

The number of microbial biostimulant and biofertilizer products on the market and companies manufacturing them have more than doubled in the last five years. One resource to identify these products and companies by name is the OMRI ([Organic Materials Review Institute](#)) list of organically approved materials and products for use as agricultural inputs. While OMRI provides an online search and gathers information into downloadable documents organized in various ways, isolating inputs that fit into the sub-category of microbial bioproducts for crop production is not so straightforward.

We have compiled a list identifying companies that manufacture microbial biostimulant and biofertilizer products for use in crop production. It is derived from OMRI's "Crop Fertilizers and Amendments" database, specifically the Supplier Information file "*CropByCompany-NOP.pdf*".

Companies in this list make products that meet the following criteria:

1. Contain microbes, i.e. bacteria and/or fungi, as their active ingredients
2. Are advertised to enhance crop growth and resistance to biotic and abiotic stresses
3. Are applied to horticultural crops
4. Are OMRI-listed
5. Are described as biofertilizers, biostimulants, seed inoculants, soil amendments, soil conditioners, soil inoculants

Not included in our list are:

- A. Companies that **only** manufacture biostimulants or biofertilizers with primary active ingredients is substance **other than** microbes, such as humic acids, protein hydrolysates, or seaweed extracts
- B. Companies that **only** manufacture microbial products intended as compost additives
- C. Companies that **only** manufacture microbial products **with manure** (used on crops not intended for human consumption)
- D. Companies that **only** manufacture products advertised as crop protectants, such as biocontrol agents and biopesticides
- E. Companies that **only** manufacture some combination of products A-D.

Three search terms were used to identify companies that produce products fitting our inclusion criteria: "microbial inoculants", "microbial products", and "mycorrhizae". Results yielding companies whose products only fit reasons A-E above were excluded from the list.

Our list serves several functions for users. A company-based list:

- Leads you straight to vital information about the manufacturer, product, and distributors via their website, if available. Many companies manufacture a suite of products with similar, yet distinct, ingredients or purposes that can be browsed in one place.
- Allows interested parties to search for products that are available/produced locally, within their state, region, or country.
- Provides a more consistent "road map" for where to find particular types of microbial products. Individual microbial product availability/label/name is more liable to change frequently as compared with the companies producing them.

This list does not represent an endorsement of companies listed, nor a discrimination against those not. It is for educational purposes only and is based on a replicable and transparent process.

This resource is created by the Vegetable Production Systems Lab. Contact us: Matt Kleinhenz, [kleinhenz.1@osu.edu](mailto:kleinhenz.1@osu.edu), Vegetable Production Systems Lab, Department of Horticulture and Crop Science, OSU OARDC, 1680 Madison Ave., Wooster, OH 44691

Summary of this version: total of 165 companies (119 based in the US, 46 international companies in 8 many countries)

*Last updated April 2020 (based on OMRI's Supplier Information file "CropByCompany-NOP.pdf" dated April 21, 2020)*
