

Safety Data Sheets on Demand!

A safety data sheet (SDS) provides important safety information regarding specific chemicals, chemical compounds, and chemical mixtures. A SDS should be available for reference in any area where chemicals are being used or stored.

Did you know you can look up thousands of safety data sheets on the EHS website?

A link on the EHS website will navigate the user to the *Chemwatch* chemical management system. Go to the EHS home page and find the “Safety Data Sheet Search” icon.

There you can enter the desired chemical, compound, or mixture. This system has tens of thousands of safety data sheets available for users to browse, track, and print.

Find your desired SDS at ehs.osu.edu.
