Table 15. Grasses and Nutsedge—Response to Postemergence Herbicides in Soybeans

This table compares the relative effectiveness of herbicides on individual weeds. Ratings indicate the level of control of weeds present at the time of application, and are based on labeled rate and weed size or growth stage. Postemergence soybean herbicides not listed on the grass or broadleaf section of this table lack significant activity on those weeds.

Weed control rating:

9 = 90% to 100% control 8 = 80% to 90% control

7 = 70% to 80% control 6 = 60% to 70% control

- = less than 60% control, not recommended.

Crop tolerance rating:

0 = Excellent

1 = Good 2 = Fair

3 = Poor

Crop injury of 1 or less is rarely significant.

Performance may be better or worse than indicated in the table, due to weather or soil conditions or other variables.
