

Note:

This protocol is modeled on the protocol in the McDermott, K.B., Petersen, S.E., Watson, J.M. & Ojemann, J.G. (2003) *Neuropsychologia* paper, *A procedure for identifying regions preferentially activated by attention to semantic and phonological relations using functional magnetic resonance imaging*.

Although the lists and presentation orders used in the Lexical Processing fMRI Protocol are those used in the McDermott et al. paper, the duration times printed in the packet may differ from the duration times of the McDermott et al. experiment. The Powerpoint presentations are meant to provide a demonstration of the programs used in the actual experiment.

For information on exact presentation durations and details regarding the experiment, please see:

McDermott, K.B., Petersen, S.E., Watson, J.M. & Ojemann, J.G. (2003).
A procedure for identifying regions preferentially activated by attention to semantic and phonological relations using functional magnetic resonance imaging. *Neuropsychologia*, 41, 293-303.
