University of Chicago Celiac Disease Research Study

Researchers at the University of Chicago are conducting a research study to examine the effects of “brain fog” following gluten exposure in celiac disease. Brain fog is not well understood, and this study will help us learn more about its causes.

You may qualify for the study if:

- You are age 21 or older
- You have been diagnosed with celiac disease for at least 1 year
- You have maintained a strict gluten-free diet for at least 1 year
- You show symptoms of “brain fog” with gluten exposure.

Study visits:

- This study involves 6 weeks of participation and 4 visits at the University of Chicago clinic in Hyde Park.
- You will also give multiple blood, urine, and stool samples, undergo two MRI scans, and complete evaluations of your memory, attention span, and ability to process information.

Participants will be compensated up to $250.

For more information or to enroll in this study, contact Adam Geibel at ageibel2@bsd.uchicago.edu or 773-834-4705.

Principal Investigator: Sonia Kupfer, MD Associate Professor of Medicine - Gastroenterology (contact: skupfer@medicinebsd.uchicago.edu)
