

JOIN THIS UNIVERSITY OF DELAWARE STUDY FOR HEALTHY PERI-MENOPAUSAL WOMEN AGE 40 to 55

Receive up to \$400 and free health test results

[GET IN TOUCH](#)

Researchers at the University of Delaware are conducting a research study for healthy women age 40 to 55 who are entering menopause (peri-menopausal).

The purpose of this study is to understand how changing estrogen levels affect women's blood vessel function as they transition into menopause.

There will be a total of 5 visits in Newark, Delaware and participants will perform some activities at home.

All participants will be provided financial compensation plus the results of a standard physical exam.

DO I QUALIFY?

You may be eligible to participate if you...

- Are a healthy woman age 40 to 55
- Are experiencing irregular menstrual cycles or other symptoms of menopause
- Do not use hormonal birth control or hormone replacement therapy (i.e., you are not taking the pill, using a hormonal IUD, or receiving treatment for hot flashes)
- Do not smoke
- Do not have high blood pressure, heart disease or diabetes
- Can attend visits in Newark, Delaware

WHAT IS INVOLVED?

- Total of 5 visits
- Initial health screening visit at UD
- Visits 2 and 5 at RAD Fertility in Newark (pre/post-screening)
- Visits 3 and 4 at UD lab (assessments of blood vessel function)
- Self-administering a daily injection of hormone-regulating medication (Antagon) at home for 10 to 12 days
- Wearing an estrogen or placebo patch for 7 days

WHY PARTICIPATE?

- Receive up to \$400
- Receive the results from a standard physical exam
- Help UD researchers understand estrogen's effect on blood vessel function
- Free parking for all study visits
