

Ohio Crop Weather

Warm Early in the Week

Warmer than normal weather early in the week helped push crop maturity, according to Cheryl Turner, State Statistician, USDA NASS, Ohio Field Office. There were 5.7 days suitable for fieldwork during the week ending October 6.

Most locales saw temperatures in the high 80s or low 90s which was much warmer than normal. This warmth was welcomed given the lack of crop maturity. Farmers kept an eye on the forecast and hoped for a later than normal killing frost as late planted corn and soybeans was still immature relative to normal.

Some growers harvested their earliest planted corn and soybeans. Moisture levels were reported to be high. Corn silage was also harvested. The winter wheat crop was being planted much more quickly than normal due in large part to fields being available because they were not planted to other commodities this year. Pasture conditions were highly variable across the State. In the northern and central parts of the State, adequate rainfall was beneficial, while lack of rainfall in the southern part of the State was negatively affecting pastures and hay regrowth.

Soil Moisture: Week Ending 10/06/19

Item	Very short	Short	Adequate	Surplus
	(percent)	(percent)	(percent)	(percent)
Topsoil moisture	24	33	38	5
Subsoil moisture	22	31	43	4

Crop Progress: Week Ending 10/06/19
