

# Healthy and Complete Communities in Delaware: The Walkability Assessment Tool

This three step process will help you assess the walkability of your community. Complete all steps of the assessment to increase the likelihood that your town will benefit from the process!

## Step One: Preparing for the Walk and Workshop

Use the Pre-Assessment Questionnaire to establish goals and objectives.

Communicate healthy-communities concepts to local officials and encourage strategic thinking.

## Step Two: Let's Get Walking

Now it's time for an "in the field" assessment. Plan and facilitate a walk to assess walkability.

Use the Walkability Checklist to evaluate your community with the Walkability Rating Scale.

## Step Three: Path Forward

Collaborate to initiate plans, policies, and programs to enhance walkability.

Use results to help you prioritize issues and develop ways to address identified areas for improvement.
