

WISCONSIN FALCONWATCH 2008 NESTING SEASON REPORT

© Greg Septon 2008

***"Lily" (b/g) 56/A** hatched in 2001 at the Firststar Bank in Cedar Rapids, IA
has nested at the Racine County Courthouse since 2002
producing a total of 17 chicks.*

Wisconsin tied last year's production with a known total of 81 young produced at 27 successful (young produced) nest sites. Twelve nests were located along the Lake Michigan shoreline, 4 along the Fox River, 2 along the Wisconsin River, 8 along the Mississippi River (4 on cliffs) (*source RRP web site*), and 1 inland at Jefferson. The following pages provide an overview of successful nests, active sites, observations and failed nests throughout the state as well as information about Wisconsin-produced peregrines nesting in other states.

LAKEFRONT NEST SITES

Pleasant Prairie: We Energies Pleasant Prairie Power Plant (P4)

Nesting Details

Adult Female: “Breezer” (b/r) *R/*2 was wpr in 1998 at the US Steel site in Gary, IN. This is Breezer’s 10th year at P4.

Adult Male: “Duke” (b/r) 1/*P is a 1998 falcon produced at Milwaukee’s Landmark on the Lake site.

Eggs: 5 Laid between March 13 – 23

Projected Hatch Dates: April 22 – 26

Eggs Hatched: 5 Between April 26 – May 2

Banded: 1 Female and 3 males on May 16

This site has been active since 1997 and has produced a total of 37 young (3.08/year). Once again this was the first site known to produce eggs in the state with the first laid on March 13th.

Banding Data

Name	Sex	Color Band	USFWS Band
Lex	Female	S/53	1687-02106
Remmie	Male	E/53	2206-84680
Bob	Male	E/54	2206-84681
Light	Male	E/55	2206-84682

Above: Breezer perched
At her nest box

Left: Breezer’s 4 chicks
on banding day

Below: A portrait of Duke

Kenosha: United Hospital System, Kenosha Medical Center

Nesting Details

Adult Female: "Blessing" (b/g) W/17 was wpr in 2006 at the Mayo Clinic site in Rochester, MN - back for her 2nd year.
Adult Male: "Aaron" (b/g) 80/H, a 2002 West Milwaukee ADM (*Froedtert*) produced falcon is back for his 3rd year.

Eggs: 4 Laid between April 1 – 12
Projected Hatch Dates: May 14 – 16
Eggs Hatched: 2 on May 17 – 18
Banded: 1 Female & 1 male on June 5

Above left: Aaron
Above right: Blessing
Below: Sheri & Caesar

NOTE: Blessing W/17 was found dead in downtown Kenosha on July 21.

This site has been active since 2006 producing a total of 7 young (2.33/year).

Banding Data

Name	Sex	Color Band	USFWS Band
Sheri	Female	98/D	1687-01826
Caesar	Male	H/58	2206-84575

Racine: Racine County Courthouse

*Left: Lily protecting her 3 offspring
Above: Beaster perched atop the
Courthouse ledge*

Nesting Details

Adult Female: “Lily” (b/g) 56/A hatched in 2001 at the Firstar Bank in Cedar Rapids, IA is back for her 7th year.

Adult Male: “Beaster” (b/g) 67/M hatched in 2005 at We Energies Pleasant Prairie Power Plant.

Eggs: 4 Laid between March 30 – April 5

Projected Hatch Dates: May 6 – 8

Eggs Hatched: 3 Between May 6 – 8

Banded: 2 Females & 1 male on May 27

This site has been active since 2002 producing a total of 17 young (2.1/year).

Banding Data

Name	Sex	Color Band	USFWS Band
Laurel	Female	S/56	1687-02109

Oak Creek: We Energies Oak Creek Power Plant

Nesting Details

Left: This year's lineup.....

Above: Atlanta perched in front of her new nest box

Adult Female: Atlanta (b/r) L/*C was wpr in 1996 at the WPS Pulliam Power Plant site in Green Bay, WI. This is Atlanta's 10th year at this site.

Adult Male: "Scott" (b/g) M/Y, here for his 3rd year was wpr in 2000 at the ADM Malting complex (*formerly Froedtert Malt complex*) in West Milwaukee, WI.

Eggs: 4 Laid between April 15 – 22

Projected Hatch Dates: May 24 – 26

Eggs Hatched: 4 Between May 21 – 25

Banded: 1 Female and 3 males on June 16

NOTE: This year, great horned owls took over the peregrine's nest box in January and fledged 2 young in April. A second nest box was installed in March and the peregrines moved into this box immediately after the young owls fledged.

This site has been active since 1998 producing a total of 38 young (3.5/year).

Banding Data

Milwaukee: US Bank (formerly Firststar Center)

Left: "Maya" (b/g) M/12 replaced last year's female "Jean" (b/g) 19/C who moved to the We Energies Valley Power Plant nest site in Milwaukee
Above: Maya's 3 youngsters

Nesting Details

Adult Female: Maya (b/g) M/12 was born in 2006 at the WPS Weston Power Plant in Rothschild, WI. This is her first year at this site.

Adult Male: Unidentified but banded b/g

Eggs: 4 Laid between March 28 – April 3

Projected Hatch Dates: May 4 – 6

Eggs Hatched: 3 Between May 6 – 8

Banded: 3 Males on May 27

NOTE: Interestingly, Maya was also recorded on the web cam at the U.W. – Milwaukee EMS site during her incubation period.

This site has been active since 2002 producing a total of 17 young (2.4/year).

Banding Data

Name	Sex	Project Band	USFWS Band
Seth	Male	E/59	2206-84686
Charlie	Male	E/62	2206-84618
Ottie	Male	E/63	2206-84619

Milwaukee: Miller Brewery

Left: Herbert (b/g) 80/N
Above: The unbanded adult female
Below: Their 3 young

Nesting Details

Adult Female: Unbanded but believed to be the same as in past years.

Adult Male: “Herbert” (b/g) 80/N, produced in 2004 at the We Energies Valley Power Plant in Milwaukee - back for his third year.

Eggs: 4 Laid between March 26 – April 1

Projected Hatch Dates: May 2 – 4

Eggs Hatched: 4 Between May 4 – 5

Banded: 1 Females & 2 males on May 27

This site has been active since 2002 producing a total of 20 young (2.9/year).

Milwaukee: Hoan Bridge/Milwaukee Municipal Sewerage District (MMSD)

Nesting Details

Adult Female: Unbanded

Adult Male: “Hoffmann” (b/g) 54/M,
produced in 2003 at the Edgewater
Generating Station site in Sheboygan,
WI.

Eggs: At least 2 between April 5 – 7

Eggs Hatched: 2 Between May 8 – 9

Banded: 1 Female & 1 male on June 4

Above laying and hatch dates are estimates

Left: The 2 youngsters at MMSD

*Above: The unbanded adult
female*

NOTE: This is considered the Hoan Bridge/MMSD/Jones Island territory. Peregrines nested on the Hoan Bridge in 1999 and at MMSD this year. The MMSD building and nest box is directly west of and adjacent to the Hoan Bridge.

NOTE: On July 17th, an unbanded adult female peregrine was found injured on the Hoan Bridge and was likely the female from this site. Injuries were such that she had to be euthanized.

Left: Raynie
Center: Bella & Malty
Above: The last photo I took of Leopold

Nesting Details

Adult Female: "Raynie" (b/r) A/*H, a 1995 wpr falcon from Chicago. This is Raynie's 11th year at this site.

Adult Male: "Leopold (b/r) C/D, a captive-produced peregrine released at Pleasant Prairie, WI in 1992 and present here since 1994.

Eggs: 4 Laid by April 17

Projected Hatch Dates: May 18 – 20

Eggs Hatched: 2 on May 21

Banded: 1 Female & 1 male on June 6

NOTE: Leopold was injured in a wire collision on June 29th and subsequently euthanized. In his 16 years he fathered an impressive 42 young.

This site has been active since 1995 producing a total of 40 young (2.9/year).

Kewaunee: Dominion Kewaunee Nuclear Power Plant

A peregrine was first seen here in late February by Craig Long. On June 23rd he witnessed both adults looking after two fledged young that appeared to be males.

Plans are still being considered to move the nest box from atop the containment dome to a more manageable and safer location on the corner of the plant roof. Once this is completed, it is hoped banding can continue at this site. No falcons have been banded at this site since 2005.

This site has been active since 2001 producing a total of 17 young (2.1/year)

FOX RIVER NEST SITES

Green Bay: WPS Pulliam Power Plant

Nesting Details

Adult Female: “Beth” (b/g) 25/B, produced in 2003 at the Midwest Generation Power Plant in Waukegan, IL.

Adult Male: Believed to be (b/g) **45/H** who was wpr in 2001 at the Grand Haven L., Sims Plant site in Grand Haven, MI but no positive ID.

Above: The 2 Pulliam chicks at 5 days of age

Eggs: 3 Laid between March 23 – 27

Projected Hatch Dates: April 30 – May 2

Eggs Hatched: 2 Between May 4 – 5

Banded: 1 Female and 1 male on May 24

This site has been active since 1996 producing a total of 40 young (3.07/year).

Banding Data

Name	Sex	Project Band	USFWS Band
Jocasta	Female	S/54	1687-02107

Green Bay: Georgia Pacific Mill **NEW SITE**

Nesting Details

Adult Male: Banded b/g
Adult Female: Unbanded

Eggs: 2 Laid between May 14 – 15

Eggs Hatched: 1 on June 17

Banded: 1 Female on July 9

Above laying and hatch dates are estimates

Note: The peregrines at this new site nested atop an old silo in the midst of a demolition project. Once the falcons were spotted, the project was halted and will not be resumed until after Labor Day in order to allow the falcons to complete their nesting season. In the meanwhile, plans are underway to construct a nest box on a nearby safe structure.

FAILED NEST SITES

Milwaukee: We Energies Valley Power Plant

A lone adult male spent a good portion of the winter and spring at this site finally attracting a mate in mid-May who I identified as “Jean” (b/g) 19/C, the female that nested at Milwaukee’s US Bank (USB) site last year.

Although the 3 eggs that were laid restored hope for this site, in the end they failed to hatch. I still believe the adult male here is also paired with the new female at the nearby USB site. Once the eggs hatched at the USB site, the male spent less time at VAPP leaving Jean on her own to hunt and may be the reason the eggs failed to hatch. Interestingly, Jean was his mate last year at the USB site and produced 4 young there.

Left: Jean’s three eggs

Above: Jean does a close fly by when we visited the nest on May 16

Nesting Details

Adult Female: Jean (b/g 19/C) was wpr in 2005 at the Evanston Library site in Evanston, IL. This is Jean’s 1st year at this site.

Adult Male: Banded b/g

This site has been active since 2002 producing a total of 17 young (2.4/yr.)

Eggs: 3 Laid between April 21 – 26

Nest Failed

ACTIVE/NON-PRODUCTIVE SITES

Racine: Racine Quarry

After 2 falcons were found dead near this site last spring, I made an effort to look for activity here this season. On March 28th I saw a sub-adult falcon sail by and disappear into the quarry. On April 14th I saw a single falcon as well but on subsequent visits of April 23, May 9, and May 16, I found no falcons. I spent several hours this spring glassing and scoping the best looking ledges and walls but aside from spotting a cliff nesting pair of Canada geese, I saw no signs of nesting peregrines. Although a pair could have nested, its always possible I missed finding the nest so I will try again next year.

Milwaukee: Mayfair Mall

Peregrines have been seen in this area on and off for years but this year in late March I received word from raptor biologist/bander Bill Stout that he had seen a pair of falcons on the north mall tower. When I drove over for a look the next day, I found an adult male and an immature female perched on the NE corner of the tower. Throughout the spring I continued to see this pair and thus contacted the mall management. By May 1st a nest box was in place and as of last week, the adult male was still present. Interestingly, a pair of Red-tailed hawks nested in a stick nest they built on the top level of the west face of the south mall tower.

Milwaukee: UW-Milwaukee, EMS Building

Peregrines were observed here last spring and a nest box with a web cam was subsequently installed. The first activity in the nest box was recorded on March 13th. Although numerous falcons were observed here, one male seems to have held onto this territory all spring. He was captured on the web cam many times and is **"JJ" (b/g) 96/N**, a male produced in 2005 at the Renew Energy, LLC (*formerly Cargill Malt Complex*) in Jefferson, WI.

Other individual falcons documented at this site include:

1. **"Sheba" (b/g) W/14**, produced in 2006 at the Colonade Golden Valley site in Hennepin, Co., MN
2. **"Maya" (b/g) M/12**, born in 2006 at the WPS Weston Power Plant in Rothschild, WI
3. An unbanded full adult female
4. An unbanded immature female beginning her first adult molt
5. An unbanded immature female
6. An unbanded juvenile male

Hopefully, this site will be successful next spring!

Two Rivers: Fisher Hamilton (FH) Complex

After last year's failed nest here, a nest box was installed atop the main office building. A pair of falcons was observed here in early February, then only a female was seen during March and although two falcons were observed here in April, no nesting attempt was made. Like last year, there is a huge gull population in the area and they are nesting on every available flat roof.

Neenah: Thermagen Power (formerly Minergy Glass Aggregate Plant)

Once again, a number of peregrines were observed here this spring according to Jan Schmidt. There was no tracking cam at the nest box this year so none of the visiting falcons were identified and unfortunately, none nested.

MISSISSIPPI RIVER NEST SITES

For additional information on the Mississippi River nest sites check out the **Raptor Resource Project (RRP)** web site at: www.raptorresource.org/

WISCONSIN PRODUCED PEREGRINES NESTING IN OTHER STATES

Over the past 20+ years we've had numerous Wisconsin-produced peregrines survive and nest in other states. This year Wisconsin peregrines were identified in the following states: IL (M. Hennen), IN (J. Castrale), OH (OH DNR web site) and PA (W. PA Conservancy web site). Although there are likely others that have yet to be identified, following is known information on Wisconsin-produced peregrines that nested or were identified in other states for 2008:

ILLINOIS

"Auntie Em" (b/g) 5/*P, a female produced at Milwaukee's Landmark on the Lake site in 1999 paired with male Tracy (b/g) *P/M who was produced at the Broadway site in 1997. The pair nested at 5821 N. Broadway, in Chicago producing 3 young.

"Emily" (b/g) 5/*E, a large male banded as a female who was produced at the We Energies Oak Creek Power Plant in Oak Creek in 2000 paired with "Hercules" (b/r) *D/W produced in Minneapolis, MN in 1997. The pair nested at the Metropolitan Correctional Center site in Chicago producing 3 young.

"Rosie" (b/r) *6/D, a female produced at Milwaukee's Landmark on the Lake site in 1997 paired with an unbanded male at the University of IL Chicago site and produced 3 young.

"Fran" (b/g) 5/*X, a female produced at Milwaukee's Hoan Bridge site in 1999 paired with an unidentified male at the Waukegan site producing 5 young.

"Bryanne" (b/g) 9/*Y, a female produced at West Milwaukee's ADM (*formerly Froedtert Malt*) site in 2000 was picked up by Animal Control on May 6 and later died. Her mate (b/g) L/N produced at Chicago's Broadway site in 2000 abandoned the site and 2 eggs were retrieved. The pair nested at Chicago's Pilson Park site.
