2015 Ohio Dairy Enterprise Analysis Summary

This document contains summary information for 39 dairy farms with 40 dairy enterprises that participated in the 2015 Ohio Farm Business Analysis and Benchmarking Program. These farms provided detailed financial and production information in order to complete a whole farm financial analysis and enterprise analysis for their dairy and crop enterprises.

Data for more than 12,600 cows are included in this year's summary, representing nearly 5% of Ohio's dairy herd. Herd size ranged from 30 to more than 1,200 cows with three herds milking more than 1,000 cows. Thirty-seven of the dairy enterprises were managed conventionally, and three were managed organically. Three of the conventional dairy enterprises utilized robotic milkers.

2015 was a challenging year for many Ohio dairy farmers, and a stark contrast to 2014 which was characterized by strong milk markets and record high prices. Increased milk production stimulated by strong export markets and record-breaking milk prices in 2014 resulted in increased milk production which struggled to find buyers as export demand declined followed by a dramatic decline in milk price.

Milk Prices

Most Ohio dairy farmers market their milk in Federal Order 33. The Class III milk price averaged \$15.80 per hundredweight (cwt.) for the year (Table 1), \$6.54 per cwt. lower than 2014. The Producer Price Differential (PPD) averaged \$0.44 per cwt. for the year, down from \$0.82 per cwt. the year before, resulting in an average Statistical Uniform Price (SUP) of \$16.24 per cwt. in 2015. The 2015 SUP was \$6.93 per cwt. lower than 2014, a 30% decline from 2014's average of \$23.16 per cwt.

Table 1: 2015 Monthly and annual average per cwt. milk prices for Federal Order 33

2015													
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	Avg
Class III	16.18	15.46	15.56	15.81	16.19	16.72	16.33	16.27	15.82	15.46	15.30	14.44	15.80
PPD	0.49	0.31	-0.03	-0.11	-0.21	-0.46	-0.17	-0.22	0.95	1.13	1.85	1.69	0.44
SUP	16.67	15.77	15.53	15.70	15.98	16.26	16.16	16.05	16.77	16.59	17.15	16.13	16.24
MPP	8.33568	7.65539	7.52618	7.48212	7.83000	8.15831	7.44659	7.94360	8.94909	9.21504	10.01471	9.099397	8.304676
2 month avg	7.99554		7.50415		7.99500		7.69510		9.08207		9.55705		
less 7.3% sequestration deduction													
Class III @ 3.5% BF = Class III													
Producer Price Differential = PPD													
Statistical Uniform Price = SUP													
Margin Protection Program = MPP													

The Statistical Uniform price represents the base price every dairy farm selling Grade A non-organic milk in Federal Order 33 would receive plus or minus component, somatic cell, and/or any quality or quantity adjustments. The average milk price received by the 37 conventionally managed dairy enterprises in 2015 was \$18.39 per cwt., ranging from \$13.24 to \$24.63 per cwt. The 3 organically managed herds received an average milk price of \$36.51 per cwt.

Record Low Net Returns in 2015

2015 net return per cow was extraordinarily low, averaging \$36.42 per cow, before a labor and management charge, for all herds. This average net return is the lowest in 5 years of Ohio data (Table 2).

Table 2: Comparison of total cost of production per cwt. and net return per cow, 2011 - 2015

	2011	2012	2013	2014	2015
Average of all herds:					
Total cost per cwt ¹	\$20.23	\$18.76	\$19.21	\$20.42	\$18.21
Net return per cow ²	\$317	\$231	\$544	\$1,266	\$36.42
Average of High 20%³:					
Total cost per cwt ¹	\$16.88	\$15.38	\$16.04	\$18.14	\$15.28
Net return per cow ²	\$1,290	\$1,145	\$1,501	\$1,976	\$905.48

¹Total cost per cwt. including revenue adjustments (income from cull cows, bull calf and other animal sales) before labor and management charge.

²Before a labor and management charge

³Farms sorted by net return per cow

We typically see a large range in net return per cow among the farms in the analysis with this year's surpassing \$4,200 per cow (Table 3) ranging from a loss of \$1,983 per cow to a net return of \$2,234 per cow.

If we consider only the 37 conventionally managed herds, the average net return drops to a loss of \$91.92 per cow. Fully half of the conventional herds (19 of 37) experienced a negative net return per cow with 2 additional herds generating less than \$100 per cow. Those conventional herds that generated positive net returns averaged \$450 per cow. The conventional herds that experienced a net return of less than zero experienced an average loss of \$605 per cow.

Table 3: Average of all farms, range, and average of the high 20% for selected factors for 40 Ohio dairy enterprises, 2015

	Average of 40 farms	Range	Average of High 20% ¹
Number of Cows	323	30 – 1,200+	297
Milk sold per cow	24,569	11,950 – 30,947	26,504
Feed cost per cwt of milk²	\$11.88	\$ 8.71 – \$19.15	\$10.42
Total cost per cwt³	\$18.21	\$14.40 – \$26.30	\$15.28
Net return per cow⁴	\$36.42	(\$1,983) – \$2,234	\$905.48

¹Farms sorted by net return per cow, 8 farms.

²Includes feed costs for mature cows and raised replacements excluding custom raised heifers if feed is included in the custom raising charge. All raised feed is valued at total cost of production including a labor and management charge.

³Total cost per cwt. including revenue adjustments (income from cull cows, bull calf and other animal sales) before a labor and management charge.

⁴Before a labor and management charge.

Herd Size

All herds averaged 323 cows, with herd size ranging from 30 to more than 1,200 cows. While the average numbers for all herds together are interesting, they have limited value when comparing performance of an individual herd with this broad range in herd sizes. To provide meaningful information for herds of different sizes, enterprise summaries per cow and per cwt were generated for herds with 50 to 100 cows, 100 to 200 cows, 200 to 500 cows, and herds with more than 500 cows. Benchmark reports were also generated for different herd sizes for the first time with the 2015 data. Reports are available for herds with 30 to 200 cows, 200 to 500 cows, and 200 to 1,200 cows both per cow and per cwt.

2015 – The Year in Review

Weather - Jim Noel, NOAA/NWS/Ohio River Forecast Center

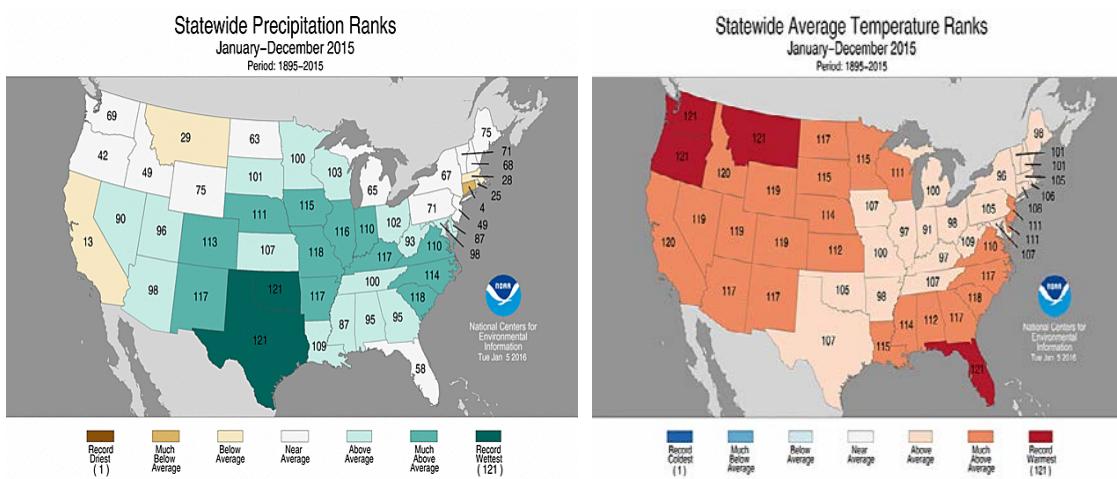

2015 was a wetter and warmer year across Ohio. After a cool 2014 with near normal precipitation, both temperatures and precipitation increased for 2015. It was the 19th wettest year on record in 121 years of recordkeeping, and was also the 23rd warmest year on record.

By season:

Ohio experienced a colder and drier winter in 2015, with it being the 20th coldest and 25th driest winter on record. Moving into spring planting season, Ohio saw temperatures slightly warmer than normal with near normal rainfall. Ohio temperatures ranked 33rd warmest out of 121 years.

By the summer growing season there were some challenges as maximum temperatures were the 20th coolest on record, yet overall temperatures were near normal. With above normal cloud cover and rainfall in summer of 2015, minimum temperatures were the 33rd warmest on record. It was the 7th wettest summer on record.

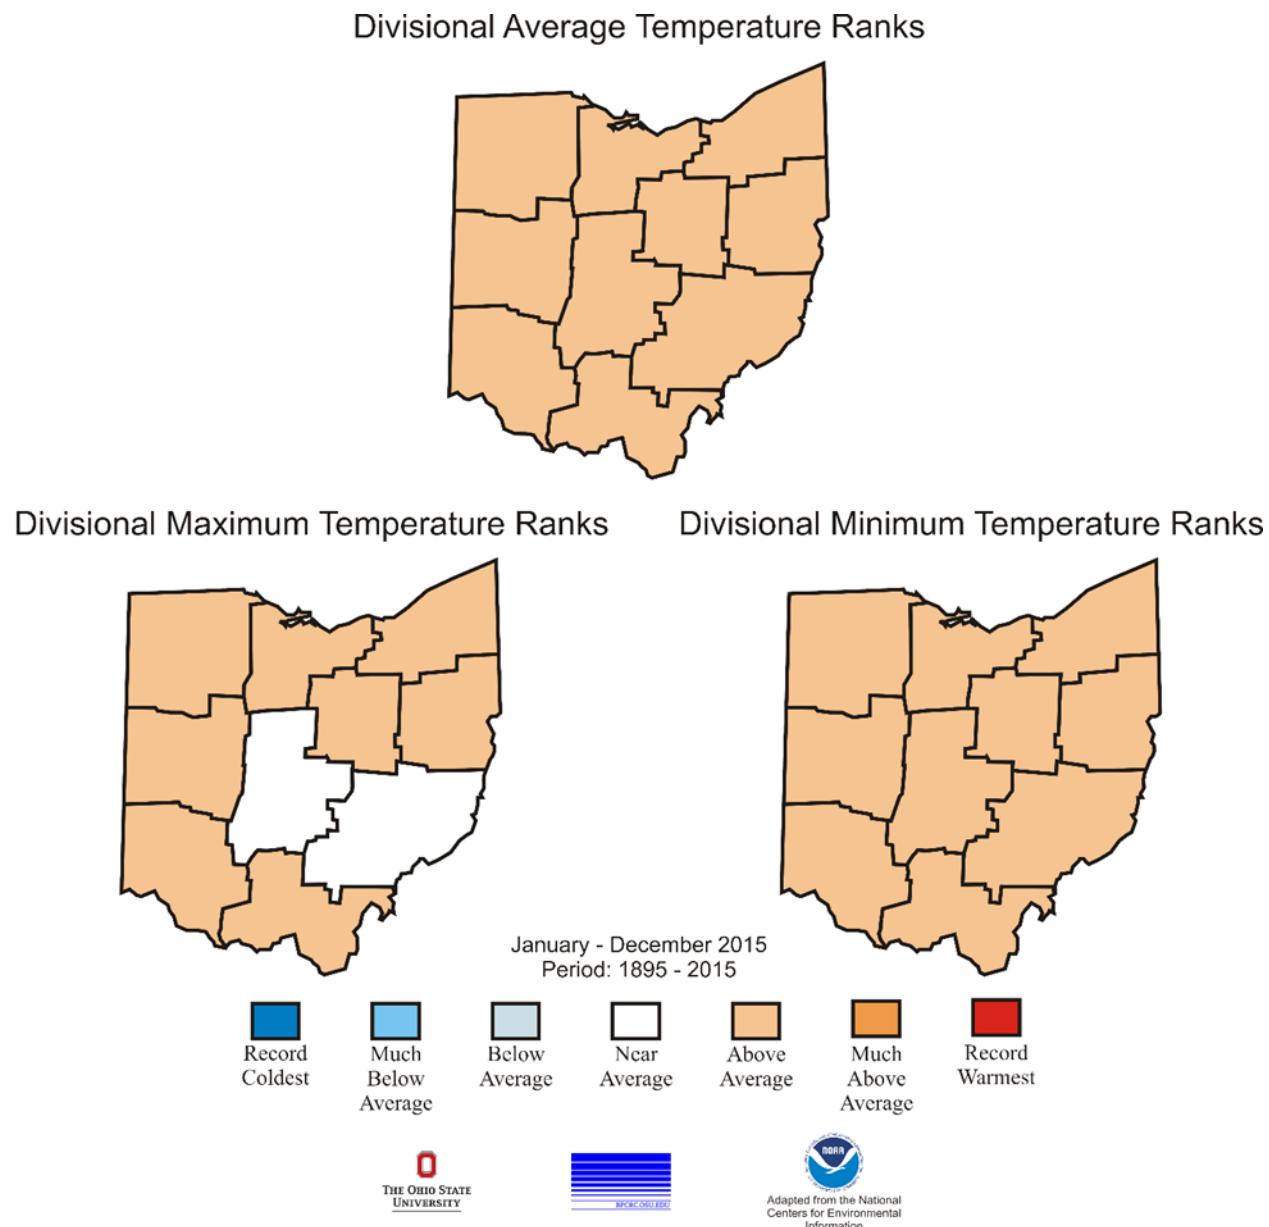

Moving into fall harvest season, the weather was marked by the 2nd warmest fall on record with near normal rainfall. Even though 2015 was warmer and wetter than normal, there were some extremes within those numbers.

Source: National Climactic Data Center

Each year, no matter the statewide weather conditions, at least one of the farms participating in the analysis experiences local weather conditions that cause a steep decline in crop yields. This may cause farms that are otherwise profitable to experience a year of declines in working capital resulting from a decline in raised feed and crop inventories as well as low profitability resulting from higher feed costs. Lower crop yields increase the crops' cost of production as total costs are divided by lower yields. This situation is then compounded by the need to purchase additional feed to compensate for lower raised feed production.

Participating Farms

In 2015, participating dairy farms were located in 15 counties. The majority of farms were located in the northeast part of the state.

Figure 2: Locations of the 39 Ohio dairy farm businesses participating in 2015

Dairy Enterprise Analysis Reports

The Dairy Enterprise Analysis reports show the average physical production, gross margin over purchase costs, direct costs, overhead costs, and net returns on a per cow or per hundredweight (cwt) basis. Information is presented for the average of all farms and the "High 20%" sorted by net return per cow.

Gross Margin is the accrual gross value added by the enterprise. It includes income from sale of offspring and livestock products, cull income, non-cash transfers to other enterprises, and the value of production used in the home or for feed. It also includes the value of the livestock inventory change from the beginning to the end of the year. Inventory changes are calculated using the cost-basis balance sheet, and each farm's per-head values for their breeding livestock inventories are held constant from the beginning through the end of the year. The cost of livestock purchased and the value of any animals transferred in are deducted from gross returns.

Net Return is the amount contributed by a unit of the enterprise toward operator labor, management, and equity capital. Any wages and benefits paid to the operator are removed from labor costs (and added to *Labor and Management Charge*) so that all farms are on equal footing.

Net Return over Labor and Management is the return remaining after compensating the operator for unpaid labor and management. This is the per-unit return to equity capital.

Labor and Management calculation:

Management is calculated at 5% of the Value of Farm Production (VFP)

Labor is valued at \$13.50 per hour for 3,000 hours annually (one operator)

The Value of Farm Production is the farm's total income less the cost of purchased feed.

Example:

$$\begin{array}{rcl} \text{Management at } 5\% * \$950,000 \text{ VFP} & = \$47,500 \\ \text{Labor of } 3,000 \text{ hrs} * \$13.50 & = \$40,500 \\ & \$88,000 \end{array}$$

Cost of Production shows the average cost per unit in each cost category. *Total direct and overhead expense per unit* is the breakeven price needed to cover cash costs and depreciation.

With Other Revenue Adjustments is the breakeven price adjusted for cull sales, other offspring sales, the cost of replacement stock, and any other miscellaneous income. This assumes that some costs can be covered by these other income sources.

With Labor and Management is the final breakeven price to provide a labor and management return for the operator(s).

Other Information contains both economic and technical efficiency measures for the enterprise. Rounding of individual items for the report may cause minor discrepancies with the calculated total

Benchmark Reports

Benchmark reports follow each enterprise summary, both per cow, and per cwt. These reports include information on 36 income, expense, and efficiency measures from the dairy enterprise analyses.

Benchmark reports allow farms to compare their performance against other Ohio farms. Farms that complete an analysis receive benchmark reports personalized for their farm. These reports include their farm's dairy enterprise numbers in a "My Farm" column next to the Group Median column, and the corresponding percentiles are highlighted for each of the 36 items. Managers can quickly see where they are doing well and where they have opportunities for improvement.

The Benchmark reports are generated using the RankEm[©] software from the University of Minnesota's Center for Farm Financial Management. Benchmark reports include the median value (half of the data points were higher, half of the data points were lower – which will frequently be at least slightly different from the average) for each of the 36 income, expense and efficiency measures. For each measure, the corresponding data is sorted from lowest to highest. Then the median value of for each 10% grouping of the data set is sorted into the 10%, 20%, 30%...100% columns of the table.

Each line is calculated separately. In other words, the 10% column does not represent the bottom 10% of all farms, nor does the 100th percentile group include only the top performing farms. An individual farm may be in the 80th percentile for Gross Return, but in the 30th percentile for feed cost. Typically, a farm's values will be scattered in multiple percentile groups (columns) across the chart.

Hired Labor: Hired labor is listed on line 12 (the first line of overhead expenses). Ohio treats hired labor as a direct expense to the dairy enterprise; Minnesota treats it as an overhead expense. While it is listed in these benchmark reports after total direct expenses, it is included in the direct expense total.

Utilities: Utilities are listed on line 15 of the benchmark reports. Ohio treats utilities as a direct expense to the dairy enterprise; Minnesota treats it as an overhead expense. While it is listed in these benchmark reports after total direct expenses, utilities are included in the direct expense total.

Machinery Leases: Not enough farms had machinery leases to include data on these benchmark reports.

Building Leases: Not enough farms had building leases to include data on benchmark reports.

Corn, Corn Silage, and Alfalfa Fed: These numbers do not reflect all of the corn, corn silage, or alfalfa fed on the farms in the analysis. It would include all of the corn, corn silage or alfalfa raised on a farm which was fed in 2015. Purchased corn, corn silage, or alfalfa is often included as a purchased feed cost on some farms.

¹ Hired labor and utilities are included in total direct expenses in the Ohio Summary

Appendix I

Dairy Enterprise Analysis Procedures and Measures

The Dairy Enterprise Analysis shows the profitability of each dairy enterprise including four or more farms.

Gross Margin includes product and livestock sales, cull sales, the value of offspring transferred out of the enterprise, the value of inventory change from beginning to end of year, and any other income assigned to the enterprise. Livestock purchases and the value of animals transferred in from other enterprises are subtracted.

Direct Expenses include expenses that are directly related to the specific livestock enterprise. Feed and most other direct expenses are directly assigned based on farm records. Some, such as Fuel and Oil and Repairs, which are difficult to assign directly to enterprises, are determined by allocating the total annual expense across all enterprises using allocation factors entered for each farm.

Overhead Expenses are also determined by allocating the total annual expense across all enterprises using allocation factors entered for each farm.

Net Return is the Gross Return minus Total Direct and Overhead Expenses.

Net Return over Labor and Management is calculated by allocating the farmer's charge for unpaid labor and management across all enterprises and subtracting it from Net Return.

Estimated Labor Hours is calculated by allocating the farmer's estimate of total operator and hired labor hours for the year across all enterprises.

Cost of Production is calculated by dividing the total expense for each category by Total Production. Cull sales, other offspring sales, and any other miscellaneous income are subtracted and replacement purchases and transfers in are added to arrive at the cost *with Other Revenue Adjustments*.

Cost of Production with Labor and Management is the cost with other revenue adjustments plus the producer's charge for operator's labor and management. This is the breakeven price for the primary product to provide a return for operator labor and management.

The last section of each analysis contains both economic and technical efficiency measures.

Rounding of individual items for the report may have caused minor discrepancies with the calculated totals.
