
MODEL 4: Ceiling Projector with HDMI and User Computer

This model has a ceiling projector that must be connected to your computer when using. There are only a few rooms that have this system due to the dynamics and use case of the rooms.

Example: Use this in a critique or studio classroom to make presentations with a variety of tools. Use the control panel on the wall to turn the system on and off. The controls will turn the projector on, lower the screen and connect the speaker to your computer via the HDMI cable. This model is located in Bixby Hall 214 and Walker Hall 050.

Visual of room and various components

- 1 Projector
- 2 Control Panel
- 3 HDMI Cable*

***Note:** Sam Fox IT only provides connection adapters to faculty. If you do not have one submit a help desk ticket.

Technology Set Up

- A: Turn on the projector at the wall control panel.
- B: Connect your computer to the HDMI cable (Use a connector for thunderbolt if needed).
- D: Ask students in room to mute sound and mic on laptops or other electronic devices if they are also connecting to a Zoom while in-person.

Reminders

- The TV Cart needs power to run all items on the cart.
- If you need to connect your computer to the TV that already has a computer on it, you must use the HDMI 2 setting.
- Disinfect surfaces you have touched and tech at end of each class with cleaning supplies in the room.
