Ohio Crop Weather

May 18, 2020

Planting Continued as Temperatures Remained Cool

While temperatures remained cool throughout the state, farmers made good planting progress, according to Cheryl Turner, State Statistician, USDA NASS, Ohio Field Office. Some damage was reported to **winter wheat** from freezing temperatures early in the week while rain activity late in the week may have caused damage to crops not yet emerged. Average temperatures for the week were below historical normals and the entire state averaged close to 1-inch precipitation. There were 3.8 days suitable for fieldwork during the week ending May 17.

Farmers continued tillage and spraying activities. Large increases in **corn** and **soybeans** planting were reported in the Northwest portion of the state. Corn planted progress was 57 percent, 8 percentage points ahead of the five-year average. Soybeans planted progress was ahead of the five-year average while soybeans emerged was behind the five-year average due to recent cooler than normal temperatures slowing germination. Sixty-six percent of **pasture and range** was considered good or excellent compared to 53 percent last year.
