

# Institute for Public Health Summer Research Program

Our Summer Research Program is open to students who seek challenge, research and experience in one of three tracks. During this eight-week program, students work with a mentor, engage in research, attend workshops and seminars led by experts, and gain the opportunity to grow academically in a diverse environment.

## AGING & NEUROLOGICAL DISEASES

### AGING & NEUROLOGICAL DISEASES

Through this track, students learn about three neurological conditions and diseases that often interplay with the aging process: stroke, Parkinson's disease, and dementia. Participants work in research labs and centers focused on these issues.

## PUBLIC & GLOBAL HEALTH

### PUBLIC & GLOBAL HEALTH

Students gain knowledge, conduct real-world practice and research, receive career counseling and build a network of colleagues while collaborating with public health, global health and pediatric faculty, St. Louis community professionals, and each other.

### CARDIOVASCULAR DISEASE & HEMATOLOGY

Undergraduate and health professional students learn about the broad scope of cardiovascular disease and hematologic disorders and their interdisciplinary and multidimensional impact.

## RADIANCE
