areas (UA) of 50,000 or more people, 2. Urban Clusters (UC) of at least 2,500 and less than 50,000 people. Rural encompasses all population, housing, and territory not included within an urban area."
- Zip codes from the data were matched to their census areas. In areas with multiple census tracts of both rural and urban designations, the majority designation was chosen.

**Timeframe**
- Data from substance use treatment admissions between January 1, 2018 and December 31, 2018.
- Data are collected at entry and discharge. The time between the two data points varies based on treatment and client. Some clients have multiple treatment admissions and discharges during this timeframe.

**Substance Use Treatment Data**
- Any client admitted for co-occurring substance use and mental health treatment were excluded in this analysis.

**Who is Accessing Publicly-Funded Treatment in Rural and Urban Environments?**

Funding for this project has been provided by the Department for Health and Social Services, Division of Substance Abuse and Mental Health-State of Delaware through a grant from the Substance Abuse and Mental Health Services Administration (SAMHSA T081735).
