

Children ages 7-17 needed for a blood vessel function study!

A University of Delaware Cardiovascular Research Laboratory is conducting a research study to evaluate blood vessel function in healthy children between the ages of 7 and 17.

Participants will be asked to complete tests including but not limited to: noninvasive blood vessel testing including ultrasound imaging and a blood sample.

This study only requires 2 visits to the STAR Health Sciences Complex at UD and participants will be compensated for their time (~2.5 hours).
