Young Healthy Volunteers Needed for Research Study

Examining How the Brain Senses Salt in Young Healthy Men and Women

Who? 18–35-year-old healthy men and naturally-cycling women not using hormonal contraceptives.

What? High salt infusion and functional magnetic resonance imaging (MRI) scan
(3 experimental visits; 4.5 total hours’ time commitment)

Where? Visits 1 and 3: Center for Biomedical and Brain Imaging
Visit 2: Nurse Managed Primary Care Center in STAR

Participants will receive compensation for participating.
Participants will also receive the results of a physical screening.
