

**Table 1. Weed Response to “Burndown” Herbicides**

This table gives a general comparative rating of “burndown” herbicides used in no-till corn and/or soybean production. Under unfavorable conditions, some herbicides may not perform as well as indicated below. Under very favorable conditions, control may be better than indicated. Herbicide rate, weed size and stage of growth, and environmental conditions interact to influence herbicide performance. The herbicides listed in the following tables do not represent every herbicide active ingredient or combination that may be suitable for weed management in all situations.

Weed control rating: 9 = 90% to 100%; 8 = 80% to 90%; 7 = 70% to 80%; 6 = 60% to 70% control; and - = less than 60% control, not recommended.

Ratings are for control of existing vegetation only (not residual control). Treatments containing glyphosate should be applied with AMS (and surfactant if required by the glyphosate product label). Most other treatments should be applied with a COC or MSO (plus UAN if recommended by the label). Ratings for 2,4-D are based on a rate of 0.5 lb ae/A unless otherwise indicated – increasing the 2,4-D rate to 1.0 lb ae/A will improve control of legumes, dandelion, marestail, and some other weeds.

	Giant Foxtail	Lambsquarters	Common Ragweed	Giant Ragweed	Annual Smartweeds	Common Chickweed	Mustards, Shepherd's Purse	Winter Wheat, Rye Cover	Orchardgrass/Fescue Sod	Canada Thistle	Red Clover	Alfalfa	Hairy Vetch	Marestail (group 9-R) <sup>1</sup>	Prickly Lettuce	Annual Bluegrass	Deadnettle, Henbit	Carolina Foxtail	Dandelion	Cressleaf Groundsel

<sup>1</sup>Ratings are for control of emerged marestail only. Marestail emerges in fall, spring, and early summer, and use of burndown plus residual herbicides in early spring results in most effective control. See "horseweed (marestail)" in the "Problem Weed" section for more information.

<sup>2</sup>Chlorimuron products: Canopy, Cloak, Valor XLT, Fierce XLT, Envive, Authority XL/MAXX, Zone Maxx. Cloransulam products: Authority First, Sonic, FirstRate, Surveil.

<sup>3</sup>Saflufenacil products: Sharpen, Verdict, Zidua PRO.

<sup>4</sup>Tribenuron products: Express, Panoflex.

<sup>5</sup>Rimsulfuron products: Resolve, Basis, Prequel, Crusher.
