BME 80G can be taken to meet the ethics requirement, but the credits will not be counted toward the overall credit requirement for the Ph.D. since it is a lower-division course. In other words, students who choose to take BME 80G for the ethics requirement, must take another 5-credit BME graduate-level course to fulfill their course credits.

Graduate-Level Biomolecular Engineering Electives

Students must take at least two 5-credit, graduate-level BME courses. Suitable courses are to be selected in consultation with the Biomolecular Engineering Graduate Advising Committee, the student, and the student's faculty advisor. Alternative electives may be considered with the approval of a student's faculty advisor and the graduate director.

Seminars

BME 280B	Seminar on Bioinformatics and Bioengineering	2

Lab Rotations

Students must take at least two quarters of BME 296, during which students do three research laboratory rotations. Students must enroll in BME 296 during fall and winter quarters of their first year. Laboratory rotations for Ph.D. students are generally completed in the first two quarters (three 7-week rotations).

BME 296	Research in Bioinformatics	5

Bootcamp Activity

Entering graduate cohorts are expected to participate in the hands-on "bootcamp" just before the start of the fall quarter. Bootcamp activities include program orientation, laboratory safety training, teaching assistant (TA) training, fellowship advice, cohort building activities, practical advice for navigating graduate school, and a hands-on research project.

Transfer Limitations

Up to two graduate courses may be transferred from other graduate institutions with the approval of the faculty advisor and the graduate director.

Further Study Outside the Department

No further courses are required. However, with faculty guidance students often choose to take upper-division undergraduate courses or graduate courses outside the department to make up for deficiencies in background areas of particular importance.

With consent of the graduate director, variations in the composition of the required courses may be approved.

Foreign Language Requirements

Optional Catchall

Teaching Requirement

Ph.D. students will be required to serve as teaching assistants for at least one quarter during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience, for those who are not allowed to be employed due to visa regulations, or for other reasons approved by the graduate director.

Ph.D. students whose native language is not English must demonstrate English fluency for Teaching Assistantship purposes before serving as a TA. Detailed information about TA eligibility is available at the Baskin Engineering Graduate Affairs website.

Pre-Qualifying Requirements

Qualifying Examination

Ph.D. students must select a faculty research advisor by the end of the first year. A qualifying examination committee is then formed in the second year, which consists of the advisor and three additional members, and which is approved by the graduate director and the campus graduate dean. At least two of the four must be members of the Department of Biomolecular Engineering. The student must submit a written dissertation proposal to all members of the committee and the graduate program advisor one month in advance of the examination. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by the qualifying committee.

Ph.D. students are strongly recommended to pass the qualifying examination and advance to candidacy by the end of their second year. They are required to do so by the end of their third year.

Post-Qualifying Requirements

Dissertation

Dissertation

Ph.D. candidates will submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The reading committee, formed upon advancement to candidacy, consists of the dissertation supervisor and two readers appointed by the graduate director upon the recommendation of the dissertation supervisor. At least one of

the three must be a member of the Department of Biomolecular Engineering.

Dissertation Defense

The candidate will present their research in a public seminar. The seminar will be followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision.

Academic Progress

Graduate students receiving two or more U (unsatisfactory) grades or grades below B- in courses relevant to the program are not making adequate progress and will be placed on academic notice for the next three quarters of registered enrollment.

Graduate students who fail (unsatisfactory or lower than B-) a relevant course while on notice may be dismissed from the program. Students may appeal their dismissal. Graduate students who fail a relevant course after being removed from notice are immediately returned to academic notice.

Graduate students experiencing circumstances that may adversely affect their academic performance should consult with their advisor and the graduate director.

Applying for Graduation

All candidates for a degree must submit an Application for PhD Degree to the Graduate Division by the date stated in the Academic and Administrative Calendar for the quarter they wish to receive the degree. The deadline for degree applications is typically in the second week of the quarter. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

[Optional Catchall]

Computational Media

Baskin Engineering
(831) 459-2158
engineering.ucsc.edu

PROGRAMS OFFERED

Computer Science: Computer Game Design B.S. (p. 547)

Computational Media M.S. (p. 554)

Computational Media Ph.D. (p. 557)

Computational Media Designated Emphasis (p. 553)

Games and Playable Media M.S. (p. 563)

Human Computer Interaction M.S. (p. 565)

OTHER PROGRAMS OF INTEREST

Art and Design: Games and Playable Media B.A. (p. 128)

Digital Arts and New Media M.F.A.

Film and Digital Media Ph.D. (p. 70)

The Computational Media Department engages in boundary-pushing research and education that integrates technical, interpretive, and design work to create human-centered media and experiences that address complex problems for societal impact. The department creates media, experiences, and ways of understanding that have an impact in the world we live in. We likewise perform research that embraces diverse ideas, disciplines, approaches, concepts, and methods in our work and community.

The Computational Media (CMPM) Department offers courses on a wide range of topics, many of which integrate technical subject matter with design-oriented, theoretical, and historical topics. The Computational Media Department administers an undergraduate bachelor of science (B.S.) degree in Computer Science: Computer Game Design, a professional master of science (M.S.) degree in Games and Playable Media (**Admissions suspended for AY25-26**), a professional master of science (M.S.) degree in Human Computer Interaction, as well as a master of science (M.S.), a doctor of philosophy (Ph.D.), and a designated emphasis in Computational Media. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate.

COMPUTER SCIENCE: COMPUTER GAME DESIGN B.S.

Information and Policies

Introduction

The goal of the B.S. in Computational Media degree is to provide students a deep understanding of the technical aspects of computer game engineering and a broad background in the artistic, systemic, and production elements of game design and development.

The core of the degree program is a strong grounding in computer science and computer engineering, preceded by a foundation in mathematics. Classes also develop skills in areas such as visual communication and team-oriented game production, while developing knowledge of topics such as game history, play experiences, game systems, and social and ethical issues.

In their upper-division courses, students gain depth by taking electives in computational media and computer science and engineering, with options such as Game AI, Game Graphics and Real-Time Rendering, Generative AI (Procedural Content Generation), Mobile Applications, Interactive Storytelling, and Algorithmic Music. A two-course game development sequence (Game Development Experience and Game

Development Patterns) and a two-quarter comprehensive sequence (Rapid Prototyping and Game Design Studio) allow students to develop complex computer games and integrate materials from the rest of the program.

Program Learning Outcomes

Recipients of a B.S. degree in Computer Game Design at University of California, Santa Cruz, are expected to have the following skills and experiences:

1. Demonstrate mastery of computer science in the following core knowledge areas: algorithms, data structures, complexity, and software engineering and development.
2. Apply system-level perspective by thinking at multiple levels of detail and abstraction and by recognizing the context in which a computer system may function, including its interactions with people and the physical world.
3. Apply problem-solving skills and the knowledge of computer science to solve real problems.
4. Recognize and take into account the social, legal, historical, ethical, and cultural issues in the discipline of computer games.
5. Demonstrate written, oral, and graphic design communication skills regarding technical material about computer science and computer games, broadly conceived.
6. Design and build a technical system that achieves an artistic goal for audience experience, employing sound computer science techniques.
7. Demonstrate the ability to collaboratively plan, organize, and execute complex, team-oriented projects, using appropriate communication and coordination techniques.

Academic Advising for the Program

The Baskin School of Engineering (BE) Undergraduate Advising Office is located in the Baskin Engineering Building, Room 225. Staff can be contacted via email at bsoeadvising@ucsc.edu or at the Undergraduate Advising website.

Transfer students to the program should consult the Transfer Students section of the Baskin Engineering Undergraduate Affairs page.

Getting Started in the Major: Frosh

It is recommended that high school students intending to apply to the major have completed four years of mathematics (through advanced algebra and trigonometry) as well as any available courses in computer science, arts, and media (especially interactive media). Comparable college mathematics, arts, and media courses completed at other institutions also serve to properly prepare a student for the major.

Computer Science (CS): Game Design is a course-intensive and sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. (Please see Plan One and Plan Two in the Planners section for more information.)

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7

and one of the following courses

ECE 13	Computer Systems and C Programming	7
CSE 13S	Computer Systems and C Programming	7
CSE 12	Computer Systems and Assembly Language and Lab	7

Lecture and lab combinations count as one course.

In addition, completing all but one of the following courses prior to transfer is recommended to ensure timely graduation:

CSE 20	Beginning Programming in Python	5
CSE 12	Computer Systems and Assembly Language and Lab	7
	One of these courses	
AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5
	One of these courses	
ECE 13	Computer Systems and C Programming	7
CSE 13S	Computer Systems and C Programming	7

(Lecture-lab combinations count as one course.)

Getting Started in the Major: Transfer Students

Transfer students should declare their major in their first quarter at UC Santa Cruz. Instructions for declaring a major in the Baskin School of Engineering are on the Baskin Engineering undergraduate advising major declaration page.

Please note that most major courses have a strong theoretical component to prepare the student for designing—as opposed to simply using—technical and game systems. Often, other institutions' courses that emphasize applications of current programming languages and authoring tools do not count toward the major at UC Santa Cruz. For specifics on the BE's transfer student policies, please see Baskin Engineering's Transfer Students website.

CS: Game Design is a course-intensive and sequential program, and transfer students that intend to graduate in two years should plan their schedule carefully with Baskin Engineering Advising. (Please see Plan Three in the Planners section for more information.)

Major Qualification Policy and Declaration Process

Major Qualification

In order to be admitted into the Computer Science: Computer Game Design major, students must be listed as a proposed major within the School of Engineering. Please see the Baskin Engineering Major Qualification Requirements page for more information.

Transfers to the program should consult the Transfer Students section of the Baskin Engineering Undergraduate Affairs page.

Students have to complete all the foundation courses to qualify for the major. Some courses may be satisfied via exam credit.

In addition to being listed as a proposed School of Engineering major, admission to the Computer Science: Computer Game Design major is based on the following criteria:

Take the following course:

CSE 16	Applied Discrete Mathematics	5

And one of the following calculus courses:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

And a core programming sequence to include one of the following group of classes:

	Either these courses	
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 30	Programming Abstractions: Python	7
ECE 13	Computer Systems and C Programming	7
	or these courses	
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 30	Programming Abstractions: Python	7

Students with no prior programming courses will take CSE 20 before CSE 30 and CSE 12. Students with a prior programming course, Advanced Placement (AP) examination credit, or clearing the "Test-out" bar will start with CSE 30 and CSE 12.

Appeal Process

Denials of admission to the major may be appealed by submitting a letter to the School of Engineering Undergraduate Advising office, addressed to the Computational Media undergraduate director, within 15 days from the date the notification was mailed. The appeal letter must describe why the student's prior performance was not an accurate reflection of their potential. Within 15 days of receipt of the appeal, the Undergraduate Advising office will notify the student and their college of the decision.

How to Declare a Major

Students should submit a petition to declare by completing the petition for major/minor declaration form as soon as they complete the major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed major qualification courses.

There are four steps to declaring a BE major. For a detailed guide to this process, please consult Baskin Engineering's Declare Your Major website.

Letter Grade Policy

The Baskin School of Engineering requires letter grades for all courses in an engineering major.

[Optional Catchall]

Course Substitution Policy

Double Majors and Major/Minor Combinations Policy

Study Abroad

Honors

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of “Highest Honors in the Major.” Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of “Honors in the Major.” The School of Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

[Optional Catchall]

Baskin Engineering Policies

Please refer to Admission to Baskin Engineering Majors in the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major and the need for students to obtain preapproval before taking courses elsewhere.

Requirements and Planners

Course Requirements

The Computer Science: Computer Game Design curriculum has 24–26 courses (depending on the core programming sequence taken). Thirteen of these courses are upper-division. Several of the required courses and electives are also general education courses. Some courses may be satisfied via exam credit. Please consult with the schedule of classes or the General Catalog for more information.

Course requirements are divided into five conceptual areas and may not be credited in more than one area:

Lower-Division Courses

Upper-Division Courses

Mathematics

Choose one of the following options:

	Either these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
	or these courses	
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Credit for one or both MATH 19A/MATH 19B may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement examinations.

Plus one of the following courses:

MATH 21	Linear Algebra	5
AM 10	Linear Algebra for Engineers	5

Plus the following course:

CSE 16	Applied Discrete Mathematics	5

Computational Foundations

Choose one of the following options:

	Either this course	
ECE 13	Computer Systems and C Programming	7
	or this course	
CSE 13S	Computer Systems and C Programming	7

CSE 12 is a prerequisite for these courses.

Plus all of the following courses:

CSE 20	Beginning Programming in Python	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 30	Programming Abstractions: Python	7
CSE 101	Introduction to Data Structures and Algorithms	5

Students with no prior programming courses will take CSE 20 before CSE 30 and CSE 12. Students with a prior programming course, AP credit, or clearing the “Test-out” bar will start with CSE 30 and CSE 12.

Games and Playable Media Foundations

Complete all of the following courses:

FILM 80V	Video Games as Visual Culture	5
CMPM 80J	Games as Technical Culture	5

Game Design and Development

Complete all of the following courses:

CMPM 80K	Foundations of Video Game Design	5
CMPM 120	Game Development Experience	5
CMPM 121	Game Development Patterns	5
CMPM 130	User Interface and User Experience Design	5
CMPM 170	Rapid Prototyping	5
CMPM 171	Game Design Studio	7
CMPM 176	Game Systems	5

Computer Game Engineering

Complete **five** courses from the following list. The majority of these computer game engineering electives (CGEs) are technical practice electives that focus on the development and analysis of computational systems (i.e., the “programming” part of game creation).

No more than two of the five can be from CMPM 110, CMPM 122, CMPM 131, CMPM 132, CMPM 150, CMPM 177, CSE 103, CSE 104, or ECON 166A. (These seven courses focus on other skills useful in computer game development, such as design, production, and mathematical analysis.) CMPM 179 and CMPM 180 are repeatable for credit but may only count once each toward the elective requirement.

NOTE: Lecture/lab combinations count as one course. Associated labs are required only when required by the lecture.

CMPM 110	Writing for Game Technologies	5
CMPM 122	Business of Games	5
CMPM 125	Game Technologies	5

CMPM 131	User Experience for Interactive Media	5
CMPM 132	Interaction Design Studio	5
CMPM 146	Game AI	5
CMPM 147	Generative Design	5
CMPM 148	Interactive Storytelling	5
CMPM 150	Creating Digital Audio	5
CMPM 151	Algorithmic Music for Games	5
CMPM 152	Musical Data	5
CMPM 163	Game Graphics and Real-Time Rendering	5
CMPM 164	Game Engines	5
CMPM 169	Creative Coding	5
CMPM 172	Game Production Studio	7
CMPM 123	Advanced Programming	5
CMPM 177	Creative Strategies for Designing Interactive Media	5
CMPM 178	Human-Centered Design Research	5
CMPM 179	Game Design Practicum	5
CMPM 180	Topics in Computational Media	5
CSE 102	Introduction to Analysis of Algorithms	5
CSE 103	Computational Models	5
CSE 104	Computability and Computational Complexity	5
CSE 110A	Fundamentals of Compiler Design I	5
CSE 110B	Fundamentals of Compiler Design II	5
CSE 112	Comparative Programming Languages	5
CSE 113	Parallel and Concurrent Programming	5
CSE 115A	Introduction to Software Engineering	5
CSE 115B	Software Design Project	5
CSE 115C	Software Design Project II	5
CSE 117	Open Source Programming	5
CSE 118	Mobile Applications	5
CSE 119	Software for Society	5
CSE 120	Computer Architecture	5
CSE 130	Principles of Computer Systems Design	5
CSE 132	Computer Security	5
CSE 138	Distributed Systems	5
CSE 140	Artificial Intelligence	5
CSE 142	Machine Learning	5
CSE 144	Applied Machine Learning: Deep Learning	5
CSE 145	Introduction to Data Mining	5
CSE 146	Ethics and Algorithms	5
CSE 150	Introduction to Computer Networks	7
CSE 156	Network Programming	5
CSE 157	Internet of Things	7
CSE 160	Introduction to Computer Graphics	7
CSE 161	Introduction to Data Visualization	5
CSE 162	Advanced Computer Graphics and Animation	5
CSE 163	Data Programming for Visualization	5
CSE 180	Database Systems I	5
CSE 181	Database Systems II	5
CSE 183	Web Applications	5
CSE 186	Full Stack Web Development I	5
CSE 187	Full Stack Web Development II	5
CSE 184	Data Wrangling and Web Scraping	5
ECON 166A	Game Theory and Applications I	5
ECE 118	Introduction to Mechatronics	10

Note that enrollment restrictions might apply to any of the CSE courses listed here, and it is unlikely Computer Science: Computer Game Design students will be able to enroll in enrollment-restricted courses.

Electives

Disciplinary Communication (DC) Requirement

Students must satisfy the major's upper-division disciplinary communication (DC) requirement by completing the following course:

CMPM 130	User Interface and User Experience Design	5

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by receiving a passing grade in the following courses:

CMPM 170	Rapid Prototyping	5
CMPM 171	Game Design Studio	7

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are three sample academic plans that students can use to plan their sequence of courses in the major. The first two plans are suggested guidelines for students who begin their studies in their frosh year. Such students, if they plan carefully, will have several openings free to take other breadth courses they find interesting.

Plan One is for a student entering UC Santa Cruz in their frosh year who is prepared to go directly into MATH 19A/MATH 20A and CSE 30.

Plan Two is for a student entering UC Santa Cruz their frosh year who needs to take preparatory courses prior to MATH 19A or CSE 30 to ensure a successful outcome in those courses.

Plan Three is for a junior transfer student who has completed their mathematics, computational foundations, and general education requirements.

Plan One

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
Year 1	CSE 30	CSE 12	CSE 16	
	MATH 19A	MATH 19B	CSE 13S	
Year 2	CMPM 80K	FILM 80V	CMPM 120	
	AM 10 / MATH 21	CMPM 80J	CSE 101	
Year 3	CMPM 176	Game Engineering Elective 1	CMPM 130	
	CMPM 121	Game Engineering Elective 2	Game Engineering Elective 3	
Year 4	CMPM 170	CMPM 171		
	Game Engineering Elective 4	Game Engineering Elective 5		

* Writing II should be taken in or before spring quarter of the second year.

Plan Two

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
Year 1	CSE 20	CSE 30	CSE 12	
	MATH 3	MATH 19A	MATH 19B	
	College Core	WRIT 1	WRIT 2*	
Year 2	CMPM 80K	FILM 80V	CMPM 120	
	CSE 13S	MATH 21 or AM 10	CSE 101	
	CSE 16	CMPM 80J		
Year 3	CMPM 176	Game Engineering Elective 1	Game Engineering Elective 3	
	CMPM 121	Game Engineering Elective 2	CMPM 130	
Year 4	CMPM 170	CMPM 171		
	Game Engineering Elective 4	Game Engineering Elective 5		

* WRIT 2 should be taken in or before spring quarter of the second year.

In addition to the specific courses shown in the four-year planner, a student must complete courses satisfying the CC, ER, SR, SI, and TA general education requirements.

Plan Three

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
Year	[OPE	CSE 101	CMPM	

1 (Jr)	N]*		120
	CMPM 80K	FILM 80V	CMPM 130
		CMPM 80J	Game Engineering Elective 1
Year 2 (Sr)	CMPM 170	CMPM 171	Game Engineering Elective 4
	CMPM 121	Game Engineering Elective 2	Game Engineering Elective 5
	CMPM 176	Game Engineering Elective 3	

* This planner assumes that, in addition to the minimum requirements for transfer students to be admitted to UC Santa Cruz, students should also have completed the equivalents of all but one course from CSE 20; AM 10 or MATH 21; ECE 13 or CSE 13S; and CSE 12, as well as all general education requirements if they wish to graduate in two years. This [OPEN] slot in the planner is for any of those courses that the student may not have completed.

COMPUTATIONAL MEDIA DESIGNATED EMPHASIS

Introduction

The graduate designated emphasis (DE) leading to the degree notation “with an emphasis in Computational Media” provides specialization in the theory, principles, and practices of the field of computational media. This DE is administered by the Department of Computational Media. Students wishing to complete an M.F.A. or Ph.D. degree with an emphasis in this area must satisfy the degree requirements of a primary program as well as of the DE. The DE is most suitable for students pursuing degrees in computer science and engineering, digital art and new media, film and digital media, literature, and psychology. However, students from any area may work in this interdisciplinary field as long as they meet all requirements, including progress, within the primary degree program. It is intended for students in terminal degree programs (e.g., Ph.D., M.F.A.) rather than non-terminal master’s or certificate programs.

Requirements

Committee Composition and Departmental Approvals

Upon electing to pursue a designated emphasis (DE) in computational media, students must choose a DE faculty advisor in the Department of Computational Media. A list of eligible DE advisors is maintained online. The student must organize a preliminary meeting with the DE advisor, and agree on a plan for completion of the requirements outlined below. Once this plan has been designed, the student must submit the Computational Media DE Request Form online, which will be signed by the CM DE advisor, the student’s departmental faculty advisor, and the CM graduate director. Once approved, this request will be filed in the Baskin Engineering Graduate Student Affairs Office. This should ideally be done before the student’s advancement to candidacy (for Ph.D. students), and no later than three months before the planned date for the oral presentation completion requirement.

The student’s M.F.A. thesis or capstone, Ph.D. qualifying exam, or Ph.D. dissertation committee must include one member of the Computational Media (CM) Department faculty, typically the student’s DE advisor.

Course Requirements

All students must complete CMPM 201 (Introduction to Computational Media) and two additional 5-credit graduate courses offered or crosslisted by the CM department and/or faculty with (non-zero percentage) appointments in the department. One of the additional courses may be fulfilled through a graduate independent study (of 5 credits or greater) with a CM faculty member, with approval of the CM graduate director.

Writing, Research and/or Teaching Requirements

The student must complete a significant piece of computational media writing. Examples include a student’s M.F.A. thesis (or substantial section of one) or a Ph.D. dissertation chapter—but other pieces of writing are also acceptable, at the discretion of the CM graduate director, including conference and journal publications.

Applying for Graduation

All candidates for a degree must submit an application for the master's degree or an application for the doctorate in philosophy degree to the appropriate office in their primary department by the date stated in the Academic and Administrative Calendar for the quarter they wish to receive the degree. Students who have completed a designated emphasis should be sure to note the designated emphasis on the degree application. The deadline for degree applications is typically in the second week of the quarter. A student is required to be registered or on filing fee during the quarter in which the degree is conferred.

When students apply for graduation, they must also submit the Computational Media DE Confirmation Form online to certify that they have met the DE requirements. This form will be signed by the CM DE advisor, the CM graduate advisor,

and the CM graduate director, and then filed in the Baskin Engineering Graduate Student Affairs Office.

COMPUTATIONAL MEDIA M.S.

Introduction

The goal of the M.S. in Computational Media (CM) is to help students build on existing strengths and move into new areas of computational media work. The design of the degree ensures, first, that students have a meaningful foundation in the key areas needed for undertaking interdisciplinary CM work. This may require some additional development in one or more areas (e.g., a sequence of computer programming classes). In addition, the M.S. coursework includes both broad and topical classes that help students understand the different ways that innovative work in CM connects the knowledge and methods of the different disciplines that contribute to it. Finally, the M.S. also includes a student-defined thesis, in which they demonstrate their ability to apply their foundational and integrative knowledge while developing novel work through supervised research. The M.S. is appropriate for students continuing in a variety of directions, including pursuing a terminal degree and performing innovative media creation.

M.S. students must complete a minimum of 35 quarter credits of graduate and upper-division courses, including 15 credits of core courses, 10 credits of topic courses, and between 7 - 10 credits of supervised research (CMPM 299). No more than 15 credits may be upper-division undergraduate courses.

Requirements

Course Requirements

Core Courses (15 Credits)

CMPM 201	Introduction to Computational Media	5
CMPM 202	Computation Media Research	5
CMPM 203	Computational Media Methods	5

Topics Courses (10 Credits)

M.S. students are required to take 10 credits of CM topics courses. This category includes all 5-credit CMPM graduate classes, as long as they are not already counted in another category (e.g., it cannot include core courses), in addition to courses available in other departments. Current topics courses are listed below.

Current Topics Courses

CMPM 230	Data Science in Computational Experiences	5
CMPM 232	Psychology of Play	5
CMPM 235	User Evaluation of Technology	5
CMPM 237	Advanced Topics in Human-Robot Interaction	5
CMPM 243	Social Computing Research: Design, Algorithms, and Incentives	5
CMPM 244	Artificial Intelligence in Games	5
CMPM 248	Interactive Storytelling	5
CMPM 265	Generative Methods	5
CMPM 268	Immersive Analytics	5
CMPM 269	Machine Learning for Creativity and Design	5
CMPM 290A	Topics in Computational Media	5
CMPM 290J	Playable Media	5
CMPM 290K	Social and Emotional Approaches to Human Computer Interaction	5
CMPM 290P	Topics in Computational Cinematography	5
CSE 245	Computational Models of Discourse and Dialogue	5
CSE 260	Computer Graphics	5
CSE 261	Advanced Visualization	5
CSE 263	Data Driven Discovery and Visualization	5
CSE 265	Human-Computer Interaction	5
CSE 290L	Topics in Crowdsourcing and Collaboration	5
DANM 250A	Art and Science	5
DANM 250B	Socially Engaged Art	5
DANM 250C	Performance and Embodiment	5
DANM 250E	Collaborative Research Project Group: Experimental Play	5
FILM 228	Moving Image Archives and the Frontiers of Information	5
FILM 230	Expanded Documentary	5
FILM 234	Toward an Ethics of New Media	5
GAME 232	Advanced Game Technologies	5
GAME 238	Computer Graphics for Games	5
GAME 240	Game Usability	5
GAME 250	Foundations of Serious Games and Gamification	5
GAME 251	Games User Research	5
GAME 290A	Advanced Topics in Games	5
HCI 250	Participatory Design	5

DANM 250A, DANM 250B, DANM 250C, DANM 250E: can be repeated.

Other Requirements

In addition to the above curricular requirements, students are also required to satisfy the three Foundation Areas requirements. There are three additional program requirements, though students may have completed the necessary work for one or more before admission. Students are expected to demonstrate an understanding of the following three Foundation Areas:

- Media Creation in a CM context
- Computer Programming sufficient to carry out CM research
- Interpretive Practices sufficient to carry out CM research

Media Creation: All M.S. students must demonstrate an understanding of media creation in a CM context, and must do so by the end of their second year in the program. This can be completed by any of:

- The Computer Science: Computer Game Design B.S. game studio sequence (CMPM 170, CMPM 171, CMPM 172) before graduate enrollment.
- The Art and Design: Games and Playable Media B.A. game studio sequence (ARTG 170, ARTG 171, ARTG 172) before graduate enrollment.
- A Digital Arts and New Media (DANM) project group sequence (three DANM 250 courses in same area, in sequence) during or before computational media M.S./Ph.D. graduate enrollment.
- The Games and Playable Media M.S. project sequence (GAME 270, GAME 271, GAME 272) before Computational Media M.S./Ph.D. graduate enrollment (due to Professional Degree Supplemental Tuition (PDST) and cohort model, these cannot be taken by students in other programs).
- At least three graduate or upper-division undergraduate courses from a list of offerings at UCSC that require programming knowledge and are focused on defining and developing CM-related projects (e.g., CMPM 148) during or before CM graduate enrollment. See the media creation courses list below.
- Petition to CM graduate director, presenting evidence of equivalent coursework at another institution and/or equivalent CM project experience in another context.

Computer Programming: All M.S. students must demonstrate an understanding of computer programming sufficient to carry out CM research, and must do so by the end of their second year in the program. This can be completed by:

- Taking a series of courses that integrate media and programming knowledge (e.g., GAME 235, GAME 236, and CMPM 120).
- Taking core programming (e.g., CSE 30 and CSE 101) and advanced programming (e.g., CSE 111) at UCSC or another institution.
- Petition to CM graduate director, presenting evidence of programming knowledge developed in another context.

Interpretive Practices: All M.S. students are expected to have an understanding of interpretive and critical methods sufficient to carry out CM research. Students who lack such a background are strongly encouraged to take a series of courses in this area, consulting with their advisor regarding which courses would be most appropriate. The appropriate Interpretive Practices for a given student depends on the specific research area for the student. The key is that the student is able to critique and intervene in their research area from a broader social, cultural, and historical perspective. One recommended sequence (which may or may not be appropriate for a specific student) is:

- HISC 1: Introduction to the History of Consciousness. If this is not possible, take an 80-level course that integrates introductory interpretive content (e.g., FILM 80V: Video Games as Visual Culture).
- Take two more graduate or upper-division undergraduate courses that focus on interpretive practices. The CM department offers courses that integrate this with CM knowledge, such as some offerings of CMPM 290A (e.g., Media Constellations) and CMPM 176: Game Systems. Other programs also offer courses that make this integration, such as DANM 201: Recent Methods and Approaches to Digital Arts and Culture and DANM 202: Dialogues and Questions in Digital Arts and Culture. Courses that do not make this integration, but that are connected to the student's research area, are also acceptable.

Note: In extraordinary circumstances the graduate director can reduce the number of required courses based on a petition presenting past accomplishments, for example, reducing the number of required topics courses by one for each substantial past research publication or system accepted from the petition.

Current Media Creation Courses

GAME 210	Game Art Intensive	5
GAME 215	Audio Direction	5

M.S. Research Thesis (7-10 credits)

The M.S. follows Plan I which requires a research thesis. It is a substantial undertaking within the CM field, which may emphasize technical, media-creation, or interpretive aspects—or may emphasize more than one area equally. Regardless of which of the above areas the M.S. research emphasizes, a written thesis is required. This written thesis is reviewed by a committee of at least two faculty that must include at least one member of the CM department and draw half or more of its members from the UCSC academic senate. M.S. students are required to take the CMPM 299 (Thesis Research) independent study twice with their faculty advisor for their thesis completion. The courses do not need to be taken consecutively.

CMPM 299	Thesis Research

Lower-Division Courses

Students who are considering enrolling in lower-division courses in order to fulfill additional degree requirements (e.g., CSE 30, HISC 1) may wish to consult with the course instructor and their advisor about instead taking an independent study or directed study (with the course instructor, their advisor, or a third faculty member) that subsumes the work of the course and adds additional content to bring it up to a graduate level. Graduate students must be enrolled in some combination of at least 10 credits of courses or independent studies that are either graduate or upper-division undergraduate courses in order to be considered full-time enrolled.

Transfer Credit

Up to 10 credits transferred from equivalent courses in previous graduate work at UCSC or elsewhere can be applied toward the M.S. course requirements. This can satisfy the topics requirement, but is not to exceed the three-course overall limit on transfers from outside institutions. A Course Substitution/Waiver form can be found on the Baskin Engineering (BE) Graduate Advising website.

Review of Progress

On an ongoing basis, the faculty reviews the progress of every student remaining on track to complete the degree in six consecutive academic quarters. Students not making adequate progress toward completion of degree requirements (see the Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements, which includes courses and a master's thesis, in two years.

Students receiving two or more unsatisfactory grades (U or grade below B) in School of Engineering (SoE) courses, or who receive an unsatisfactory grade (U or grade below B) in the Computational Media core course sequence (CMPM 201, CMPM 202, CMPM 203), are not making adequate progress and will be placed on academic probation for the following quarter of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment. Students who are on academic probation or are not enrolled full time are no longer guaranteed any previously committed funding. Should students receive an unsatisfactory grade (U or below B) in a School of Engineering course while on probation, the Computational Media Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again receives an unsatisfactory grade (U or below B) in a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their advisor and the graduate director immediately. Students may appeal their dismissal.

Planners

M.S. in One Year (Student with technical CM B.S. degree)

This is a sample program for a student who has completed a bachelor’s degree with significant technical content and a focus on some form of computational media (such as computer games). The B.S. in Computer Science: Computer Game Design at UCSC is such a degree. Such students will have already satisfied the requirement for understanding media creation in a CM context (e.g., by taking the CMPM 170, CMPM 171, and CMPM 172 sequence at UCSC) and the requirement for demonstrating an understanding of computer programming (e.g., by taking a core programming sequence and CSE 111 at UCSC). This program is for a student who wants to complete the M.S. degree in one year.

Fall	Winter	Spring
CMPM 201	CMPM 202	CMPM 203
Topics course	Topics course	CMPM 299 (5 credits)
CMPM 299 (2 - 5 credits)	Elective/independent study (optional)	Elective/independent study (optional) (M.S. thesis approved)

M.S. in Five Quarters (Student requiring technical and interpretive foundation work)

This is a sample program for a student who has graduated from a digital media program or other undergraduate degree that provides experience in media creation in a CM context, but not an understanding of computer programming or interpretive practices. (CMPM 202 is moved to the second year, to reflect the need for computer programming knowledge before taking this course.)

	Fall	Winter	Spring
Year 1	CMPM 201	HISC 1	CMPM 203
	Topics course	Topics course	Interpretive graduate/upper-division course
	GAME 235	GAME 236	CMPM 120
Year 2	CMPM 299 (2 - 5 credits)	CMPM 202	
	Interpretive graduate/upper-division course	CMPM 299 (5 credits)	
	Elective/Independent Study (optional)	Elective/Independent Study (optional) (M.S. thesis approved)	

Applying for Graduation

Students planning to graduate should refer to the Baskin School of Engineering Graduate Studies website.

Optional Catchall

COMPUTATIONAL MEDIA PH.D.

Introduction

The Ph.D. in computational media (CM) is designed for those who are already actively working in computational media and want to develop new knowledge that will change what is possible and how we understand it. The Ph.D. program includes all the course requirements of the M.S., with the exception of those related to the M.S. thesis. Ph.D. students have a number of additional requirements, as well. First, they must take additional topics courses, building understanding of a broader set of CM approaches. Second, they must pass both a first-year exam and a comprehensive exam, setting clear milestones for the development of expert-level knowledge in CM. Third, they must engage in substantial independent research that contributes to the development of the field, working closely with CM research faculty. Fourth, they must propose, complete, and defend a significant and novel dissertation project. The Ph.D. is appropriate for those who aim to lead future CM research efforts, within the academy, industry, government, non-profit, and other contexts.

Advancement to Candidacy

Course Requirements

Ph.D. students will complete 15 credits of core courses, 20 credits of topics courses, and 10 credits of courses involved in preparation for the comprehensive examination.

Core Courses (15 Credits)

CMPM 201	Introduction to Computational Media	5
CMPM 202	Computation Media Research	5
CMPM 203	Computational Media Methods	5

Topics Courses (20 Credits)

Ph.D. students are required to take 20 credits of CM topics courses. The courses may be any combination of these types (as long as not already counted in another category):

- 5-credit CMPM graduate classes.
- Classes in other subject codes that cover the theory and/or practice of a CM area, as listed in the "topics courses."
- Up to 10 credits transferred from equivalent courses in previous graduate work at UC Santa Cruz or elsewhere (not to exceed three course overall limit on transfers from outside institutions, between this and other requirements).

Current Topics Courses

CMPM 230	Data Science in Computational Experiences	5
CMPM 232	Psychology of Play	5
CMPM 235	User Evaluation of Technology	5
CMPM 237	Advanced Topics in Human-Robot Interaction	5
CMPM 243	Social Computing Research: Design, Algorithms, and Incentives	5
CMPM 244	Artificial Intelligence in Games	5
CMPM 248	Interactive Storytelling	5
CMPM 255	Games for Impact Studio I	5
CMPM 256	Games for Impact Studio II	5
CMPM 265	Generative Methods	5
CMPM 268	Immersive Analytics	5

CMPM 269	Machine Learning for Creativity and Design	5
CMPM 290A	Topics in Computational Media	5
CMPM 290J	Playable Media	5
CMPM 290K	Social and Emotional Approaches to Human Computer Interaction	5
CMPM 290P	Topics in Computational Cinematography	5
CSE 245	Computational Models of Discourse and Dialogue	5
CSE 260	Computer Graphics	5
CSE 261	Advanced Visualization	5
CSE 263	Data Driven Discovery and Visualization	5
CSE 265	Human-Computer Interaction	5
CSE 290L	Topics in Crowdsourcing and Collaboration	5
DANM 250A	Art and Science	5
DANM 250B	Socially Engaged Art	5
DANM 250C	Performance and Embodiment	5
DANM 250E	Collaborative Research Project Group: Experimental Play	5
FILM 228	Moving Image Archives and the Frontiers of Information	5
FILM 230	Expanded Documentary	5
FILM 234	Toward an Ethics of New Media	5
GAME 232	Advanced Game Technologies	5
GAME 238	Computer Graphics for Games	5
GAME 240	Game Usability	5
GAME 250	Foundations of Serious Games and Gamification	5
GAME 251	Games User Research	5
GAME 290A	Advanced Topics in Games	5
HCI 250	Participatory Design	5

DANM 250A, DANM 250B, DANM 250C, and DANM 250E may be repeated.

Exam Courses (20 Credits)

CMPM 205	Bridging the Disciplines: Writing and Synthesis for Computational Media	5
CMPM 206	Computational Media Research Preparation	5
CMPM 297B	Independent Study or Research	10

CMPM 205: Teaches the skills of doing interdisciplinary research and writing and synthesis across disciplines, which are important for doing research in computational media.

CMPM 206: Teaches skills for gathering literature and preparing portfolio for comprehensive exam, taken the same quarter as exam. 5 credits.

CMPM 297B: Research in preparation for the comprehensive exam, usually taken with the student's advisor. Students should enroll in 5 credits of CMPM 297A the quarter prior to their comprehensive exam, and then 5 credits of CMPM 297A alongside CMPM 206 the quarter they plan to take the comprehensive exam.

Additional Requirements

In addition to the above curricular requirements, students are also required to satisfy the three Foundation Areas requirements. The Foundation Areas are evaluated through the completion of the Comprehensive Exam, and must be completed by the end of students' second year in the program (sixth quarter, excluding summer quarter). Individual plans for demonstrating competency in the Foundation Areas will depend on students' previous studies. A student should consult with both their faculty advisor and graduate director to determine the best path for being prepared to demonstrate competency in the Foundation Areas through the Comprehensive Exam. Many students opt to complete the Foundation Areas via graduate coursework, but the requirements can also be met via past projects, undergraduate coursework, or professional experience in the given area.

Students are expected to demonstrate competency in the following three Foundation Areas, which are evaluated through the completion of the Comprehensive Exam:

- Media Creation in a CM context
- Computer Programming sufficient to carry out CM research
- Interpretive Practices sufficient to carry out CM research

Media Creation: Ph.D. students must demonstrate sufficient and appropriate media-focused knowledge to develop a significant CM research contribution. This can be completed by any of:

- The Computer Science: Computer Game Design B.S. game studio sequence (CMPM 170, CMPM 171, CMPM 172) before graduate enrollment.
- The Art and Design: Games and Playable Media B.A. game studio sequence (ARTG 170, ARTG 171, ARTG 172) before graduate enrollment.
- A DANM project group sequence (three DANM 250 courses in same area, in sequence) during or before CM M.S./Ph.D. graduate enrollment.

- Game for Impact studio courses: CMPM 255 and CMPM 256
- At least three graduate or upper-division undergraduate courses from a list of offerings at UC Santa Cruz that require programming knowledge and are focused on defining and developing CM-related projects (e.g., CMPM 148) during or before CM graduate enrollment. See the list of media creation courses.
- Petition to CM graduate director, presenting evidence of equivalent coursework at another institution and/or equivalent CM project experience in another context.

Computer Programming: All Ph.D students must demonstrate sufficient and appropriate technical knowledge, including computer programming, to develop a significant CM research contribution. This can be completed by:

- Taking a series of courses that integrate media and programming knowledge (e.g., GAME 235, GAME 236, and CMPM 120).
- Taking core programming (e.g., CSE 30 and CSE 101) and advanced programming (e.g., CSE 111) at UC Santa Cruz or another institution.
- Petition to CM graduate director, presenting evidence of programming knowledge developed in another context.

Interpretive Practices: All Ph.D. students are expected to demonstrate sufficient and appropriate knowledge of interpretive practices to develop a significant CM research contribution. Students who lack such a background are strongly encouraged to take a series of courses in this area, consulting with their advisor regarding which courses would be most appropriate. The appropriate Interpretive Practices for a given student depends on the specific research area for the student. The key is that the student is able to critique and intervene in their research area from a broader social, cultural and historical perspective. One recommended sequence (which may or may not be appropriate for a specific student) is:

- HISC 1: Introduction to the History of Consciousness. If this is not possible, take an 80-level course that integrates introductory interpretive content (e.g., FILM 80V: Video Games as Visual Culture).
- Take two more graduate or upper-division undergraduate courses that focus on interpretive practices. The CM department offers courses that integrate this with CM knowledge, such as some offerings of CMPM 290A (e.g., Media Constellations) and CMPM 176: Game Systems. Other programs also offer courses that make this integration, such as DANM 201: Recent Methods and Approaches to Digital Arts and Culture and DANM 202: Dialogues and Questions in Digital Arts and Culture. Courses that do not make this integration, but that are connected to the student's research area, are also acceptable.

The final determination that a student has satisfied the media creation, programming, and interpretation requirements is made during the comprehensive exam, including the portfolio review portion of the exam. The coursework suggested above is intended to provide students with the knowledge and skills to successfully pass their comprehensive exam, and to provide appropriate projects for the portfolio portion of the exam. A student should consult with both their advisor and the grad director to determine the best path for being prepared for the comprehensive exam.

Note: In extraordinary circumstances the graduate director can reduce the number of required courses based on a petition presenting past accomplishments. For example, reducing the number of required topics courses by one for each substantial past research publication or system accepted from the petition.

Lower-Division Courses

Students who are considering enrolling in lower-division courses in order to fulfill additional degree requirements (e.g., CSE 30, HISC 1) may wish to consult with the course instructor and their advisor about instead taking an independent study or directed study (with the course instructor, their advisor, or a third faculty member) that subsumes the work of the course and adds additional content to bring it up to a graduate level. Graduate students must be enrolled in some combination of at least 10 credits of courses or independent studies that are either graduate or upper-

division undergraduate courses in order to be considered full-time enrolled.

Teaching Requirement

Pre-Qualifying Requirements

Ph.D. students are required to two examinations, the FYE and the comprehensive exam, before they take the qualifying exam.

First-Year Examination

The Ph.D. First-Year Exam measures students' understanding of, and ability to, synthesize and apply core computational media knowledge (history, theory, research approaches, and evaluation methods) in a written format. To fulfill the writing and synthesis requirement students must enroll in CMPM 205, a 5-credit course. Passing the CMPM 205 course at a Ph.D. level will then fulfill the First-Year Exam requirement. CMPM 205 must be taken in the spring of their first year (third quarter, excluding summer quarters) unless students need additional foundation work before taking one of the core courses, in which case it may be the second year (sixth quarter, excluding summer quarters).

CMPM 205 is offered twice a year: in the Spring and Summer quarters. First year students must take CMPM 205 in the Spring quarter. Students who receive a U in the Spring quarter have another chance to retake CMPM 205 in the Summer.

If a student gets a U in the course after taking it twice, then the student has three options:

1.) Transfer to the master's program and complete a terminal M.S. degree.

2.) Withdraw from the Ph.D. program.

3.) Remain in the Ph.D. program and be recommended for disqualification.

Students are recommended for disqualification from the program immediately if they either (a) fail the course twice or (b) fail the course once and elect not to take the course again.

In extraordinary circumstances the graduate director may give a student the option of taking the CMPM 205 course without having taken the core coursework (CMPM 201, CMPM 202, and CMPM 203) during any quarter. Those who pass may complete the degree without taking the core courses.

Ph.D. Comprehensive Examination

The Ph.D. comprehensive exam measures students' preparation to perform independent CM research. It must be taken (for the first time) no later than the end of a student's second year in the program (sixth quarter, excluding summer quarters). Before taking the exam, students must have completed the preparatory coursework for understanding media creation and computer programming, as well as demonstrated an understanding of interpretive practices (Foundation Areas, as outlined above). The quarter prior to taking the comprehensive exam, students enroll in a 5-credit independent study (CMPM 297A) with their advisor to prepare for the exam. During the quarter in which they plan to take the exam, students enroll in CMPM 206 (a 5-credit course, usually offered by the CM graduate director each quarter) and a 5-credit independent study (CMPM 297A, usually with their advisor), and take an exam evaluated by advisor and graduate director (with another faculty member stepping in if advisor is graduate director). The exam itself includes two components, a literature review and portfolio:

- Literature Review: Reading a significant body of material in two or three depth areas of CM—from a list developed by the student, advisor, and course instructor—integrating it, and writing one or more essays about it.
- Portfolio: A portfolio review of CM projects, with (a) a detailed written description of the computational system-building goals and process of at least one project led (in this aspect) by the student and (b) a detailed written description of the media-making goals and process of at least one project led (in this aspect) by the student. The projects may be from during or before enrollment in the program, and the written descriptions may be of the same or different projects.

There are three possible outcomes of the comprehensive exam:

- Pass at Ph.D. level
- Pass at M.S. level
- Fail

As with the first-year exam, students who pass the comprehensive exam at the Ph.D. level are done with the exam. Students who pass at the M.S. level may elect to leave the program with an M.S., upon completion of all M.S. requirements. Both students who pass at the M.S. level and students who fail have the option to take the exam again, in a future quarter, not later than the middle of their third year in the program (eighth quarter, excluding summer quarters). Students who take the exam again may not decrease their outcome (e.g., a student who passes at the M.S. level in spring, then fails or passes at the M.S. level the next time the course is offered, retains the option of completing the M.S.). Students may only take the exam twice. Students are recommended for dismissal from the program immediately if they either (a) fail twice or (b) fail once and elect not to take the exam again.

Qualifying Examination

Qualifying Examination and Advancement to Candidacy

The Ph.D. qualifying examination (QE) measures students' preparation to begin Ph.D. research. It must be taken (for the first time) no later than the end of a student's third year in the program (ninth quarter, excluding summer quarters). It has two parts: first, a detailed written description of a proposed dissertation project, distributed to the committee before the oral examination; second, an oral presentation of the project, followed by questioning from the committee.

The committee policy for the CM Ph.D. follows that of UC Santa Cruz. Specifically: The qualifying examination committee shall consist of at least four examiners, one of whom is not a member of the student's department. The department shall submit to the Office of the Graduate Dean at least one month before the proposed examination a list of four qualified persons who are willing to serve on the examination committee, and who meet the following conditions:

- The chair of the examination committee must be a tenured faculty member.
- The student's thesis advisor cannot chair the examination committee.
- The outside member must be (a) a tenured faculty member from a different discipline on the University of California, Santa Cruz, campus, (b) a tenured faculty member of the same or different discipline from another academic institution involved in research and graduate education, or (c) a qualified person outside of academia with significant research experience (as determined by the Graduate Division).

After passing the qualifying examination, students advance to candidacy. Students who do not pass the examination may take it again, but must do so no later than the end of their fourth year in the program (12th quarter, excluding summer quarters). Students may only take the examination twice. Students are recommended for dismissal from the program immediately if they either (a) fail twice or (b) fail once and elect not to take the examination again.

Post-Qualifying Requirements

Planners

Ph.D., Not Seeking M.S. Degree (Students with Technical CM M.S. Degree)

This is a sample program for a student who has completed a master's degree with significant technical content and a focus on some form of computational media (such as computer games). The M.S. in games and playable media at UC Santa Cruz (offered in Silicon Valley) is such a degree. Such students will have already satisfied the requirement for understanding media creation in a CM context (e.g., by taking the GAME 270, GAME 271, and GAME 272 sequence at UC Santa Cruz) and the requirement for demonstrating an understanding of computer programming (such master's degrees generally only accept students who know how to program). This program is for a student who wants to complete the Ph.D. without getting a second M.S. in the process.

	Fall	Winter	Spring

Ph.D., Seeking M.S. Degree (Students with Non-technical Master's Degree)

This is a sample program for a student who has completed a master's degree with significant arts content and a focus on some form of computational media (such as digital art). The M.F.A. in digital art and new media at UC Santa Cruz is such a degree. Such students will have already satisfied the requirement for understanding media creation in a CM context (e.g., by taking one of the DANM 250 sequences at UC Santa Cruz) but not necessarily the requirement for demonstrating an understanding of computer programming (such master's degrees generally focus on the strength of the student's arts portfolio, rather than technical skills). This program is for a student who wants to complete the Ph.D. while getting an M.S. in the process.

	Fall	Winter	Spring

			(Dissertation Defense)

Ph.D., Also Seeking M.S. Degree (Students with Technical Non-CM B.S.)

This is a sample program for a student who has completed a bachelor's degree with significant technical content but little focus on any form of computational media. The B.S. in computer science at UC Santa Cruz is such a degree. Such students will have already satisfied the requirement for demonstrating an understanding of computer programming (e.g., by taking a core programming sequence and CSE 111 at UC Santa Cruz) though students strongly focused on theoretical computer science may need to take an advanced programming course. This program is for a student who wants to complete the M.S. degree on the way to the Ph.D.

	Fall	Winter	Spring
Year 1	CMPM 201	CMPM 202	CMPM 203
	Topics course	Topics course	Topics course
	CMPM 179	CMPM 148	CMPM 290J (First-Year Exam)

	(Passes Comprehensive Exam)		(Passes Qualifying Exam/Advances to Candidacy)
Year 4	CMPM 299 (15 credits)	CMPM 299 (15 credits)	CMPM 299 (15 credits)
Year 5	CMPM 299 (15 credits)	CMPM 299 (15 credits)	CMPM 299 (15 credits)
			(Dissertation Defense)

Transfer Credit

Up to 10 credits transferred from equivalent courses in previous graduate work at UC Santa Cruz or elsewhere can be applied toward the Ph.D. course requirements. This can partially satisfy the topics requirement, but is not to exceed the three-course overall limit on transfers from outside institutions. A Course Substitution/Waiver form can be found on the BE Graduate Advising webpage.

[Optional Catchall]

Dissertation

Dissertation

The Ph.D. dissertation is a significant contribution to the CM field. It may emphasize technical, media-creation, or interpretive aspects, but must have a significant secondary contribution from at least one of the other areas—and may also emphasize areas equally. It requires an oral defense before a faculty committee, as well as a final dissertation document reviewed by that committee (distributed to the committee before the defense, and revised after the defense in response to committee comments). The committee must include at least two members of the CM Department.

Dissertation Defense

Academic Progress

As noted above, in order to remain in good academic standing, students must:

- Take the first-year exam (for the first time) the spring of the year they finish the core coursework. This should be spring quarter of their first year (third quarter, excluding summer quarters) unless students need additional foundation work before taking one of the core courses, in which case it may be the second year (sixth quarter, excluding summer quarters). Students who fail have the option to take the exam again, in the immediately following summer offering (unless granted an exception to take it the following academic year). Students may only take the exam twice. Students are recommended for dismissal from the program immediately if they either (a) fail twice or (b) fail once and elect not to take the exam again.
- Take the comprehensive exam (for the first time) no later than the end of a student’s second year in the program (sixth quarter, excluding summer quarters). Students who fail have the option to take the exam again, in a future quarter, not later than the middle of their fourth year in the program (eighth quarter, excluding summer quarters). Students may only take the exam twice. Students are recommended for dismissal from the program immediately if they either (a) fail twice or (b) fail once and elect not to take the exam again.
- Take the qualifying exam (for the first time) no later than the end of a student’s third year in the program (ninth quarter, excluding summer quarters). Students who do not pass the examination may take it again, but must do so no later than the end of their fourth year in the program (12th quarter, excluding summer quarters). Students may only take the examination twice. Students are recommended for dismissal from the program immediately if they either (a) fail twice or (b) fail once and elect not to take the examination again.

In addition, because the primary work in the Ph.D. is independent research under the supervision of a faculty advisor, students are expected to be working with a research advisor at all times. This advisor must either be a voting member of the Computational Media Department faculty or another UC Santa Cruz faculty member granted advisor status by the department in the student's case (either at the time of the student's admission or at a later point). Any student who ends a term without a faculty advisor will be issued a warning. If a student ends two academic quarters without an advisor they will be recommended for dismissal from the program immediately, unless granted an exception. Students interested in transferring faculty advisors should discuss this with their current and proposed faculty advisors and submit the Petition to Transfer Advisors once a transfer is agreed.

Applying for Graduation

Students planning to graduate should refer to the Baskin School of Engineering Graduate Studies website.

[Optional Catchall]

GAMES AND PLAYABLE MEDIA M.S.

Introduction

The M.S. in Games and Playable Media program has suspended admissions for the 2025-26 year.

The M.S. in Games and Playable Media (GPM) prepares students to make professional contributions to the creation of games and other forms of media that invite and structure play. The degree is offered at the UC Santa Cruz Silicon Valley Campus in Santa Clara, enabling connection and collaboration with local industry. The curriculum includes deep engagement with game creation as well as a focus on professional development. Students can also take advantage of course offerings in games and related technologies on the Santa Cruz campus, and the potential for collaborations with the department’s field-leading research groups.

The curriculum covers four core competencies: (1) game design and development, which includes working in a group to design, develop software experiences, elicit user input and test the user experience; (2) game development technologies, including gameplay programming techniques and knowledge of game engines and middleware; (3) knowledge and working practice in industry-standard tools for collaboration and project management, source code management, and content creation; and (4) specialized concentrations in areas such as development of alternative input devices, level design, game audio, game narrative, and others.

The M.S. in Games and Playable Media is a five-quarter program that spans one and two-thirds academic years. Students are expected to complete coursework in five academic quarters, without leaves of absence.

Requirements

Course Requirements

All students are required to take 60 credits to complete the M.S.. (Any electives not found on the list below must be approved by the Games and Playable Media vice chair on a case-by-case basis.) Required courses are as follows:

All of the following courses:

GAME 200	Game Design Systems	5
GAME 221	Professional Development for Game Makers	5
GAME 231	Game Technologies	5
GAME 270	Games and Playable Media Studio I	5
GAME 271	Games and Playable Media Studio II	5
GAME 272	Games and Playable Media Studio III	5
GAME 280A	Games Proseminar	2

GAME 280A must be taken a minimum of two times.

Plus one of the following options:

	Either this course	
GAME 230	Fundamentals of Game Engineering	5
	or these courses	
GAME 235	Game Development I	5
GAME 236	Game Development II	5

Students who lack sufficient technical preparation to enter course Games and Playable Media GAME 230, Fundamentals of Game Engineering, must take both GAME 235, Game Development I, and GAME 236, Game Development II. Assessment of technical preparation will be performed based on completed coursework prior to entry into the program, discussion with the student, and, at the program's discretion, use of a technical assessment examination.

Three courses from the electives list below, 15 credits (5 credits each)

CMPM 230	Data Science in Computational Experiences	5
CMPM 232	Psychology of Play	5
CMPM 235	User Evaluation of Technology	5
CMPM 244	Artificial Intelligence in Games	5
CMPM 248	Interactive Storytelling	5
CMPM 265	Generative Methods	5
CMPM 290J	Playable Media	5
CMPM 297A	Independent Study or Research	5
GAME 201	Level Design	5
GAME 202	Introduction to Build (Advanced): Physical Computing	5
GAME 210	Game Art Intensive	5
GAME 215	Audio Direction	5
GAME 232	Advanced Game Technologies	5
GAME 240	Game Usability	5
GAME 251	Games User Research	5
GAME 252	Modeling and Simulation	5
GAME 290A	Advanced Topics in Games	5
HCI 250	Participatory Design	5
MUSC 206B	Computer-Assisted Composition	5

Credit for various CMPM 297A options varies. A maximum of five credits of Computational Media 297A (Independent Study or Research) can be used to meet degree requirements.

Other Requirements

Master's Capstone Project

Completion of a Master's Capstone Project (Plan II) is required for the master's degree. These are collaborative projects, created together with other students in the Games and Playable Media (GPM) M.S. program. Projects are typically completed by students during GAME 272, Games and Playable Media Studio III. Students are evaluated based both on their individual contributions to the project and on the overall success of the project as a whole. Each project will be demonstrated via a public presentation, and this demonstration comprises part of the final project evaluation.

Evaluation of projects is overseen by a minimum of three people, which must include the GPM vice chair along with other members of the GPM program faculty, GPM program advisory committee, and/or other instructors in the GPM program. A majority of the committee's voting members are members of the UC Santa Cruz academic senate.

Planners

There are two primary paths through the first year of the degree. Students with less technical background take GAME 235 and GAME 236 in their first year, while those with more technical background take GAME 230 in their first year. All students, regardless of whether they do GAME 235 and GAME 236 or GAME 230, are required to complete at least 60 credits.

The sample programs include summer internships or sponsored projects. These are not required, and do not bear academic credit. They are, however, strongly suggested.

Sample program for students with more technical background

Fall Quarter 1	GAME 230, Fundamentals of Game Engineering (5 credits)
	GAME 200, Game Design Systems (5 credits)
	GAME 280A, Games Proseminar (2 credits)
Winter Quarter 2	Elective 1 (5 credits)
	Elective 2 (5 credits)
	GAME 280A, Games Proseminar (2 credits)
Spring Quarter 3	GAME 231, Game Technologies (5 credits)
	GAME 270, Games and Playable Media Studio 1 (5 credits)
	GAME 221, Professional Development for Game Makers I (2 credits)

Summer	Internship or Sponsored Project
Fall Quarter 4	GAME 271, Games and Playable Media Studio II
	Elective 3 (5 credits)
	GAME 280A, Games Proseminar (2 credits)
Winter Quarter 5	GAME 272, Games and Playable Media Studio III (5 credits)
	Elective 4 (5 credits)
	GAME 280A, Games Proseminar (2 credits)

Sample program for students with less technical background

Fall Quarter 1	GAME 235, Development I (5 credits)
	GAME 200, Game Design Systems (5 credits)
	GAME 280A, Games Proseminar (2 credits)
Winter Quarter 2	GAME 236, Game Development II (5 credits)
	Elective 1 (5 credits)
	GAME 280A, Games Proseminar (2 credits)
Spring Quarter 3	GAME 231, Game Technologies (5 credits)
	GAME 270, Games and Playable Media Studio 1 (5 credits)
	GAME 221, Professional Development for Game Makers (5 credits)
Summer	Internship or Sponsored Project
Fall Quarter 4	GAME 271, Games and Playable Media Studio II
	Elective 2 (5 credits)
	GAME 280A, Games Proseminar (2 credits)
Winter Quarter 5	GAME 272, Games and Playable Media Studio III (5 credits)
	Elective 3 (5 credits)
	GAME 280A, Games Proseminar (2 credits)

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of the M.S. degree may be taken before beginning the graduate program through the concurrent enrollment program. The game art, game writing, and game sound requirements of the M.S. program may also be satisfied through courses from other institutions or prior UCSC coursework. Petitions should be submitted along with the transcript from the other institution. For courses taken at other institutions, copies of the syllabi, examinations, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

On an ongoing basis, the faculty reviews the progress of every student remaining on track to complete the degree in five consecutive academic quarters. Students not making adequate progress toward completion of degree requirements (see the Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter, and move forward through the course sequences together with their cohort, remaining on track to complete the degree in five academic quarters.

Students receiving one unsatisfactory grade (U or grade below B) in a Baskin Engineering (BE) course are not making adequate progress and will be placed on academic probation for the following quarter of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment. Students who are on academic probation or are not enrolled full time are no longer guaranteed any previously committed funding. Should students receive an unsatisfactory grade (U or below B) in a Baskin Engineering course while on probation, the Computational Media Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again receives an unsatisfactory grade (U or below B) in a Baskin Engineering course, they will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their graduate advisor and the program vice chair immediately. Students may appeal their dismissal.

Applying for Graduation

Students planning to graduate should refer to the Baskin School of Engineering Graduate Studies website.

Optional Catchall

HUMAN COMPUTER INTERACTION M.S.

Introduction

The Master's of Science (M.S.) in Human Computer Interaction (HCI) aims to train students in core skills for human-computer interaction professionals: design methodologies, ethical and inclusive practices, prototyping and technical build skills, eliciting and integrating subject matter knowledge, user research methods, effective teamwork, professional communication, and career planning—all within the context of user experience (UX) and interaction. The curriculum is designed to accommodate students who have expertise in the social sciences, technical skills, and/or subject matter knowledge. Students with varying knowledge will be intentionally mixed together in coursework, in order to maximize peer learning and collaboration across strengths. The degree is offered in Santa Clara, California at the Silicon Valley Campus of UCSC, alongside the Games and Playable Media, and Natural Language Processing M.S. degrees, to enable students to connect and collaborate across programs and with local industry leaders.

The M.S. in Human Computer Interaction is a four-quarter program that begins in fall quarter, includes career planning courses and activities, and encourages student internships during summer. The HCI M.S. program is a Plan II master's program, which has a capstone requirement. Students are expected to complete coursework in four academic quarters, without leaves of absence.

Requirements

Course Requirements

All students are required to complete at least 53 credits for the M.S. in Human Computer Interaction. The HCI MS program is a Plan II Masters program, which has a capstone requirement fulfilled via the HCI 271 and HCI 272 course sequence. The required courses are as follows:

All of the following courses:

HCI 200	Introduction to HCI	5
HCI 201	Introduction to HCI Methods	5
HCI 220	Ethics and Activism in Tech and Design	5
HCI 271	HCI Capstone 1	5
HCI 272	HCI Capstone 2	10

Plus one of the following courses:

HCI 202A	Introduction to Build: Bootcamp	5
HCI 202B	Introduction to Build (Advanced): Physical Computing	5

Students with a less technical background should enroll in HCI 202A, while students with a more technical background (e.g., comfortable with programming basics) should enroll in the advanced course HCI 202B. The courses are generally offered during the same quarter.

Plus this two-credit course which must be taken every academic quarter:

HCI 290	HCI Seminar	2

HCI 290 must be taken every quarter for a total of four times (8 credits).

None of the above core HCI classes may count toward the elective requirement below.

Two courses from the elective list below:

All students are required to enroll and pass (letter grade "B-" or better or an "S" grade) in a minimum of two elective courses chosen from the list in the catalog.

ART 184	3D Art and Design I	5
ART 185	3D Art and Design II	5
CMPM 201	Introduction to Computational Media	5
CMPM 203	Computational Media Methods	5
CMPM 230	Data Science in Computational Experiences	5
CMPM 232	Psychology of Play	5
CMPM 235	User Evaluation of Technology	5
CMPM 237	Advanced Topics in Human-Robot Interaction	5
CMPM 243	Social Computing Research: Design, Algorithms, and Incentives	5
CMPM 248	Interactive Storytelling	5
CMPM 290J	Playable Media	5
CMPM 290A	Topics in Computational Media	5
CMPM 297A	Independent Study or Research	5
FILM 225	Software Studies	5
FILM 232	Audiovisual Ethnography	5
FILM 283	New Media Art and Digital Culture	5
GAME 200	Game Design Systems	5
GAME 201	Level Design	5
GAME 210	Game Art Intensive	5
GAME 215	Audio Direction	5
GAME 231	Game Technologies	5
GAME 232	Advanced Game Technologies	5
GAME 240	Game Usability	5
GAME 250	Foundations of Serious Games and Gamification	5
GAME 251	Games User Research	5
GAME 290A	Advanced Topics in Games	5
HCI 250	Participatory Design	5

*A maximum of five credits of CMPM 297A, Independent Study or Research, can be used to meet degree requirements.

Other Requirements

Master's Capstone Project

Completion of a master's capstone project is required for the M.S. degree. All students are required to take the capstone sequence (HCI 271 and HCI 272), in which they work in teams with industry, community, or faculty sponsors. The capstone is the culmination of the degree where student teams will cover the end-to-end design process of a product lifecycle using the skills they have developed throughout the M.S. degree. HCI 271 involves discovery, exploration, and research of the design space. HCI 272 involves prototyping, evaluation, and iteration. Both courses require students to develop and hone inclusive design practices, documentation and communication of design decisions to multiple stakeholders, and team professionalism.

During HCI 271, Capstone I, students form project teams with capstone sponsors (e.g., industry sponsors or faculty), develop a UX strategy, design and execute user research, analyze user data, and deliver polished user research deliverables to stakeholders. HCI 272, Capstone II, is a double-weighted course (10 credits) in which the same student teams produce a polished, high quality capstone project (e.g., high fidelity prototype, including design components) through extensive building of prototypes, user evaluations, and iterations of designs. The quarter culminates in a showcase where students communicate their work to stakeholders in multiple mediums.

Capstone sponsors are chosen at the discretion of the HCI vice chair, HCI executive director, and the HCI 271/HCI 272 instructors. Students may be provided the option to propose a sponsor which must be approved by instructors, by a deadline determined by instructors. Capstone student teams will ultimately be decided by instructors and will remain constant throughout the capstone sequence. In the case sponsors no longer can participate in either capstone class, instructors will reassign student teams to other sponsors as appropriate.

In the summer between HCI 271 and HCI 272 there may be opportunities to work independently with capstone sponsors or non-capstone related projects. The student is responsible for any agreement to do work with sponsors over the summer; the HCI M.S. program has no oversight nor role with such arrangements. Capstone-related work cannot be carried out during the summer without prior approval from capstone instructors.

Planners

There are two primary paths through the first year of the degree that require the same number of courses. Students with less technical background take HCI 202A, while those with more technical background take HCI 202B. Some electives are only offered in particular quarters/years; students should carefully plan for such electives before the first fall quarter. Students can refer to the Baskin Engineering Schedule of Classes and can contact the graduate advisor with questions. The sample programs include summer internships or sponsored projects. These are not required, and do not bear academic credit. They are, however, strongly recommended.

Sample program for students with less technical background

Fall Quarter 1	HCI 200, Introduction to HCI (5 credits)
	HCI 201, Introduction to Design Methods in HCI (5 credits)
	HCI 290, HCI Seminar (2 credits)
Winter Quarter 2	HCI 202A, Introduction to Build: Bootcamp (5 credits)
	HCI 220, Ethics and Activism in Tech and Design (5 credits)
	Elective (5 credits)
	HCI 290, HCI Seminar (2 credits)
Spring Quarter 3	HCI 271, Capstone I (5 credits)
	Elective (5 credits)
	HCI 290, HCI Seminar (2 credits)
Summer	Internship, Independent Studies, self-directed learning, etc. Sponsored Project
Fall Quarter 4	HCI 272, Capstone II (10 credits)
	HCI 290, HCI Seminar (2 credits)

Sample program for students with more technical background

Fall Quarter 1	HCI 200, Introduction to HCI (5 credits)
	HCI 201, Introduction to Design Methods in HCI (5 credits)
	HCI 290, HCI Seminar (2 credits)
Winter Quarter 2	HCI 202B, Introduction to Build (Advanced): Physical Computing (5 credits)
	HCI 220, Ethics and Activism in Tech and Design (5 credits)
	Elective (5 credits)
	HCI 290, HCI Seminar (2 credits)
Spring Quarter 3	HCI 271, Capstone I (5 credits)
	Elective (5 credits)
	HCI 290, HCI Seminar (2 credits)
Summer	Internship, Independent Studies, self-directed learning, etc.
Fall Quarter 4	HCI 272, Capstone II (10 credits)
	HCI 290, HCI Seminar (2 credits)

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of the M.S. degree may be taken before beginning the graduate program through the concurrent enrollment program. One of the two core introduction classes (Intro to Build, Intro to HCI Methods) may also be satisfied through courses from other institutions or prior UC Santa Cruz coursework. Petitions should be submitted along with the transcript from the other institution. For courses taken at other institutions, copies of the syllabi, examinations, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UC Santa Cruz.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

On an ongoing basis, the faculty reviews the progress of every student so they remain on track to complete the degree in four consecutive academic quarters. Students not making adequate progress toward completion of degree requirements (see the Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter, and move forward through the course sequences together with their cohort, remaining on track to complete the degree in a single four-quarter year.

Students receiving one unsatisfactory grades (U or grade below B) in a Baskin Engineering course are not making adequate progress and will be placed on academic probation for the following quarter of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Students who are on academic probation or are not enrolled full time are no longer guaranteed any previously committed funding. Should students receive an unsatisfactory grade (U or below B) in a Baskin Engineering course while on probation, the Computational Media Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again receives an unsatisfactory grade (U or below B) in a Baskin Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their graduate advisor, the program vice chair, or the executive director immediately. Students may appeal their dismissal.

Optional Catchall

Applying for Graduation

Students planning to graduate should refer to the Baskin Engineering Graduate Studies website.

SERIOUS GAMES M.S. (DISCONTINUED)

As of the 2023-2024 academic year, the Serious Games Master of Science (M.S.) program has been discontinued. For continuing students who entered the program prior to 2023-2024, please refer to the degree requirements published at the time of entering UCSC or subsequent catalog(s).

Technology and Information Management B.S. (p. 648)

Technology and Information Management Minor (p. 654)

Computer scientists and engineers study the design and architecture of digital systems, their properties, and their application. The science and engineering of computing systems includes a variety of disciplines from the mathematical study of computation to the design of architectures leveraging advanced technologies, as well as expertise in the many different levels of abstraction in between, and the realization of a vast array of applications and information technologies. These systems are now present in almost every human endeavor, in the form of embedded systems to cloud-scale computation, from personal devices to society-scale networks and systems, from artificial intelligence (AI) to the everyday systems they automate.

Computing is the field that is most strongly influencing the societal, industrial, and technological advances of this century, bringing a revolution spanning from what humans can do (via information technology, artificial intelligence, data science, e-commerce, and more) to how they communicate (the web, social networks, generative AI, mobile devices, and virtual/augmented reality). Indeed, as of 2023, six of the seven largest companies worldwide by market capitalization are all information technology companies. The rapid and targeted communication afforded by these systems has affected our culture and politics. Computing, from hardware to AI, algorithms and networking, is responsible for an increasing share of the value even of products that once were purely mechanical systems, such as automobiles.

Computing spans multiple areas that are continually evolving, spurred by both technological and theoretical advances; the current areas can be roughly categorized as follows:

- Design and architecture, or how computing systems are built: from transistors to architectures and parallel systems.
- Systems, or how the architectures can be organized: operating systems, storage, networking, and databases, the languages used to program them, and the techniques used to ensure their secure operation.
- Theory, concerning the abstract properties of computing systems, spanning from the theory of computation to algorithms, from the foundations of programming languages and concurrency to the theory of databases and distributed systems.
- Artificial Intelligence, or how to computationally understand information about the world, including data science, generative AI, machine learning, natural language processing and vision.
- Applications, or how computing systems can be used and what the implications of their use are, from web to mobile systems, from vision to assistive technologies, from fairness and privacy issues to the societal implications of computing, to the incentive structures that make collaboration and communication possible.

Computing at UC Santa Cruz has already attained a very high level of international recognition. The Computer Science and Engineering Department's organization, as a single cohesive department, facilitates new projects and courses that span multiple areas. As a broad department, it benefits from a wider and more prepared graduate student cohort, and the close coordination of degrees with course offerings that provide engineering majors with more streamlined and cutting-edge degree programs. With its proximity to Silicon Valley and its outstanding research, UCSC is a leader in computing research and education.

The Computer Science and Engineering Department offers five undergraduate degree programs, three undergraduate minors, and graduate master's and doctoral degree programs.

Two additional programs in Baskin Engineering share the same introductory programming courses as the Computer Science and Engineering Department's computing majors. The Computational Media Department offers a degree that focuses on computer game design by providing students with artistic, systems, and management perspectives for developing computer games. The Electrical and Computer Engineering Department offers a degree in robotics that builds on courses in computer engineering and electrical engineering, combined with mechanical engineering, that focuses on constructing and controlling robotic devices.

UNDERGRADUATE PROGRAM

The Computer Science and Engineering Department at UC Santa Cruz offers five undergraduate degrees and three related minors:

The **bachelor of science (B.S.) in computer engineering** prepares graduates for a rewarding career in engineering. UCSC computer engineering graduates will gain a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry. Because computer engineering is so broad, the B.S. in computer engineering offers four specialized concentrations for completing the program: systems programming, computer systems, networks, and digital hardware.

The **bachelor of science (B.S.) in computer science** is appropriate for students desiring a strong concentration in the core areas of computer science—algorithms, programming languages, and systems—with more courses in computer science, computer engineering, and computational media; this program also allows for a few electives outside of science and engineering.

The **bachelor of arts (B.A.) in computer science** is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including some courses outside of science and engineering, or even for a double major in another discipline.

The **bachelor of arts (B.A.) in network and digital technology** provides students with in-depth knowledge of the underlying structure and function of network and computer technology and the design processes that make those technologies function. The program is tailored to students who wish to combine technology with other fields or have a general focus on digital-computer networks. The B.A. in network and digital technology is not an engineering degree, but B.A. graduates will be prepared to work with technology development in other capacities, or join the computer network workforce.

At UC Santa Cruz, students in computing majors are first introduced to programming using the Python programming language in CSE 20, Beginning Programming in Python. CSE 30, Programming Abstractions: Python, exposes students to more advanced concepts. CSE 30 assumes some Python experience. Students with a prior programming course, AP credit, or clearing the "Test-out" bar will start with CSE 30.

Students trained in a different language should self-study Python to prepare for CSE 30. See the CSE 20 Testout Exam website for resources and further information. CSE40 is also required for all to learn the basics of artificial intelligence for bachelor of science (B.S.) in computer science and bachelor of arts (B.A.) in computer science.

The bachelor of science (B.S.) in computer science, the bachelor of science (B.S.) in computer engineering, and bachelor of arts (B.A.) in network and digital technology also require mastering C and computer organization. CSE 12, Computer Systems and Assembly Language & Laboratory, provides the underpinnings of computer organization necessary for mastering the C programming language. C programming is introduced in CSE 13S, which depends on CSE 12.

Many computer engineering and computer science students continue their education through the M.S. degree. The Department of Computer Science and Engineering offers a **combined B.S./M.S. pathway** in computer science and engineering that enables eligible undergraduates to move without interruption to the graduate program. Interested students should contact their adviser for more details.

COURSES FOR NON-MAJORS

The Department of Computer Science and Engineering offers course CSE 3, Personal Computer Concepts: Software and Hardware, providing students an introductory course on the design and use of computers from an engineering viewpoint. Other courses of interest to non-majors include CSE 20, Beginning Programming in Python and CSE 12, Computing Systems and Assembly Language & Laboratory an introductory course on computer systems, system software, and machine-level programming; CSE 80N, Introduction to Networking and the Internet, an introduction to technological services of the Internet; and CSE 80A, Universal Access: Disability, Technology, and Society.

GRADUATE PROGRAM

The Department of Computer Science and Engineering offers a doctorate (Ph.D.) and a master of science (M.S.) degree program. Graduate students in these programs establish a solid foundation in algorithms, architectures, programming languages, and then proceed to a thorough study of recent developments in their selected area of specialization. The department offers the M.S. in the Natural Language Processing professional degree program.

The normative time for the CSE Ph.D. program is five years for a full-time student.

Students admitted to the CSE Ph.D. program are generally supported in the form of a combination of fellowships, teaching assistantships, and/or graduate research assistantships.

The normative time for CSE M.S. thesis track programs is two years for a full-time student and from one year to four quarters for the M.S. project track programs.

The CSE M.S. thesis track is for students interested in advanced studies and carrying out independent research as well as those contemplating pursuit of a Ph.D. degree.

The M.S. in Natural Language Processing program is a five-quarter program offered through the UCSC campus location in Silicon Valley.

COMPUTER ENGINEERING B.S.

Information and Policies

Introduction

The bachelor of science (B.S.) in computer engineering prepares graduates for a rewarding career in engineering. UC Santa Cruz computer engineering graduates will gain a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry. Because computer engineering is so broad, the B.S. in computer engineering offers four specialized concentrations for completing the program: systems programming, computer systems, networks, and digital hardware

Systems Programming Concentration

The systems programming concentration focuses on software systems: courses include operating systems, compilers, software engineering, and advanced programming. Students finishing this concentration are very well prepared for building large software systems of all types. This concentration is the closest one to a computer science major- the main differences are that it does not require computer science theory courses, but because of the core computer engineering requirements, includes more hardware and electronics than a computer science bachelor's degree.

Computer Systems Concentration

The computer systems concentration provides a balance between software and hardware design. Students are prepared for a large variety of different design tasks, especially those requiring the integration of hardware and software systems, but may need further training for any particular specialization.

Networks Concentration

The networks concentration focuses on communication between computers, covering both network hardware and protocols. Students finishing this concentration are well prepared for the design of wired and wireless network systems.

Digital Hardware Concentration

The digital hardware concentration focuses on hardware design and includes more electronics than the other concentrations. Students finishing this concentration are well prepared for building hardware systems. This concentration is the closest one to an electronics major; the main differences are that it does not require as much electronics theory or

analog electronic design, but because of the core computer engineering requirements, requires more software skills.

Program Learning Outcomes

For the Computer Engineering B.S. degree, the program learning outcomes are:

- an ability to apply knowledge of mathematics, science, and engineering;
- an ability to design a system, component, or process to meet desired needs within realistic constraints;
- an ability to function effectively on teams that establish goals, plan tasks, meet deadlines, and analyze risk and uncertainty;
- an ability to communicate effectively; and
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Academic Advising for the Program

The Baskin Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in Baskin Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Transfer students should also refer to the Transfer Information and Policy section.

Baskin Engineering Building, Room 225
bsoeadvising@ucsc.edu
(831) 459-5840

Getting Started in the Major: Frosh

This major is highly course intensive and sequential; students who intend to pursue this major must begin taking classes for the major in their first quarter at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

Transfer Information and Policy

Transfer students who want to pursue the computer engineering major, must have applied and been admitted to UC Santa Cruz as a proposed computer engineering major.

Transfer Admission Screening Policy

Students should complete at least six of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5
AM 20	Ordinary Differential Equations for Engineers	5
AM 30	Multivariate Calculus for Engineers	5
MATH 23A	Vector Calculus	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7
ECE 13	Computer Systems and C Programming	7
PHYS 5A	Introduction to Physics I	5
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1

Lecture-lab combinations count as one course.

CSE 13S and ECE 13 are alternatives; only one or the other, whichever is completed first, can count toward the six courses.

AM 10 and MATH 21 are alternatives; only one or the other, whichever is completed first, can count toward the six courses.

AM 30 and MATH 23A are alternatives; only one or the other, whichever is completed first, can count toward the six courses.

To earn their degree within two years after transferring, it is recommended that transfer students have completed courses transferable as PHYS 5A/PHYS 5L, PHYS 5C/PHYS 5N, MATH 19A, MATH 19B, and one of the following: MATH 23A, AM 10, MATH 21, or AM 20. In addition, completion of at least one programming course is recommended.

Cumulative GPA

Their cumulative GPA should be at least 2.8 in all of the courses attempted.

Transfer students who wish to graduate in two years are strongly recommended to complete all lower division major requirements and most General Education requirements before coming to UC Santa Cruz. Please note that while AP courses satisfy screening requirements they do

not count toward the minimum GPA. If you satisfy the transfer admissions

screening requirements, you are not required to take additional coursework in order to declare.

Getting Started in the Major: Transfer Students

Transfer students should declare their major in their first quarter at UC Santa Cruz. Instructions for declaring a major in

Baskin Engineering are on the Baskin Engineering undergraduate advising website.

Major Qualification Policy and Declaration Process

Major Qualification

Transfer students should refer to the Transfer Admission Screening requirements.

In order to declare the computer engineering major students must be listed as a proposed major within Baskin Engineering. Please refer to the Baskin Engineering "Proposed Major Retention" and its "Declaring a Baskin Engineering Major" sections in the catalog for more information.

In addition to being listed as a proposed Baskin Engineering major, declaration of the computer engineering major in the first six quarters of enrollment at UC Santa Cruz is based on performance in the following lower-division courses required for the major:

CE Major Qualification Courses

Both of these:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

And one of these (whichever is completed first):

AM 30	Multivariate Calculus for Engineers	5
MATH 23A	Vector Calculus	5

And one of these (whichever is completed first):

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

And one of these:

CSE 13S	Computer Systems and C Programming	7
ECE 13	Computer Systems and C Programming	7

And all of these:

AM 20	Ordinary Differential Equations for Engineers	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7
PHYS 5A	Introduction to Physics I	5
PHYS 5L	Introduction to Physics I Laboratory	1
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1

Appeal Process

Students who are informed that they are not qualified for the major may appeal this decision by submitting a letter to the undergraduate director through the Baskin Engineering undergraduate advising office within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

How to Declare a Major

There are four steps to declaring a Baskin Engineering major. For a detailed guide to this process, please consult the Baskin Engineering Declare Your Major website.

Students should start the declaration of major process by completing Step One on the Baskin Engineering Declare Your Major website as soon as they complete 36 credits in the computer engineering major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed enough courses.

Letter Grade Policy

All students admitted to a Baskin Engineering major, or seeking admission to a major, must take all courses required for that major for a letter grade. This policy includes courses required for these degrees that are sponsored by other departments.

[Optional Catchall]

Course Substitution Policy

Undergraduate engineering students who wish to substitute a major course with a course from another department at UC Santa Cruz, or from another academic institution, must first seek approval through the Baskin Engineering Undergraduate Advising Office. The advising office requires a Petition for Course Substitution be approved before credit for an alternate course can be applied to any Baskin Engineering major requirement.

Petition forms are available at the Undergraduate Advising Office and online.

Petitions and procedures for approval must be obtained from and submitted to the Undergraduate Advising Office.

Community Colleges courses once enrolled at UCSC

Once enrolled in Baskin Engineering students who wish to take a course at a California community college must first check Assist.org to see if the course is equivalent at UC Santa Cruz. If the course is not listed on Assist.org, students must submit a course substitution petition to the BE Undergraduate Advising Office to have it reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course

description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

If the course is approved for equivalency or was on Assist.org, then students with declared majors must also receive approval by their major department to take the class at the community college **PRIOR** to taking it. Undeclared students must receive prior approval

from the CSE Department to substitute a course for CSE 13S. Undeclared students do not require prior approval for other courses listed on Assist.org. Forms and procedures for approval can be obtained from and submitted to the BE Undergraduate Advising Office.

Four-Year Institutions and the UC Education Abroad Program (UCEAP)

Students who intend to take a course at a four-year institution or UC Education Abroad, must submit a Course Substitution Petition to the BE Undergraduate Advising Office to have the course reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

Double Majors and Major/Minor Combinations Policy

Students completing the computer engineering major cannot also receive the computer engineering minor or the Network and Digital Technology B.A. degree.

Study Abroad

Honors

Majors are considered for “Honors in the Major” and “Highest Honors in the Major” based on their GPA and on results of undergraduate research and other significant contributions to Baskin Engineering. Students with a GPA of 3.70, in most cases, receive highest honors. Students with a GPA of 3.30, in most cases, receive honors. Students with particularly significant accomplishments in undergraduate research or contributions to Baskin Engineering may be considered with a lower GPA. Computer engineering juniors and seniors may also be eligible for election to the UC Santa Cruz chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Materials Fee and Miscellaneous Fees

Please see the section on fees under Baskin Engineering.

Requirements and Planners

Course Requirements (all concentrations)

All students in the computer engineering major take the same core courses, which give the fundamentals of programming and hardware design, supported by the physics and mathematics necessary to understand them. Students must complete all of the courses listed within their selected concentration, and they must complete the capstone sequence. The comprehensive requirement for computer engineering majors is satisfied by completion of the capstone course. Some courses may be satisfied via exam credit.

Lower-Division Courses

All of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Plus one of the following

AM 30	Multivariate Calculus for Engineers	5
MATH 23A	Vector Calculus	5

Plus one of the following

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus all of the following

AM 20	Ordinary Differential Equations for Engineers	5
CSE 12	Computer Systems and Assembly Language and Lab	7

Plus one of the following

CSE 13S	Computer Systems and C Programming	7
ECE 13	Computer Systems and C Programming	7

Plus all of the following

CSE 16	Applied Discrete Mathematics	5
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
PHYS 5A	Introduction to Physics I	5
PHYS 5L	Introduction to Physics I Laboratory	1
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1

Students with no prior programming will take CSE 20 before CSE 30 and CSE 12. Students with a prior programming course, AP credit, or clearing the “Test-out” bar will start with CSE 30, and CSE 12.

Plus one of the following options

	Either these courses	
PHYS 5B	Introduction to Physics II	5
PHYS 5M	Introduction to Physics II Laboratory	1
	or this course	
ECE 9	Statics and Mechanics of Materials	5

Upper-Division Courses

Core requirements:

(In addition to the core requirements students must complete the courses for one of the concentrations.)

CSE 100	Logic Design	5
CSE 100L	Logic Design Laboratory	2
CSE 101	Introduction to Data Structures and Algorithms	5
CSE 120	Computer Architecture	5
CSE 121	Embedded System Design	7
CSE 185E	Technical Writing for Computer Science and Engineering	5
ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 103	Signals and Systems	5
ECE 103L	Signals and Systems Laboratory	2

Plus one of the following

CSE 107	Probability and Statistics for Engineers	5
STAT 131	Introduction to Probability Theory	5

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in computer engineering is satisfied by one of the following:

CSE 185E	Technical Writing for Computer Science and Engineering	5
CSE 195	Senior Thesis Research	5

Comprehensive Requirement

Capstone Requirement

All computer engineering students complete one of the following capstone sequences:

Both of the following courses

CSE 123A	Engineering Design Project I	5
CSE 123B	Engineering Design Project II	7

Or all of the following courses

CSE 129A	Capstone Project I	2
CSE 129B	Capstone Project II	5
CSE 129C	Capstone Project III	5

Or the following course

CSE 195	Senior Thesis Research	5

CSE 195 also requires the submission of an approved senior thesis.

Or the following course

ECE 118	Introduction to Mechatronics	10

May not also be used as a concentration elective.

Concentration Courses

All students complete the core courses, disciplinary communication (DC), and comprehensive requirements listed above, In addition to these courses, students must complete all courses listed within their selected concentration below.

Computer Systems Concentration Requirements

One of the following courses

CSE 125	Logic Design with Verilog	7
CSE 122	Introduction to VLSI Digital System Design	5

CSE 222A, Advanced VLSI Digital System Design, may be substituted for CSE 122 with department approval.
CSE 225, Introduction to ASIC Systems Design, may be substituted for CSE 125 with department approval. Petition forms for course substitution are available at the undergraduate advising office and on the Undergraduate Advising website.

Plus the following course

CSE 130	Principles of Computer Systems Design	5

Plus one of the following courses

CSE 111	Advanced Programming	5
CSE 134	Embedded Operating Systems	5

Plus one upper-division or graduate elective

From the approved elective list for the computer engineering major.

Digital Hardware Concentration Requirements

The following course

CSE 125	Logic Design with Verilog	7

CSE 225, Introduction to ASIC Systems Design, may be substituted for CSE 125 with department approval. Petition forms for course substitution are available at the undergraduate advising office and on the Undergraduate Advising website.

Plus one of the following options

	Either these courses	
ECE 171	Analog Electronics	5
ECE 171L	Analog Electronics Laboratory	2

	or this course	
CSE 122	Introduction to VLSI Digital System Design	5

CSE 222A, Advanced VLSI Digital System Design, may be substituted for CSE 122 with department approval. Petition forms for course substitution are available at the undergraduate advising office and on the Undergraduate Advising website.

Plus one of the following courses

CSE 122	Introduction to VLSI Digital System Design	5
CSE 220	Computer Architecture	5
CSE 228A	Agile Hardware Design	5
ECE 171	Analog Electronics	5
ECE 171L	Analog Electronics Laboratory	2
ECE 173	High-Speed Digital Design	7

Lecture-lab combinations count as one course.

Note that CSE 122 or ECE 171 and ECE 171L cannot be used again here.

Plus one upper-division or graduate elective

From the approved elective list for the computer engineering major or the Computer Engineering B.S. Digital Hardware Concentration Grad-Level Course List.

Networks Concentration Requirements

All of the following courses

CSE 150	Introduction to Computer Networks	7
CSE 156	Network Programming	5
CSE 156L	Network Programming Laboratory	2
CSE 130	Principles of Computer Systems Design	5

Plus one of the following options

Either the lecture-lab combination of CSE 151 and CSE 151L, or one upper-division or graduate elective from the approved elective list for the computer engineering major.

System Programming Concentration Requirements

The following course

CSE 130	Principles of Computer Systems Design	5

Plus one of the following courses

CSE 111	Advanced Programming	5
CSE 134	Embedded Operating Systems	5

Plus the following course

CSE 150	Introduction to Computer Networks	7

Plus one of the following options

Either the lecture-lab combination of CSE 151 and CSE 151L, or one upper-division or graduate elective from the approved elective list for the computer engineering major.

Plus one of the following courses

CSE 113	Parallel and Concurrent Programming	5
CSE 156	Network Programming	5
CSE 156L	Network Programming Laboratory	2
CSE 110A	Fundamentals of Compiler Design I	5

CSE 156 and CSE 156L lecture-lab combination count as one course.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Below are two sample academic plans for students majoring in computer engineering. Since the plans for the third and fourth years will vary according to the concentration and capstone selected, placeholders for these courses have been indicated with “concentration course” and “capstone course.” As part of the major declaration process students prepare a four-year plan based on a concentration and this may affect the placement of other courses as well. Careful planning at the time of declaration is required to complete the degree within four years. Entering frosh who have little programming experience, are strongly advised to take a programming course in the fall quarter. Students completing the courses in the four-year planners will have satisfied the MF, PR-E, SI, and SR general education requirements.

Plan One for Entering Frosh
This plan is for students with programming experience who are prepared for MATH 19A.

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 19A CSE 30 COLL 1	MATH 19B CSE 12 WRIT 1/WRIT	AM 30 CSE 13S	

		1E (if needed)	
2nd (soph)	AM 10	AM 20	CSE 101
	PHYS 5A PHYS 5L	PHYS 5C PHYS 5N	PHYS 5B PHYS 5M
	CSE 16		
	WRIT 2*		
3rd (junior)	ECE 101 ECE 101L	CSE 107	CSE 121
	CSE 120	CSE 100. CSE 100L	Concentration course
4th (senior)	Concentration course	Capstone course	Capstone course
	ECE 103 ECE 103L	Concentration course	Concentration course
	CSE 185E		

* WRIT 2 should be taken in or before spring quarter of the second year.

Plan Two for Entering Frosh

This plan is for students with no programming experience who are placed into MATH 3.

	Fall	**Winter**	**Spring**	**Summer**
Entering				College 1A
				Summer Edge (optional)
1st (frosh)	MATH 3	MATH 19A	MATH 19B	
	CSE 20	CSE 30	CSE 12	
		WRIT 1/WRIT 1E (if needed)		
2nd (soph)	PHYS 5A PHYS 5L	PHYS 5C PHYS 5N	PHYS 5B PHYS 5M	
	CSE 16	CSE 13S	CSE 101	
	AM 30	AM 10		
	WRIT 2*			
3rd (junior)	CSE 100 CSE 100L	ECE 101 ECE 101L	CSE 185E	
	CSE 120	AM 20	ECE 103 ECE 103L	
		STAT 131	Concentration course	
4th (senior)	CSE 121	Capstone course	Capstone course	
	Concentration course	Concentration course	Concentration course	

* WRIT 2 should be taken in or before spring quarter of the second year.

Plan for Junior Transfers

Below is a sample academic plan for students transferring to UC Santa Cruz in computer engineering for their junior year. It assumes that all but one lower-division and all general education course requirements have been satisfied. Since the plans for the third and fourth years vary according to the concentration and capstone selected, placeholders for these courses have been indicated with “concentration course” and “capstone course.” As part of the major declaration process students prepare a plan based on a concentration and this may affect the placement of other courses as well. Careful planning at the time of declaration is required to complete the degree within two years.

	Fall	**Winter**	**Spring**	**Summer**
Entering				KRSG 1T
				Summer Edge (optional)
3rd	ECE 101	CSE 101	CSE 100	

(junior)	ECE 101L		CSE 100L
	CSE 13S	CSE 107	Concentration course
		CSE 120	
4th (senior)	CS 121	Capstone course	Capstone course
	Concentration course	Concentration course	ECE 103 ECE 103L
	CSE 185E	Concentration course	

Curriculum charts for all Baskin Engineering majors are available on the department's website.

COMPUTER SCIENCE B.S.

Information and Policies

Introduction

The bachelor of science (B.S.) program is appropriate for students desiring a strong concentration in the core areas of computer science—algorithms, programming languages, and systems—with more courses in computer science, computer engineering, and computational media; this program also allows for a few electives outside of science and engineering.

Applications of computer science are found in many other areas of study, from art, music, and linguistics to social sciences, economics, business, digital, and social media, environmental and life sciences, and sciences. Thus, interdisciplinary activities are encouraged. For those students whose primary interest is in another area, a minor in computer science is offered.

Program Learning Outcomes

Recipients of a Bachelor of Science degree in Computer Science at the University of California, Santa Cruz, are expected to have the following skills and experiences:

1. Demonstrate mastery of computer science in the following core knowledge areas:
    - Algorithms, data structures, and complexity
    - Programming languages
    - Software engineering and development
    - Computer systems
2. Apply system-level perspective by thinking at multiple levels of detail and abstraction and by recognizing the context in which a computer system may function, including its interactions with people and the physical world.
3. Apply problem-solving skills and the knowledge of computer science to solve real problems.
4. Understand how technological advances impact society and the social, legal, ethical and cultural ramifications of computer technology and their usage.
5. Write about and orally communicate technical material about computer science and computer systems, broadly conceived.

Academic Advising for the Program

The Baskin Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in Baskin Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Transfer students should also refer to the Transfer Information and Policy section.

Baskin Engineering Building, Room 225
bsoeadvising@ucsc.edu
(831) 459-5840

Getting Started in the Major: Frosh

It is recommended that high school students intending to apply to the computer science major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

This major is highly course intensive and sequential; students who intend to pursue this major must begin taking classes for the major in their first quarter at UC Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

Transfer Information and Policy

Transfer students who want to pursue the computer science major, must have applied and been admitted to UC Santa Cruz as a proposed computer science major.

Transfer Admission Screening Policy

The following Transfer Screening policy takes effect in fall 2024 and will be mandatory for all transfer students entering UC Santa Cruz fall 2026 and later. Transfer students entering UCSC prior to fall 2026 are encouraged to complete these requirements, but will still be considered for admission if they fulfill the 2023-2024 admissions screening requirements.

Prior to admission, transfer students must have completed the following five courses or their articulated equivalents with a combined minimum GPA of 3.0.

Lecture-lab combinations count as one course. Please note that while AP courses satisfy screening requirements they do not count toward the minimum GPA. If you satisfy the transfer admissions screening requirements, you are not required to take additional coursework in order to declare.

All of the following

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7

Plus one of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

Plus one of the following

MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20B	Honors Calculus	5

Minimum GPA

The combined GPA in the five courses above must be at least a 3.0.

Furthermore, transfer students entering in the fall must have completed at least three of these courses by the end of the fall term of the previous academic year and have a minimum 3.0 GPA over all completed CS major qualification courses at that time.

Transfer students are strongly recommended to complete one course out of MATH 21, AM 10, MATH 23A or AM 30, and most general education requirements prior to arriving at UC Santa Cruz.

Most courses in the computer science program at UC Santa Cruz have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, computer science students are first introduced to programming using the programming language Python. The core programming sequence—courses CSE 30 and CSE 13S—exposes students to both Python and C. Many upper-division courses that involve programming use the C and C++ programming languages.

Transfer students who are not familiar with both an object-oriented language may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Python and C relatively simple.

Getting Started in the Major: Transfer Students

Transfer students should declare their major in their first quarter at UC Santa Cruz. Instructions for declaring a major in the Baskin School of Engineering are on the Baskin Engineering undergraduate advising major declaration page.

Major Qualification Policy and Declaration Process

Major Qualification

Transfer students should refer to the Transfer Admission Screening requirements.

For all students, it is necessary to be listed as a proposed computer science major within Baskin Engineering before being able to declare the major. Additionally, students must satisfy the following three criteria to qualify for the CS B.S. major:

Declare

Students must declare CS (Computer Science B.S. or Computer Science B.A.) as their major between student's second to sixth quarter.

CS B.S. Major Qualification courses

Students must have completed the following CS major qualification courses to qualify for the CS B.S. major:

Complete these three courses

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 30	Programming Abstractions: Python	7

Plus one of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

Plus one of the following

MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20B	Honors Calculus	5

Cumulative GPA

Students must also have a cumulative GPA of at least 3.0 in the CS major qualification courses attempted at UC Santa Cruz, with at most one unsuccessful attempt (grade C-, D+, D, D-, F, or NP) permitted in a CS major qualification course. Courses satisfied via exam credit are not counted in the GPA calculation.

Appeal Process

Students who are informed that they do not qualify for the major may appeal this decision by submitting a letter to the undergraduate director through the Baskin Engineering

undergraduate advising office within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

How to Declare a Major

Students interested in pursuing computer science must indicate computer science as a proposed major on their application for admission to UC Santa Cruz. Students admitted to UCSC in fall 2018 or later will be able to declare a computer science major only if they have been admitted to UCSC as proposed computer science majors.

There are four steps to declaring a Baskin Engineering major. For a detailed guide to this process, please consult Baskin Engineering's Declare Your Major website.

Students should start the declaration of major process by completing Step One on the Baskin Engineering Declare Your Major website as soon as they complete the CS major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed all CS major qualification courses.

Letter Grade Policy

All students admitted to a Baskin Engineering major, or seeking admission to a major, must take all courses required for that major for a letter grade. This policy includes courses required for these degrees that are sponsored by other departments.

[Optional Catchall]

Course Substitution Policy

Undergraduate engineering students who wish to substitute a major course with a course from another department at UC Santa Cruz, or from another academic institution, must first seek approval through the Baskin Engineering Undergraduate Advising Office. The advising office requires a Petition for Course Substitution be approved before credit for an alternate course can be applied to any Baskin Engineering major requirement.

Petition forms are available at the Undergraduate Advising Office and online.

Petitions and procedures for approval must be obtained from and submitted to the Undergraduate Advising Office.

Community Colleges courses once enrolled at UCSC

Once enrolled in Baskin Engineering students who wish to take a course at a California community college must first check Assist.org to see if the course is equivalent at UC Santa Cruz. If the course is not listed on Assist.org, students must submit a course substitution petition to the BE Undergraduate Advising Office to have it reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

If the course is approved for equivalency or was on Assist.org, then students with declared majors must also receive approval by their major department to take the class at the community college PRIOR to taking it. Undeclared students must receive prior approval from the CSE Department to substitute a course for CSE 13S. Undeclared students do not require prior approval for other courses listed on Assist.org. Forms and procedures for approval can be obtained from and submitted to the BE Undergraduate Advising Office.

Four-Year Institutions and the UC Education Abroad Program (UCEAP)

Students who intend to take a course at a four-year institution or UC Education Abroad, must submit a Course Substitution Petition to the BE Undergraduate Advising Office to have the course reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

Double Majors and Major/Minor Combinations Policy

Students may not receive both the Computer Science B.A. and Computer Science B.S. degrees.

Students may not receive both the Network and Digital Technology B.A. and the Computer Science B.S. degrees.

Study Abroad

Honors

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of "Highest Honors in the Major." Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of "Honors in the Major." Baskin Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

[Optional Catchall]

Requirements and Planners

Course Requirements

This program is designed for students who wish to maximize exposure to computer science concepts and methods by taking a large selection of upper-division computer science courses,

as well as courses in the sciences and mathematics. A minimum of 21 courses must be completed for the B.S. in computer science. Some courses may be satisfied via exam credit.

Lower-Division Courses

Computer Science and Engineering

All of the following

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 16	Applied Discrete Mathematics	5
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
CSE 40	Machine Learning Basics: Data Analysis and Empirical Methods	5

Students with no prior programming will take CSE 20 before CSE 30, and CSE 12. Students with a prior programming course, AP credit, or clearing the CSE 20 “Test-out” bar will start with CSE 30, and CSE 12.

CSE 40 has a test-out option which can satisfy this requirement.

Plus the following

CSE 13S	Computer Systems and C Programming	7

Mathematics

Plus one of the following options:

	Either these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
	or these courses	
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Applied Mathematics

One of these courses

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus one of these courses

AM 30	Multivariate Calculus for Engineers	5
MATH 23A	Vector Calculus	5

Engineering Science

ECE 30	Engineering Principles of Electronics	5

Upper-Division Courses

Computer Science and Engineering

Take the following courses:

CSE 101	Introduction to Data Structures and Algorithms	5
CSE 101M	Mathematical Thinking for Computer Science	5
CSE 120	Computer Architecture	5
CSE 130	Principles of Computer Systems Design	5

Plus one of the following

CSE 102	Introduction to Analysis of Algorithms	5
CSE 103	Computational Models	5

Plus one of the following

CSE 112	Comparative Programming Languages	5
CSE 114A	Foundations of Programming Languages	5

Statistics

Take one of the following:

STAT 131	Introduction to Probability Theory	5
CSE 107	Probability and Statistics for Engineers	5

Electives

Four courses must be completed from the list below . At least one course must be a computer science and engineering course. At most two courses can be from applied mathematics, statistics or mathematics, of which at most one may be substituted with two physics classes, chosen from the following list of class pairs: PHYS 6A and PHYS 6C, PHYS 6A and PHYS 6B, PHYS 5A and PHYS 5C, PHYS 5A and PHYS 5B. Any laboratories required or recommended by the Physics Department associated with these classes are not part of the computer science B.S. major requirements.

List of B.S. electives:

1. Any 5-credit or more CSE course with a number between 100 and 189, **except** for the DC courses CSE 115A and CSE 185E/CSE 185S.

2. Any 5-credit or more CSE course with a number between 201 and 279. Approval for courses with numbers 290 and above may be requested by submitting a course substitution petition to the BE Undergraduate Advising Office. Courses with numbers 280-289 are not eligible. Undergraduate students require permission from the instructor to enroll in graduate courses.

3. CSE 195 (if not used to satisfy the DC requirement).

4. Any course from the following list:

AM 114	Introduction to Dynamical Systems	5
AM 147	Computational Methods and Applications	5
AM 148	GPU Programming for Scientific Computations	5
AM 160	Introduction to Scientific Machine Learning	5
CMPM 120	Game Development Experience	5
CMPM 131	User Experience for Interactive Media	5
CMPM 146	Game AI	5
CMPM 163	Game Graphics and Real-Time Rendering	5
CMPM 164	Game Engines	5
CMPM 164L	Game Engines Lab	2
CMPM 171	Game Design Studio	7
CMPM 172	Game Production Studio	7
MATH 110	Introduction to Number Theory	5
MATH 115	Graph Theory	5
MATH 116	Combinatorics	5
MATH 117	Advanced Linear Algebra	5
MATH 118	Advanced Number Theory	5
MATH 134	Cryptography	5
MATH 145	Introductory Chaos Theory	5
MATH 145L	Introductory Chaos Laboratory	1
MATH 148	Numerical Analysis	5
MATH 160	Mathematical Logic I	5
MATH 161	Mathematical Logic II	5
MATH 162	Introduction to Computably Enumerable Functions and Sets and their Degrees	5
STAT 132	Classical and Bayesian Inference	5

Lecture/lab combinations count as one course. If a lecture has a lab offered (required or optional), the lab must be passed to count for this requirement.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement.

The DC requirement in computer science B.S. is satisfied by completing an additional course from the following options.

	Either one of these courses	
CSE 115A	Introduction to Software Engineering	5
CSE 185E	Technical Writing for Computer Science and Engineering	5
CSE 195	Senior Thesis Research	5

Course CSE 195 may be used either as an elective, or to satisfy the DC requirement, but not for both.

Comprehensive Requirement

In addition to the above requirements, students must satisfy one of the following two exit requirements: pass one of the capstone courses (see Capstone Courses below); or successfully complete a senior thesis. A passed capstone course also counts toward satisfying the minimum number of upper-division electives requirement.

Capstone Courses

Students may choose from one of the following capstone courses to satisfy their exit requirement (lecture-lab combinations count as one course):

CSE 110B	Fundamentals of Compiler Design II	5
CSE 115C	Software Design Project II	5
CSE 115D	Software Design Project - Accelerated	5
CSE 121	Embedded System Design	7
CSE 134	Embedded Operating Systems	5
CSE 138	Distributed Systems	5
CSE 140	Artificial Intelligence	5
CSE 143	Introduction to Natural Language Processing	5
CSE 144	Applied Machine Learning: Deep Learning	5
CSE 145	Introduction to Data Mining	5
CSE 156	Network Programming	5
CSE 156L	Network Programming Laboratory	2
CSE 157	Internet of Things	7
CSE 160	Introduction to Computer Graphics	7
CSE 161	Introduction to Data Visualization	5
CSE 161L	Data Visualization Laboratory	2
CSE 162	Advanced Computer Graphics and Animation	5
CSE 162L	Advanced Computer Graphics and Animation Laboratory	2
CSE 163	Data Programming for Visualization	5
CSE 168	Introduction to Augmented Reality and Virtual Reality	7
CSE 181	Database Systems II	5
CSE 183	Web Applications	5
CSE 184	Data Wrangling and Web Scraping	5
CSE 187	Full Stack Web Development II	5
CMPM 172	Game Production Studio	7

Senior Thesis

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a

minimum of 5 credits in CSE 195, Senior Thesis Research. The supervision of a senior thesis student is always at the discretion of the faculty member.

The student first submits a written thesis proposal and obtains approval of a faculty sponsor. Then the student submits a written draft and makes an oral presentation to a faculty examining committee. After receiving feedback from the examining committee, the student submits one or more additional drafts, until the final draft is approved by the examining committee. The total amount of writing shall be consistent with the campus Disciplinary Communication requirement. A passing grade in CSE 195 is earned when the final thesis is approved.

CSE 195	Senior Thesis Research	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are three sample academic plans: (1) a four-year plan for the B.S. major for first-year students with programming experience; (2) an alternative first-year plan for students without programming experience; and (3) a two-year plan for the B.S. major for transfer students that have completed all general education requirements.

Students completing the courses in the planners will have satisfied the MF and SR general education requirement.

Four-Year Plan for Students with Programming Experience

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	CSE 30 MATH 19A College 1	CSE 12 MATH 19B WRIT 1/WRIT 1E (if needed)	CSE 16 AM 10	
2nd (soph)	CSE 13S AM 30 WRIT 2*	CSE 101 CSE 107	CSE 101M CSE 40	
3rd (junior)	CSE 102 CSE 120	CSE 130 Elective	Elective ECE 30	
4th (senior)	Elective DC elective	CSE 114A	Capstone elective	

* WRIT 2 should be taken in or before spring quarter of the second year.

First-Year Plan for Students Without Programming Experience

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	CSE 20 MATH 3	CSE 30 MATH 19A WRIT 1/WRIT 1E (if needed)	CSE 12 MATH 19B	
2nd (soph)	CSE 13S WRIT 2* CSE 16	AM 10 CSE 101	AM 30 CSE 101M	
3rd (junior)	CSE 120	CSE 40	CSE 103	

	CSE 114A	CSE 107	ECE 30
4th (senior)	CSE 130	Elective	Capstone elective
	DC Elective	Elective	Elective

* WRIT 2 should be taken in or before spring quarter of the second year.

Two-Year Degree Planner for Transfer Students

	Fall	**Winter**	**Spring**	**Summer**
Entering				KRSG 1T Summer Edge (optional)
1st (junior)	CSE 13S	CSE 101	CSE 101M	
	AM 30	CSE 120	CSE 40	
	STAT 131	ECE 30		
2nd (senior)	CSE 130	CSE 102	Elective	
	CSE 114A	Elective	Capstone elective	
	DC Elective	Elective		

Note: One elective must be drawn from the DC course list and one from the capstone course list. Also, the above plan assumes having taken one of MATH 21, MATH 23A, or AMS 10 and most general education requirements prior to arriving at UC Santa Cruz as well as courses equivalent to CSE 16 and CSE 30 and CSE 12).

Curriculum charts for all Baskin Engineering majors are available on the Baskin Engineering Advising Major Curriculum Charts page.

COMPUTER SCIENCE B.A.

Information and Policies

Introduction

The bachelor of arts (B.A.) program at University of California, Santa Cruz, is designed to give students a grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including some courses outside of science and engineering, or even for a double major in another discipline.

Program Learning Outcomes

Recipients of a Bachelor of Science or a Bachelor of Arts degree in Computer Science at UC Santa Cruz are expected to have the following skills and experiences:

1. Demonstrate mastery of computer science in the following core knowledge areas:
   - Algorithms, data structures, and complexity
   - Programming languages
   - Software engineering and development
2. Apply system-level perspective by thinking at multiple levels of detail and abstraction and by recognizing the context in which a computer system may function, including its interactions with people and the physical world.
3. Apply problem-solving skills and the knowledge of computer science to solve real problems.
4. Understand how technological advances impact society and the social, legal, ethical and cultural ramifications of computer technology and their usage.
5. Write about and orally communicate technical material about computer science and computer systems, broadly conceived.

Academic Advising for the Program

The Baskin Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in Baskin Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Transfer students should also refer to the Transfer Information and Policy section.

Baskin Engineering Building, Room 225
bsoeadvising@ucsc.edu
(831) 459-5840

Getting Started in the Major: Frosh

It is recommended that high school students intending to apply to the computer science major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

This major is highly course intensive and sequential; students who intend to pursue this major must begin taking classes for the major in their first quarter at UC Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

Transfer Information and Policy

Transfer students who want to pursue the computer science major, must have applied and been admitted to UC Santa Cruz as a proposed computer science major.

Transfer Admission Screening Policy

The following Transfer Screening policy takes effect in fall 2024 and will be mandatory for all transfer students entering UC Santa Cruz fall 2026 and later. Transfer students entering UCSC prior to fall 2026 are encouraged to complete these requirements, but will still be considered for admission if they fulfill the 2023-2024 admissions screening requirements.

Prior to admission, transfer students must have completed the following five courses or their articulated equivalents with a combined minimum GPA of 2.8.

Lecture/lab combinations count as one course. Please note that while AP courses satisfy screening requirements they do not count toward the minimum GPA. If you satisfy the transfer admissions screening requirements, you are not required to take additional coursework in order to declare.

These courses

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7

Plus one of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

Plus one of the following

MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20B	Honors Calculus	5

Minimum GPA

The combined GPA in the five courses above must be at least of 2.8.

Furthermore, transfer students entering in the fall must have completed at least three of these courses by the end of the fall term of the previous academic year and have a minimum 2.80 GPA over all completed CS major qualification courses at that time.

Most courses in the computer science program at UC Santa Cruz have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, computer science students are first introduced to programming using the programming language Python. The core programming sequence—courses CSE 30 and CSE 13S —exposes students to both Python and C. Many upper-division courses that involve programming use the C and C++ programming languages.

Transfer students who are not familiar with Python may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Python and C relatively simple.

Getting Started in the Major: Transfer Students

Transfer students should declare their major in their first quarter at UCSC. Instructions for declaring a major in Baskin Engineering are on the Baskin Engineering undergraduate advising major declaration page.

Major Qualification Policy and Declaration Process

Major Qualification

Transfer students should refer to the Transfer Admission Screening requirements.

For all students, it is necessary to be listed as proposed computer science majors within the School of Engineering before being able to declare the major. Additionally, students admitted as frosh must satisfy the following three criteria to qualify for the CS B.A. major

Declare

Students must declare CS (Computer Science B.S. or Computer Science B.A.) as their major between student's second to sixth quarter.

CS BA Major Qualification courses

Students must have completed the following CS major qualification courses to qualify for the major:

Complete these two courses

CSE 12	Computer Systems and Assembly Language and Lab	7

CSE 30	Programming Abstractions: Python	7

Plus one of the following

CSE 13S	Computer Systems and C Programming	7
CSE 40	Machine Learning Basics: Data Analysis and Empirical Methods	5

CSE 40 has a test-out option that can satisfy this requirement.

CSE 13S is not required for the CS B.A., but either CSE 101P or CSE 101 is required, and CSE 101 will require CSE 13S. Several upper division CSE courses require CSE 101.

Plus one of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

Plus one of the following

MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20B	Honors Calculus	5

Cumulative GPA

Students must also have a cumulative GPA of at least 2.80 in the CS major qualification courses attempted at UC Santa Cruz, with at most one unsuccessful attempt (grade C-, D+, D, D-, F, or NP) permitted in a CS major qualification course. Courses satisfied via exam credit are not included in the GPA calculation.

Appeal Process

Students who are informed that they do not qualify for the major may appeal this decision by submitting a letter to the undergraduate director through the Baskin Engineering undergraduate advising office within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

How to Declare a Major

Students interested in pursuing computer science must indicate computer science as a proposed major on their application for admission to UC Santa Cruz. Students admitted to UCSC in fall 2018 or later will be able to declare a computer science major only if they have been admitted to UCSC as a proposed computer science major.

There are four steps to declaring a Baskin Engineering major. For a detailed guide to this process, please consult Baskin Engineering's Declare Your Major website.

Students should start the declaration of major process by completing Step One on the Baskin Engineering Declare Your Major website as soon as they complete the CS major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed all CS major qualification courses.

Letter Grade Policy

All students admitted to a Baskin Engineering major, or seeking admission to a major, must take all courses required for that major for a letter grade. This policy includes courses required for these degrees that are sponsored by other departments.

[Optional Catchall]

Course Substitution Policy

Undergraduate engineering students who wish to substitute a major course with a course from another department at UC Santa Cruz, or from another academic institution, must first seek approval through the Baskin Engineering Undergraduate Advising Office. The advising office requires a Petition for Course Substitution be approved before credit for an alternate course can be applied to any Baskin Engineering major requirement.

Petition forms are available at the Undergraduate Advising Office and online.

Petitions and procedures for approval must be obtained from and submitted to the Undergraduate Advising Office.

Community Colleges courses once enrolled at UCSC

Once enrolled in Baskin Engineering students who wish to take a course at a California community college must first check Assist.org to see if the course is equivalent at UC Santa Cruz. If the course is not listed on Assist.org, students must submit a course substitution petition to the BE Undergraduate Advising Office to have it reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

If the course is approved for equivalency or was on Assist.org, then students with declared majors must also receive approval by their major department to take the class at the community college PRIOR to taking it. Undeclared students must receive prior approval from the CSE Department to substitute a course for CSE 13S. Undeclared students do not require prior approval for other courses listed on Assist.org. Forms and procedures for approval can be obtained from and submitted to the BE Undergraduate Advising Office.

Four-Year Institutions and the UC Education Abroad Program (UCEAP)

Students who intend to take a course at a four-year institution or UC Education Abroad, must submit a Course Substitution Petition to the BE Undergraduate Advising Office to have the course reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

Double Majors and Major/Minor Combinations Policy

Students may not receive both the computer science B.A. and computer science B.S. degrees.

Students may not receive both the Network and Digital Technology B.A. and the Computer Science B.A. degrees.

Study Abroad

Honors

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of "Highest Honors in the Major." Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of "Honors in the Major." Baskin Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

[Optional Catchall]

Requirements and Planners

Course Requirements

The aim of this program is to expose students to a rigorous curriculum in computer science while maintaining sufficient flexibility so that students can take courses outside computer science, pursue a minor in another discipline, or complete a double major. Every student must complete a minimum of 16 courses—eight lower-division and eight upper-division. Out of these, the eight lower-division courses and the first upper-division course are required preparatory courses for every student. Once these preparatory courses are completed, students tailor their own program by choosing seven upper-division elective courses. Some courses may be satisfied via exam credit.

Lower-Division Courses

Computer Science and Engineering

All of the following

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 16	Applied Discrete Mathematics	5
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
CSE 40	Machine Learning Basics: Data Analysis and Empirical Methods	5

Students with no prior programming will take CSE 20 before CSE 30, and CSE 12. Students with a prior programming course, AP credit, or clearing the CSE 20 “Test-out” bar will start with CSE 30, and CSE 12.

CSE 40 has a test-out option that can satisfy this requirement.

Plus one of the following options

	Either these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
	or these courses	
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Plus one of the following

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Upper-Division Courses

One of the following courses

CSE 101P	Introduction to Data Structures and Algorithms in Python	5
CSE 101	Introduction to Data Structures and Algorithms	5

Breadth Courses

Three courses from either Breadth List below.
Courses in the second Breadth List require CSE 101.

Breadth courses not requiring CSE 101

CSE 101M	Mathematical Thinking for Computer Science	5
CSE 102	Introduction to Analysis of Algorithms	5
CSE 103	Computational Models	5
CSE 112	Comparative Programming Languages	5
CSE 114A	Foundations of Programming Languages	5
CSE 118	Mobile Applications	5
CSE 120	Computer Architecture	5
CSE 140	Artificial Intelligence	5
CSE 142	Machine Learning	5
CSE 143	Introduction to Natural Language Processing	5
CSE 144	Applied Machine Learning: Deep Learning	5

CSE 150	Introduction to Computer Networks	7
CSE 183	Web Applications	5
CSE 184	Data Wrangling and Web Scraping	5

Breadth courses requiring CSE 101

CSE 110A	Fundamentals of Compiler Design I	5
CSE 130	Principles of Computer Systems Design	5
CSE 132	Computer Security	5
CSE 134	Embedded Operating Systems	5
CSE 138	Distributed Systems	5
CSE 160	Introduction to Computer Graphics	7
CSE 180	Database Systems I	5
CSE 186	Full Stack Web Development I	5

Electives

Three courses from the list of B.A. electives below, including at least one upper-division CSE course(s) numbered between 100 and 189, or CSE 195.

For other courses, computational media, and applied mathematics and statistics courses are strongly recommended.

List of BA electives

1. Any 5-credit or more upper-division course with a number between 100 and 189 offered by Baskin Engineering, except for the DC courses CSE 115A and CSE 185E/CSE 185S.

2. Any 5-credit or more CSE course with a number between 201 and 279. Approval for courses with numbers 290 and above may be requested by submitting a course substitution petition to the BE Undergraduate Advising Office. Courses with numbers 280-289 are not eligible. Undergraduate students require permission from the instructor to enroll in graduate courses.

3. CSE 195 (if not used to satisfy the DC requirement).

4. Any course from the following list:

ARTG 118	Character Creation for Video Games	5
EART 124	Modeling Earth's Climate	5
EART 125	Statistics and Data Analysis in the Geosciences	5
EART 172	Geophysical Fluid Dynamics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5
ECON 101	Managerial Economics	5
ENVS 115A	Geographic Information Systems and Environmental Applications	5
ENVS 115L	Exercises in Geographic Information Systems	2
FILM 170A	Fundamentals of Digital Media Production	5
LING 112	Syntax I	5
LING 113	Syntax II	5
LING 118	Semantics III	5
LING 125	Foundations of Linguistic Theory	5
MATH 110	Introduction to Number Theory	5
MATH 115	Graph Theory	5
MATH 116	Combinatorics	5
MATH 117	Advanced Linear Algebra	5
MATH 118	Advanced Number Theory	5
MATH 134	Cryptography	5
MATH 140	Industrial Mathematics	5
MATH 145	Introductory Chaos Theory	5
MATH 145L	Introductory Chaos Laboratory	1
MATH 148	Numerical Analysis	5
MATH 160	Mathematical Logic I	5
MATH 161	Mathematical Logic II	5
MUSC 123A	Electronic Music: Synthesis & Composition I	5
MUSC 123B	Electronic Music: Synthesis & Composition II	5
MUSC 123C	Electronic Music: Synthesis & Composition III	5
PHYS 115	Computational Physics	5
PHYS 150	Quantum Computing	5

Lecture/lab combinations count as one course. If a lecture has a lab offered (required or optional), the lab must be passed to count for this requirement.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement.

The DC requirement for the computer science B.A. is satisfied by completing one of the following additional courses:

	One of these courses	
CSE 115A	Introduction to Software Engineering	5
CSE 185E	Technical Writing for Computer Science and Engineering	5
CSE 195	Senior Thesis Research	5

The course used for the DC requirement cannot also be used as an upper-division elective.

Comprehensive Requirement

In addition to the above B.A. requirements, students in the computer science majors must satisfy one of the following two exit requirements:

1. Pass one of the capstone courses (see Capstone Courses below);
   A passed capstone course also counts toward satisfying

the minimum number of upper-division electives requirement.

2. Successfully complete a senior thesis as described below.
   CSE 195 can count toward satisfying the minimum number of upper-division electives requirement or completing the DC requirement, but not both.

Capstone Courses

Students may choose from one of the following capstone courses to satisfy their exit requirement (lecture/lab combinations count as one course.):

CSE 110A	Fundamentals of Compiler Design I	5
CSE 115C	Software Design Project II	5
CSE 115D	Software Design Project - Accelerated	5
CSE 134	Embedded Operating Systems	5
CSE 138	Distributed Systems	5
CSE 140	Artificial Intelligence	5
CSE 143	Introduction to Natural Language Processing	5
CSE 144	Applied Machine Learning: Deep Learning	5
CSE 145	Introduction to Data Mining	5
CSE 156	Network Programming	5
CSE 156L	Network Programming Laboratory	2
CSE 157	Internet of Things	7
CSE 160	Introduction to Computer Graphics	7
CSE 161	Introduction to Data Visualization	5
CSE 161L	Data Visualization Laboratory	2
CSE 162	Advanced Computer Graphics and Animation	5
CSE 162L	Advanced Computer Graphics and Animation Laboratory	2
CSE 163	Data Programming for Visualization	5
CSE 168	Introduction to Augmented Reality and Virtual Reality	7
CSE 181	Database Systems II	5
CSE 183	Web Applications	5
CSE 184	Data Wrangling and Web Scraping	5
CSE 187	Full Stack Web Development II	5
CMPM 172	Game Production Studio	7

CSE 110A, CSE 115C, CSE 115D, CSE 134, CSE 138, CSE 156/CSE 156L, CSE 157, CSE 160, CSE 161, CSE 162, CSE 168, and CSE 181 require CSE 101.

Senior Thesis

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a minimum of 5 credits in CSE 195, Senior Thesis Research. The supervision of a senior thesis student is always at the discretion of the faculty member.

The student first submits a written thesis proposal and obtains approval of a faculty sponsor. Then the student submits a written draft and makes an oral presentation to a faculty examining committee. After receiving feedback from the examining committee, the student submits one or more additional drafts, until the final draft is approved by the examining committee. The total amount of writing shall be consistent with the campus Disciplinary Communication requirement. A passing grade in CSE 195 is earned when the final thesis is approved.

CSE 195	Senior Thesis Research	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are three sample academic plans: (1) a four-year plan for the B.A. major for first-year students with programming experience; (2) an alternative first-year plan for students without programming experience; and (3) a two-year plan for the B.A. major for transfer students.

Students completing the courses in the planners will have satisfied the MF general education requirement.

Four-Year Plan for Students with Programming Experience

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	CSE 30 MATH 19A College 1	AM 10 MATH 19B WRIT 1/WRIT 1E (if needed)	CSE 12	
2nd (soph)	CSE 13S	Breadth	CSE 101	

	WRIT 2[1]	CSE 40	
3rd (junior)	Breadth	Elective	Breadth
	Elective		
4th (senior)	DC elective		Elective (capstone)

[1]WRIT 2 should be taken in or before spring quarter of the second year.

First-Year Plan for Students Without Programming Experience

	Fall	**Winter**	**Spring**	**Summer**
Entering				College 1A
				Summer Edge (optional)
1st (frosh)	CSE 20	CSE 30	CSE 12	
	MATH 3	MATH 19A	MATH 19B	
	College 1	WRIT 1/WRIT 1E (if needed)		
2nd (soph)	CSE 40	AM 10	CSE 101P	
	WRIT 2[1]	CSE 16		
3rd (junior)	Breadth[2]	Breadth[2]	Breadth[2]	
	Elective[2]	Elective[2]		
4th (senior)	CSE 185S		Elective (capstone)[2]	

[1] WRIT 2 should be taken in or before spring quarter of the second year.
[2] Breadth and elective courses cannot require CSE 101.

Two-Year Degree Planner for Transfer Students

	Fall	**Winter**	**Spring**	**Summer**
Entering				KRSG 1T
				Summer Edge
				(optional)
1st (junior)	CSE 40	CSE 101P	Breadth[1]	
	AM 10			
2nd (senior)	Breadth[1]	Breadth[1]	CSE 185S	
	Elective[1]	Elective[1]	Elective (capstone)[1]	

[1] Breadth and elective courses cannot require CSE 101.

Curriculum charts for all Baskin Engineering majors are available on the Baskin Engineering undergraduate advising Major Curriculum Charts page.

NETWORK AND DIGITAL TECHNOLOGY B.A.

Information and Policies

Introduction

The Bachelor of Arts in Network and Digital Technology at the University of California, Santa Cruz, provides students with in-depth knowledge of the underlying structure and function of networking and digital-computer technology and the design processes that make those technologies function. The program is tailored to students who wish to combine technology with other fields or have a general focus on software-based digital technologies that enable Internet services and computer networks. The B.A. in network and

digital technology is not an engineering degree, but B.A. graduates will be prepared to work with technology development in other capacities, or join the computer networking workforce. Students interested in graduate study should pursue a B.S. program.

Program Learning Outcomes

For the Network and Digital Technology B.A. degree the program learning outcomes are:

- an ability to apply knowledge of mathematics, science, and engineering;
- an ability to design a system, component, or process;
- an ability to communicate effectively; and
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Academic Advising for the Program

The Baskin Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in Baskin Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Transfer students should also refer to the Transfer Information and Policy section.

Baskin Engineering Building, Room 225
bsoeadvising@ucsc.edu
(831) 459-5840

Getting Started in the Major: Frosh

This major is highly course intensive and sequential; students who intend to pursue this major must begin taking classes for the major in their first quarter at UC Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

Transfer Information and Policy

Transfer students who want to pursue the network and digital technology major, must have applied and been admitted to UC Santa Cruz as a proposed network and digital technology major.

Transfer Admission Screening Policy

Students should complete at least six courses from the following list

Lecture-lab combinations count as one course.

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5
AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5
AM 30	Multivariate Calculus for Engineers	5
MATH 23A	Vector Calculus	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7
ECE 13	Computer Systems and C Programming	7
PHYS 5A	Introduction to Physics I	5
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1
PHYS 6C	Introductory Physics III	5
PHYS 6N	Introductory Physics III Laboratory	1

AM 10 and MATH 21 are alternatives; only one or the other, whichever is completed first can count toward the six courses.

AM 20 and MATH 24 are alternatives; only one or the other, whichever is completed first can count toward the six courses.

AM 30 and MATH 23A are alternatives; only one or the other, whichever is completed first, can count toward the six courses.

ECE 13 and CSE 13S are alternatives; only one or the other, whichever is completed first, can count toward the six courses.

PHYS 5A and PHYS 5L are alternatives to PHYS 6A and PHYS 6L; only one or the other can count toward the six courses.

PHYS 5C and PHYS 5N are alternatives to PHYS 6C and PHYS 6N; only one or the other can count toward the six courses.

Getting Started in the Major: Transfer Students

Transfer students should declare their major in their first quarter at UC Santa Cruz. Instructions for declaring a major in the Baskin Engineering are on the undergraduate advising major declaration page.

Major Qualification Policy and Declaration Process

Major Qualification

Transfer students should refer to the Transfer Admission Screening requirements.

In order to declare the network and digital technology major, students must be listed as a proposed major within Baskin Engineering. Please refer to the Baskin Engineering "Proposed Major Retention" and its "Declaring a Baskin Engineering Major" sections in the catalog for more information.

In addition to being listed as a proposed Baskin Engineering major, qualification for the network and digital technology major is based on performance in the following lower-division courses and associated labs required for the major. To qualify for the network and digital technology major students must have completed at least 36 credits in these courses with a cumulative GPA of at least 2.30 or greater.

All of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7

Plus one of the following

AM 30	Multivariate Calculus for Engineers	5
MATH 23A	Vector Calculus	5

Plus one of the following

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus one of the following

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

Plus one of the following

CSE 13S	Computer Systems and C Programming	7
ECE 13	Computer Systems and C Programming	7

Plus one of the following lecture/lab options

	Either these courses	
PHYS 5A	Introduction to Physics I	5
	or these courses	
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1

Plus one of the following lecture/lab combinations

	Either these courses	
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
	or these courses	
PHYS 6C	Introductory Physics III	5
PHYS 6N	Introductory Physics III Laboratory	1

Cumulative GPA

Students seeking to change their current major to network and digital technology after their sixth quarter must have completed the courses listed above with a cumulative GPA of at least 2.30.

Please note that while exam credit can satisfy major qualification requirements it does not count toward the minimum GPA. If you satisfy the transfer admissions screening requirements, you are not required to take additional coursework in order to declare.

Appeal Process

Students who are informed that they do not qualify for the major may appeal this decision by submitting a letter to the undergraduate director through the Baskin Engineering undergraduate advising office within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

How to Declare a Major

There are four steps to declaring a Baskin Engineering major. For a detailed guide to this process, please consult Baskin Engineering's Declare Your Major website.

Students should start the declaration of major process by completing Step One on the Baskin Declare Your Major website as soon as they complete 36 credits in the major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed enough major qualification courses.

Letter Grade Policy

All students admitted to a Baskin Engineering major, or seeking admission to a major, must take all courses required for that major for a letter grade. This policy includes courses required for these degrees that are sponsored by other departments.

[Optional Catchall]

Course Substitution Policy

Undergraduate engineering students who wish to substitute a major course with a course from another department at UC Santa Cruz, or from another academic institution, must first seek approval through the Baskin Engineering Undergraduate Advising Office. The advising office requires a Petition for Course Substitution be approved before credit for an alternate course can be applied to any Baskin Engineering major requirement.

Petition forms are available at the Undergraduate Advising Office and online.

Petitions and procedures for approval must be obtained from and submitted to the Undergraduate Advising Office.

Community Colleges courses once enrolled at UCSC

Once enrolled in Baskin Engineering students who wish to take a course at a California community college must first check Assist.org to see if the course is equivalent at UC Santa Cruz. If the course is not listed on Assist.org, students must submit a course substitution petition to the BE Undergraduate Advising Office to have it reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

If the course is approved for equivalency or was on Assist.org, then students with declared majors must also receive approval by their major department to take the class at the community college PRIOR to taking it. Undeclared students must receive prior approval from the CSE Department to substitute a course for CSE 13S. Undeclared students do not require prior approval for other courses listed on Assist.org. Forms and procedures for approval can be obtained from and submitted to the BE Undergraduate Advising Office.

Four-Year Institutions and the UC Education Abroad Program (UCEAP)

Students who intend to take a course at a four-year institution or UC Education Abroad, must submit a Course Substitution Petition to the BE Undergraduate Advising Office to have the course reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

Double Majors and Major/Minor Combinations Policy

Students completing any of the following degrees cannot also receive the Network and Digital Technology B.A.

- Robotics Engineering B.S.
- Computer Engineering B.S.
- Computer Science B.S.
- Computer Science B.A.

The following minors cannot be combined with the Network and Digital Technology B.A/ :

- Computer Engineering minor
- Computer Science minor

Study Abroad

Honors

Majors are considered for “Honors in the Major” and “Highest Honors in the Major” based on their GPA and on results of undergraduate research and other significant contributions to Baskin Engineering. Students with a GPA of 3.70, in most cases, receive highest honors. Students with a GPA of 3.30, in most cases, receive honors. Students with particularly significant accomplishments in undergraduate research or contributions to Baskin Engineering may be considered with a lower GPA.

School of Engineering Policies

Please refer to the Baskin Engineering section of the catalog for additional policies that apply to all Baskin Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees under the School of Engineering.

Requirements and Planners

Course Requirements

All students in the network and digital technology major must take the following courses. The comprehensive requirement is satisfied by completion of the capstone course. Some courses may be satisfied via exam credit.

Lower-Division Courses

Students who may have originally pursued another major should discuss with the Baskin Engineering undergraduate advising office whether or not already completed coursework may be substituted for one or more lower division-requirements.

One of the following

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus one of the following

AM 20	Ordinary Differential Equations for Engineers	5

MATH 24	Ordinary Differential Equations	5

Plus one of the following

AM 30	Multivariate Calculus for Engineers	5
MATH 23A	Vector Calculus	5

Plus all of the following

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 16	Applied Discrete Mathematics	5
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Students with no prior programming will take CSE 20 before CSE 30 and CSE 12. Students with a prior programming course, AP credit, or clearing the "Test-out" bar will start with CSE 30 and CSE 12.

Plus one of the following

CSE 13S	Computer Systems and C Programming	7
ECE 13	Computer Systems and C Programming	7

Plus one of the following lecture/lab combinations

	Either these courses	
PHYS 5A	Introduction to Physics I	5
	or these courses	
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1

Plus one of the following lecture/lab combinations

	Either these courses	
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
	or these courses	
PHYS 6C	Introductory Physics III	5
PHYS 6N	Introductory Physics III Laboratory	1

Upper-Division Courses

All of the following

CSE 101	Introduction to Data Structures and Algorithms	5
CSE 150	Introduction to Computer Networks	7
CSE 185E	Technical Writing for Computer Science and Engineering	5

Electives

Five additional 5-credit or more, upper-division electives, and associated laboratories are required.
Students may choose courses from either or both of the lists below, or from the additional approved electives list. One of these five courses should also be used to satisfy the comprehensive requirement below. See Comprehensive Requirement below for courses which satisfy that requirement.

Students are encouraged to discuss their interests and elective choices with their faculty advisors. Students may use the following lists to focus their studies in a particular area.

Digital Technology for Networking Focus

Students wishing to focus on digital technology for networking should consider including among their courses the following (lecture-lab combinations are counted as one course):

CSE 118	Mobile Applications	5
CSE 151	Advanced Computer Networks	5
CSE 151L	Advanced Computer Networks Laboratory	2
CSE 156	Network Programming	5
CSE 156L	Network Programming Laboratory	2
CSE 157	Internet of Things	7
CSE 167	Mobile Sensing and Interaction	5
CSE 183	Web Applications	5

CSE 157 has additional prerequisites.

Internet Software Technology Focus

Students wishing to focus on Internet software technology should consider including among their courses the following:

CSE 115A	Introduction to Software Engineering	5
CSE 117	Open Source Programming	5
CSE 119	Software for Society	5
CSE 130	Principles of Computer Systems Design	5
CSE 165	Human-Computer Interaction	5
CSE 180	Database Systems I	5
CSE 181	Database Systems II	5
CSE 182	Introduction to Database Management Systems	5
CSE 186	Full Stack Web Development I	5
CSE 187	Full Stack Web Development II	5

CSE 115A, CSE 117, CSE 157, and CSE 181 have additional prerequisites.
Students may not receive credit for both CSE 180 and CSE 182.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement in network and digital technology is satisfied by completing CSE 185E, Technical Writing for Computer Engineers.

CSE 185E	Technical Writing for Computer Science and Engineering	5

Comprehensive Requirement

One of the following courses must be completed. This course can count as one of the five required electives.

CSE 115A	Introduction to Software Engineering	5
CSE 156	Network Programming	5
CSE 156L	Network Programming Laboratory	2
CSE 157	Internet of Things	7
CSE 181	Database Systems II	5
CSE 183	Web Applications	5
CSE 187	Full Stack Web Development II	5

Lecture-lab combinations count as one course.
Students may petition to request approval to satisfy the comprehensive requirement with another engineering course having a substantial technology based project.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans: (1) a four-year plan for first-year students with no prior programming experience, and (2) a two-year plan for transfer students that have completed all lower-division major requirements except AM 30, CSE 13S, and CSE 30. Students completing the courses in the four-year planner will have satisfied the MF and SI General Education requirements.

Four-Year Major Planner for Network and Digital Technology

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 3 CSE 20 College 1	MATH 19A CSE 30 WRIT 1/WRIT 1E (if needed)	MATH 19B AM 10	
2nd (soph)	CSE 12 PHYS 6A PHYS 6L WRIT 2[1]	CSE 13S CSE 16	CSE 101 PHYS 6C PHYS 6N	
3rd (jr)	CSE 150 AM 30	Elective AM 20	CSE 185E Elective	
4th (sr)	Elective	Capstone course	Elective	

[1]WRIT 2 should be taken in or before spring quarter of the second year.

Two-Year Planner for Transfer Students

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
1st (jr)	CSE 30 CSE 150	CSE 13S AM 30	CSE 101 CSE 185E	
2nd (sr)	Elective Elective	Capstone course Elective	Elective	

Curriculum charts for all Baskin Engineering majors are available at the Baskin Engineering undergraduate advising website.

COMPUTER ENGINEERING MINOR

Course Requirements

Complete the following requirements for the Computer Engineering Minor. Some courses may be satisfied via exam credit. Though courses for the minor may be taken for a letter grade or Pass/No Pass (P/NP), many of the courses may be required for a student's major which could require a letter grade (including all Baskin Engineering majors). Students should be aware of the letter grade policy for their chosen major before choosing Pass/No Pass.

Lower-Division Courses

The following course

CSE 12	Computer Systems and Assembly Language and Lab	7

Plus one of the following

CSE 13S	Computer Systems and C Programming	7
ECE 13	Computer Systems and C Programming	7

Plus all of the following

CSE 16	Applied Discrete Mathematics	5
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Students with no prior programming will take CSE 20 before CSE 30, and CSE 12. Students with a prior programming course, AP credit, or clearing the “Test-out” bar will start with CSE 30 and CSE 12.

Math placement is required for one or more of the courses for this minor. For more information, please review the Math Placement website.

Plus one of the following

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

AM 20 and MATH 24 both require one additional mathematics course as a prerequisite.

Plus one of the following lecture/lab combinations

	Either these courses	
PHYS 5A	Introduction to Physics I	5
	or these courses	
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1

Plus one of the following lecture/lab combinations

	Either these courses	
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
	or these courses	
PHYS 6C	Introductory Physics III	5
PHYS 6N	Introductory Physics III Laboratory	1

Upper-Division Courses

All of the following

CSE 100	Logic Design	5
CSE 100L	Logic Design Laboratory	2
CSE 120	Computer Architecture	5

Plus one of the following

ECE 118	Introduction to Mechatronics	10
CSE 121	Embedded System Design	7

Plus all of the following

CSE 101	Introduction to Data Structures and Algorithms	5
ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2

COMPUTER SCIENCE MINOR

Course Requirements

Thirteen courses are required for the computer science minor. Some courses may be satisfied via exam credit. Though courses for the minor may be taken for a letter grade or Pass/No Pass, many of the courses may be required for a student's major which could require a letter grade (including all Baskin Engineering majors). Students should be aware of the letter grade policy for their chosen major before choosing Pass/No Pass

Lower-Division Courses

One of the following options:

	Either these courses	
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

MATH 19B	Calculus for Science, Engineering, and Mathematics or these courses	5
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Plus one of the following:

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus all of the following

CSE 20	Beginning Programming in Python	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7

Students with no prior programming will take CSE 20 before CSE 30, and CSE 12. Students with a prior programming course, AP credit, or clearing the “Test-out” bar will start with CSE 30, and CSE 12.

Math placement is required for one or more of the foundational courses for this minor. For more information, please review the Math Placement website.

Plus one of the following

CSE 13S	Computer Systems and C Programming	7
ECE 13	Computer Systems and C Programming	7

Upper-Division Courses

The following course

CSE 101	Introduction to Data Structures and Algorithms	5

Plus two upper-division computer science and engineering courses from the following list

CSE 101M	Mathematical Thinking for Computer Science	5
CSE 102	Introduction to Analysis of Algorithms	5
CSE 103	Computational Models	5
CSE 110A	Fundamentals of Compiler Design I	5
CSE 114A	Foundations of Programming Languages	5
CSE 115A	Introduction to Software Engineering	5
CSE 118	Mobile Applications	5
CSE 120	Computer Architecture	5
CSE 130	Principles of Computer Systems Design	5
CSE 132	Computer Security	5
CSE 134	Embedded Operating Systems	5
CSE 138	Distributed Systems	5
CSE 140	Artificial Intelligence	5
CSE 142	Machine Learning	5
CSE 143	Introduction to Natural Language Processing	5
CSE 144	Applied Machine Learning: Deep Learning	5
CSE 150	Introduction to Computer Networks	7
CSE 160	Introduction to Computer Graphics	7
CSE 180	Database Systems I	5
CSE 183	Web Applications	5
CSE 184	Data Wrangling and Web Scraping	5
CSE 186	Full Stack Web Development I	5

Plus two additional upper-division courses

Two additional courses satisfying one of the following conditions. Lecture/lab combinations count as one course. If a lecture has a lab offered (required or optional), the lab must be passed to count for this requirement.

1. Any 5-credit or more upper-division CSE course with a number between 100 and 189 or CSE 195.

2. Any 5-credit or more CSE course with a number between 201 and 279. Approval for courses with numbers 290 and above may be requested by submitting a course substitution petition to the BE Undergraduate Advising Office. Courses with numbers 280-289 are not eligible. Undergraduate students require permission from the instructor to enroll in graduate courses.

3. Any course from the following list

AM 148	GPU Programming for Scientific Computations	5
AM 160	Introduction to Scientific Machine Learning	5

COMPUTER SCIENCE AND ENGINEERING CONTIGUOUS BACHELOR’S/MASTER’S PATHWAY: COMPUTER SCIENCE AND ENGINEERING

The Department of Computer Science and Engineering (CSE) offers a combined bachelor's/master's pathway. Undergraduate students from any major in Baskin Engineering can apply to the pathway in order to earn a bachelor's degree together with an M.S. degree in Computer Science and Engineering. Depending on the student’s progress and advance planning, it is expected that the combined pathway can be completed in five years.

The five-year bachelor's/master's pathway offers a competitive edge to students who are completing their undergraduate degree at UC Santa Cruz, by enabling those with advanced preparation to move directly from the

undergraduate to the graduate program and complete an M.S. degree with as few as seven courses beyond the bachelor's degree.

The pathway prepares students for leadership positions in industry, and is also attractive for undergraduate students planning to pursue a Ph.D. degree targeting research careers in industry or academia. Baskin Engineering has many opportunities for undergraduate and graduate research, enabling Bachelor's/Master's pathway students to continue their undergraduate research projects as graduate students with the same research group.

Students in the M.S. programs are not guaranteed any form of financial support from the department. It is the student's responsibility to ensure that they have sufficient funds to complete the M.S. degree program.

Particularly motivated students can complete both the bachelor's and the master's degrees in 15 quarters (five academic years). However, advance planning is essential. Interested students should contact the CSE Graduate Advising Office and their faculty adviser early in their college career—no later than the end of their junior year. Students in this pathway retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate coursework in advance of graduate standing.

Admission to the Contiguous Five-Year Bachelor's/Master's Pathway

The undergraduate degree requirements are not changed by the Bachelor's/Master's pathway; however, the pathway capitalizes on graduate-level courses that may apply toward both the undergraduate and graduate degree requirements (see Course Requirements below). Students should consult the Baskin Engineering Undergraduate Affairs Office concerning their respective undergraduate degree requirements.

Acceptance into the CSE Bachelor's/Master's pathway is by formal application, and confirmed eligibility for the program does not guarantee admission. Students who apply to the M.S. program through the Bachelor's/Master's pathway will be measured against the full applicant pool during the admissions decision process. Undergraduates interested in the pathway can complete the interest form at any time starting in the first quarter of junior standing. To qualify, applicants must be current UC Santa Cruz undergraduates declared in a major within Baskin Engineering, must have a 3.0 cumulative GPA when they apply to the Bachelor's/Master's pathway, and must maintain a 3.0 or higher cumulative GPA until the completion of their undergraduate degree The Graduate Affairs Office will verify and track students' eligibility for the pathway until completion of the bachelor's degree. Two of the three required letters of recommendation are waived for applicants with confirmed eligibility for the pathway. However, the one required letter must be from a UCSC faculty or instructor.

If admitted to the CSE M.S. program, pathway students are able to count qualified courses previously completed as an undergraduate toward their CSE M.S. degree requirements. To ensure courses are qualified to count toward the M.S. degree, students should review the CSE M.S. degree requirements and communicate with their graduate student advisor.

Students who do not meet the Bachelor's/Master's pathway eligibility requirements or who wish to take time off between the bachelor's and master's degree programs are encouraged to apply for admission to the standard CSE M.S. program through the regular graduate admissions process.

Course Requirements

Master's students can graduate by pursuing either Thesis Plan I or a Capstone Plan II. The Thesis Plan I is appropriate for students interested in advanced studies and in carrying out independent research, as well as for those students contemplating pursuit of a Ph.D. degree. The Thesis Plan I may extend the expected time for graduation beyond the expected one academic year as students typically take two to three quarters to complete a thesis. Advance planning is essential to graduate from the CSE M.S. program with the Thesis Plan I in one academic year. The Capstone Plan II is appropriate for students interested in advanced studies to better prepare themselves for the information technology workforce. The expected time for graduation with Capstone Plan II is one academic year for a full-time student.

Students may count up to two courses (10 credits) taken as an undergraduate toward the M.S. coursework requirements, as either of the following:

- 2 graduate courses (10 credits)
- 1 undergraduate course (5 credits) and 1 graduate course (5 credits)

If a student wishes to use an undergraduate course toward the M.S. coursework requirements, the course must not have been used to satisfy any undergraduate degree requirements.

A minimum of 35 credits of graduate coursework must still be completed during the graduate career. At most one upper-division undergraduate course can be counted toward the M.S. degree requirements.

Students should refer to the CSE M.S. program statement for more specific information on degree requirements, concentrations, academic progress, and applying to graduate.

COMPUTER SCIENCE AND ENGINEERING M.S.

Introduction

The Computer Science and Engineering Department offers a Master of Science (M.S.) degree program. An M.S. student can graduate by pursuing either Thesis Plan I or Capstone Plan II. Students in either plan complete a total of 48 credits as follows: 13 credits of core requirements, 15 credits of

breadth requirements, 15 credits of elective requirements, and 5 credits of capstone course requirements.

The expected time for graduation with Thesis Plan I is two academic years for a full-time student. This option is appropriate for students interested in advanced studies and in carrying out independent research, as well as for those students contemplating pursuit of a Ph.D. degree. The expected time for graduation with Capstone Plan II is one to two academic years for a full-time student. This option is appropriate for students interested in advanced studies to better prepare themselves for the information technology workforce.

Students in the M.S. program are not guaranteed any form of financial support from the department. It is the student's responsibility to ensure that they have sufficient funds for completing the M.S. degree program. Although obtaining an internship is not part of the program's requirements, most M.S. students manage their finances by working as interns at companies in the Bay Area during the summer months.

Requirements

Course Requirements

CSE 200	Research and Teaching in Computer Science and Engineering	3
CSE 201	Analysis of Algorithms	5
CSE 210A	Programming Languages	5
CSE 220	Computer Architecture	5

Thesis Plan I

Each student is required to take 48 credits as follows:

1. A core requirement must be met by taking CSE 200, Research and Teaching in Computer Science and Engineering (CSE), and any two out of the following three courses: CSE 201, Analysis of Algorithms; CSE 210A, Programming Languages; and CSE 220, Computer Architecture. Each student must complete CSE 200 in their first year.
2. One course each from three different breadth categories for a total of three courses (15 credits)—see the Breadth Requirements webpage.
3. Students must take 5 credits of CSE 299, Thesis Research, in order to fulfill the Thesis Plan I capstone course requirement. Up to 10 credits of CSE 299 or 5 credits of CSE 299 and 5 credits of CSE 247 may be counted toward the degree requirements.
4. All remaining courses must be regular, 5-credit graduate courses (not 2-credit seminars). Courses that do not count toward the 48 credits requirement include all courses numbered CSE 247, CSE 296 and all courses in the CSE 280 and CSE 297 series.
5. Up to 10 credits from courses taught at UCSC other than CSE courses may be counted toward the degree requirements. The student must obtain the graduate director's authorization to count a course from outside of Baskin Engineering.
6. Upper-division undergraduate UC Santa Cruz CSE courses may be taken as a graduate student to strengthen a student's knowledge base. At most, 5 credits of UC Santa Cruz upper-division undergraduate CSE courses may be counted toward the 48 credits requirement if they were not already used toward an undergraduate degree requirement.

Capstone Plan II

Each student is required to take 48 credits as follows:

1. A core requirement must be met by taking CSE 200, Research and Teaching in Computer Science and Engineering (CSE), and any two out of the following three courses: CSE 201, Analysis of Algorithms; CSE 210A, Programming Languages; and CSE 220, Computer Architecture. Each student must complete CSE 200 in their first year.
2. One course each from three different breadth categories for a total of three courses (15 credits)—see the Breadth Requirements webpage.
3. Students must take 5 credits of CSE 297, Independent Study, or CSE 247, Projects in Artificial Intelligence. CSE 297 may be taken more than once; however, only 5 credits of CSE 297 or CSE 247 will be counted toward the required 48 credits to fulfill the capstone course requirement.
4. All remaining courses must be regular, 5-credit graduate courses (not 2-credit seminars). Courses that do not count toward the 48-credit requirement include all courses numbered CSE 247, CSE 296, and all courses in the CSE 280 and CSE 299 series.
5. Up to 10 credits from courses taught at UCSC other than CSE courses may be counted toward the degree requirements. The student must obtain the graduate director's authorization to count a course from outside of Baskin Engineering.
6. Upper-division undergraduate UC Santa Cruz CSE courses may be taken as a graduate student to strengthen a student's knowledge base. At most, 5 credits of UC Santa Cruz upper-division undergraduate CSE courses may be counted toward the 48 credits requirement if they were not already used toward an undergraduate degree requirement.

Letter Grade Policy

With the exception of CSE 200 and all courses in the CSE 280 and CSE 297/CSE 299 series, all graduate courses and upper-division courses must be taken for letter grades. Only courses with a letter grade of B- or higher can be counted toward the M.S. degree requirements. This policy includes courses used for this degree that are sponsored by other departments. To ensure they will receive a letter grade, students should check that they have selected the letter grade

option no later than the 15th day of instruction each quarter for each class in which they are enrolled.

Other Requirements

Students in Thesis Plan I must complete an M.S. thesis, while students in Capstone Plan II must complete an M.S. project.

Thesis Plan I

After the student has completed some coursework in the proposed area of research and become acquainted with the faculty conducting research in that area, a student electing Thesis Plan I submits a written proposal to a faculty member, usually by the third academic quarter. If the faculty member determines they are able to advise the student's thesis, they collaborate with the student to further develop the scope of the student's research and refine the proposal. By accepting the proposal, the faculty member becomes the student's faculty/thesis advisor. In consultation with the advisor, the student forms a Master's Thesis Reading Committee with at least two additional faculty members, each of whom is provided a copy of the proposal. Exceptions to the committee structure may be granted by the graduate program director and/or by the graduate dean. Changes in the membership of the committee, once appointed, may only be made with the approval of the graduate dean.

Members of a Master's Thesis Reading Committee must meet the following criteria:

1. The first member must be a Senate CSE faculty member.
2. The second member must be a Senate UC Santa Cruz Baskin Engineering faculty member (may be CSE as well).
3. The third member must be a UC Santa Cruz Baskin Engineering faculty member or a recognized expert in the student's research area, as judged by the graduate program director and the Graduate Division Dean. In the event that the outside member is not from UCSC, the outside member's CV must be submitted along with the exam committee nomination form.

Additional members may be added to the committee. Students should consult their advisors about the membership of their committee.

By the end of the second week of the quarter in which a student plans to graduate, the student must submit a formal nomination of their Master's Thesis Reading Committee to the Graduate Division for approval. The required form for nominating a Master's Thesis Reading Committee is located on the Graduate Division's website. A final draft of the thesis must be provided to the members of the Master's Thesis Reading Committee for review at least 30 days before the last day of the quarter in which the student plans to graduate. The final thesis must be accepted by the Master's Thesis Reading Committee before the M.S. degree is awarded. Once the final thesis has been approved, the student must submit a PDF copy of the signed title page and a PDF copy of the thesis to their graduate advisor by the deadline listed in the Academic Calendar. The student must also submit the original signed title page of the thesis to the Graduate Division by the deadline indicated in the Academic Calendar. Finally, an approved PDF copy of the thesis should be submitted through the ProQuest dissertation site. Formatting guidelines for the master's thesis can be found on the Graduate Division's website.

CSE 299A	Thesis Research	5

Capstone Plan II

The M.S. project is an individual or a team-based project supervised by a faculty advisor and approved by a Master's Project Reading Committee composed of the faculty advisor and a faculty member from Baskin Engineering.

Members of a Master's Project Reading Committee must meet the following criteria:

1. The first member must be a Senate CSE faculty member.
2. The second member must be a Senate UC Santa Cruz Baskin Engineering faculty (may be CSE as well).

Master's Project Reading Committees are nominated by completing a Master's Project form and are approved by the graduate director.

A team consists of up to five members. Projects can either be proposed by the team or the team may bid on projects proposed by faculty members. It is also possible to have industry-sponsored or government-sponsored projects, in which case the industry/government supervisor can be invited to be an optional third member of the Master's Project Reading Committee.

The final project must be accepted by the Reading Committee before the M.S. degree is conferred.

CSE 297A	Individual Study or Research	5

Transfer Credit

Courses from other institutions may be substituted for equivalent courses at UC Santa Cruz (with the approval of the graduate director) but may not count toward the 48-credit requirement. For example, an equivalent Computer Architecture course taken elsewhere may be used in lieu of CSE 220. However, the student will need to replace it with 5 credits of another graduate elective course. As another example, a student may substitute an equivalent graduate course for CSE 260 and count that for a breadth requirement, but may not count that course toward the 48-credit requirement. Petitions should be submitted along with the transcript from the other institution. For courses taken at other institutions, copies of the syllabi, exams, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UC Santa Cruz. At most, a total of three courses may be transferred from other institutions.

Up to 10 credits of graduate courses fulfilling the degree requirements of the CSE M.S. degree may be taken before beginning the graduate program as a UC Santa Cruz

undergraduate student or through the UCSC Open Campus/Concurrent Enrollment program. To petition to transfer credits completed previously at UC Santa Cruz, students should contact their graduate student advisor in their first quarter of the CSE M.S. program. If a student took courses through the UCSC Open Campus/Concurrent Enrollment program, transcripts from UCSC Extension should be included with the petition.

Only courses completed before the start of the graduate program that fulfill the letter grade policy of the CSE M.S. program will be considered. The letter grade policy is as follows: With the exception of CSE 200, CSE 296, and all courses in the CSE 280 and CSE 297/9 series, all graduate courses and upper-division courses must be taken for a letter grade. Only courses with a letter grade of B- or higher can be counted toward the M.S. degree requirements

Academic Progress

Each year, the faculty reviews the progress of every student. Expected academic progress for master's students includes selecting a capstone plan (Thesis Plan I or Capstone Plan II) and identifying a faculty advisor by the end of the third quarter. Many students complete the program in four quarters, and all full-time students are expected to complete the degree within six quarters.

Students without adequate academic preparation may be required to take additional courses. Full-time students are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time CSE students must complete their core requirements (CSE 200 and two of the three following courses: CSE 201, CSE 210A, and CSE 220) within one year and normally must complete all course requirements within two years for the M.S.

Students receiving two or more unsatisfactory grades (U or a letter grade below B-) in Baskin Engineering courses are not making adequate progress and will be recommended for academic notice for the following three quarters of registered enrollment. Taking a leave of absence does not count as enrollment, and it does not extend the degree timeline. Part-time enrollment is counted as a half quarter of enrollment.

Students not making adequate progress toward completion of degree requirements (see the Graduate Student Handbook to review the policy on satisfactory academic progress) may be recommended for academic notice. Students who violate the terms of their academic notice are subject to dismissal from the program.

Should any CSE graduate student fail a Baskin Engineering course while on academic notice, the CSE Department may request the graduate dean dismiss that student from the graduate program. If after being removed from academic notice the student again fails a Baskin Engineering course, they will return immediately to academic notice.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their faculty advisor and the graduate director immediately. Students may appeal their dismissal.

Applying for Graduation

All candidates for a degree must submit an Application for Master's Degree to the Graduate Advising Office by the date stated in the Academic and Administrative Calendar for the quarter you wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term.

A student is required to be registered or on Filing Fee Status, whichever is applicable, during the quarter in which the degree is conferred. Students should consult their graduate student advisor to determine which option fits their situation. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

COMPUTER SCIENCE AND ENGINEERING PH.D.

Introduction

The Computer Science and Engineering Department offers a doctorate (Ph.D.) degree program. The normative time for the Ph.D. program is five to six years for a full-time student. Students admitted to the Ph.D. program usually receive financial support in the form of a combination of fellowships, teaching assistantships, and/or graduate research assistantships.

Advancement to Candidacy

Course Requirements

Each student is required to take 58 credits as follows:

- 18 credits of core requirements must be met by taking CSE 200 and one course each from three Core Categories: Programming Languages/Theory; Computer Architecture/Systems and Artificial Intelligence/Machine Learning/Data Science.
- 40 credits of regular, 5-credit graduate courses (not 2-credit seminars). Courses that do not count toward the 58-credit requirement include CSE 296, and all courses numbered CSE 280. CSE 297 and/or CSE 299 may be taken more than twice; however, only 10 credits total of CSE 297 and/or CSE 299 will be counted toward the required 58 credits.
- At most 10 credits can be from courses taught by departments other than CSE. The student must obtain their advisor’s authorization to take a course from outside of Baskin Engineering.
- Undergraduate courses do not count toward the 58-credit requirement.

Foreign Language Requirements

English Language Proficiency Requirement

Applicants whose native language is not English must take the Test of English as a Foreign Language (TOEFL) exam or the

International English Language Testing System (IELTS) exam and submit an official score report with the admission application. For admission purposes, the minimum passing score for the TOEFL exam must be 570 on the paper-based, 230 on the computer-based, or 89 on the Internet-based test. The minimum passing score for the IELTS exam is 7. TOEFL/IELTS waivers for admission purposes may be requested by applicants who have completed a four-year bachelor's degree at an English-speaking institution.

To be considered for teaching assistant support, students must meet the English language requirement for teaching assistants. Students may satisfy this requirement in one of the following ways:

- Achieving a minimum score of 26 on the spoken portion of the Internet-based TOEFL
- Achieving an overall score of 7 or higher and a speaking score of 8 or higher on the IELTS
- Participating in the Graduate Preparation Program (GPP)

Teaching Requirements

Each student is required to complete at least one quarter of teaching assistantship. This requirement can be met before or after advancement to candidacy. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Pre-Qualifying Requirements

Qualifying Examination

The qualifying examination (QE) is made up of multiple components. After completing all required coursework, the student must prepare a written thesis prospectus detailing their proposed dissertation research. This prospectus serves as the basis of the oral qualifying examination, which is a test of the student’s knowledge in advanced technical areas relevant to the dissertation topic. This oral examination consists of a seminar-style talk before an examining committee pre-approved by the graduate division where the student describes the thesis prospectus, followed by questions from the committee on the substance of the talk and the areas of presumed expertise of the student.

After successful completion of the QE exam and the timely submission of the Qualifying Exam Report by the QE committee, the student will nominate a dissertation reading committee (which may differ from the QE exam committee) that must also be approved by the Graduate Division.

To continue in the Ph.D. program, students must advance to candidacy by the end of their third year. The first step is identifying and formally nominating the qualifying exam committee. The members of the qualifying exam committee should be decided in collaboration with the student’s faculty advisor and must include the following:

1. The chair of the committee must be a tenured Senate CSE faculty member who is not the student's advisor.
2. A Senate CSE faculty member (may be the advisor).
3. A Senate UCSC faculty member or a recognized expert in the student's research area as judged by the graduate director and Graduate Division dean. (may be the advisor).
4. The outside member must be a tenured Senate faculty member from a department other than CSE at UCSC or a recognized expert in the student's research area from outside UCSC. The outside member may not be the student's advisor. In the event that the outside member is not from UCSC they must have credentials equivalent to a tenured faculty member as judged by the graduate director and the Graduate Division dean. The outside member's CV must be submitted along with the exam committee nomination form.

A ladder rank faculty (Academic Senate member) holds the title of assistant professor, associate professor, professor, assistant teaching professor, associate teaching professor, or teaching professor. Associate professors, professors, associate teaching professors, and teaching professors have tenure.

Additional members may be added to the committee. Exceptions to the committee requirements above may be granted by the graduate director when appropriate, as long as the committee meets the Graduate Division requirements. In order to formally nominate their proposed QE committee, the student should submit a QE Nomination Form for review well in advance of the Graduate Division’s submission deadline. The CSE faculty graduate director will review and, if approved, forward to the Graduate Division for final review and approval. Should the QE committee not be approved, the CSE department and/or Graduate Division may ask the student to reschedule the QE date. It is also recommended that students reach out to their committee with a draft of their paper/presentation in order to incorporate any feedback before the QE exam takes place.

At least two weeks before the QE, the student should submit the title of their prospectus, an abstract, and the location information for their exam using the Advancement/Defense Notification Request Form so that the Advising Office can send out an announcement to the BE community.

In order to pass the qualifying examination, the committee must come to unanimous agreement that the student has passed the exam, and the committee will provide a written report on the qualifying exam. The final step in the advancement process for the student is to identify and formally nominate a dissertation reading committee.

If the student does not pass the qualifying examination, the student may be asked to complete additional coursework, or other research-related work, before retaking the examination. The student may be allowed to retake the qualifying examination once, and the composition of the examining committee will remain the same for the second try. Students who fail the qualifying examination twice may be dismissed

from the Ph.D. program, or given the option to exit with a master's degree.

Students are advanced to candidacy after they have completed the course requirements, passed the qualifying examination, cleared all incompletes from their records, have an appointed dissertation reading committee, and paid the advancement to candidacy fee.

Students who have not advanced to candidacy by the end of their third year (nine quarters) are recommended for academic notice, and are subject to dismissal from the program if they do not advance by the end of their fourth year (12 quarters).

See additional instructions at Baskin Enginneering's Graduate Experience website.

Post-Qualifying Requirements

Letter Grade Policy

Letter grading is required for all courses applied toward the Computer Science and Engineering Ph.D. degree with an exception for up to 10 credits of the student's choice and the following courses: CSE 200, Research and Teaching in Computer Science and Engineering; CSE 297, Independent Study or Research; CSE 299, Thesis Research; and seminar courses (CSE 280 series). With the exception of CSE 200, courses used to satisfy the core requirement must be taken for letter grade. This policy includes courses used for this degree that are sponsored by other departments. To ensure they will receive a letter grade, students should check that they have selected the letter grade option no later than the 15th day of instruction each quarter for each class in which they are enrolled.

Transfer Credit

Up to three courses (15 credits) can be transferred from another institution with approval by the CSE graduate director.

Petitions should be submitted along with the transcript from the other institution or UC Santa Cruz extension. For courses taken at other institutions, copies of the syllabi, exams, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

Dissertation

Dissertation

Each student writes a Ph.D. dissertation which must be submitted to the reading committee at least one month prior to the dissertation defense. The members of the Dissertation Reading Committee must include at least three members as follows:

1. The faculty advisor of the student. This is the chair of the committee.
2. A Senate Baskin Engineering faculty member who is not the student's advisor. This member must be from CSE at UCSC if the advisor is not from CSE at UCSC.
3. A Senate UCSC faculty or a recognized expert in the student's research area with credentials equivalent to a Senate UCSC faculty member as judged by the graduate director and Graduate Division dean.

At least half of the committee must be members of the Santa Cruz Division of the Academic Senate.

Additional members may be added to the committee. Students should consult their advisors about the membership of their committee. The committee must be approved by the graduate director. Exceptions to the committee requirements above may be granted by the graduate director when appropriate, as long as the committee meets the Graduate Division requirements.

The dissertation must show the results of in-depth research, be an original contribution of significant knowledge, and include material worthy of publication. Where appropriate, research internships with companies, government laboratories, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation.

Dissertation Defense

At least two weeks before the defense, the student should submit the title of their dissertation, an abstract, and the location information for their exam using the Advancement/Defense Notification Request Form so that the Advising Office can send out an announcement to the BE community. The defense consists of a presentation of the candidate's research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the public and the reading committee. The committee then decides whether the dissertation is acceptable or requires revision. Upon submission of the final dissertation, the committee will sign the cover page. The student must then submit a Docusigned or original, wet-ink signed cover page to the Division of Graduate Studies, as well as an electronic copy of the dissertation to ProQuest. Copies must also be sent to the graduate advisor. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Academic Progress

Each year, the faculty reviews the progress of every student. The department expects Ph.D. students to advance to candidacy by the end of the third year (nine quarters), and requires students to advance to candidacy by the end of the fourth year (12 quarters). Ph.D. students who have not advanced to candidacy by the end of their third year (nine quarters) will be recommended for academic notice, and may be subject to dismissal from the program if not advanced to candidacy by the end of their fourth year (12 quarters). Students are expected to complete the degree by the end of the fifth year (15 quarters), and required to do so by the end of the sixth year (18 quarters) in order to maintain good academic standing.

Students without adequate academic preparation may be required to take additional courses. Full-time students are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time CSE students must complete their core requirements within two years and normally must complete all course requirements within three years.

Students who are on part-time status accrue time-to-degree at one-half the rate of full-time students for those quarters during which they are on approved part-time study, unless they have advanced to candidacy. Taking a leave of absence does not count as enrollment, and it does not extend the degree timeline. Doctoral students who have advanced to candidacy accrue time-to-degree at the regular rate, regardless of part-time or full-time status. Taking a leave of absence post-advancement does not "stop the clock" on normative time. Time-to-degree continues to accrue at the normal rate while Ph.D. candidates are on approved leave.

Students receiving two or more unsatisfactory grades (U or letter grade below B-) in Baskin Engineering courses are not making adequate progress and will be recommended for academic notice for the following three quarters of registered enrollment. Students not making adequate progress toward completion of degree requirements (see the Graduate Student Handbook for policy on satisfactory academic progress) may be recommended for academic notice. Students who violate the terms of their academic probation are subject to dismissal from the program.

Should any CSE graduate student fail a Baskin Engineering course while on probation, the CSE Department may request the graduate dean to dismiss the student from the graduate program. If after being removed from academic notice, the student again fails a Baskin Engineering course, they will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their faculty advisor and the graduate director immediately. Students may appeal their dismissal.

Applying for Graduation

All candidates for a degree must submit an Application for Doctor of Philosophy Degree to the Graduate Advising Office by the date stated in the Academic and Administrative Calendar for the quarter you wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term.

A student is required to be registered or on Filing Fee Status, whichever is applicable, during the quarter in which the degree is conferred. Students should consult the department advisor to determine which option fits their situation. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

[Optional Catchall]

NATURAL LANGUAGE PROCESSING M.S.

Introduction

Natural Language Processing (NLP) focuses on the development of computer programs to understand, generate, and learn from human language. It is a fundamental capability of artificial intelligence, and provides algorithms, methods and tools for analyzing text or speech for applications including conversational agents, machine translation, question answering, knowledge discovery, and sentiment analysis. The University of California, Santa Cruz professional Master of Science in Natural Language Processing program provides an education that has both depth and breadth in the core algorithms and methods used for NLP, and integrates foundational skills in data science and linguistic theory to prepare graduates to work in the field of natural language processing in industry, governmental agencies or nonprofit organizations. The degree is offered through the UCSC campus in Silicon Valley, enabling connection and collaboration with local industry and a focus on career development. Students are expected to complete coursework in four to five academic quarters, without leaves of absence.

Course Requirements

The minimum credit requirement for the M.S. Degree in Natural Language Processing is 59 credits. All courses must be taken for a letter grade with the exception of seminar courses.

Note: All students, both international and domestic, must graduate once they meet all program requirements.

Core Courses

All students are required to take the following six core courses (30 credits):

NLP 201	Natural Language Processing I	5
NLP 202	Natural Language Processing II	5
NLP 203	Natural Language Processing III	5
NLP 220	Data Science and Machine Learning Fundamentals	5
NLP 243	Deep Learning for Natural Language Processing	5
NLP 244	Advanced Machine Learning for Natural Language Processing	5

Electives

In addition, students are required to take two elective courses from the list below (10 credits):

NLP 245	Conversational Agents	5
NLP 255	Topics in Applied Natural Language Processing	5
NLP 267	Machine Translation	5
NLP 270	Linguistic Models of Syntax and Semantics for Computer Scientists	5

CSE 245	Computational Models of Discourse and Dialogue	5
CSE 272	Information Retrieval	5
CSE 290C	Advanced Topics in Machine Learning	5
CSE 290K	Advanced Topics in Natural Language Processing	5

Seminar

Students are encouraged to take the NLP seminar each time it is offered, however a maximum of 4 credits of NLP 280 can be counted toward the 59 credits required for the degree.

All students are required to take the following seminar course at least twice (4 credits):

NLP 280	Seminar in Natural Language Processing	2

Capstone Courses

NLP M.S. students are required to take all courses in the following capstone series (15 credits):

NLP 271A	Capstone I: Recent Research in NLP	5
NLP 271B	Capstone II: Natural Language Processing	10

Transfer Credit

The NLP M.S. program does not accept transfer credit or course substitutions from other institutions. Course substitutions for elective courses taken at UCSC will be considered by petition.

Capstone Requirements

The capstone requirement for the M.S. Degree is fulfilled through an application team project. Students are expected to work on their capstone requirement over the spring and second fall quarters. Teams will consist of three to five students, who will work collaboratively on the project.

The teamwork will be spread over a 5-credit class in the spring quarter (NLP 271A) and a 10-credit class in the second fall quarter (NLP 271B) to constitute the complete 15-credit capstone experience.

In NLP 271A, student teams will explore the NLP research literature and present a proposal for their capstone project. In NLP 271B, student teams will complete their capstone project and present the final results to the public.

In NLP 271A, student teams will review papers from the research literature and get matched to mentors from either industry or the UC Santa Cruz NLP program faculty, based on their interests. Mentors will meet with their teams at least once a week to evaluate progress and provide guidance. At the end of the quarter, each team will produce a 10-page written project proposal, and orally present it to the NLP Industry Advisory Board. The proposal will cover the topic for their capstone project, the background, the data sources, the high level design, and a milestone schedule. The proposal will need to be approved by the capstone coordinator (typically, the executive director of the program).

In NLP 271B, teams will complete the implementation of their capstone project, under guidance from their mentors. At the end of the quarter, each team will submit a 10-page written report and present their work at the annual UC Santa Cruz NLP Capstone Workshop. Student evaluations will be based on the quality of the team project, individual class participation, and peer evaluations (in which students evaluate the contributions of their teammates).

All students will be required to either present a poster or oral presentation at the UCSC NLP Capstone Workshop, which will be an integral part of the capstone evaluation. The Capstone Workshop will be an annual event taking place at the end of each fall quarter to which program faculty, students, and members of the Industry Advisory Board will be encouraged to attend. The workshop will also serve as a general outreach to NLP scientists in local industry and government.

Planners

Students can complete the M.S. Degree requirements in either four quarters or five quarters depending on the pace at which they wish to complete the degree and if they would like to engage in optional independent research during the program. By the end of the second week in their first fall quarter in the program, students are required to inform their graduate student advisor if they plan to complete the M.S. Degree requirements in four quarters or five quarters.

The sample planners below may include summer internships or independent studies to engage in research. These are not required and do not bear academic credit.

Sample Planner for Completing the Program in Four Quarters (Fall, Winter, Spring, Fall)

Fall Quarter 1 (15 credits)	NLP 201 (5 credits)
	NLP 220 (5 credits)
	NLP 243 (5 credits)
Winter Quarter 2 (12-17 credits)	NLP 202 (5 credits)
	NLP 244 (5 credits)
	Elective 1 (5 credits) - alternatively can be completed in Spring Quarter
	NLP 280 (2 credits)
Spring Quarter 3 (17 credits)	NLP 203 (5 credits)
	NLP 271A (5 credits)
	Elective 1 / Elective 2 (5 credits) - depends on whether an elective was completed previously in first Winter Quarter
	NLP 280 (2 credits)
Summer Session	Internship or Independent Study (optional)

Fall Quarter 4 (10-15 credits)	NLP 271B (10 credits) Elective 2 (5 credits) - not required if 10 credits of elective coursework were completed previously

Sample Planner for Completing the Program in Five Quarters (Fall, Winter, Spring, Fall, Winter)

Fall Quarter 1 (15 credits)	NLP 201 (5 credits) NLP 220 (5 credits) NLP 243 (5 credits)
Winter Quarter 2 (10-12 credits)	NLP 202 (5 credits) NLP 244 (5 credits) NLP 280 (2 credits) - alternatively can be completed in second Winter Quarter
Spring Quarter 3 (12-17 credits)	NLP 203 (5 credits) NLP 271A (5 credits) Elective 1 (5 credits) - alternatively can be completed in second Fall or Winter Quarters NLP 280 (2 credits)
Summer Session	Internship or Independent Study (optional)
Fall Quarter 4 (10-15 credits)	NLP 271B (10 credits) Elective 1 (5 credits) - depends on whether an elective was completed previously Elective 2 (5 credits) - alternatively can be completed in second Winter Quarter
Winter Quarter 5 (10-12 credits)	Elective 1 (5 credits) - required if not completed previously Elective 2 (5 credits) - required if not completed previously NLP 280 (2 credits) - required if second offering of the seminar was not completed previously

Review of Progress

Normative time for completion of the NLP M.S. program is four quarters (fall, winter, spring, and an additional fall term). Alternatively, students can complete the program in five quarters (fall, winter, spring terms, and an additional fall and winter) if they wish to pursue a less intensive schedule or participate in optional internship and research opportunities during the program. Engagement in an internship or independent research is not required by the NLP M.S. program. Students are expected to maintain full-time enrollment for the duration of the program and complete all degree requirements within four to five quarters. Students are required to inform their Graduate Student Advisor by the end of the second week of their first fall quarter if they plan to complete the M.S. Degree requirements in four quarters or five quarters.

All courses, with the exception of the NLP 280 seminar, are offered once per academic year. If a student fails a core course, they will be required to retake and pass that course the following year when it is offered. If a student fails an elective course, they may make up those credits by passing an additional elective course in a subsequent quarter. Students receiving two or more unsatisfactory grades (U or letter grade below B-) are not making adequate progress and will be recommended for academic probation for up to three quarters of registered enrollment. Should a student fail a course while on academic probation, the department may request the graduate dean to dismiss the student from the graduate program. If after being removed from probation, the student again fails a Baskin School of Engineering course, they will return immediately to academic probation. Taking a leave of absence does not count as enrollment.

Students not making adequate progress toward completion of degree requirements (see the Graduate Student Handbook for policy on satisfactory academic progress) may be recommended for academic probation. Students who violate the terms of their academic probation are subject to dismissal from the program.

Applying for Graduation

All candidates for a degree must submit an Application for the Master's Degree to the Graduate Advising Office by the date stated in the Academic and Administrative Calendar for the quarter you wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term. For more information about applying for graduation, visit the Baskin School of Engineering Graduate Studies website.

Optional Catchall

HUMAN LANGUAGE MEDIA AND MODELING DESIGNATED EMPHASIS

Introduction

The graduate designated emphasis (DE) leading to the degree notation “with an emphasis in Human Language Media and Modeling Designated Emphasis” (HLMM) is a collaboration of faculty from the Departments of Computer Science and Engineering, Linguistics, and Psychology. This DE is administered by the Department of Computer Science and Engineering. Students wishing to complete a master’s thesis, project, or doctoral dissertation in this area must satisfy the degree requirements of a primary program as well as those of the DE. The DE is most suitable for students pursuing degrees in linguistics, computational media, computer science and engineering, and psychology. However, students from any area may work in this interdisciplinary field as long as they

meet all requirements, including progress, within the primary degree program.

The current HLMM DE faculty are:

- Pranav Anand, Linguistics
- Jeffrey Flanigan, Computer Science and Engineering
- Jean E. Fox Tree, Psychology
- Yi Zhang, Computer Science and Engineering

Requirements

All students must demonstrate an understanding of human language media and modeling designated emphasis, through prior work and the completion of a set of HLMM DE electives or courses.

Committee Composition and Departmental Approvals

The student's M.S. project or thesis, or Ph.D. qualifying exam, or Ph.D. committee must include one member of the HLMM DE faculty.

Course Requirements

All students must complete three 5-credit graduate core courses from the approved list of courses and two offerings of a 2-credit seminar course.

List of Approved Courses

Three 5-credit courses, plus two 2-credit seminars are required, chosen from the list of approved courses:

CSE 240	Artificial Intelligence	5
CSE 245	Computational Models of Discourse and Dialogue	5
CSE 244B	Machine Learning for Natural Language Processing	5
CSE 290K	Advanced Topics in Natural Language Processing	5
CSE 243	Data Mining	5
CSE 272	Information Retrieval	5
STAT 266C	Introduction to Data Wrangling	3

Seminar Course List

CSE 280Z	Seminar in Natural Language Processing and Dialogue	2
NLP 280	Seminar in Natural Language Processing	2

Writing, Research and/or Teaching Requirements

The student's dissertation or master's project or thesis must demonstrate knowledge of, and orientation to, research issues related to HLMM.

Proficiency Requirements

All students must demonstrate an understanding of Natural Language Processing, through prior work and the completion of a set of HLMM electives or courses.

COMPUTER ENGINEERING BS ELECTIVE COURSE LIST

Computer Engineering Electives

Electives

The courses listed here will satisfy the upper division/graduate/or approved elective requirement for the computer engineering major.

AM 114	Introduction to Dynamical Systems	5
AM 147	Computational Methods and Applications	5
CMPM 146	Game AI	5
CSE 101M	Mathematical Thinking for Computer Science	5
CSE 102	Introduction to Analysis of Algorithms	5
CSE 103	Computational Models	5
CSE 106	Applied Graph Theory and Algorithms	5
CSE 108	Algorithmic Foundations of Cryptography	5
CSE 110A	Fundamentals of Compiler Design I	5
CSE 110B	Fundamentals of Compiler Design II	5
CSE 111	Advanced Programming	5
CSE 112	Comparative Programming Languages	5
CSE 113	Parallel and Concurrent Programming	5
CSE 114A	Foundations of Programming Languages	5
CSE 115A	Introduction to Software Engineering	5
CSE 118	Mobile Applications	5
CSE 122	Introduction to VLSI Digital System Design	5
CSE 125	Logic Design with Verilog	7

CSE 253	Network Security	5
CSE 257	Wireless and Mobile Networks	5
CSE 259	Sensor Networks	5
CSE 264	Computer Vision	5
CSE 265	Human-Computer Interaction	5
ECE 215	Models of Robotic Manipulation	5
ECE 216	Bio-Inspired Locomotion	5
ECE 218	Mechatronics	10
ECE 240	Introduction to Linear Dynamical Systems	5
ECE 241	Introduction to Feedback Control Systems	5
ECE 242	Applied Feedback Control	5
ECE 244	Digital Control	5
ECE 246	Hybrid Dynamical Systems	5
ECE 245	Estimation and Introduction to Control of Stochastic Processes	5
ECE 249	Introduction to Cyber-physical Systems	5

NETWORK AND DIGITAL TECHNOLOGY ELECTIVES COURSE LIST

Network and Digital Technology Electives

The following additional electives may count toward the Network and Digital Technologies B.A. electives requirement. In addition to the list below, courses on the major's program statement listed under the Digital Technology for Networking Focus and/or Internet Software Technology Focus will count as electives.

Lecture/lab combinations count as one course.

Applied Mathematics

AM 114	Introduction to Dynamical Systems	5
AM 147	Computational Methods and Applications	5
AM 231	Nonlinear Control Theory	5

Computational Media

CMPM 146	Game AI	5

Computer Science and Engineering

CSE 100	Logic Design	5
CSE 100L	Logic Design Laboratory	2
CSE 101M	Mathematical Thinking for Computer Science	5
CSE 102	Introduction to Analysis of Algorithms	5
CSE 103	Computational Models	5
CSE 107	Probability and Statistics for Engineers	5
CSE 110A	Fundamentals of Compiler Design I	5
CSE 110B	Fundamentals of Compiler Design II	5
CSE 111	Advanced Programming	5
CSE 112	Comparative Programming Languages	5
CSE 113	Parallel and Concurrent Programming	5
CSE 120	Computer Architecture	5
CSE 121	Embedded System Design	7
CSE 125	Logic Design with Verilog	7
CSE 132	Computer Security	5
CSE 138	Distributed Systems	5
CSE 140	Artificial Intelligence	5
CSE 142	Machine Learning	5
CSE 144	Applied Machine Learning: Deep Learning	5
CSE 160	Introduction to Computer Graphics	7
CSE 161	Introduction to Data Visualization	5
CSE 161L	Data Visualization Laboratory	2
ECON 166A	Game Theory and Applications I	5
CSE 193	Field Study	5
CSE 198	Individual Study or Research	5
CSE 276	Optimization Theory and Applications	5

CSE 193 and 198 require approval that is determined by the department via Course Substitution Petition. Students may take CSE 107 or STAT 131, but not both.

Electrical and Computer Engineering

ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 102	Properties of Materials	5
ECE 102L	Properties of Materials Laboratory	2
ECE 103	Signals and Systems	5
ECE 103L	Signals and Systems Laboratory	2
ECE 115	Introduction to Solid Mechanics	5
ECE 118	Introduction to Mechatronics	10
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 135	Electromagnetic Fields and Waves	5
ECE 135L	Electromagnetic Fields and Waves Laboratory	2
ECE 136	Engineering Electromagnetics	5
ECE 141	Feedback Control Systems	5
ECE 151	Communications Systems	5
ECE 152	Introduction to Wireless Communications	5
ECE 153	Digital Signal Processing	5
ECE 167	Sensing and Sensor Technologies	7
ECE 171	Analog Electronics	5
ECE 171L	Analog Electronics Laboratory	2
ECE 172	Advanced Analog Circuits	5
ECE 173	High-Speed Digital Design	7
ECE 175	Energy Generation and Control	5
ECE 175L	Energy Generation and Control Laboratory	2
ECE 180J	Advanced Renewable Energy Sources, Storage, and Smart Grids	5

Statistics

STAT 131	Introduction to Probability Theory	5
STAT 132	Classical and Bayesian Inference	5

Students may take CSE 107 or STAT 131, but not both.

PROGRAMS OFFERED

Electrical Engineering B.S. (p. 609)

Robotics Engineering B.S. (p. 617)

Electrical Engineering Minor (p. 623)

Assistive Technology Minor (p. 627)

Bioelectronics and Biophotonics Minor (p. 628)

Electrical and Computer Engineering Contiguous Bachelor's/Master's Pathway (p. 628)

Electrical and Computer Engineering M.S. (p. 630)

Electrical and Computer Engineering Ph.D. (p. 633)

Robotics and Control Designated Emphasis (p. 637)

The Electrical and Computer Engineering Department at UC Santa Cruz aims to achieve engineering discoveries that benefit humankind through a combination of curiosity, open-mindedness, and inclusiveness. We aim to provide undergraduate and graduate students with inspiration and quality education, believing that rigor, creativity, and excitement should be part of the Electrical and Computer Engineering curriculum. Our Electrical Engineering undergraduate program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org.

UNDERGRADUATE PROGRAM

The Electrical and Computer Engineering Department's undergraduate program offers bachelor of science degrees for students majoring in electrical engineering and robotics engineering. The electrical engineering B.S. degree is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org. Minors are also offered in electrical engineering, bioelectronics and biophotonics, and assistive technology.

The department emphasizes teaching excellence, opportunities for students to engage in research with our faculty, and preparation for industrial professional practice through yearlong interdisciplinary team-based capstone projects. Students primarily intending to pursue graduate study research can choose the thesis option instead of the capstone sequence.

For more details, visit the Electrical and Computer Engineering Department website and the department's program statements in the catalog.

GRADUATE PROGRAM

The Department of Electrical and Computer Engineering (ECE) at the University of California, Santa Cruz (UCSC) offers master of science (M.S.) and doctor of philosophy (Ph.D.) degree programs and conducts research in the following core areas:

- Electronic Circuits and Energy Systems
- Photonic and Electronic Devices
- Robotics, Control, and Cyber-Physical Systems
- Signals, Image Processing, and Communication Systems

For more information about the core areas and associated graduate courses, the department, and its faculty, please visit the Electrical and Computer Engineering Department website and the respective program statements in the catalog.

ELECTRICAL ENGINEERING B.S.

Information and Policies

Introduction

The electrical engineering B.S. program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org.

Students can pursue either of two concentrations, Electronics/Optics or Communications, Signals and Systems.

Program Learning Outcomes

Program Educational Objectives:

Program Educational Objectives (PEOs) are based on the needs of the Electrical Engineering program constituents. They describe what graduates are expected to attain within a few years after graduation.

The PEOs for the Electrical Engineering program at the University of California, Santa Cruz, are as follows:

1. Advanced Learning and Professional Development: Achieve a high quality, professional approach to engineering through a desire for advanced education, lifelong learning and participation in the professional engineering community.
2. Adaptation to Technological Change: Enjoy a successful professional career in a world with rapid technological change by having a sound foundation in the fundamental electrical engineering theory, design and basic science upon which future technology will be based.
3. Skills for Initial and Continued Employment Success: Demonstrate job-relevant electrical engineering skills through theoretical and practical competence in hardware, software, and programming aspects of electrical engineering, as well as independence in thought and action.
4. Leadership, Teamwork and Entrepreneurial Skills: Achieve a high level of individual creativity for personal achievement as well as the interpersonal, communications and responsibility skills for creating an effective team project environment, including an ability to apply engineering competence in both research and product oriented settings.
5. Ethics and Societal Issues: Practice a high standard of professional ethics and have a positive impact on the social and environmental aspects of engineering design and implementation.

Student Outcomes:

Upon graduation, students completing the Electrical Engineering B.S. program shall have an ability to:

1. identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics;
2. apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors;
3. communicate effectively with a range of audiences;
4. recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts;
5. function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives;
6. develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions; and
7. acquire and apply new knowledge as needed, using appropriate learning strategies.

Academic Advising for the Program

The Baskin Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in Baskin Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications.

Transfer students should also refer to the Transfer Information and Policy section.

Baskin Engineering Building, Room 225
bsoeadvising@ucsc.edu
(831) 459-5840

Getting Started in the Major: Frosh

For the first two years, all electrical engineering students are expected to take a basic set of lower-division mathematics, physical science, and engineering courses. After the first two years, electrical engineering students focus on topics within the discipline and specialize in one of two options: electronics/optics, including digital and analog circuits and devices, VLSI design, optoelectronics, electromagnetics, power engineering, and biomedical device engineering; or communications, signals, systems, and control, including optical, wireless communication, signal and image processing, networks signal processing, instrumentation, and control.

This major is highly course intensive and sequential; students who intend to pursue this major must begin taking classes for the major in their first quarter at UC Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

Transfer Information and Policy

Transfer students who want to pursue the electrical engineering major, must have applied and been admitted to UC Santa Cruz as a proposed electrical engineering major.

Transfer Admission Screening Policy

The following Transfer Screening policy takes effect in fall 2024 and will be mandatory for all transfer students entering UC Santa Cruz fall 2026 and later. Transfer students entering UCSC prior to fall 2026 are encouraged to complete these requirements, but will still be considered for admission if they fulfill the 2023-2024 admissions screening requirements.

Time to degree completion varies based on coursework completed prior to transfer. Students are strongly encouraged to complete all equivalent coursework available to them before transferring.

Please refer to the sample plans in the Requirements and Planners section. In most cases, students are not able to complete more than two upper-division classes per term. Contact the BE Advising office if you have questions regarding how long it will take to complete the degree requirements.

The following courses or their equivalents, are required prior to transfer by the end of spring term for students planning to enter in the fall.

First-year calculus

Both:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Linear algebra

One of:

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Differential equations

One of:

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

Calculus-based physics

A year of calculus-based physics courses accepted as equivalent to:

PHYS 5A	Introduction to Physics I	5
PHYS 5B	Introduction to Physics II	5
PHYS 5M	Introduction to Physics II Laboratory	1
PHYS 5C	Introduction to Physics III	5

PHYS 5N	Introduction to Physics Laboratory III	1

Cumulative GPA

A minimum GPA of 2.8 must be obtained in the courses listed above.

Beginning fall of 2026, CSE 12 or an equivalent will be required prior to transfer.

Computer systems

CSE 12	Computer Systems and Assembly Language and Lab	7

Additionally

In addition, the following courses are recommended prior to transfer

PHYS 5D	Introduction to Physics IV	5
CSE 20	Beginning Programming in Python	5
MATH 23A	Vector Calculus	5
MATH 23B	Vector Calculus	5
ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2

General Education Options

Prospective students are encouraged to prioritize required and recommended major preparation prior to transfer, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

Transfer students should declare their major in their first quarter at UC Santa Cruz. Instructions for declaring a major in Baskin Engineering are on the Declare Your Major page.

Major Qualification Policy and Declaration Process

Major Qualification

Transfer students should refer to the Transfer Admission Screening requirements.

Admission to the electrical engineering major is selective. In order to be admitted into the electrical engineering major students must be listed as a proposed major within Baskin Engineering, and complete all the courses listed below with a GPA of 2.8 or better. Some courses may be satisfied via exam credit. Courses completed via exam credit are not included in the GPA calculation.

Please refer to the Baskin Engineering "Proposed Major Retention" and its "Declaring a Baskin Engineering Major" sections in the catalog or Baskin Engineering's information on declaring a major for more information.

Both of the following:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Plus one of the following courses:

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus one of the following courses:

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

Plus all the following courses:

PHYS 5A	Introduction to Physics I	5
PHYS 5B	Introduction to Physics II	5
PHYS 5M	Introduction to Physics II Laboratory	1
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1

PHYS 5B/PHYS 5M can be substituted by one of the required upper-division courses for the purposes of major qualification. PHYS 5B/PHYS 5M is still required to complete major requirements.

Plus the following course:

ECE 80T	Modern Electronic Technology and How It Works	5

ECE 80T is waived for transfer students, though the course is still recommended.

Plus one additional lower-division required course:

CSE 12	Computer Systems and Assembly Language and Lab	7
ECE 13	Computer Systems and C Programming	7
MATH 23A	Vector Calculus	5
MATH 23B	Vector Calculus	5
AM 30	Multivariate Calculus for Engineers	5
AM 100	Mathematical Methods for Engineers	5
PHYS 5D	Introduction to Physics IV	5

MATH 23A or AM 30;

MATH 23B or AM 100

Appeal Process

Students who are informed that they are not eligible to declare may appeal this decision by submitting a letter to the undergraduate director within 15 days from the date the notification was mailed. Within 15 days of receipt of the

appeal, the department will notify the student, the college, and the Office of the Registrar of the decision.

If you have further questions concerning the appeal process, please contact the Undergraduate Advising Office at (831) 459-5840 or email bsoeadvising@ucsc.edu.

More information regarding the appeal process can be found on the Baskin Engineering Major Declaration Appeal Process page.

How to Declare a Major

Petition to declare your major as soon as you have met qualification requirements and/or reach your declaration deadline quarter, whichever comes first.

Major Declaration consists of four steps:

Step 1- Log into MyUCSC and submit the Petition for Major/Minor via MyUCSC as soon as you have met major qualification requirements and/or reach your declaration deadline quarter, whichever comes first.

Step 2- After submitting the Petition for Major/Minor via MyUCSC *it can take up to 10 business days to receive a response.* The response will be an email from our office indicating that your petition has been processed and informing you of your next steps. At this point, you will either be given information regarding next steps for Major Declaration **OR** next steps for the Major Declaration Appeal process.

Step 3- Students who meet their major qualification requirements to declare will be added to a Canvas course. The Canvas course consists of several modules with information about campus and major policies, major requirements, as well as academic planning guidance. Students will be expected to score a 100% on a short quiz, checking for understanding of this information before their major declaration will be processed.

Step 4- The Baskin Engineering Undergraduate Advising office will review which students have completed the Final Major Declaration quiz with 100% and have submitted an academic plan every Wednesday. If you have completed both items, your major declaration will be processed within a week from that Wednesday and any associated major declaration holds will be lifted.

To see if your major has been officially declared: You can go to your MyUCSC Student Center and click on “Student Advising Summary".

On the Career/Program/Plan tab, you will see the field "Declared Major:" and your major will be listed.

If your major declaration has not been entered yet, you will see the field "Proposed Major:" with your proposed major listed.

Detailed instructions for declaring a major in Baskin Engineering are on the BE Undergraduate Advising Declare your Major page.

Letter Grade Policy

The Electrical and Computer Engineering Department requires letter grading for all courses applied toward the Electrical Engineering Bachelor of Science (B.S.) degree.

[Optional Catchall]

Course Substitution Policy

Please refer to the Substitutions for Courses Taken at UCSC and Course Equivalencies and Substitutions Taken at an Outside Institution sections of the Baskin Engineering page of the catalog for the policy regarding course substitutions.

Double Majors and Major/Minor Combinations Policy

ECE 121, ECE 141 and ECE 167, which are used toward the assistive technology minor, cannot also be used to satisfy electrical engineering B.S. electives.

Study Abroad

Four-Year Institutions and the UC Education Abroad Program (UCEAP)

Students who intend to take a course at a four-year institution or UC Education Abroad, must submit a Course Substitution Petition to the BE Undergraduate Advising Office to have the course reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus.

It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations.

To guarantee equivalency, departments may sometimes require a grade of B or better. If the course is approved for equivalency, then the student must also receive approval by their major department **PRIOR** to taking the class. Forms and procedures for approval can be obtained from and submitted to the BE Undergraduate Advising Office.

Honors

Electrical engineering majors are considered for “Honors in the Major” and “Highest Honors in the Major” based on the GPA and on results of undergraduate research and other significant contributions to Baskin Engineering. Students with a GPA of 3.7 or higher receive highest honors. Students with a GPA of 3.3 or higher but less than 3.7, receive honors. A student meeting the GPA requirement for highest honors or honors may not receive honors if a student has been found guilty of academic misconduct. Students with particularly significant accomplishments in undergraduate research or contributions to Baskin Engineering may be considered with a lower GPA. Electrical engineering juniors and seniors may also be eligible for election to the UC Santa Cruz chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Materials Fee and Miscellaneous Fees

Please see the section on fees under Baskin Engineering.

[Optional Catchall]

Requirements and Planners

Course Requirements (all concentrations)

Complete the following requirements. Some courses may be satisfied via exam credit.

Lower-Division Courses

Students gain a solid foundation in calculus, engineering mathematics, physics, computer science, and computer engineering during their first two years. Majors must complete the following 13 lower-division courses (including corresponding laboratories). These courses form part of the prerequisite sequence and should be completed during the first two years at UC Santa Cruz. The requirements are rigorous; students must be prepared to begin these courses early in their studies.

Electrical and Computer Engineering

ECE 80T	Modern Electronic Technology and How It Works	5

This course is waived for transfer students.

Computer Science and Engineering

One of these courses:

CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7

A test-out option is available for CSE 20.

Plus both of these courses:

CSE 12	Computer Systems and Assembly Language and Lab	7
ECE 13	Computer Systems and C Programming	7

Mathematics

Take the following courses:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Plus one of the following options:

	Either these courses	
MATH 23A	Vector Calculus	5
MATH 23B	Vector Calculus	5
	or these courses	
AM 30	Multivariate Calculus for Engineers	5
AM 100	Mathematical Methods for Engineers	5

Applied Mathematics

One of the following

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus one of the following

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

Physics

All of the following:

PHYS 5A	Introduction to Physics I	5
PHYS 5B	Introduction to Physics II	5
PHYS 5M	Introduction to Physics II Laboratory	1
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
PHYS 5D	Introduction to Physics IV	5

Upper-Division Courses

Fifteen upper-division courses along with associated 1- or 2-credit laboratories are required for the major. The course requirements include both depth and breadth, technical writing, and a comprehensive capstone design project.

All students are required to take the following eight upper-division courses, with associated laboratories.

Electrical and Computer Engineering

ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 102	Properties of Materials	5
ECE 102L	Properties of Materials Laboratory	2
ECE 103	Signals and Systems	5
ECE 103L	Signals and Systems Laboratory	2
ECE 135	Electromagnetic Fields and Waves	5
ECE 135L	Electromagnetic Fields and Waves Laboratory	2
ECE 151	Communications Systems	5
ECE 171	Analog Electronics	5
ECE 171L	Analog Electronics Laboratory	2

Computer Science and Engineering

CSE 100	Logic Design	5
CSE 100L	Logic Design Laboratory	2

Statistics

One of the following

CSE 107	Probability and Statistics for Engineers	5
STAT 131	Introduction to Probability Theory	5

Lecture/lab combinations count as one course.

Electives

In addition to completing the courses required for both concentrations, electrical engineering majors must complete four elective courses chosen from the lists below. Students pursuing the Electronics/Optics concentration must choose at least three courses from the Electronics/Optics courses listed below. Students pursuing the Communications, Signals and Systems concentration must choose at least three courses from the Communication and Signals courses listed below.

Certain graduate-level courses as well as those courses taught in conjunction with graduate courses may also be used to fulfill an elective requirement as listed below. No course may be counted twice.

ECE 183 can be taken as an elective course with an approval of the undergraduate director.

Design Elective: One of the four concentration courses chosen must include at least one of the following design electives ECE 118, ECE 121, ECE 157 ECE 157L, ECE167 and ECE 173. This course must be taken before the first capstone course ECE 129A.

Electronics/Optics Concentration Courses

Electrical and Computer Engineering

ECE 104	Bioelectronics	5
ECE 110	Brain-Inspired Machine Learning	5
ECE 115	Introduction to Solid Mechanics	5
ECE 118	Introduction to Mechatronics	10
ECE 121	Microcontroller System Design	7
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 136	Engineering Electromagnetics	5
ECE 141	Feedback Control Systems	5
ECE 145	Estimation and Introduction to Control of Stochastic Processes	5
ECE 157	RF Hardware Design	5
ECE 157L	RF Hardware Design Laboratory	2
ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 167	Sensing and Sensor Technologies	7
ECE 172	Advanced Analog Circuits	5
ECE 173	High-Speed Digital Design	7
ECE 169	Electric Machinery and Control	5
ECE 175	Energy Generation and Control	5
ECE 175L	Energy Generation and Control Laboratory	2
ECE 176	Energy Conservation and Control	5
ECE 176L	Energy Conversion and Control Laboratory	2
ECE 177	Power Electronics	5
ECE 177L	Power Electronics Laboratory	2
ECE 178	Device Electronics	5
ECE 180J	Advanced Renewable Energy Sources, Storage, and Smart Grids	5
ECE 183	Special Topics in Electrical Engineering	5
ECE 185	Introduction to the US Electricity Industry	5
ECE 193	Field Study	5
ECE 198	Individual Study or Research	5
ECE 201	Introduction to Nanotechnology	5
ECE 203	Nanocharacterization of Materials	5
ECE 207	Nanomaterials and Nanometer-Scale Devices	5
ECE 210	Brain-Inspired Machine Learning	5
ECE 215	Models of Robotic Manipulation	5
ECE 221	Advanced Analog Integrated Circuits	5
ECE 222A	Advances in Agriculture Technology	5
ECE 230	Optical Fiber Communication	5
ECE 231	Optical Electronics	5
ECE 241	Introduction to Feedback Control Systems	5
ECE 242	Applied Feedback Control	5
ECE 243	System Identification	5
ECE 245	Estimation and Introduction to Control of Stochastic Processes	5
ECE 275	Energy Market, Policy, and Modeling	5

Lecture/lab combinations count as one course. Each of the ECE 183, ECE 193, and ECE 198 courses can be taken only once as an elective course.

[(ECE 130 and ECE 230), (ECE 141 and ECE 241), and (ECE 172 and ECE 221) are undergraduate and graduate courses, and from each pair of classes only one can be taken for this program.]

Communications, Signals, Systems Concentration Courses

Electrical and Computer Engineering

ECE 118	Introduction to Mechatronics	10
ECE 121	Microcontroller System Design	7
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 136	Engineering Electromagnetics	5
ECE 141	Feedback Control Systems	5
ECE 145	Estimation and Introduction to Control of Stochastic Processes	5
ECE 152	Introduction to Wireless Communications	5
ECE 153	Digital Signal Processing	5

ECE 157	RF Hardware Design	5
ECE 157L	RF Hardware Design Laboratory	2
ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 173	High-Speed Digital Design	7
ECE 183	Special Topics in Electrical Engineering	5
ECE 193	Field Study	5
ECE 198	Individual Study or Research	5
ECE 230	Optical Fiber Communication	5
ECE 215	Models of Robotic Manipulation	5
ECE 237	Image Processing and Reconstruction	5
ECE 241	Introduction to Feedback Control Systems	5
ECE 242	Applied Feedback Control	5
ECE 243	System Identification	5
ECE 244	Digital Control	5
ECE 245	Estimation and Introduction to Control of Stochastic Processes	5
ECE 250	Digital Signal Processing	5
ECE 251	Principles of Digital Communications	5
ECE 252	Wireless Communications	5
ECE 253	Introduction to Information Theory	5
ECE 255	Error Control Coding	5
ECE 256	Statistical Signal Processing	5

Computer Science and Engineering

CSE 150	Introduction to Computer Networks	7

Lecture/lab combinations count as one course. Each of the ECE 183, ECE 193 and ECE 198 courses can be taken only once as an elective course.

[(ECE 130 and ECE 230), (ECE 152 and ECE 252), (ECE 141 and ECE 241), and (ECE 153 and ECE 250) are undergraduate and graduate courses, and from each pair of classes only one can be taken for this program.]

Disciplinary Communication (DC) Requirement

Students in all majors must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement is satisfied by completing the senior capstone course sequence:

Either these three courses:

ECE 129A	Capstone Project I	5
ECE 129B	Capstone Project II	5
ECE 129C	Capstone Project III	5

Or these two courses:

ECE 129A	Capstone Project I	5
ECE 195	Senior Thesis Research	5
ECE 195	Senior Thesis Research	5

10 credits for the senior thesis course, ECE 195, must be completed for this option.

Comprehensive Requirement

The senior comprehensive requirement for electrical engineering majors is in two parts: a project course and assessment options.

Project Course

These senior-level courses encompass an in-depth project, including analysis, design, testing, and documentation, requiring students to call upon knowledge acquired throughout their undergraduate studies. Students must complete one capstone design course that spans three quarters. Current course choices include the following:

ECE 129A	Capstone Project I	5
ECE 129B	Capstone Project II	5
ECE 129C	Capstone Project III	5

Or complete the following courses:

ECE 129A	Capstone Project I	5
ECE 195	Senior Thesis Research	5
ECE 195	Senior Thesis Research	5

10 credits for the senior thesis course, ECE 195, must be completed for this option.

Outcomes Assessment Options

The Electrical and Computer Engineering Department requires an outcomes assessment. All students are required to complete an exit survey and meet with a faculty member for an exit interview. The specifics of the outcomes assessment may change from year to year; for this catalog year, students must also complete one of the following options:

1. maintenance of a 2.5 grade point average in all required and elective courses for the major; or
2. senior thesis submission; or
3. portfolio review.

Portfolios must include the following:

- project report(s)
- a one- or two-page overview of the student’s contribution to the project(s);
- a two-page essay concerning the relationship of engineering to society (specific topics will be provided by the Electrical and Computer Engineering Department).

The portfolios must be submitted electronically at least seven days before the end of the instruction in the quarter of graduation. Portfolios will not be returned.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following is a sample academic plan for incoming first-year students. Students who are unable to follow this planner should consult with ECE advisors for alternatives. Transfer students should seek advisement as their plans will vary depending on their lower-division courses.

Plan for Entering Frosh

	Fall	Winter	Spring	**Summer**
Entering				Summer Edge (optional) CSE 20 or test-out MATH placement exam
1st year	MATH 19A CSE 20 College 1	MATH 19B PHYS 5A PHYS 5L ECE 80T	CSE 12 AM 10 PHYS 5B PHYS 5M	
2nd year	PHYS 5C PHYS 5N AM 30 or MATH 23A PHYS 5D	ECE 101 ECE 101L AM 20 WRIT 2**	ECE 13 ECE 103 ECE 103L	Recommended Option: ECE 171 ECE 171L
3rd year	ECE 171 ECE 171L CSE 100 CSE 100L ECE 174 (if DE is ECE 157 or ECE 173)	Design Elective or Elective 1 STAT 131	Design Elective or Elective 2 AM 100 or MATH 23B	Internship
4th year	ECE 129A ECE 102 ECE 102L Elective 3	ECE 129B or ECE 195 (thesis) ECE 151	ECE 129C or ECE 195 (thesis) ECE 135 ECE 135L Elective 4	

* Students with no prior programming will take CSE 20 before CSE 12. Students with a prior programming course, AP credit, or clearing the “Test-out” bar will start with CSE 12.

** WRIT 2 should be taken in or before spring quarter of the second year.

Three of the four electives must be taken in the student’s concentration.

In addition to the specific courses shown in the planner above, a student must complete courses satisfying the CC, ER, IM, TA and PE general education requirements.

Plan for Junior Transfer Students with completion of screening requirements for admission

	Fall	Winter	Spring	**Summer**
2nd year				Summer Edge (optional) MATH recommended CSE 20 or test-out if no prior programming
3rd year	ECE 101 ECE 101L CSE 12 AM30 or MATH 23A	CSE 100 CSE100L STAT 131	ECE 103 ECE103L ECE 13	Recommended Option: ECE 171 ECE 171L
4th	ECE	Design	Design	

year	102 ECE 102L	Elective or Elective 1	Elective or Elective 2
	ECE 171 ECE 171L	ECE 151	Elective 3
	ECE 174 (if DE is ECE 157 or 173)		
5th year	ECE 129A	ECE 129A or ECE 195 (thesis)	ECE129 C or ECE195 (thesis)
	PHY S 5D	Elective 4	ECE 135 ECE 135L
	AM 100 or MAT H 23B		

Three of the four electives must be taken in the student's concentration.

Plan for Junior Transfer Students with completion of all recommended coursework prior to transfer

	Fall	Winter	Spring	**Summer**
2nd year				Summer Edge (optional) STAT 131 ECE 171 ECE 171L
3rd year	ECE 103 ECE 103L	Design Elective or Elective 1	Design Elective or Elective 2	
	ECE 13	ECE 171 ECE 171L	CSE 100 CSE 100L	
	ECE 174 (if DE is ECE 157 or 173)			
4th year	ECE 129A	ECE 129B or ECE 195 (thesis)	ECE 129C or ECE 195 (thesis)
	ECE 102 ECE 102L	ECE 151	ECE 135 ECE 135L
	STAT 131		
5th year	Elective 3		
	Elective 4		

Three of the four electives must be taken in the student's concentration.

Curriculum charts for all BE majors are available at the Baskin Engineering undergraduate advising Major Curriculum Charts page.

Additional information about this program can be found on the department's website.

ROBOTICS ENGINEERING B.S.

Information and Policies

Introduction

Program Learning Outcomes

Student Outcomes

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts

5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Academic Advising for the Program

The Baskin Engineering Undergraduate Advising office offers general advising for prospective and declared undergraduates majoring in Baskin Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications.

Transfer students should also refer to the Transfer Information and Policy section.

Baskin Engineering Building, Room 225
bsoeadvising@ucsc.edu
(831) 459-5840

Getting Started in the Major: Frosh

This major is highly course intensive and sequential; students who intend to pursue this major must begin taking classes for the major in their first quarter at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

Transfer Information and Policy

Transfer students who want to pursue the robotics engineering major must have applied and been admitted to UC Santa Cruz as a proposed robotics engineering major.

Transfer Admission Screening Policy

Time to degree completion varies based on coursework completed prior to transfer. Students are strongly encouraged to complete all equivalent coursework available to them before transferring.

Please refer to the sample plans in the requirements and planners section. In most cases, students are not able to complete more than two upper-division classes per term. Contact the BE Advising office if you have questions regarding how long it will take to complete the degree requirements.

The following courses or their equivalents, are required prior to transfer by the end of spring term for students planning to enter in the fall.

First-year calculus

Both:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Linear Algebra

One of:

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Differential equations

One of:

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

Calculus-based physics

Two quarters of calculus-based physics courses accepted as equivalent to:

PHYS 5A	Introduction to Physics I	5
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1

Cumulative GPA

A minimum GPA of 2.8 must be obtained in the courses listed above.

Beginning fall of 2026, CSE 12 or an equivalent will be required prior to transfer

Computer engineering

CSE 12	Computer Systems and Assembly Language and Lab	7

Additionally

In addition, the following courses are recommended prior to transfer.

MATH 23A	Vector Calculus	5
CSE 16	Applied Discrete Mathematics	5
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2

Also, CSE 16, CSE 20, CSE 30, MATH 23A, ECE 13, ECE 101/ECE 101L, ECE 171/ECE 171L, STAT 131 and many general education requirements may be offered by UC Santa Cruz Summer Session and taken prior to starting the first fall quarter at UCSC.

Getting Started in the Major: Transfer Students

Transfer students should declare their major in their first quarter at UC Santa Cruz. Instructions for declaring a major in Baskin Engineering are on the Declare Your Major page.

Major Qualification Policy and Declaration Process

Major Qualification

Transfer students should refer to the Transfer Admission Screening requirements.

In order to be admitted into the robotics engineering major students must be listed as a proposed major within Baskin Engineering. Please refer to the Baskin Engineering "Proposed Major Retention" and its "Declaring a Baskin Engineering Major" sections in the catalog or the BE Undergraduate Advising Prepare to Declare page for more information.

In addition to being listed as a proposed Baskin Engineering major, declaration of the robotics engineering major in the first six quarters of enrollment at UC Santa Cruz is based on performance in the following lower-division courses and associated labs required for the major:

Take both of these courses:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Plus one of the following:

AM 30	Multivariate Calculus for Engineers	5
MATH 23A	Vector Calculus	5

Plus one of the following:

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus one of the following:

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

And all of these courses:

ECE 9	Statics and Mechanics of Materials	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7
ECE 13	Computer Systems and C Programming	7
PHYS 5A	Introduction to Physics I	5
PHYS 5C	Introduction to Physics III	5

Appeal Process

Students who are informed that they are not eligible to declare may appeal this decision by submitting a letter to the undergraduate director within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, the college, and the Office of the Registrar of the decision.

If you have further questions concerning the appeal process, please contact the Undergraduate Advising Office at (831) 459-5840 or email bsoeadvising@ucsc.edu.

More information regarding the appeal process can be found on the BE Undergraduate Advising Appeal Your Major page.

How to Declare a Major

Instructions for declaring a major in Baskin Engineering are on the Baskin Engineering Undergraduate Advising Declare Your Major page.

Letter Grade Policy

The Electrical and Computer Engineering Department requires letter grading for all courses applied toward the B.S. in robotics engineering. This policy includes courses required for the degree that are sponsored by other departments.

[Optional Catchall]

Course Substitution Policy

Please refer to the Substitutions for Courses Taken at UCSC and Course Equivalencies and Substitutions Taken at an Outside Institution sections of the Baskin Engineering page of the catalog for the policy regarding course substitutions.

Double Majors and Major/Minor Combinations Policy

Students completing this major cannot also receive the computer engineering minor, assistive technology minor or the network and digital technology B.A. degree.

Study Abroad

Four-Year Institutions and the UC Education Abroad Program (UCEAP)

Students who intend to take a course at a four-year institution or UC Education Abroad, must submit a Course Substitution Petition to the BE Undergraduate Advising Office to have the course reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus.

It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better. If the course is approved for equivalency, then the student must also receive approval by their major department

PRIOR to taking the class. Forms and procedures for approval can be obtained from and submitted to the BE Undergraduate Advising Office.

Honors

Majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on their GPA and on results of undergraduate research and other significant contributions to Baskin Engineering. Students with a GPA of 3.7 or higher, in most cases, receive highest honors. Students with a GPA of 3.3 or higher but less than 3.7, in most cases, receive honors. Students with particularly significant accomplishments in undergraduate research or contributions to Baskin Engineering may be considered with a lower GPA. Robotics engineering juniors and seniors may also be eligible for election to the UC Santa Cruz chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

School of Engineering Policies

Please refer to the Baskin Engineering section of the catalog for additional policies that apply to all Baskin Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees under Baskin Engineering.

[Optional Catchall]

Requirements and Planners

Course Requirements

Completing the major declaration requirements in math and physics during the first two years is a priority to meet upper-division prerequisites. Although not required, it is recommended that students interested in the robotics engineering major take ECE 8, Introduction to Robot Automation. Please contact BE Advising if you have questions. The senior comprehensive requirement for robotics engineering majors is satisfied by completion of the capstone course and the portfolio exit requirement. Students not making sufficient progress in the major may be recommended to change to another major. Some courses may be satisfied via exam credit.

Lower-Division Courses

Students who may have originally pursued another major should discuss with the Baskin Engineering Undergraduate Advising office whether or not already completed coursework may be substituted for one or more lower-division requirements.

Either of the following:

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Either of the following:

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

And the following:

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7

Students with no prior programming will take CSE 20 before CSE 30. Students with a prior programming course, AP credit, or clearing the "Test-out" bar will start with CSE 30.

And either of the following:

MATH 23A	Vector Calculus	5
AM 30	Multivariate Calculus for Engineers	5

And all the following courses:

ECE 13	Computer Systems and C Programming	7
CSE 16	Applied Discrete Mathematics	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
PHYS 5A	Introduction to Physics I	5
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
ECE 9	Statics and Mechanics of Materials	5
ECE 10	Fundamentals of Robot Kinematics and Dynamics	5

Upper-Division Courses

All of the following:

CSE 100	Logic Design	5
CSE 100L	Logic Design Laboratory	2
ECE 141	Feedback Control Systems	5
ECE 167	Sensing and Sensor Technologies	7
CSE 101	Introduction to Data Structures and Algorithms	5
ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 103	Signals and Systems	5
ECE 103L	Signals and Systems Laboratory	2
ECE 118	Introduction to Mechatronics	10
ECE 121	Microcontroller System Design	7

And either of the following:

CSE 107	Probability and Statistics for Engineers	5
STAT 131	Introduction to Probability Theory	5

Electives

Advanced Robotics Elective

One of the following:

ECE 215	Models of Robotic Manipulation	5
ECE 216	Bio-Inspired Locomotion	5
ECE 240	Introduction to Linear Dynamical Systems	5
ECE 242	Applied Feedback Control	5
ECE 243	System Identification	5
ECE 244	Digital Control	5
ECE 245	Estimation and Introduction to Control of Stochastic Processes	5
ECE 246	Hybrid Dynamical Systems	5
ECE 249	Introduction to Cyber-physical Systems	5

Upper-Division and Graduate Elective

One course from the following (with a recommendation of ECE163):

ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 145	Estimation and Introduction to Control of Stochastic Processes	5
ECE 149	Introduction to Cyber-physical Systems	5
ECE 153	Digital Signal Processing	5
ECE 222A	Advances in Agriculture Technology	5
ECE 110	Brain-Inspired Machine Learning	5
ECE 169	Electric Machinery and Control	5
ECE 151	Communications Systems	5
ECE 152	Introduction to Wireless Communications	5
ECE 171	Analog Electronics	5
ECE 171L	Analog Electronics Laboratory	2
ECE 172	Advanced Analog Circuits	5
ECE 173	High-Speed Digital Design	7
ECE 175	Energy Generation and Control	5
ECE 175L	Energy Generation and Control Laboratory	2
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 102	Properties of Materials	5
ECE 102L	Properties of Materials Laboratory	2
ECE 135	Electromagnetic Fields and Waves	5
ECE 135L	Electromagnetic Fields and Waves Laboratory	2
ECE 193	Field Study	5
ECE 198	Individual Study or Research	5
AM 114	Introduction to Dynamical Systems	5
AM 147	Computational Methods and Applications	5
CSE 131	Introduction to Operating Systems	5
CSE 156	Network Programming	5
CSE 156L	Network Programming Laboratory	2
CSE 118	Mobile Applications	5
CSE 140	Artificial Intelligence	5
CSE 142	Machine Learning	5
CSE 276	Optimization Theory and Applications	5
CMPM 146	Game AI	5

Lecture and required concurrent lab course counts as one course.

Disciplinary Communication (DC) Requirement

Students in all majors must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in robotics is satisfied by completing the senior capstone course sequence:

Either these three courses:

ECE 129A	Capstone Project I	5
ECE 129B	Capstone Project II	5
ECE 129C	Capstone Project III	5

Or these two courses:

ECE 129A	Capstone Project I	5
ECE 195	Senior Thesis Research	5
ECE 195	Senior Thesis Research	5

10 credits for the senior thesis course, ECE 195, must be completed for this option.

Comprehensive Requirement

The senior comprehensive requirement for robotics engineering majors is in two parts: a project course and assessment options.

Capstone Requirement

Students must complete one capstone design course that spans three quarters

ECE 129A	Capstone Project I	5
ECE 129B	Capstone Project II	5
ECE 129C	Capstone Project III	5

or complete the following courses:

ECE 129A	Capstone Project I	5

ECE 195	Senior Thesis Research	5
ECE 195	Senior Thesis Research	5

10 credits for the senior thesis course, ECE 195, must be completed for this option.

Exit Requirement

Students are required to complete an exit survey and attend an exit interview. Portfolios of the students work will be collected from our courses for program evaluation. The portfolios will be reviewed by the Electrical and Computer Engineering undergraduate committee and will include two project reports: ECE 118 and either the senior capstone report (ECE 129A/ECE 129B/ECE 129C) or the student's senior thesis.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following is a sample academic plan for incoming first-year students. Students who are unable to follow this planner should consult with ECE advisors for alternatives. Transfer students should seek advisement as their plans will vary depending on their lower-division courses.

Plan for Entering Frosh

Year	Fall	Winter	Spring	**Summer**
1st	MATH 19A	MATH 19B	CSE 12	
	CSE 20	PHYS 5A PHYS 5L	AM 10	
	College 1	WRIT 1 (if neded)	CSE 16	
	ECE 8* (recommended if MATH 19A is completed)			
2nd	PHYS 5C PHYS 5N	AM 20	ECE 13	Elective Option: ECE 171 ECE 171L completes EE minor
	AM 30	ECE 101 ECE 101L	ECE 103 ECE 103L	
	CSE 30	WRIT 2**		
3rd	CSE 100 CSE 100L	ECE 121	ECE 118	
	CSE 107 or STAT 131	ECE9	ECE 10	
	ECE 8* (recommended)			
4th	ECE 129A	ECE 129B or ECE 195 (thesis)	ECE 129C or ECE 195 (thesis)	
	ECE 141	ECE 167	Adv. Robo. Elective	
	CSE 101		Elective	

* MATH 19A is the priority for 1st-year students. ECE 8 is recommended for 1st-year students who have already earned credit for MATH 19A. Please consult with BE Advising if you have questions.

** WRIT 2 should be taken in or before spring quarter of the second year.
Electives and advanced robotics electives may only be offered once per year, and may have additional prerequisites.

Plan for Junior Transfer Students with completion of screening requirements for admission

Year	Fall	Winter	Spring	**Summer**
2nd				Summer Edge (optional) (math recommended)
3rd	ECE 101 ECE 101L	CSE 100 CSE 100L	ECE 103 ECE 103L	Elective Option: ECE 171 ECE 171L completes EE minor
	CSE 12	ECE 9	ECE 13	

	CSE 16	CSE 20	AM 30 or MATH 23A
4th	CSE 30	ECE 121	ECE 118
	ECE 141	CSE 107 or STAT 131	ECE 10
5th	ECE 129A	ECE 129B or ECE 195 (thesis)	ECE 129C or ECE 195 (thesis)
	Elective or Adv. Robo. Elective	ECE 167	Elective or Adv. Robo. Elective
	CSE 101		

Electives and Advanced Robotics Electives may only be offered once per year, and may have additional prerequisites.

Plan for Junior Transfer Students with completion of all recommended coursework prior to transfer

Year	Fall	Winter	Spring	**Summer**
2nd				Summer Edge (optional)
3rd	ECE 103 ECE 103L	Elective Option: ECE 171 ECE 171L completes EE minor	CSE 100 CSE 100L	
	ECE 13	ECE 9	ECE 10	
4th	CSE 101	ECE 121	ECE 118 (10 credits, not recommended with other upper-division coursework)	
	ECE 141	CSE 107		
5th	ECE 129A	ECE 129B or ECE 195 (thesis)	ECE 129C or ECE 195 (thesis)	
Adv. Robo. Elective	ECE 167			
	Part Time Final Quarter			

Electives and Advanced Robotics Electives may only be offered once per year, and may have additional prerequisites. Curriculum charts for all Baskin Engineering majors are available at the BE Undergraduate Advising Major Curriculum Charts page.

ELECTRICAL ENGINEERING MINOR

The electrical engineering minor provides a solid foundation in the core areas of electronic circuits and signals and systems, as well as the prerequisite material in mathematics and physics. Concentration of upper-division electives in either of the major tracks constitutes substantial and focused work in the discipline of electrical engineering. This minor is particularly suitable for students with majors in applied physics or any Baskin Engineering major.

Course Requirements

Requirements for the minor in Electrical Engineering are the following. Though courses for the minor may be taken for a letter grade or Pass/No Pass (P/NP), many of the courses may be required for a student's major which could require a letter grade (including all Baskin Engineering majors). Students should be aware of the letter grade policy for their chosen major before choosing Pass/No Pass.

Lower-Division Courses

Mathematics

Math placement is required for one or more of the foundational courses for this minor. For more information, please review the Math Placement website.

All of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Plus one of the following courses

MATH 23A	Vector Calculus	5
AM 30	Multivariate Calculus for Engineers	5

Plus one of the following

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus one of the following

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

Science

One of the following lecture/lab combinations

	Either these courses	
PHYS 5A	Introduction to Physics I	5
	or these courses	
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1

Plus one of the following lecture/lab combinations

	Either these courses	
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
	or these courses	
PHYS 6C	Introductory Physics III	5
PHYS 6N	Introductory Physics III Laboratory	1

Upper-Division Courses

All of the following courses

ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 103	Signals and Systems	5
ECE 171	Analog Electronics	5
ECE 171L	Analog Electronics Laboratory	2

Electives

Plus at least 15 additional credits of upper-division or graduate courses from the lists below. All of the upper-division electives must come from the same concentration.

If a course has a required lab, students must pass the lecture and lab in order to use the lab credits to fulfill the 15-credit requirement for the minor.

ECE 183 can be taken as an elective course with an approval of the undergraduate director.

Communications Signal Processing Concentration

Electrical and Computer Engineering

ECE 118	Introduction to Mechatronics	10
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 136	Engineering Electromagnetics	5
ECE 141	Feedback Control Systems	5
ECE 145	Estimation and Introduction to Control of Stochastic Processes	5
ECE 149	Introduction to Cyber-physical Systems	5
ECE 152	Introduction to Wireless Communications	5
ECE 157	RF Hardware Design	5
ECE 157L	RF Hardware Design Laboratory	2
ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 183	Special Topics in Electrical Engineering	5
ECE 193	Field Study	5
ECE 198	Individual Study or Research	5
ECE 215	Models of Robotic Manipulation	5
ECE 242	Applied Feedback Control	5
ECE 243	System Identification	5
ECE 245	Estimation and Introduction to Control of Stochastic Processes	5
ECE 251	Principles of Digital Communications	5
ECE 253	Introduction to Information Theory	5
ECE 255	Error Control Coding	5
ECE 256	Statistical Signal Processing	5

Each of ECE 183, ECE 193 and ECE 198 courses can be taken only once as an elective course.

(ECE 130 and ECE 230, ECE 141 and ECE 241, and ECE 153 and ECE 250 are undergraduate and graduate courses taught in conjunction, and only one can be taken for this program.)

Computer Science and Engineering

CSE 150	Introduction to Computer Networks	7

Control and Signal Processing Concentration

Electrical and Computer Engineering

ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 135	Electromagnetic Fields and Waves	5
ECE 135L	Electromagnetic Fields and Waves Laboratory	2
ECE 136	Engineering Electromagnetics	5
ECE 145	Estimation and Introduction to Control of Stochastic Processes	5
ECE 149	Introduction to Cyber-physical Systems	5
CSE 152	Principles of Computer Communication	5
ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 172	Advanced Analog Circuits	5
ECE 176	Energy Conservation and Control	5
ECE 176L	Energy Conversion and Control Laboratory	2
ECE 177	Power Electronics	5
ECE 177L	Power Electronics Laboratory	2
ECE 183	Special Topics in Electrical Engineering	5
ECE 193	Field Study	5
ECE 198	Individual Study or Research	5
ECE 215	Models of Robotic Manipulation	5
ECE 237	Image Processing and Reconstruction	5
ECE 242	Applied Feedback Control	5
ECE 243	System Identification	5
ECE 244	Digital Control	5
ECE 245	Estimation and Introduction to Control of Stochastic Processes	5
ECE 251	Principles of Digital Communications	5
ECE 253	Introduction to Information Theory	5
ECE 255	Error Control Coding	5
ECE 256	Statistical Signal Processing	5

Each of ECE 183, ECE 193 and ECE 198 courses can be taken only once as an elective course.

(ECE 130 and ECE 230, and ECE 172 and ECE 221 are undergraduate and graduate courses taught in conjunction, and only one can be taken for this program.)

Computer Science and Engineering

CSE 150	Introduction to Computer Networks	7

Electronics and Photonics Concentration

Electrical and Computer Engineering

ECE 102	Properties of Materials	5
ECE 102L	Properties of Materials Laboratory	2
ECE 104	Bioelectronics	5
ECE 110	Brain-Inspired Machine Learning	5
ECE 115	Introduction to Solid Mechanics	5
ECE 121	Microcontroller System Design	7
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 153	Digital Signal Processing	5
ECE 135	Electromagnetic Fields and Waves	5
ECE 135L	Electromagnetic Fields and Waves Laboratory	2
ECE 136	Engineering Electromagnetics	5
ECE 141	Feedback Control Systems	5
ECE 145	Estimation and Introduction to Control of Stochastic Processes	5
ECE 149	Introduction to Cyber-physical Systems	5
ECE 152	Introduction to Wireless Communications	5
ECE 157	RF Hardware Design	5
ECE 157L	RF Hardware Design Laboratory	2
ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 172	Advanced Analog Circuits	5
ECE 167	Sensing and Sensor Technologies	7
ECE 173	High-Speed Digital Design	7
ECE 174	Introduction to EDA Tools for PCB Design	3
ECE 175	Energy Generation and Control	5
ECE 175L	Energy Generation and Control Laboratory	2
ECE 176	Energy Conservation and Control	5
ECE 176L	Energy Conversion and Control Laboratory	2
ECE 177	Power Electronics	5
ECE 177L	Power Electronics Laboratory	2
ECE 178	Device Electronics	5
ECE 180J	Advanced Renewable Energy Sources, Storage, and Smart Grids	5
ECE 183	Special Topics in Electrical Engineering	5
ECE 193	Field Study	5
ECE 198	Individual Study or Research	5
ECE 201	Introduction to Nanotechnology	5
ECE 203	Nanocharacterization of Materials	5
ECE 210	Brain-Inspired Machine Learning	5
ECE 215	Models of Robotic Manipulation	5
ECE 231	Optical Electronics	5
ECE 242	Applied Feedback Control	5
ECE 243	System Identification	5
ECE 245	Estimation and Introduction to Control of Stochastic Processes	5

Each of ECE 183, ECE 193 and ECE 198 courses can be taken only once as an elective course.

(ECE 130 and ECE 230, ECE 141 and ECE 241, and ECE 172 and ECE 221 are undergraduate and graduate courses taught in conjunction, and only one can be taken for this program.)

Power and Energy Concentration

Electrical and Computer Engineering

ECE 104	Bioelectronics	5
ECE 121	Microcontroller System Design	7
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 135	Electromagnetic Fields and Waves	5
ECE 135L	Electromagnetic Fields and Waves Laboratory	2
ECE 136	Engineering Electromagnetics	5
ECE 141	Feedback Control Systems	5
ECE 149	Introduction to Cyber-physical Systems	5
ECE 152	Introduction to Wireless Communications	5
ECE 153	Digital Signal Processing	5
ECE 157	RF Hardware Design	5
ECE 157L	RF Hardware Design Laboratory	2
ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 167	Sensing and Sensor Technologies	7
ECE 170	Advanced Power Electronics	5
ECE 172	Advanced Analog Circuits	5
ECE 173	High-Speed Digital Design	7
ECE 174	Introduction to EDA Tools for PCB Design	3
ECE 175	Energy Generation and Control	5
ECE 175L	Energy Generation and Control Laboratory	2
ECE 176	Energy Conservation and Control	5
ECE 176L	Energy Conversion and Control Laboratory	2
ECE 177	Power Electronics	5
ECE 177L	Power Electronics Laboratory	2
ECE 178	Device Electronics	5
ECE 180J	Advanced Renewable Energy Sources, Storage, and Smart Grids	5
ECE 181J	Renewable Energy Sources in Practice	7
ECE 183	Special Topics in Electrical Engineering	5
ECE 185	Introduction to the US Electricity Industry	5
ECE 193	Field Study	5
ECE 198	Individual Study or Research	5
ECE 215	Models of Robotic Manipulation	5
ECE 242	Applied Feedback Control	5
ECE 243	System Identification	5
ECE 275	Energy Market, Policy, and Modeling	5

Each of ECE 183, ECE 193 and ECE 198 courses can be taken only once as an elective course.

(ECE 130 and ECE 230, ECE 141 and ECE 241, and ECE 172 and ECE 221 are undergraduate and graduate courses taught in conjunction, and only one can be taken for this program.)

Robotics and Automation Concentration

Electrical and Computer Engineering

ECE 115	Introduction to Solid Mechanics	5
ECE 145	Estimation and Introduction to Control of Stochastic Processes	5
ECE 149	Introduction to Cyber-physical Systems	5
ECE 151	Communications Systems	5
ECE 152	Introduction to Wireless Communications	5
ECE 153	Digital Signal Processing	5
ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 176	Energy Conservation and Control	5
ECE 176L	Energy Conversion and Control Laboratory	2
ECE 183	Special Topics in Electrical Engineering	5
ECE 193	Field Study	5
ECE 198	Individual Study or Research	5
ECE 215	Models of Robotic Manipulation	5
ECE 242	Applied Feedback Control	5
ECE 243	System Identification	5
ECE 245	Estimation and Introduction to Control of Stochastic Processes	5

Each of ECE 183, ECE 193 and ECE 198 courses can be taken only once as an elective course.

Digital Hardware Concentration

Electrical and Computer Engineering

ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 135	Electromagnetic Fields and Waves	5
ECE 135L	Electromagnetic Fields and Waves Laboratory	2
ECE 136	Engineering Electromagnetics	5
ECE 141	Feedback Control Systems	5
ECE 145	Estimation and Introduction to Control of Stochastic Processes	5

ECE 149	Introduction to Cyber-physical Systems	5
ECE 151	Communications Systems	5
ECE 152	Introduction to Wireless Communications	5
ECE 153	Digital Signal Processing	5
ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 167	Sensing and Sensor Technologies	7
ECE 172	Advanced Analog Circuits	5
ECE 176	Energy Conservation and Control	5
ECE 176L	Energy Conversion and Control Laboratory	2
ECE 183	Special Topics in Electrical Engineering	5
ECE 193	Field Study	5
ECE 198	Individual Study or Research	5
ECE 215	Models of Robotic Manipulation	5
ECE 242	Applied Feedback Control	5
ECE 243	System Identification	5
ECE 245	Estimation and Introduction to Control of Stochastic Processes	5

Each of ECE 183, ECE 193 and ECE 198 courses can be taken only once as an elective course.

(ECE 130 and ECE 230, ECE 141 and ECE 241, and ECE 172 and ECE 221 are undergraduate and graduate courses taught in conjunction, and only one can be taken for this program.)

ASSISTIVE TECHNOLOGY MINOR

The assistive technology minor is designed for students interested in helping people with movement disabilities. The emphasis is on designing exoskeletons and robots built on two core cross-disciplinary courses: Mechatronics (ECE 118) and Functional Anatomy (METX 135 & METX 135L).

The minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed under Major and Minor Requirements. Because of the large number of courses required, it is most suitable for students in majors already requiring a substantial number of these courses. The minor cannot be combined with the Assistive Technology: Motor concentration of the former bioengineering major or the Robotics Engineering B.S. major. ECE 121, ECE 141 and ECE 167 cannot also be used to satisfy electrical engineering B.S. electives.

Course Requirements

Requirements for the minor in assistive technology are the following. Though courses for the minor may be taken for a letter grade or Pass/No Pass (P/NP), many of the courses may be required for a student's major which could require a letter grade (including all Baskin Engineering majors). Students should be aware of the letter grade policy for their chosen major before choosing Pass/No Pass.

Lower-Division Courses

Math placement is required for one or more of the foundational courses for this minor. For more information, please review the Math Placement website.

One of the following

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus one of the following

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

Plus one of the following

CHEM 3A	General Chemistry	5
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5

Note: This requirement may also be satisfied with prior completion of CHEM 1A or equivalent.

Previous to July 1, 2023, the General Chemistry series, offered by the Department of Chemistry and Biochemistry, was listed in the General Catalog as CHEM 1A, CHEM 1B and CHEM 1C, with associated laboratories CHEM 1M and CHEM 1N. As of academic year 2023-24, this series was replaced with two distinct series: CHEM 3A, CHEM 3B and CHEM 3C, with labs CHEM 3BL and CHEM 3CL; or CHEM 4A and CHEM 4B with labs CHEM 4AL and CHEM 4BL. Descriptions of these two series are given here.

All of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
PHYS 5A	Introduction to Physics I	5
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
BIOL 20A	Cell and Molecular Biology	5
BIOE 20B	Development and Physiology	5
CSE 12	Computer Systems and Assembly Language and Lab	7
ECE 13	Computer Systems and C Programming	7

Upper-Division Courses

All of the following courses:

ECE 101	Introduction to Electronic Circuits	5

ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 103	Signals and Systems	5
CSE 100	Logic Design	5
CSE 100L	Logic Design Laboratory	2
ECE 118	Introduction to Mechatronics	10
METX 135	Functional Anatomy	5
METX 135L	Functional Anatomy Lab	3
ECE 167	Sensing and Sensor Technologies	7

Plus one of the following courses:

ECE 121	Microcontroller System Design	7
ECE 141	Feedback Control Systems	5

BIOELECTRONICS AND BIOPHOTONICS MINOR

The bioelectronics and biophotonics minor is designed for students in chemical, biological, environmental sciences, and biomolecular engineering to learn how to interface biological systems with electronics including sensors, actuators, and wireless communications. Introductory chemistry and physiology is desired, but not required.

Course Requirements

Essential courses for the minor in bioelectronics and biophotonics deal with the analog electronics to interface biological systems to sensors and with the signals they produce, both analog and digital, for interfacing to computer systems. The minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed under Major and Minor Requirements. Though courses for the minor may be taken for a letter grade or Pass/No Pass (P/NP), many of the courses may be required for a student's major which could require a letter grade (including all Baskin Engineering majors). Students should be aware of the letter grade policy for their chosen major before choosing Pass/No Pass.

Requirements for the minor in bioelectronics and biophotonics consist of the following:

Lower-Division Courses

Math placement is required for one or more of the foundational courses for this minor. For more information please review the Math placement website.

All of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
PHYS 5A	Introduction to Physics I	5
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
CSE 12	Computer Systems and Assembly Language and Lab	7
ECE 13	Computer Systems and C Programming	7

Plus one of the following:

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5

Plus one of the following:

AM 20	Ordinary Differential Equations for Engineers	5
MATH 24	Ordinary Differential Equations	5

Upper-Division Courses

All of the following courses:

CSE 100	Logic Design	5
CSE 100L	Logic Design Laboratory	2
ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 103	Signals and Systems	5
ECE 121	Microcontroller System Design	7
ECE 167	Sensing and Sensor Technologies	7

Plus one of the following options

	Either this course	
ECE 104	Bioelectronics	5
	or these courses	
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
	or this course	
BME 140	Bioinstrumentation	5

ECE 130 ECE 130L requires PHYS 5B

ELECTRICAL AND COMPUTER ENGINEERING CONTIGUOUS BACHELORS MASTERS PATHWAY

The Department of Electrical and Computer Engineering (ECE) offers a combined bachelor's (B.S.) and master's of science (M.S.) degree path. Undergraduate students can apply to this program to earn a B.S. degree in their own major together with an M.S. degree in electrical and computer engineering. Depending on the student's progress, students can complete the combined path in five years.

The five-year bachelor's/master's pathway offers a competitive edge to students who are completing their undergraduate degree at UC Santa Cruz by enabling those with advanced preparation to move directly from the undergraduate to the graduate program and complete an M.S.

degree with as few as seven courses beyond the bachelor's degree.

Particularly motivated students can complete both the bachelor's and the master's degrees in 15 quarters (five academic years). However, advance planning is essential. Interested students should contact the Baskin Engineering Graduate Affairs Office and their staff adviser early in their college career—no later than the end of their junior year. Students in this pathway retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate coursework in advance of graduate standing.

Admission process to the contiguous pathway

The undergraduate degree requirements are not changed by the bachelor's/master's pathway; however, the pathway capitalizes on graduate-level courses that may apply toward both the undergraduate and graduate degree requirements (see Course Requirements below). Students should consult Undergraduate Advising concerning their respective undergraduate degree requirements.

Students can apply to the B.S./M.S. contiguous pathway in electrical and computer engineering at any time starting in the first quarter of junior standing by completing the ECE Contiguous Pathway Eligibility Survey. The Graduate Affairs Office will verify and track students' eligibility for the pathway until completion of the bachelor's degree. Admission to the contiguous pathway program in ECE is open to all qualified UC Santa Cruz students. All students who apply to the pathway will be admitted into it, provided they satisfy the requirements (see below). However, approval of an undergraduate student into a five-year bachelor's/master's path does not automatically guarantee admission into the one-year master's program. Students apply for admission into the M.S. program during their senior year using the same procedure and timeline as all other applicants to the program. Students are then considered for the M.S. program along with regular applicants. Students who do not satisfy the requirements for the contiguous pathway will be encouraged to apply to the regular M.S. program.

If admitted to the ECE M.S. program, pathway students are able to count up to 15 credits of qualified graduate-level courses previously completed as an undergraduate or through UCSC's open campus enrollment program toward their ECE M.S. degree requirements. To ensure courses are qualified to count toward the M.S. degree, students should review the ECE M.S. degree requirements and communicate with their graduate student advisor. Nevertheless, campus policy requires a minimum of 35 credits be completed during the graduate career, of which a maximum of 15 credits can be undergraduate upper-division coursework.

Students who do not meet the bachelor's/master's pathway eligibility requirements or who wish to take time off between the bachelor's and master's degree programs are encouraged to apply for admission to the standard ECE M.S. program through the regular graduate admissions process.

Requirements

The minimum requirements for the B.S./M.S. contiguous pathway are as follows:

- Applicants must have a 3.0 GPA when they apply to the B.S./M.S. contiguous pathway program, and must maintain a 3.0 GPA or higher until the completion of their undergraduate requirements.
- Applicants who are a current UC Santa Cruz undergraduate declared in a major within Baskin Engineering do not need to complete any prerequisite coursework. Applicants who hold a declared major outside of Baskin Engineering must select a designated core area and complete the required coursework prerequisites prior to their submission of the formal M.S. program application:

Electronic Circuits and Energy Systems

At least two classes from one of the following two lists with grade B+ or higher:

Electronic Circuits

ECE 157	RF Hardware Design	5
ECE 171	Analog Electronics	5
ECE 172	Advanced Analog Circuits	5
ECE 173	High-Speed Digital Design	7
ECE 177	Power Electronics	5

Energy Systems

ECE 171	Analog Electronics	5
ECE 175	Energy Generation and Control	5
ECE 176	Energy Conservation and Control	5
ECE 177	Power Electronics	5

Photonics and Electronic Devices

At least two classes from the following list with grade B+ or higher:

ECE 102	Properties of Materials	5
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 135	Electromagnetic Fields and Waves	5

Robotics, Controls, and Cyber-Physical Systems

At least two classes from the following lists with grade B+ or higher:

One required course from the following list:

ECE 141	Feedback Control Systems	5
ECE 241	Introduction to Feedback Control Systems	5

And at least one course from the following list:

ECE 118	Introduction to Mechatronics	10

ECE 121	Microcontroller System Design	7
ECE 163	Introduction to Small-Scale UAV Theory and Practice	7
ECE 167	Sensing and Sensor Technologies	7

Signals, Image Processing, and Communications

Both of the following classes with grade B+ or higher:

ECE 151	Communications Systems	5
ECE 153	Digital Signal Processing	5

Students should refer to the ECE M.S. program statement for more specific information on degree requirements, concentrations, academic progress, and applying to graduate.

ELECTRICAL AND COMPUTER ENGINEERING M.S.

Introduction

The Department of Electrical and Computer Engineering (ECE) at the University of California, Santa Cruz (UCSC) offers master of science (M.S.) and doctor of philosophy (Ph.D.) degree programs and conducts research in the following core areas:

- Electronic Circuits and Energy Systems
- Photonic and Electronic Devices
- Robotics, Control, and Cyber-Physical Systems
- Signals, Image Processing, and Communication Systems

Students indicate their core area of study on their admission application. These core areas determine the broad focus of a student's study (providing depth) while still providing the flexibility needed within the program to allow for breadth and the desire to meet each individual student's goals for study.

For more information about the core areas and associated graduate courses, the department, and its faculty, please visit the Electrical and Computer Engineering Department website.

Students begin the program with the completion of courses in a core area of interest and then proceed to do research in their area of specialization. M.S. students must complete a master's thesis (Plan I: Thesis), pass the comprehensive examination (Plan II A: Comprehensive Examination), or complete a project (Plan II B: Project). The expected time to degree with Plan I: Thesis is two academic years for a full-time student. This option is appropriate for students interested in advanced studies and in carrying out independent research, as well as for those students contemplating pursuit of a Ph.D. degree.

The expected time to degree with Plan II A: Comprehensive Examination and Plan II B: Project is two academic years for a full-time student. Students pursuing these two tracks can complete the degree in one academic year with careful planning. These options are ideal for students pursuing advanced studies to enhance their preparation for careers in a variety of technical fields including areas such as electronic circuits and energy systems, photonic and electronic devices, robotics, control, and cyber-physical systems, as well as signals, image processing, and communication systems.

The default track for all admitted students is the comprehensive examination track. Upon enrollment, students are not assigned an academic faculty advisor and should work with the graduate program advisor for guidance on course selection and program options. Students who plan to follow Plan I: Thesis or Plan II B: Project nominate a faculty advisor no later than the end of their first academic year in the program. If a student does not intend to follow Plan II A: Comprehensive Exam, they must notify the graduate advisor no later than the end of their first year (third quarter) in the program. Students will not be permitted to change degree plan tracks after the completion of their first year.

Requirements

Course Requirements

Thesis Track

Each student is required to take 45 credits, which must consist of:

- At least 15 credits from one of the four core areas defined above.
- At least 20 credits of the total 45 credits must be satisfied through ECE graduate courses.*
- At most 25 credits can be from courses taught by departments other than ECE. The student must obtain the graduate director's authorization to take a course from outside of Baskin Engineering. Approved core area courses do not require prior authorization.
- At most 10 credits of independent study (ECE 297, ECE 299) are counted toward the ECE course requirements.
- At most 5 credits of ECE 290 and ECE 291 can be counted toward the ECE course requirements. A combined total of 5 credits from ECE 290 and/or ECE 291 are mandatory.
- Undergraduate courses do not count toward the 45-credit requirement.

Total credits required for the M.S. degree is 45.

*The 20 credits of ECE graduate courses can include courses from the core areas only if they are ECE graduate courses. Graduate courses offered by other departments and approved for the core areas are not counted as ECE graduate courses.

Note that each graduate course satisfying the above requirements typically covers 5 credits. Courses in the ECE 280 series do not count toward the 45-credit requirement.

Comprehensive Examination Track

Each student is required to take 45 credits, which must consist of:

- At least 15 credits from one of the four core areas defined above.
- At least 25 credits of the total 45 credits must be satisfied through ECE graduate courses.*
- At most 20 credits can be from courses taught by departments other than ECE. The student must obtain the graduate director's authorization to take a course from outside of Baskin Engineering. Approved core area courses do not require prior authorization.
- At most 5 credits of ECE 290 and ECE 291 can be counted toward the ECE course requirements. A combined total of 5 credits from ECE 290 and/or ECE 291 are mandatory.
- Undergraduate courses do not count toward the 45-credit requirement.

Total credits required for the M.S. degree is 45.

*The 25 credits of ECE graduate courses can include courses from the core areas only if they are ECE graduate courses. Graduate courses offered by other departments and approved for the core areas are not counted as ECE graduate courses.

Note that each graduate course satisfying the above requirements typically covers 5 credits. Independent study credits do not count toward the degree requirements for students in the comprehensive examination track. Courses in the ECE 280 series do not count toward the 45-credit requirement.

Each student in the comprehensive examination track must pass three comprehensive exam subjects from ECE courses in their chosen core area. Students may not take the comprehensive exam in the same subject more than twice, and may attempt a maximum of six subjects.

Project Track

Each student is required to take 45 credits, which must consist of:

- At least 15 credits must be satisfied with courses from one of the four core areas defined above.
- At least 25 credits of the total 45 credits must be satisfied through ECE graduate courses.*
- At most 5 credits of independent study (ECE 297, ECE 299) are counted toward the ECE course requirements.
- At most 20 credits can be from courses taught by departments other than ECE. The student must obtain the graduate director's authorization to take a course from outside of Baskin Engineering. Approved core area courses do not require prior authorization.
- At most 5 credits of ECE 290 and ECE 291 can be counted toward the ECE course requirements. A combined total of 5 credits from ECE 290 and/or ECE 291 are mandatory.
- Undergraduate courses do not count toward the 45-credit requirement.

Total credits required for the M.S. degree is 45.

*The 25 credits of ECE graduate courses can include courses from the core areas only if they are ECE graduate courses. Graduate courses offered by other departments and approved for the core areas are not counted as ECE graduate courses.

Note that each graduate course satisfying the above requirements typically covers 5 credits. Courses in the ECE 280 series do not count toward the 45-credit requirement.

Other Requirements

Thesis Track

A master's research thesis, viewed as acceptable by a thesis committee approved by the Graduate Division, is required of each student in this track. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis advisor. In consultation with the advisor, the student forms a Master's Thesis Reading Committee with at least two additional faculty members, each of whom is provided a copy of the proposal. Exceptions to the committee structure may be granted by the graduate program director and/or by the graduate dean. Changes in the membership of the committee, once appointed, may only be made with the approval of the graduate dean. The majority of the membership of a thesis reading committee shall be members of the Santa Cruz Division of the Academic Senate. Members of a Master's Thesis Reading Committee must meet the following criteria:

1. The first member will serve as the committee chair and must be a ladder rank ECE faculty member.
2. The second member must be a ladder rank Baskin Engineering (BE) faculty (may be ECE as well).
3. The third member must be a UC Santa Cruz Baskin Engineering faculty member or a recognized expert in the student's research area, as judged by the graduate program director and the Graduate Division dean. In the event that the outside member is not from UCSC, the outside member's CV must be submitted along with the thesis committee nomination form.

One additional member may be added to the committee. Students should consult their advisors about the membership of their committee.

By the end of the second week of the quarter in which a student plans to graduate, the student must submit a formal nomination of their Master's Thesis Reading Committee to the ECE Department for approval. The required form for nominating a Master's Thesis Reading Committee is located on the Graduate Division's website. A final draft of the thesis must be provided to the members of the Master's Thesis Reading Committee for review at least 30 days before the last day of the quarter in which the student plans to graduate. Upon completion of the thesis work, the student presents an expository talk on the thesis research, and the final thesis must be accepted by the Master's Thesis Reading Committee before the award of the master of science degree. Once the final thesis has been approved, the student must submit a PDF copy of the signed title page and a PDF copy of the thesis to their graduate advisor by the deadline listed in the Academic Calendar. The student must also submit the original signed title page of the thesis to the Graduate Division by the deadline indicated in the Academic Calendar. Finally, an approved PDF copy of the thesis should be submitted through the ProQuest dissertation site. Formatting guidelines for the master's thesis can be found on the Graduate Division's website.

Comprehensive Examination Track

The comprehensive exams are only available for ECE graduate courses approved in the four core areas. Graduate courses approved in the four core areas outside ECE (such as AM or CSE) are not available for the comprehensive exams.

At the end of each quarter students will have the opportunity to take the section of the comprehensive examination relevant to the courses offered that quarter that are approved for the core areas as outlined above. The comprehensive examination will focus on fundamental material related to the subject matter of the course The results of these examination sections, when integrated, will comprehensively test the student's mastery of the curriculum. In order to pass the overall comprehensive examination, a student is required to pass at least three sections of the comprehensive examination in the proposed core area of study. Students may attempt more than one section per quarter.

Master's students must take the corresponding course in order to take the comprehensive exam in a given subject. A maximum of six exams may be attempted, and a student must pass a minimum of three subjects within their core area in order to fulfill the comprehensive exam capstone requirement.

Eligibility for the comprehensive exam is not contingent upon a student's performance in the associated course. All ECE M.S. students enrolled in an ECE core area course are eligible to complete the comprehensive exam in that subject provided they meet the registration deadline for the relevant quarter.

Students must register for the exam subjects they wish to take each quarter when the call for exam registrations is sent. Students who do not register may not be permitted to take the exam.

Students are notified of their exam results (pass/fail) by email prior to the start of the following quarter, and the results are also recorded in the student's file by the graduate advisor. If students have questions about the exam or how it was graded, they should contact the instructor who wrote the exam to request a meeting to go over the exam. Once a student has passed three exam subjects within their core area, they have fulfilled the comprehensive examination requirement and are eligible for graduation as soon as they have completed all of the other requirements for the degree.

Students in the M.S. comprehensive examination track are not eligible for Filing Fee status.

Note that Plan II A: Comprehensive Examination, is the default option for all M.S. students. Students can select Plan I: Thesis, or Plan II B: Project, only if they can find a faculty sponsor to supervise the thesis or project. If a student does not plan to follow Plan II A: Comprehensive Exam, they must notify the graduate advisor no later than the end of their first year (third quarter) in the program. Students will not be permitted to change degree plan tracks after the completion of their first year.

Project Track

Completion of a project report is required for the master's degree in this track. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the project advisor. In consultation with the advisor, the student forms a project reading committee with at least one additional faculty member, each of whom is provided a copy of the proposal.

Members of a Master's Project Reading Committee must meet the following criteria:

1. The first member must be a ladder rank ECE faculty member.
2. The second member must be a ladder rank Baskin Engineering (BE) faculty member (may be ECE as well).

The Master's Project Reading Committee is subject to the approval of the graduate director. Students must submit the names of the proposed members to the ECE Department no later than the second week of the quarter in which they intend to graduate.

Upon completion of the project, the student submits the report to the project reading committee, and the final project must be accepted by the reading committee before the award of the master of science degree. The student must also submit a PDF copy of the signed title page and a PDF copy of the approved

project to their graduate advisor by the deadline listed in the Academic Calendar.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements may be recommended for academic notice. Students who violate the terms of their academic notice are subject to dismissal from the program. Students without adequate academic preparation may be required to take additional courses. Full-time students are normally expected to complete the degree course requirements at the rate of at least two 5-credit graduate-level courses each quarter. Full-time students are expected to complete all course requirements within two years for the M.S.

Students receiving two or more grades of U (unsatisfactory) or below B- in Baskin Engineering courses are not making adequate progress and will be placed on academic notice for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half-quarter of enrollment.

If an electrical and computer engineering graduate student fails a Baskin Engineering course while on probation, the Electrical and Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a Baskin Engineering course, they will return immediately to academic notice.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their advisor and the graduate director immediately. Students may appeal their dismissal to the graduate committee.

Applying for Graduation

All candidates for a degree must submit an Application for the Master's Degree to the Graduate Advising Office by the date stated in the Academic and Administrative Calendar for the quarter you wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term.

A student is required to be registered or on Filing Fee Status, whichever is applicable, during the quarter in which the degree is conferred. Students should consult the graduate program advisor to determine which option fits their situation. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

Optional Catchall

ELECTRICAL AND COMPUTER ENGINEERING PH.D.

Introduction

The Department of Electrical and Computer Engineering (ECE) at the University of California, Santa Cruz (UCSC) offers master of science (M.S.) and doctor of philosophy (Ph.D.) degree programs and conducts research in the following core areas:

- Electronic Circuits and Energy Systems
- Photonic and Electronic Devices
- Robotics, Control, and Cyber-Physical Systems
- Signals, Image Processing, and Communication Systems

For more information about the core areas and associated graduate courses, the department, and its faculty, please visit the Electrical and Computer Engineering website.

Students begin the program with the completion of courses in a core area of interest and then proceed to do research in their area of specialization. Ph.D. students are required to complete the preliminary exam requirement within their first four quarters of study. After completing the course requirements, students must pass an oral qualifying exam and write a dissertation. Part-time study is possible for students working in industry while attending school.

Advancement to Candidacy

Each student is required to take 55 credits which must consist of:

- At least 20 credits in one of the four core areas defined above.
- At least 30 of the total 55 credits must be satisfied through ECE graduate courses.
- At most 25 credits can be from courses taught by departments other than ECE. The student must obtain their advisor’s authorization to take a course from outside of Baskin Engineering. Approved core area courses do not require prior authorization.
- At most 10 credits of independent study (ECE 297, ECE 299) will be counted toward ECE course requirements.
- A combined total of 5 credits from ECE 290 and/or ECE 291 are mandatory, but no more than 5 credits from these two courses can be counted toward degree requirements. Students are required to take ECE 291 in order to become eligible to be a teaching assistant within the ECE department.
- Undergraduate courses do not count toward the 55 credit requirement.

Total credits required for the Ph.D. degree is 55.

The 30 credits of ECE graduate courses can include courses from the core areas only if they are ECE graduate courses. Graduate courses offered by other departments and approved for the core areas are not counted as ECE graduate courses.

The ECE Department sponsors a weekly graduate seminar course, ECE 290, in fall, winter, and spring quarters. All graduate students are required to register and attend for at least one quarter during their graduate student career, and are encouraged to enroll every quarter. The graduate seminar consists of talks by invited speakers from industry and academia.

Some faculty also sponsor a weekly lab seminar or lab meeting, ECE 280. Faculty advisers can require their students to enroll for these seminars and they do count toward maintaining full-time enrollment, however they do not count toward the coursework requirements for the degree.

Course Requirements

Foreign Language Requirements

Teaching Requirements

Pre-Qualifying Requirements

Preliminary Examination

By the conclusion of their fourth quarter in the program, students admitted to the Ph.D. program must satisfy the requirements of the preliminary examination to continue in the Ph.D. program. Students who do not meet the four-quarter deadline will be placed on academic notice on the condition that they complete all required preliminary examinations by the end of the following quarter.

This examination is as follows:

- Pass three comprehensive exams from subjects in their chosen core area
- Pass one additional section of the comprehensive examination from a different core area.

The preliminary exams are only available for ECE graduate courses approved in the four core areas. Graduate courses approved in the four core areas outside ECE (such as AM or CSE) are not available for the preliminary exams.

At the end of each quarter, students will have the opportunity to take the section(s) of the preliminary examination relevant to the courses offered that quarter that are approved for the core areas. The preliminary examination will focus on fundamental material related to the subject matter of the course. The results of these examination sections, when integrated, will comprehensively test the student's mastery of the curriculum. In order to pass the overall preliminary examination, a student is required to pass at least three preliminary exam subjects in their core area, plus one exam that is not approved for their core area.

Students may attempt more than one subject per quarter. A maximum of eight exams may be attempted, and a student must pass a minimum of four subjects—three within their selected core area, and one from a different core area. Students who have obtained approved course substitutions for one or more courses within their core area may attempt the preliminary exams for those substituted courses without having taken the course at UCSC. In such cases, students are strongly encouraged to contact the instructor of the UCSC course at the beginning of the quarter to request course materials and/or audit the class.

Eligibility for the preliminary exam is not contingent upon a student's grade in the associated course. Any Ph.D. student who is either enrolled in the relevant core area course or who has demonstrated significant background knowledge of the course material to the instructor of record (for example, through an approved credit transfer) is eligible to complete the preliminary exam in that subject provided they meet the registration deadline for the relevant quarter.

Students must register for the exam subjects they wish to take each quarter when the call for exam registrations is sent. Students who do not register may not be permitted to take the exam.

Passing three preliminary exam subjects within one core area satisfies the comprehensive exam capstone requirement for the ECE Master's degree. Ph.D. students who wish to apply for a non-terminal Master's degree once they have completed this requirement are welcome to do so, provided that they have also met the coursework requirements for the M.S. degree.

Qualifying Examination

This oral examination is a defense of the student's thesis prospectus and a test of the student's knowledge in advanced technical areas of relevance to the dissertation topic. This oral examination consists of a seminar-style talk before the examining committee, where the student describes the thesis prospectus, followed by questions from the committee on the substance of the talk and the areas of presumed expertise of the student. The examination, taken typically in the third year of Ph.D. study, is administered by a Ph.D. qualifying examination committee, consisting of at least four examiners. The composition of the committee must be approved by the graduate director and the dean of graduate studies whereupon the student and the committee are notified.

If the student does not pass the qualifying examination, the student may be asked to complete additional coursework, or other research-related work, before retaking the examination. The student may be allowed to retake the qualifying examination once, and the composition of the examining committee will remain the same for the second try. Students

who fail the qualifying examination twice may be dismissed from the Ph.D. program.

The Qualifying Exam (QE) Committee is composed of at least four members who must meet the following eligibility criteria:

1. QE Chair: This person must be tenured* ECE faculty and cannot be the student's research advisor(s).
2. Member 1: Ladder-rank ECE faculty member (usually the student's research advisor).
3. Member 2: Ladder-rank SOE faculty member (may be the student's research advisor) or a recognized expert in the student's research area from outside UCSC, as judged by the graduate director and dean of Graduate Studies.
4. Outside Member: This person must be tenured UCSC faculty from outside ECE or a recognized expert in the student's research area from outside UCSC, as judged by the graduate director and dean of Graduate Studies. The outside member may not be the student's research advisor. In the event that the outside member is not from UCSC, they must have credentials equivalent to a tenured faculty member as judged by the graduate director and the dean of Graduate Studies. The outside member's CV must be submitted along with the committee nomination form.

*A ladder rank faculty (Academic Senate member) holds the title of assistant professor, associate professor, professor, assistant teaching professor, associate teaching professor, or teaching professor. Associate professors, professors, associate teaching professors, and teaching professors have tenure. Assistant professors are not tenured and cannot serve as QE Chair or the Outside Member. However, they are ladder-rank and can be Member 1 or 2.

Additional members may be added to the committee. Exceptions to the committee requirements above may be granted by the graduate director when appropriate, as long as the committee meets the Graduate Division requirements. In order to formally nominate their proposed QE committee, the student should submit a QE Nomination Form to the ECE department's graduate advisor at least 30 days in advance of the planned QE date. This will be signed by the faculty graduate representative and then sent to the Graduate Division for final approval. Students are required to submit a draft of their paper/presentation at least 30 days prior to the proposed QE date in order to incorporate any feedback before the QE exam takes place.

At least two weeks before the QE, the student should submit the title of their prospectus, an abstract, and the location information for their exam using the Advancement/Defense Notification Request Form so that the Advising Office can send out an announcement to the Baskin Engineering community.

In order to pass the qualifying examination, the committee must come to unanimous agreement that the student has passed the exam and provide a written report on the qualifying exam. The final step in the advancement process for the student is to identify and formally nominate a dissertation reading committee. Ph.D. students who have not advanced to candidacy by the end of the third year (nine quarters) are recommended for academic notice, and are subject to dismissal from the program if they do not advance by the end of their fourth year (12 quarters).

Post-Qualifying Requirements

Advancement to candidacy requires that the student:

- pass the preliminary examinations;
- complete all course requirements prior to taking the qualifying examination;
- clear all Incompletes from the student's record;
- pass the qualifying examination; and
- have an appointed Ph.D. dissertation reading committee.

Transfer Credit

ECE Ph.D. students may petition for a transfer of up to 20 credits for commensurate coursework completed at a previous institution with regional accreditation. The approval for credit transfer is contingent upon the assessment of the course substitution application by the instructor of the corresponding UCSC course and the ECE graduate director.

Non-Terminal Master's Degree

Students not already holding an M.S.E.E. degree, who are studying for the Ph.D. degree, may apply to be granted a M.S. degree when they have fulfilled all the M.S. degree requirements (including submission of an M.S. thesis or project, or passing the comprehensive examination).

Optional Catchall

Dissertation

Dissertation

Each student writes a Ph.D. dissertation which must be submitted to the reading committee at least one month prior to the dissertation defense. The members of the Dissertation Reading Committee must include at least three members as follows:

1. Committee Chair - An ECE faculty member (may be the student's research adviser).
2. Member 1 - A tenured ECE faculty member who is not the student's research adviser.

3. Member 2 - A ladder rank UCSC faculty (may be the student's research adviser) or a recognized expert in the student's research area with credentials equivalent to a ladder rank UCSC faculty member as judged by the graduate director and the dean of Graduate Studies.

NOTE: A ladder rank faculty (Academic Senate member) holds the title of assistant professor, associate professor, or professor. associate professors and professors have tenure.

If a student has two co-advisers, they should both be listed as co-chairs. Students should consult their advisers about the membership of their committees. Additional members may be added, however, the final committee must be approved by the graduate director. Exceptions to the committee requirements above may be granted by the graduate director when appropriate, as long as the committee meets the Graduate Division requirements. The Dissertation Reading Committee must be appointed in order to advance to candidacy.

The Ph.D. dissertation must show the results of in-depth research, be an original contribution of significant knowledge to the student's field of study, and include material worthy of publication. The student is strongly advised to submit research work for publication in advance of completing the dissertation so that the latter requirement is clearly satisfied. The Ph.D. dissertation results are presented in both oral and written forms, the oral form being a dissertation defense (see below) and the written form being the Ph.D. dissertation. The student must submit their written Ph.D. dissertation to the dissertation reading committee at least one month before the defense.

Dissertation Defense

At least two weeks before the defense, the student should submit the title of their dissertation, an abstract, and the location information for their exam using the Advancement/Defense Notification Request Form so that the Advising Office can send out an announcement to the BE community. The candidate presents their research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee (only), who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Academic Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements may be recommended for academic notice. Students who violate the terms of their academic notice are subject to dismissal from the program. Students without adequate academic preparation may be required to take additional courses. Full-time students are normally expected to complete the Ph.D. coursework requirements at the rate of at least two courses each quarter. Full time ECE Ph.D. students must complete all coursework requirements within three years (nine quarters).

Students receiving two or more unsatisfactory grades (U or letter grade below B-) in Baskin Engineering courses are not making adequate progress and will be placed on academic notice for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half-quarter of enrollment.

If an electrical and computer engineering graduate student fails a Baskin Engineering course while on probation, the Electrical and Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a Baskin Engineering course, they will return immediately to academic notice.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their advisor and the graduate director immediately. Students may appeal their dismissal to the graduate committee.

Normative Time

Normative time for completion of the dissertation is three years (nine quarters) from the date of advancement to candidacy, and six years (18 quarters) in total. Students who fail to meet expected milestones must request a program extension from the Graduate Division. A written request, signed by the student and their faculty adviser, detailing the timeline to degree completion should be approved by the graduate director prior to submission to the dean of graduate studies. Multiple extensions may be considered.

Students who fail to complete their dissertation within three years of advancement to candidacy, or who fail to complete the Ph.D. degree within six years, may be recommended for academic notice. In order to maintain good academic standing, students must advance to candidacy within the first three years (nine quarters), and complete the degree within the subsequent three years (nine quarters).

Students who are on part-time status accrue time-to-degree at one-half the rate of full-time students for those quarters during which they are on approved part-time study. Doctoral students who have advanced to candidacy accrue time-to-degree at the regular rate, regardless of part-time or full-time status. Taking a leave of absence does not "stop the clock" on normative time. Time-to-degree continues to accrue at the normal rate while students are on approved leave.

If the Ph.D. degree is not awarded within seven years from the date of advancement to candidacy, the student's candidacy will lapse and the student will be required to pass a new Qualifying Exam prior to submitting the dissertation, or to undergo another formal review as directed by the student's department, and the result of this examination or review will be transmitted in writing to the Graduate Council (Academic Senate Regulation 18.6).

Applying for Graduation

All candidates for a degree must submit an Application for Doctor of Philosophy Degree to the Graduate Advising Office by the date stated in the Academic and Administrative

Calendar for the quarter you wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term.

A student is required to be registered or on Filing Fee Status, whichever is applicable, during the quarter in which the degree is conferred. Students should consult the department adviser to determine which option fits their situation. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

ROBOTICS AND CONTROL DESIGNATED EMPHASIS

Introduction

The graduate designated emphasis (DE) leading to the degree notation "with an emphasis in Robotics and Control" is a collaboration of faculty from several Baskin School of Engineering programs and is administered by the Department of Electrical and Computer Engineering. Students wishing to complete a master's thesis or doctoral dissertation in this area must satisfy the degree requirements of a primary program as well as of the DE. The DE is most suitable for students pursuing degrees in Applied Mathematics, Electrical and Computer Engineering, and Statistics, but students from any area may work in this interdisciplinary field so long as they meet all requirements, including progress, within the primary degree program. A current list of the robotics and control faculty and electives is available at the Electrical and Computer Engineering website.

Requirements

Committee Composition and Departmental Approvals

For master's students pursuing a project or thesis, at least one member of the reading committee must be listed among the robotics and control faculty. For Ph.D. students, a robotics and control faculty member must serve on both the Qualifying Exam Committee and the Dissertation Committee (does not need to be the same faculty member for both).

Course Requirements

The student must complete four five-credit graduate courses and several two-credit seminar courses. All students must complete either ECE 240 or ECE 242, and three 5-credit robotics and control graduate electives.

Master's students must complete two offerings of ECE 280C, Seminar in Control (2 credits).

Doctoral students must complete four offerings of ECE 280C, Seminar in Control (2 credits).

Writing, Research and/or Teaching Requirements

The student's dissertation or thesis must include a significant section (chapter) related to robotics and control, with content suitable for a conference or journal article. Students pursuing the M.S. project track must complete a project report related to robotics and control, with content suitable for a conference or journal article.

Academic Progress

[Optional Catchall]

Statistics

Baskin Engineering
(831) 459-2158
engineering.ucsc.edu

PROGRAMS OFFERED

Statistics Minor (p. 637)

Statistical Science Contiguous Bachelor's/Master's Pathway (p. 639)

Statistical Science M.S. (p. 641)

Statistical Science Ph.D. (p. 643)

Statistics Designated Emphasis (D.E.) (p. 646)

Data Science Designated Emphasis (D.E.) (p. 647)

Statistics is a discipline devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Statistics Department at UC Santa Cruz offers M.S. and Ph.D. programs in statistical science. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a designated emphasis in statistics and a minor in statistics.

Additional information on these programs can be found on the department website.

STATISTICS MINOR

The statistics minor is available for students who wish to gain a quantitative understanding of how to (a) measure uncertainty and (b) make good decisions on the basis of incomplete or imperfect information, and to apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Course Requirements

Students complete the following requirements to earn the statistics minor. Courses may be taken for a letter grade or Pass/No Pass. Some courses may be satisfied via exam credit.

Math placement is required for one or more of the foundational courses for this minor. For more information, please review the Math Placement website.

Lower-Division Courses

Basic calculus sequence

	Either these courses	
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
	or these courses	
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Plus one course from each of the following four categories

Statistical concepts

	Either this course	
STAT 5	Statistics	5
	or these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
	or these courses	
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Computer Programming

Take one of the following courses:

BME 160	Research Programming in the Life Sciences	6
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
ASTR 119	Introduction to Scientific Computing	5
MATH 152	Programming for Mathematics	5

Passing the CSE 20 test-out exam will satisfy this requirement.

Linear Algebra

One of the following courses:

AM 10	Linear Algebra for Engineers	5
MATH 21	Linear Algebra	5
PHYS 116A	Mathematical Methods in Physics	5

It is recommended that students also take AM 20 or MATH 24.

Multivariate Calculus

	Either this course	
MATH 22	Introduction to Calculus of Several Variables	5
	or this course	
AM 30	Multivariate Calculus for Engineers	5
	or these courses	
MATH 23A	Vector Calculus	5
MATH 23B	Vector Calculus	5

Upper-Division Courses

Probability

One of the following "probability" courses:

STAT 131	Introduction to Probability Theory	5
STAT 203	Introduction to Probability Theory	5
CSE 107	Probability and Statistics for Engineers	5

Statistical Inference

STAT 132	Classical and Bayesian Inference	5

Computational Methods

One of the following:

AM 147	Computational Methods and Applications	5
MATH 148	Numerical Analysis	5

Plus two electives from the following list of courses

STAT 108	Linear Regression	5
STAT 204	Introduction to Statistical Data Analysis	5
STAT 206	Applied Bayesian Statistics	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 208	Linear Statistical Models	5
BME 205	Bioinformatics Models and Algorithms	5

ECE 145	Estimation and Introduction to Control of Stochastic Processes	5
CSE 142	Machine Learning	5
ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 113	Introduction to Econometrics	5
ECON 114	Advanced Quantitative Methods	6
ECON 120	Development Economics	5
ECON 161B	Marketing Research	5
ECON 190	Senior Proseminar	5
MATH 105A	Real Analysis	5
MATH 105B	Real Analysis	5
MATH 114	Introduction to Financial Mathematics	5
PSYC 181	Psychological Data Analysis	5
TIM 147	Introduction to Data Mining for Business	5

Note: Students planning graduate work in statistics are recommended to choose MATH 23A and MATH 23B, STAT 204 , STAT 205, and MATH 105A and MATH 105B.

STATISTICAL SCIENCE CONTIGUOUS BACHELOR'S MASTER'S PATHWAY

Information and Policies

Introduction

The Department of Statistics offers a Statistical Science Bachelor's/Master's pathway. Undergraduate students in certain majors can apply to the pathway in order to earn a B.S. degree in their own major together with an M.S. degree in Statistical Science. Approved programs are:

- B.S. in Applied Physics, Astrophysics, or Physics
- B.S. in Computer Science
- B.S. in Economics/Mathematics
- B.A. in Mathematics (Pure Math and Computational)

Sample planners for the pathway are available through the Baskin Engineering Graduate Affairs Office website. Qualified undergraduates from other undergraduate majors may also apply to the pathway and their applications will be considered on a case by case basis.

Depending on the student's progress, the B.S./M.S. pathway can be completed in five years.

Admission Requirements and Process

The requirements for admission into the 4+1 pathway are: (1) a cumulative GPA of 3.0 or more; (2) to have taken, or to have a plan to take, foundational coursework in univariate and multivariate calculus, linear algebra, introductory statistics, and programming; and (3) to have completed both STAT 131 and STAT 132 with an A- or above. (Please see Course Requirements section below for details.)

Interested students should schedule a meeting with the STAT graduate director to discuss their curriculum plan and fill the application form. The ultimate deadline for application to the pathway is the end of their junior year (ninth quarter of study at UC Santa Cruz), although students are encouraged to apply significantly earlier, ideally at the same time as their major declaration.

All students who apply to the pathway will be admitted into it, provided they satisfy the requirements. However, approval of an undergraduate student into a five-year bachelor's/master's path does not automatically guarantee admission into the one-year master's program.

Students apply for admission into the M.S. program during their senior year using the same procedure and timeline as all other applicants to the program, and they will be considered for the M.S. program along with regular applicants. The pathway assists qualified enrolled students with a simplified graduate application process that does not require students to submit Graduate Record Examination (GRE) scores. This will be made clear to students admitted into the pathway, as early as possible.

Course Requirements

Students pursuing the contiguous pathway are expected to have a strong quantitative background. At the time they apply to the pathways they will be expected to have completed the following coursework:

Basic Requirements

To be admitted into the contiguous pathway, students must have completed this series of courses with an average GPA of 3.0 or above.

Univariate Calculus

Either both MATH 19A and MATH 19B, or both MATH 20A and MATH 20B.

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Multivariate Calculus

MATH 22	Introduction to Calculus of Several Variables	5
	or this course	
AM 30	Multivariate Calculus for Engineers	5
	or these courses	
MATH 23A	Vector Calculus	5
	AND	
MATH 23B	Vector Calculus	5

Linear Algebra

AM 10	Linear Algebra for Engineers	5
	OR	
MATH 21	Linear Algebra	5
	OR	
PHYS 116A	Mathematical Methods in Physics	5

Introductory Statistics

STAT 5	Statistics	5
	OR	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
	OR	
STAT 17	Statistical Methods for Business and Economics	5
	OR	
PHYS 133	Intermediate Laboratory	5

Programming

CSE 20	Beginning Programming in Python	5

or higher level programming course; or equivalent

Advanced Requirements

During their junior year (or before, if appropriate), students in the pathway will be expected to take two courses:

STAT 131	Introduction to Probability Theory	5
STAT 132	Classical and Bayesian Inference	5

Students must obtain a grade no lower than A- in both courses to remain eligible for the pathway. A grade of A- or higher in STAT 131 will waive the M.S. requirement of taking STAT 203, Introduction to Probability Theory. Instead of STAT 203, students in the pathway will need to take an additional elective course to satisfy the credit requirements for the M.S. program (see sample plan below).

Students who pass STAT 131 and STAT 132 with a grade of C or higher but lower than A-, although not eligible to continue in the contiguous pathway to the M.S., will still have the opportunity to complete a minor in statistics or to apply to the M.S. through the regular admission process.

Senior Year Requirements

Students apply for admission into the M.S. program during their senior year using the same procedure and timeline as all other applicants to the program. In addition, during the senior year, students in the pathway will be required to take two graduate-level courses:

STAT 204	Introduction to Statistical Data Analysis	5
STAT 206B	Intermediate Bayesian Inference	5

Note that the two courses satisfy requirements for the Statistical Science M.S. program and therefore cannot be counted as part of the minimum 40 credits of upper-division courses required by the undergraduate major.

Students who are accepted into the M.S. program but fail any of the two senior-year graduate courses will revert to the regular two-year M.S. timeline and will be allowed to retake them

M.S. Year Course Requirements

Students will complete the remaining required courses (STAT 200, STAT 280B, STAT 205 and STAT 208) and electives (four, one of them in lieu of STAT 203) for the M.S. program, as well as their capstone project, during their fifth year in the program. At least two of the four electives must be chosen from List A (courses offered by the Statistics Department).

A student enrolled in the 4+1 contiguous program will complete a total of 45 credits in classroom courses, just like students in the standard M.S. program, with 15 of those credits having been completed as part of their undergraduate degree.

If for any reason a student cannot complete the M.S. requirements during their fifth year, they will revert to the standard M.S. timeline.

Core Courses

STAT 200	Research and Teaching in Statistics	3
STAT 205	Introduction to Classical Statistical Learning	5
STAT 208	Linear Statistical Models	5
STAT 280B	Seminars in Statistics	2

STAT 205 and STAT 208 must be taken for a letter grade.

List A Electives

Electives offered by the Statistics Department and open to M.S. students.

STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 209	Generalized Linear Models	5
STAT 221	Statistical Machine Learning	5
STAT 222	Bayesian Nonparametric Methods	5
STAT 223	Time Series Analysis	5
STAT 224	Bayesian Survival Analysis and Clinical Design	5
STAT 225	Multivariate Statistical Methods	5
STAT 226	Spatial Statistics	5
STAT 227	Statistical Learning and High Dimensional Data Analysis	5
STAT 229	Advanced Bayesian Computation	5
STAT 243	Stochastic Processes	5
STAT 244	Bayesian Decision Theory	5
STAT 246	Probability Theory with Markov Chains	5

List B Electives

Electives offered outside the Statistics Department and open to STAT M.S. students.

AM 212A	Applied Partial Differential Equations	5
AM 216	Stochastic Differential Equations	5
AM 230	Numerical Optimization	5
AM 250	An Introduction to High Performance Computing	5
CSE 242	Machine Learning	5
CSE 243	Data Mining	5
CSE 249	Large-Scale Web Analytics and Machine Learning	5
CSE 261	Advanced Visualization	5
CSE 263	Data Driven Discovery and Visualization	5
CSE 272	Information Retrieval	5
CSE 277	Random Process Models in Engineering	5
ECE 253	Introduction to Information Theory	5
ECE 256	Statistical Signal Processing	5
ECON 211A	Advanced Econometrics I	5
ECON 211B	Advanced Econometrics II	5
ENVS 215A	Geographic Information Systems and Environmental Applications	5
ENVS 215L	Exercises in Geographic Information Systems	2

ENVS 215L is the concurrent lab to ENVS 215A. The lecture/lab combination counts as one course.

Capstone Requirement

This is a Plan II Capstone. For the M.S. degree, students conduct an individual capstone research project (up to three quarters) and in the spring participate in a seminar in which results from their project are presented. Examples of capstone research projects include: review and synthesis of the literature on a topical area of statistical science, application and comparison of different models and/or computational techniques from a particular area of study in statistics, and comprehensive analysis of a data set from a particular application area.

Students must submit a proposal to the potential faculty sponsor no later than the end of their first academic quarter. If the proposal is accepted, the faculty member becomes the sponsor and supervises the research and writing of the project. When the project is completed and written, it must be submitted to and accepted by a committee of two individuals, consisting of the faculty advisor and one additional reader. The additional reader will be chosen appropriately from within the graduate program faculty or outside of it. Either the advisor or the additional reader must be from within the graduate program faculty.

Planner

STAT 131 and STAT 132 are requirements to qualify for the program, but do not satisfy any M.S. requirement (except, in the case of STAT 131, waiving the requirement of taking STAT 203). An M.S. elective is required in lieu of STAT 203.

Sample Planner for Bachelor's/Master's Pathway

	Fall	Winter	Spring
Junior Year	STAT 131	STAT 132	
Senior Year	STAT 204	STAT 206B	STAT 207
M.S. Year	STAT 200 (3 credits)	STAT 205	STAT 208

	M.S. elective	STAT 296	
	STAT 280B (2 credits)		

STATISTICAL SCIENCE M.S.

Introduction

Students in the statistical science program learn to develop and use statistical methods to provide a probabilistic assessment of the variability in different data structures. This knowledge is applied to the quantification of the uncertainties inherent in the discoveries, summaries and conclusions that are drawn from the data analysis. The Statistical Science M.S. places emphasis on the application of statistical methods to the solution of relevant scientific, technological and engineering problems, with the goal of preparing students for professional careers

Students will obtain an M.S. in statistical science. More specifically, students will develop background on statistical theory, methods, and computing through the program coursework, with emphasis on novel methods and applications.

Undergraduate preparation for admission

We will accept students with undergraduate degrees in fields that include computer science, engineering, mathematics, natural sciences, physics, and statistics, subject to appropriate course requirements in statistics and mathematics. Undergraduate preparation in mathematics and statistics should include:

- single variable and multivariate differential and integral calculus (UC Santa Cruz equivalent AM 11A, AM 11B or MATH 19A, MATH 19B, and MATH 23A, MATH 23B);
- linear algebra (UCSC equivalent AM 10 or MATH 21);
- introductory statistics (UCSC equivalent STAT 5 or STAT 7);
- introductory calculus-based probability and statistical inference (UCSC equivalent STAT 131 and STAT 132); and
- experience with basic computing using a high-level programming language such as R or Python (UCSC equivalent CSE 20).

Relationship of M.S. and Ph.D. programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either program. Students completing the M.S. program may proceed into the Ph.D. program upon successful completion of the pre-qualifying examination (also known as the First-Year Exam), and successful application to the graduate committee and the graduate committee's approval. Students in the Ph.D. program have the option of receiving the M.S. degree upon completion of the M.S. program requirements, including the capstone research project. Ph.D. core course STAT 205B can be used in place of STAT 205 to fulfill the M.S. degree course requirements.

Requirements

Course Requirements

Seven core courses

M.S. students must complete seven core courses: the five 5-credit courses listed below; a 3-credit course on research and teaching (STAT 200); and a 2-credit research seminar (STAT 280B). M.S. students must complete three additional 5-credit courses from the approved list of elective courses, bringing the total non-seminar credit requirement to 43 credits. None of the additional elective courses required to satisfy the unit requirements for the M.S. program can be substituted by independent study courses (M.S. Project, Independent Study/Research, or Thesis Research).

Students in the M.S. program must take the following seven core courses:

STAT 200	Research and Teaching in Statistics	3
STAT 203	Introduction to Probability Theory	5
STAT 204	Introduction to Statistical Data Analysis	5
STAT 205	Introduction to Classical Statistical Learning	5
STAT 206B	Intermediate Bayesian Inference	5
STAT 208	Linear Statistical Models	5
STAT 280B	Seminars in Statistics	2

Elective Courses

In order to maintain a full load for graduate standing after their first year, students take additional courses, including independent study courses, from the approved list of elective courses, appropriate to their research interests and selected in consultation with their advisors.

All M.S. students must complete at least **three** 5-credit electives from the approved electives listed below. Two of these electives must be taken from list A, while the remaining elective may be taken from either list A or B.

In addition to the core and approved elective courses required to satisfy credit requirements for the program, students can take additional courses from across Baskin Engineering.

Electives available to MS students include:

List A Electives

Electives taught by the Statistics Department.

STAT 202	Linear Models in SAS	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 209	Generalized Linear Models	5
STAT 221	Statistical Machine Learning	5
STAT 222	Bayesian Nonparametric Methods	5
STAT 223	Time Series Analysis	5
STAT 224	Bayesian Survival Analysis and Clinical Design	5
STAT 225	Multivariate Statistical Methods	5
STAT 226	Spatial Statistics	5
STAT 227	Statistical Learning and High Dimensional Data Analysis	5
STAT 229	Advanced Bayesian Computation	5
STAT 243	Stochastic Processes	5
STAT 244	Bayesian Decision Theory	5
STAT 246	Probability Theory with Markov Chains	5

List B Electives

Electives taught outside the Statistics Department.

AM 212A	Applied Partial Differential Equations	5
AM 216	Stochastic Differential Equations	5
AM 230	Numerical Optimization	5
AM 250	An Introduction to High Performance Computing	5
CSE 242	Machine Learning	5
CSE 243	Data Mining	5
CSE 249	Large-Scale Web Analytics and Machine Learning	5
CSE 261	Advanced Visualization	5
CSE 263	Data Driven Discovery and Visualization	5
CSE 272	Information Retrieval	5

CSE 277	Random Process Models in Engineering	5
ECE 253	Introduction to Information Theory	5
ECE 256	Statistical Signal Processing	5
ECON 211A	Advanced Econometrics I	5
ECON 211B	Advanced Econometrics II	5
ENVS 215A	Geographic Information Systems and Environmental Applications	5
ENVS 215L	Exercises in Geographic Information Systems	2

ENVS 215L is the concurrent lab to ENVS 215A. The lecture/lab combination counts as one course.

M.S. Capstone Project Requirements

This is a Plan II Capstone. For the M.S. degree, students conduct an individual capstone research project in their second year (up to three quarters), and in the spring of that year participate in a seminar in which results from their project are presented. Examples of capstone research projects include: review and synthesis of the literature on a topical area of statistical science; application and comparison of different models and/or computational techniques from a particular area of study in statistics; comprehensive analysis of a data set from a particular application area.

Students must submit a proposal to the potential faculty sponsor no later than the end of the fourth academic quarter. If the proposal is accepted, the faculty member becomes the sponsor and supervises the research and writing of the project. When the project is completed and written, it must be submitted to and accepted by a committee of two individuals, consisting of the faculty advisor and one additional reader. The additional reader will be chosen appropriately from within the graduate program faculty or outside of it. Either the advisor or the additional reader must be from within the graduate program faculty.

Normative Time to Degree

The normative time to the M.S. degree (for students enrolled full-time) is two academic years.

Review of Academic Progress

Students will be admitted to the M.S. program, not to the research group of any individual faculty member. However, each student will be matched with a first-year mentor, to ensure that adequate guidance is provided in the crucial first year of graduate school. In the second year, the role of the mentor will be played by the M.S. project advisor. Faculty advisors will be responsible for charting the progress of their students on a regular basis, and for making necessary adjustments to their plan of study and research.

The graduate program faculty will meet in the spring quarter of each academic year to review the performance of all students in the program. Based on the results from the faculty review, a written report will be provided to each student with an assessment of her/his performance and description of specific program objectives for the following academic year.

Transfer Credit

Up to three Baskin Engineering courses fulfilling the degree requirements of the M.S. degree may be taken before beginning the graduate program through the concurrent enrollment program. Courses from other institutions may not be applied to the M.S. degree course requirements.

Students who complete the M.S. degree in statistical science and continue onto the Ph.D. program in statistical science can transfer all applicable courses taken during the M.S. to the Ph.D. program, provided that such students meet the minimum residency requirement for Ph.D. programs at UC Santa Cruz, as specified by the UCSC Graduate Division.

Applying for Graduation

All candidates for a degree must submit an Application for Master's Degree to the Baskin Engineering Graduate Student Affairs office by the date stated in the Academic and Administrative Calendar for the quarter they wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term. The deadline for degree applications is typically in the second week of the quarter. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

Optional Catchall

STATISTICAL SCIENCE PH.D.

Introduction

Students in the statistical science program learn to develop and use statistical methods to provide a probabilistic assessment of the variability in different data structures. This knowledge is applied to the quantification of the uncertainties inherent in the discoveries, summaries and conclusions that are drawn from the data analysis. The Ph.D. program provides mastery of fundamental concepts in statistical theory and methods, as well as analytical and computational skills to build modern statistical models, implement them, and effectively communicate their results. Through the process of learning these skills, the students develop the ability to conduct independent research.

Students will obtain a Ph.D. in statistical science. More specifically, students will develop background on statistical theory, methods, and computing through the program coursework, with research emphasis on novel methods and applications.

Undergraduate preparation for admission

We will accept students with undergraduate degrees in fields that include computer science, engineering, mathematics, natural sciences, physics, and statistics, subject to appropriate course requirements in statistics and mathematics. Undergraduate preparation in mathematics and statistics should include:

- Single variable and multivariate differential and integral calculus (UC Santa Cruz equivalent AM 11A,

AM 11B or MATH 19A, MATH 19B, and MATH 23A, MATH 23B);

- Linear algebra (UCSC equivalent AM 10 or MATH 21); introductory statistics (UCSC equivalent STAT 5 or STAT 7);
- Introductory calculus-based probability and statistical inference (UCSC equivalent STAT 131 and STAT 132); and
- Experience with basic computing using a high-level programming language such as R or Python (UCSC equivalent CSE 20).

Relationship of M.S. and Ph.D. programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program upon successful completion of the pre-qualifying examination, and application to the graduate committee and acceptance. Students in the Ph.D. program have the option of receiving the M.S. degree upon completion of the M.S. program requirements, including the capstone research project. Ph.D. core course STAT 205B can be used in place of STAT 205 to fulfill the M.S. degree course requirements.

Advancement to Candidacy

Course Requirements

Nine core courses

Ph.D. students must complete nine core courses: seven 5-credit courses; a 3-credit course on research and teaching (STAT 200); and a 2-credit research seminar (STAT 280B). Ph.D. students must complete four additional 5-credit courses from the approved list of elective courses, bringing the total non-seminar credit requirements to 58 credits. None of the additional elective courses required to satisfy the credit requirements for the Ph.D. program can be substituted by independent study courses (Independent Study/Research or Thesis Research).

Students in the Ph.D. program must take the following nine core courses:

STAT 200	Research and Teaching in Statistics	3
STAT 203	Introduction to Probability Theory	5
STAT 204	Introduction to Statistical Data Analysis	5
STAT 205B	Intermediate Classical Inference	5
STAT 206B	Intermediate Bayesian Inference	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 208	Linear Statistical Models	5
STAT 209	Generalized Linear Models	5
STAT 280B	Seminars in Statistics	2

Elective Courses

In order to maintain a full load for graduate standing after their first year, students take additional courses, including independent study courses, from the approved list of elective courses, appropriate to their research interests and selected in consultation with their advisors.

All Ph.D. students must complete at least **four** 5-credit electives from the approved electives listed below. Two of these electives must be taken from list A, while the remaining two electives might be taken from either list A or B.

None of the additional elective courses required to satisfy the credit requirements for the Ph.D. program can be substituted by independent study courses (STAT 297, Independent Study/Research; or STAT 299, Thesis Research). However, students are encouraged to enroll in Independent Study courses even when not engaged with formal classroom courses.

In addition to the core and approved elective courses required to satisfy credit requirements for the program, students can take additional courses from across Baskin Engineering.

Electives available to PhD students include:

List A Electives

Electives taught by the Statistics Department.

STAT 221	Statistical Machine Learning	5
STAT 222	Bayesian Nonparametric Methods	5
STAT 223	Time Series Analysis	5
STAT 224	Bayesian Survival Analysis and Clinical Design	5
STAT 225	Multivariate Statistical Methods	5
STAT 226	Spatial Statistics	5
STAT 227	Statistical Learning and High Dimensional Data Analysis	5
STAT 229	Advanced Bayesian Computation	5
STAT 243	Stochastic Processes	5
STAT 244	Bayesian Decision Theory	5
STAT 246	Probability Theory with Markov Chains	5

List B Electives

AM 212A	Applied Partial Differential Equations	5
AM 216	Stochastic Differential Equations	5
AM 230	Numerical Optimization	5
AM 250	An Introduction to High Performance Computing	5
CSE 240	Artificial Intelligence	5
CSE 242	Machine Learning	5
CSE 243	Data Mining	5
CSE 249	Large-Scale Web Analytics and Machine Learning	5
CSE 272	Information Retrieval	5

CSE 277	Random Process Models in Engineering	5
ECE 253	Introduction to Information Theory	5
ECE 256	Statistical Signal Processing	5
ECON 211A	Advanced Econometrics I	5
ECON 211B	Advanced Econometrics II	5
ENVS 215A	Geographic Information Systems and Environmental Applications	5
ENVS 215L	Exercises in Geographic Information Systems	2
MATH 204	Analysis I	5
MATH 205	Analysis II	5
MATH 208	Manifolds I	5

ENVS 215L is the concurrent lab to ENVS 215A. The lecture/lab combination counts as one course.

Transfer Credit

Up to three Baskin Engineering courses fulfilling the degree requirements of the Ph.D. degree may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a M.S. degree in a related field at another institution may substitute courses from their previous university with approval of the advisor and the graduate committee. Petitions should be submitted along with the transcript from the other institution or UC Santa Cruz Extension. For courses taken at other institutions, copies of the syllabi, examinations, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UC Santa Cruz. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Foreign Language Requirements

Teaching Requirements

Ph.D. students are required to serve as teaching assistants for at least one quarter during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience, for those who are not allowed to be employed due to visa regulations, or for other reasons approved by the director of graduate studies.

Pre-Qualifying Requirements

At the end of the first year, Ph.D. students take a pre-qualifying examination, also known as the First-Year Exam, covering the six 5-credit core courses: STAT 203, STAT 204, STAT 205B, STAT 206B, STAT 207 and STAT 208. This examination comprises two parts: an in-class written examination, followed by a take-home project involving data analysis. Students who do not pass this examination can retake it before the start of the following fall quarter; if they fail the second examination they are dismissed from the Ph.D. program, but have the option to continue in the M.S. program.

Qualifying Examination

Ph.D. students must select a research advisor by the end of their second year in the program. Ph.D. students must complete the qualifying examination (advancement to candidacy) requirement by the end of the spring quarter of their third year. A written dissertation proposal must be submitted to the advisor, and filed with the Graduate Student Affairs Office. A qualifying examination committee will be formed, consisting of the advisor and at least three additional members, approved by the director of graduate studies and the dean of the Graduate Division. The following conditions must be met for the examination committee:

1. The chair of the qualifying examination committee must be a tenured faculty from within the graduate program faculty. The committee chair cannot be the student's advisor or one of their co-advisors.
2. For students with a single advisor, or two co-advisors one of which is from outside the graduate program faculty, the committee must include at least two members from within the graduate program faculty other than the advisor or co-advisor. For students with two co-advisors that are both members of the graduate program faculty, the committee must include at least one additional member from within the graduate program faculty.
3. The committee must include at least one member from outside the graduate program faculty, for which the Senate Regulations for committee membership apply. The outside member can be the student's advisor or co-advisor.

The student submits the written dissertation proposal to all members of the committee no less than one month in advance of the qualifying examination. The dissertation proposal is formally presented in a public oral qualifying examination with the committee, followed by a private examination.

Students will advance to candidacy after they have completed all course requirements (including removal of any incompletes), passed the qualifying examination, nominated a dissertation reading committee, and paid the advancement to candidacy fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of their third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation.

Dissertation Reading Committee

Upon advancement to candidacy, a dissertation reading committee is formed, consisting of the dissertation advisor who serves as the chair of the committee, and at least two additional readers. Therefore, the minimum number of dissertation reading committee members is three.

For students with a single advisor, or two co-advisors one of which is from outside the graduate program faculty, the committee must include at least two additional readers from within the graduate program faculty.

For students with two co-advisors that are both members of the graduate program faculty, the committee must include at least one additional reader from within the graduate program faculty.

The committee is subject to the approval of the graduate director and of the Graduate Division.

Dissertation

Dissertation

The Ph.D. dissertation should consist of a minimum of three chapters composed of material suitable for publication in major professional journals in statistics and journals in relevant scientific fields where the statistical methodology is applied.

Dissertation Defense

The completed dissertation must be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

Review of Academic Progress

Students will be admitted to the Ph.D. program, not to the research group of any individual faculty member. However, each student will be matched with a first-year mentor, to ensure that adequate guidance is provided in the crucial first year of graduate school. In later years, the role of the mentor will be played by the Ph.D. dissertation advisor. Faculty advisors will be responsible for charting the progress of their students on a regular basis, and for making necessary adjustments to their plan of study and research.

The graduate program faculty will meet in the spring quarter of each academic year to review the performance of all students in the program. Based on the results from the faculty review, a written report will be provided to each student with an assessment of their performance and description of specific program objectives for the following academic year.

The normative pre-candidacy period for Ph.D. students (enrolled full-time) is three years and the normative candidacy period is two years, for a total of five years to the Ph.D. degree.

Applying for Graduation

All candidates for a degree must submit an application for the Ph.D. degree to the Baskin Engineering Graduate Advising Office by the date stated in the Academic and Administrative Calendar for the quarter you wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term.

A student is required to be registered or on Filing Fee Status, whichever is applicable, during the quarter in which the degree is conferred. Students should consult the department advisor to determine which option fits their situation. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

STATISTICS DESIGNATED EMPHASIS

Introduction

Students from a Ph.D. degree program, other than statistical science, who meet the following requirements can have the designated emphasis of “statistics” annotated to their degree title. For example, a Ph.D. student in electrical engineering who meets the requirements would receive a diploma that reads “Ph.D. Electrical Engineering with an emphasis in (Statistics).”

Requirements

Committee Composition and Departmental Approvals

Upon electing to pursue a designated emphasis (DE) in statistics, students must choose a DE faculty advisor in the Statistics Department. A list of eligible DE advisors is maintained online. The student must organize a preliminary meeting with the DE advisor, and agree on a plan for completion of the requirements. Once this plan has been designated, the student and the DE advisor must complete the Application for a Designated Emphasis in Statistics form. The completed application form should be signed by the student's home department advisor, the DE advisor, and the statistics graduate director, and then filed with the Baskin Engineering Graduate Student Affairs Office (bsoe-ga@rt.ucsc.edu). This should be done at least one quarter before the student's advancement to candidacy.

Course Requirements

Both these courses

STAT 203	Introduction to Probability Theory	5
STAT 206B	Intermediate Bayesian Inference	5

Plus one of these courses

STAT 204	Introduction to Statistical Data Analysis	5
STAT 205	Introduction to Classical Statistical Learning	5
STAT 205B	Intermediate Classical Inference	5
STAT 207	Intermediate Bayesian Statistical Modeling	5

Plus one other statistics course from the following list of approved courses

STAT 204	Introduction to Statistical Data Analysis	5
STAT 205	Introduction to Classical Statistical Learning	5
STAT 205B	Intermediate Classical Inference	5

STAT 206	Applied Bayesian Statistics	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 208	Linear Statistical Models	5
STAT 209	Generalized Linear Models	5
STAT 221	Statistical Machine Learning	5
STAT 222	Bayesian Nonparametric Methods	5
STAT 223	Time Series Analysis	5
STAT 224	Bayesian Survival Analysis and Clinical Design	5
STAT 225	Multivariate Statistical Methods	5
STAT 226	Spatial Statistics	5
STAT 227	Statistical Learning and High Dimensional Data Analysis	5
STAT 229	Advanced Bayesian Computation	5
STAT 243	Stochastic Processes	5
STAT 244	Bayesian Decision Theory	5
STAT 246	Probability Theory with Markov Chains	5

Students can take either STAT 205 or STAT 205B.

Writing, Research and/or Teaching Requirements

[Optional Catchall]

DATA SCIENCE DESIGNATED EMPHASIS

Introduction

The Data Science Designated Emphasis is a non-degree program housed in the Department of Statistics of Baskin Engineering at the University of California, Santa Cruz. The program aims to provide Ph.D. students from a wide swath of graduate degree programs across campus with the training required to apply state-of-the-art methods and tools from data wrangling, data visualization, statistical data analysis, machine learning, and artificial intelligence to their own research.

Requirements

Committee Composition and Departmental Approvals

Students must include one of the Data Science program faculty members that is not a member of their home department in their qualifying exam and dissertation committees. This faculty member is the “DE advisor” for purposes of the designated emphasis. This faculty member must be identified at the time the student applies to the program. A list of current program faculty can be found at the program faculty website.

The student must organize a preliminary meeting with the DE advisor, and agree on a plan for completion of the requirements. Once this plan has been designated, the student and the DE advisor must complete the Application for a Designated Emphasis in Data Science form. The completed application form should be signed by the student's home department advisor, the DE advisor, and the DE executive committee chair, and then filed with the Baskin Engineering Graduate Student Affairs Office (bsoe-ga@rt.ucsc.edu). This must be done before the student's advancement to candidacy.

Course Requirements

Required Courses

All students in the designated emphasis are required to complete 18 credits in mandatory courses covering the following topics:

Data Wrangling and Visualization

STAT 266A	Data Visualization and Statistical Programming in R	3
STAT 266C	Introduction to Data Wrangling	3

Statistical Data Analysis

STAT 204	Introduction to Statistical Data Analysis	5

Machine Learning

CSE 242	Machine Learning	5

Speaker Series

STAT 280B	Seminars in Statistics	2

Elective Courses

In addition to completing all required courses, all students must complete at least one five-credit elective from the list below. Students may not double-count a course that is required for their main program as an elective for the Data Science DE.

Applied Mathematics

AM 229	Convex Optimization	5
AM 230	Numerical Optimization	5
AM 250	An Introduction to High Performance Computing	5

Astonomy and Astrophysics

ASTR 234	Statistical Techniques in Astronomy	5

Computational Media

CMPM 243	Social Computing Research: Design, Algorithms, and Incentives	5
CMPM 268	Immersive Analytics	5

Computer Science and Engineering

CSE 243	Data Mining	5
CSE 248	Foundations of Data Science	5
CSE 261	Advanced Visualization	5

Economics

ECON 211A	Advanced Econometrics I	5
ECON 211B	Advanced Econometrics II	5
ECON 211C	Advanced Econometrics III	5

Electrical and Computer Engineering

ECE 237	Image Processing and Reconstruction	5
ECE 250	Digital Signal Processing	5
ECE 253	Introduction to Information Theory	5
ECE 256	Statistical Signal Processing	5

Environmental Studies

ENVS 215A	Geographic Information Systems and Environmental Applications	5
ENVS 215B	Intermediate Geographic Information Systems	5

Ocean Sciences

OCEA 260	Introductory Data Analysis in the Ocean and Earth Sciences	5
OCEA 267	Applied Environmental Time Series Analysis	5

Psychology

PSYC 204	Quantitative Data Analysis	5
PSYC 205	Categorical Data Analysis	5
PSYC 214A	Multivariate Techniques for Psychology	5
PSYC 214B	Advanced Multivariate Techniques for Psychology	5

Statistics

STAT 203	Introduction to Probability Theory	5
STAT 205	Introduction to Classical Statistical Learning	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 208	Linear Statistical Models	5
STAT 209	Generalized Linear Models	5
STAT 222	Bayesian Nonparametric Methods	5
STAT 223	Time Series Analysis	5
STAT 224	Bayesian Survival Analysis and Clinical Design	5
STAT 225	Multivariate Statistical Methods	5
STAT 226	Spatial Statistics	5
STAT 227	Statistical Learning and High Dimensional Data Analysis	5
STAT 229	Advanced Bayesian Computation	5

Writing, Research and/or Teaching Requirements

[Optional Catchall]

Technology and Information Management

Baskin Engineering
(831) 459-2158
engineering.ucsc.edu

PROGRAMS OFFERED

Technology Information Management B.S. (p. 648)

Technology Information Management Minor (p. 654)

Technology and Information Management (TIM) is a multi-disciplinary program that focuses on the integration of engineering, computer science, and economics for two purposes: the technology of management, which includes the design of information technology to solve business problems; and the management of technology, which includes the management, development, and commercialization of products, innovation, and entrepreneurship. The program offers a bachelor of science (B.S.) degree in technology and information management (TIM) as well as a minor in technology and information management (TIM).

TECHNOLOGY AND INFORMATION MANAGEMENT B.S.

Information and Policies

Introduction

Technology and Information Management (TIM) is a rigorous, challenging major for those students wanting to pursue careers in the management of information and technology. TIM students will receive a thorough grounding in the fundamental principles and practices of technology (in particular, computer science and computer engineering) and management, and the scientific, mathematics, and economics principles upon which they are built. In particular, they will become proficient in the following areas: strategy, planning, innovation, entrepreneurship, information technology, software design, product development, and supply-chain management.

The essence of the technology and information management major at the University of California, Santa Cruz is the integration of fundamental intellectual content from the disciplines of computer science, computer engineering, business management economics, and finance. TIM students learn how to apply the fundamentals of these diverse disciplines to solving problems that require the integration of management and technology, e.g., developing information technology systems to manage all activities and operations in a firm, e-commerce, managing and commercializing a new technology, and starting a new high-technology company.

To graduate with a B.S. in technology and information management, students normally complete 26 required courses (with two laboratories, totaling 133 quarter credits) plus three elective courses (15 quarter credits) for the technology and information management major program. Honors students are likely to find the rigorous management and leadership elements of the program of significant interest. Industrial interactions and projects are key features of this major.

Program Learning Outcomes

A technology and information management student completing the program will:

1. learn the fundamentals of the three core areas—mathematics, economics, and engineering—necessary to analyze and solve complex problems in technology and information management.
2. develop the ability to apply mathematics, economics, and engineering to fundamental issues and problems in TIM.
3. develop the ability to identify, formulate, and solve complex real-world problems in the two key multi-disciplinary domains of technology and information management: management of technology (MOT) or management science and engineering (MSE); and technology of management (TOM) or information science and engineering (ISE).
4. be able to communicate effectively in written form in papers and project reports related to TIM.

Academic Advising for the Program

The Baskin Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in Baskin Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Transfer students should also refer to the Transfer Information and Policy section.

Baskin Engineering Building, Room 225
bsoeadvising@ucsc.edu
(831) 459-5840

Getting Started in the Major: Frosh

The technology and information management major is intended for students with an interest in both technology and business. It is recommended that students intending to declare this major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Completion of business-oriented computer literacy and basic programming courses is of benefit to students entering this major. Completion of any economics and/or business-related courses in high school is also beneficial, but the faculty realizes that these courses may not be available at many high schools. Completion of comparable college courses at other institutions serves to strengthen the preparation of a student for the technology and information management major.

This major is highly course intensive and sequential; students who intend to pursue this major must begin taking classes for the major in their first quarter at UC Santa Cruz.

Math placement is required for one or more of the foundation courses for this major. For more information, please review the Math Placement website.

Transfer Information and Policy

Transfer students who want to pursue the technology and information management major, must have applied and been admitted to UC Santa Cruz as a proposed Technology and Information Management major.

Transfer Admission Screening Policy

The requirements for transfer students are as follows:

1) Transfer students must have completed at least six of the lower-division courses from the list below
before declaring the TIM major. While the six courses can be chosen from any courses on the list, we strongly recommend that students take at least one Computer Science and Engineering course as one of the six classes.

2) A minimum cumulative GPA of 2.4 is required and is calculated based on all courses taken from the list below. Courses completed via exam credit will count toward the minimum six courses required but are not included in the minimum GPA. Only college-level courses will be included in the GPA calculation.
Students who wish to graduate in two years are strongly recommended to complete most of the general education requirements as well as all screening courses—except TIM 50, CSE 12, and CSE 13S—before coming to UC Santa Cruz.

Students should consult assist.org to determine which courses at other institutions in California are transferable to UC Santa Cruz.

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 16	Applied Discrete Mathematics	5
CSE 30	Programming Abstractions: Python	7
TIM 50	Business Information Systems	5
ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ECON 10A	Economics of Accounting	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5
AM 30	Multivariate Calculus for Engineers	5

Only one course from each of the following sets can be counted:

MATH 19A and MATH 20A

MATH 19B and MATH 20B

MATH 22 and MATH 23A and AM 30

Getting Started in the Major: Transfer Students

Transfer students should declare their major in their first quarter at UC Santa Cruz. If you satisfy the transfer admissions screening requirements, you are not required to take additional coursework in order to declare. Instructions for declaring a major in Baskin Engineering are on the Baskin Engineering undergraduate advising major declaration page.

Major Qualification Policy and Declaration Process

Major Qualification

Transfer students should refer to the transfer admission screening requirements.

In order to be admitted into the technology and information management major, students must be listed as a proposed major within Baskin Engineering. Please refer to the Baskin Engineering "Proposed Major Retention" and its "Declaring a Baskin Engineering Major" sections in the catalog for more information.

In addition, to be admitted to the TIM major after a student has entered UC Santa Cruz, students need to complete a total of six courses chosen from the following three topics. The three topics are Mathematics; Engineering; and Economics and Technology and Information Management. One course must be chosen from each topic, and the three additional courses can be from any topic. Only one course may be counted from the following sets: 1) MATH 19A and MATH 20A, 2) MATH 19B and 20B, and 3) MATH 22, MATH 23A, and AM 30.

Mathematics

At least one of the following:

	One of these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5
	or one of these courses	
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20B	Honors Calculus	5
	or one of these courses	
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5
AM 30	Multivariate Calculus for Engineers	5
	or this course	
CSE 16	Applied Discrete Mathematics	5

Engineering

At least one course from the following:

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 30	Programming Abstractions: Python	7

Students with no prior programming will take CSE 20 before CSE 30 and CSE 12.

Economics and Technology and Information Management

At least one additional course must be chosen from the following:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ECON 10A	Economics of Accounting	5
TIM 50	Business Information Systems	5

Eligibility to qualify for the major

Students in their first six quarters who have completed at least six qualifying courses in the TIM major will need to meet the following:

1. Their cumulative GPA is at least 2.4 in all of the major qualification courses attempted.

2. They have no more than 7 credits resulting in grades of C-, D+, D, D-, F or NP among all of the TIM major qualification courses attempted.

Appeal Process

Students who are informed that they do not qualify for the major may appeal this decision by submitting a letter to the undergraduate director through the Baskin Engineering undergraduate advising office within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

How to Declare a Major

There are four steps to declaring a Baskin Engineering (BE) major. For a detailed guide to this process, please consult the BE Undergraduate Advising Declare Your Major website.

Students should start the declaration of major process by completing Step One on the BE Undergraduate Advising Declare Your Major website as soon as they complete the major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed the major qualification courses.

Letter Grade Policy

All students admitted to a Baskin Engineering major, or seeking admission to a major, must take all courses required for that major for a letter grade. This policy includes courses required for these degrees that are sponsored by other departments.

Baskin Engineering Policies

Please refer to the Baskin Engineering section of the catalog for additional policies that apply to all Baskin Engineering programs. These policies include admission to the major and the need for UC Santa Cruz students to obtain pre-approval before taking courses elsewhere.

Course Substitution Policy

Undergraduate engineering students who wish to substitute a major course with a course from another department at UC Santa Cruz, or from another academic institution, must first consult the Baskin Engineering Undergraduate Advising Office. The advising office requires a Petition for Course Substitution be approved before credit for an alternate course can be applied to any Baskin Engineering major requirement.

Petition forms are available online at the Baskin Engineering Undergraduate Advising website.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Honors

The TIM program awards honors to students whose academic performance is excellent. Students with a GPA 3.5 or higher but lower than 3.7 will be awarded honors. Students with a GPA of 3.7 or higher will be awarded highest honors. Students who have been found guilty of academic misconduct are not eligible for either honors or highest honors.

[Optional Catchall]

Requirements and Planners

Course Requirements

The Technology and Information Management B.S. consists of the following requirements. Some may be satisfied via exam credit.

Lower-Division Courses

Statistics

STAT 17	Statistical Methods for Business and Economics	5
	AND	
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Mathematics

One of the following options

	Either these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
	or these courses	
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Plus one of the following

AM 30	Multivariate Calculus for Engineers	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5

Plus the following

One of these courses

AM 10	Linear Algebra for Engineers	5
	OR	
MATH 21	Linear Algebra	5

And one of these courses

AM 20	Ordinary Differential Equations for Engineers	5
	OR	
MATH 24	Ordinary Differential Equations	5

Economics

All of the following

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ECON 10A	Economics of Accounting	5

Computer Science and Engineering

All of the following

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7

CSE 16	Applied Discrete Mathematics	5
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7

Students with no prior programming will take CSE 20 before CSE 30 and CSE 12. Students with a prior programming course, exam credit, or clearing the "Test-out" bar will start with CSE 30 and CSE 12.

Plus these courses

TIM 50	Business Information Systems	5
TIM 58	Systems Analysis and Design	5

Upper-Division Courses

Computer Science and Engineering

All of the following:

CSE 150	Introduction to Computer Networks	7
TIM 170	Management of Technology Seminar	2
TIM 172A	Introduction to Management of Technology I	5
TIM 172B	Introduction to Management of Technology II	5
TIM 172P	Management of Technology Project I	3
TIM 172Q	Management of Technology Project II	3
TIM 175	Business Strategy and Information Systems	5
CSE 182	Introduction to Database Management Systems	5

Economics

One of the following courses

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus the following

ECON 113	Introduction to Econometrics	5

Electives

Two 5-credit Baskin Engineering courses

Students select two upper-division Baskin Engineering electives on the basis of their particular interests. These electives may be any 5-credit upper-division or graduate Baskin Engineering courses numbered 100-189 or 200-289. At most one of these could be replaced by a TIM independent or field study course (TIM 193, TIM 195, TIM 198, and TIM 199) with prior approval from the department.

The following limitations apply:

- Students may take STAT 131 or CSE 107, but not both;
- In cases in which a course has an associated lab, both are required to satisfy one elective.
- Classes that can be repeated for credit can only be used once to satisfy an elective requirement.

Plus one economics course

Students take one 5-credit, upper-division economics course numbered 100-189.

A list of suggested economics courses can be found on the Technology and Information curriculum chart on the Baskin Engineering Undergraduate Advising Major Curriculum page.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in technology and information management is satisfied by completing TIM 175.

TIM 175	Business Strategy and Information Systems	5

Comprehensive Requirement

Students complete the comprehensive requirement in two areas, the management of technology and the technology of management. The comprehensive requirement in the management of technology consists of two five-credit courses, TIM 172A and TIM 172B, and two three-credit project courses, TIM 172P and TIM 172Q. TIM 172A and TIM 172P need to be taken concurrently, as do TIM 172B and TIM 172Q. The comprehensive requirement in the technology of management consists of a five-credit project-intensive course, TIM 175.

TIM 172A addresses strategic, engineering, marketing, and financial processes and tools for the management, development, and commercialization of high-tech products.

TIM 172B addresses the development and application of processes and tools for the management, design, optimization, and operation of supply chain networks for high-tech products.

TIM 172P is the first of a two-course project sequence in which students apply the knowledge and skills gained in TIM 172A to complete the first part of a major quarter-long comprehensive team project in the management of technology. In this course, taken concurrently with TIM 172A, the team project focus is on the management, design, and commercialization of a new product within a high-tech company. TIM 172A and TIM 172P together form the first part of the required management of technology comprehensive requirement for the TIM B.S. major.

TIM 172Q is the second of a two-course project sequence in which students apply the knowledge and skills gained in TIM 172B to complete the second part of a major comprehensive team project in the management of technology. In this course, taken concurrently with TIM 172B, the team project focus is on the supply chain management for the new product developed in the project course TIM 172P. TIM 172B and

TIM 172Q together form the second part of the required management of technology comprehensive requirement for the TIM B.S. major.

TIM 175 requires that students understand and use a structured methodology to evaluate the competitive use of information systems within an enterprise. This is accomplished by a team project as well as by an individual project that involves researching and writing a comprehensive analytical term paper using a methodology taught as part of this course.

TIM 172A	Introduction to Management of Technology I	5
TIM 172B	Introduction to Management of Technology II	5
TIM 172P	Management of Technology Project I	3
TIM 172Q	Management of Technology Project II	3
TIM 175	Business Strategy and Information Systems	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans for students pursuing the technology and information management major. Plan One is for first-year students, and Plan Two is designed for transfer students that have completed all general education requirements. Students completing the courses in the four-year planner will have satisfied the MF, PE and SR General Education requirements.

Four-Year Major Planner

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 19A ECON 10A College 1	MATH 19B CSE 20 WRIT 1/WRIT 1E (if needed)	ECON 1 CSE 30 STAT 17 STAT 17L	
2nd (soph)	TIM 50 AM 10 WRIT 2*	ECON 2 MATH 22 or MATH 23A	ECON 100A TIM 170 CSE 12	
3rd (junior)	CSE 13S CSE 16	CSE 150 TIM 58	CSE 182 AM 20	
4th (senior)	TIM 172A TIM 172P ECON 113	TIM 172B TIM 172Q BE elective ECON elective	TIM 175 BE elective	

* WRIT 2 should be taken in or before spring quarter of the second year.

Two-Year Transfer Major Planner*

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
1st (junior)	TIM 50 ECON 100A	TIM 58 CSE 12 STAT 17 STAT 17L	TIM 170 CSE 150 ECON 113	
2nd (senior)	TIM 172A TIM 172P	TIM 172B TIM 172Q	TIM 175	

BE elective	ECON elective	BE elective
CSE 13S		CSE 182

*This plan assumes that transfer students have completed all of their lower-division courses for the technology and information management major, with the exception of CSE 12, CSE 13S, STAT 17 and STAT 17L, TIM 50 and TIM 58, prior to attending UC Santa Cruz.

Curriculum charts for all BE majors are available at the Baskin Engineering Undergraduate Advising website.

TECHNOLOGY AND INFORMATION MANAGEMENT MINOR

Course Requirements

Below are the requirements for the Technology and Information Management Minor. Some courses may be satisfied via exam credit. Courses may be taken for a letter grade or pass/no pass.

Lower-Division Courses

Mathematics (2 Courses)

Math placement is required for one or more of the foundational courses for this minor. For more information, please review the Math Placement website.

One of the following

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 20A	Honors Calculus	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Plus one of the following

AM 11B	Mathematical Methods for Economists II	5
MATH 11B	Calculus with Applications	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20B	Honors Calculus	5

Computer Science and Engineering (3 Courses)

One of the following

CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7

Clearing the CSE 20 "Test Out" bar will also satisfy this requirement.

Plus the following course

TIM 50	Business Information Systems	5

Plus one of the following options

TIM 58	Systems Analysis and Design	5
TIM 80C	Starting a New Technology Company	5

Upper-Division Courses

Mathematics (1 Course)

One of the following courses:

CSE 107	Probability and Statistics for Engineers	5
ECON 113	Introduction to Econometrics	5
STAT 131	Introduction to Probability Theory	5

Electives (4 Courses)

Four courses from the following list:

CSE 150	Introduction to Computer Networks	7
CSE 180	Database Systems I	5
CSE 182	Introduction to Database Management Systems	5
ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5
ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5
TIM 172A	Introduction to Management of Technology I	5
TIM 172B	Introduction to Management of Technology II	5
TIM 175	Business Strategy and Information Systems	5

Either CSE 180 or CSE 182

Either ECON 100A or ECON 100M

Either ECON 100B or ECON 100N

SOCIAL SCIENCES DIVISION

460 Humanities and Social Sciences Building
(831) 459-3212
http://socialsciences.ucsc.edu/

The Division of Social Sciences focuses on the study of human relationships and society. As global economic and political changes transform the world around us, social scientists help us meet the challenges and opportunities of the 21st century.

Our eight departments offer more than 30 undergraduate and graduate degree programs, including many that are interdisciplinary collaborations. Our faculty members conduct leading-edge research in their fields, frequently working with students in research clusters linking departments to our research centers. We also offer extensive opportunities for experiential learning through field studies.

Our research, teaching, and state-of-the-art facilities provide students with a comprehensive and rigorous education that prepares them for productive careers and further academic pursuits. For more information on the division, see our website.

Anthropology

361 Social Sciences 1 Building

PROGRAMS OFFERED

Anthropology B.A. (p. 655)

Anthropology Minor (p. **Error! Bookmark not defined.**)

Anthropology Ph.D. (p. 662)

Anthropology Designated Emphasis (p. 669)

OTHER PROGRAMS OF INTEREST

Earth Sciences/Anthropology B.A. (p. 341)

Anthropology is the study of people throughout the world and through time. Because it covers a wide range of topics—biological evolution, material remains of the past, and the world that humans create through their ideas and practices in present-day societies—anthropology is an especially integrative discipline. The anthropology program at UC Santa Cruz offers courses that reflect the diversity of the field.

- Cultural anthropology explores the everyday lives, beliefs, activities, and movements of people, objects, and ideas in diverse societies. Cultural anthropology courses examine such topics as race and ethnicity, medicine, health, science, gender, sexuality, environment, religion, law, popular culture, politics, economics, and institutions.
- Archaeology uses the material evidence of human activities to understand past human lives. Archaeology at UCSC focuses on past people's interactions with one another at the local level and within their wider social and ecological contexts. Faculty research areas include the pre-colonial and early post-colonial history of West and East Africa, California, the Caribbean, the Near East, the Pacific Northwest, and South America.
- Biological anthropology traces the human journey from its beginnings in Africa over five million years ago. Biological anthropology courses look at fossil evidence, evolutionary theory, human variation, and the behavior of primate relatives in order to analyze biological, social, and cultural changes over time. Biological anthropology at UCSC has a methodological emphasis in innovative approaches to human and non-human primate ecology and diversity founded on our expertise in genomics, isotope biochemistry, as well as human osteology.

UCSC students have the opportunity to do independent library and field research in cultural anthropology, archaeology, and biological anthropology. Laboratory courses in archaeology and biological anthropology offer practical experience in the analysis of biological and cultural materials. In cultural anthropology courses, students learn to carry out anthropological research through interviews, participant observation, surveys, the collection of oral histories, analysis of textual, visual, and aural materials, and the interpretation of archival materials.

Because anthropology is concerned with understanding human interaction, it is a useful major for anyone planning a career that involves working with people, especially those from diverse cultures. Some UCSC anthropology graduates are in social work, many are in teaching, and others pursue careers in law, city planning, politics, medicine, public health, cultural resource management, and journalism. Students intending to specialize in anthropology usually go on to graduate school because professional employment in the field almost always demands an advanced degree.

A combined major in Anthropology and Earth and Planetary Sciences, leading to a bachelor of arts (B.A.) degree, is also offered; for that program description, see Earth and Planetary Sciences (p. 341).

Most anthropology faculty have their offices in Social Sciences 1 Building. Social Sciences 1 also houses laboratories for archaeology and biological anthropology where space is provided for laboratory and individual studies courses and for collections of human and non-human mammalian skeletal material, a variety of archaeological artifacts, and collaborative workspaces for cultural anthropology research.

The Anthropology Colloquium series showcases guest speakers and gives faculty and students an opportunity to discuss new approaches to anthropological questions. Students and faculty interested in archaeology also gather informally at the Archaeology/Biological Anthropology Lunch forum to share information on fieldwork and employment opportunities. There are various anthropology-themed student groups for those who wish to connect with fellow students interested in anthropology.

ANTHROPOLOGY B.A.

Information and Policies

Introduction

The anthropology bachelor of arts (B.A.) incorporates the three anthropological subfields of anthropological

archaeology, cultural anthropology, and biological anthropology, while providing undergraduates with a solid grounding in theory and methods.

Students do not declare an emphasis or concentration within the anthropology major. All students therefore are general anthropology majors and complete the same requirements. However, students can choose to take additional courses in a specific area of anthropology while completing the upper-division anthropology electives required for the major, or by choosing to take courses above and beyond what is required for the major.

Program Learning Outcomes

A student who graduates with a B.A. in anthropology has the following knowledge and skills.

Core Concepts in Anthropology

The student demonstrates understanding of the core concepts in three primary subfields of anthropology: cultural anthropology, archaeology, and biological anthropology.

Knowledge of Cultural Differences

The student demonstrates knowledge of cultural variation and the diversity of perspectives, practices, and beliefs found within each culture and across cultures.

Integration of Subfields

The student integrates cultural, biological, and archaeological perspectives on human bodies, behavior, materialities, and institutions.

Written Communication

The student demonstrates the ability to write clearly by formulating well-organized arguments that are grounded in supporting evidence while countering evidence that contradicts the student's claims.

Oral Communication

The student is able to organize ideas and information and articulate them effectively.

Research and Analytical Skills

The student demonstrates knowledge of the basic steps involved in scholarly research, including locating and critically evaluating scholarly and other information sources relevant to the chosen topic. The student can recognize and demonstrate a basic understanding of research methods used in the various subfields of anthropology, including—but not limited to— participant observation, thick description, laboratory and field analysis, and interviewing.

Understanding of Long-Term Changes in Human Behavior and Conditions in Deep Time

The student has a grasp of long-term changes in the conditions that have shaped humans and the environments they inhabit.

Academic Advising for the Program

For more information regarding department policies, please consult the undergraduate coordinator at the Anthropology Department undergraduate advising website.

All majors, including double majors, must prepare a program of study. This can be done in consultation with faculty or undergraduate coordinator. The Anthropology Department urges students to seek faculty advice early in planning for the major. Faculty hold regular office hours weekly and encourage students to come in to talk about their program, or coursework, and career and professional advising. Students planning to pursue graduate training should plan course schedules in close consultation with faculty advisors. Transfer students should consult the Transfer Information and Policy section of this program statement.

Peer Advisors

The Anthropology Department has instituted a peer advisor program as a supplement to academic advising offered by faculty members. The peer advisors are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Please consult the Anthropology Department undergraduate advising website for scheduling with the peer advisors.

Getting Started in the Major: Frosh

This major is not highly sequential or course intensive. Students may begin taking courses toward the major in the first year, but it is not required.

Transfer Information and Policy

Transfer Admission Screening Policy

Students planning to apply in this major are not required to complete specific major preparation courses for consideration of admission to the University of California, Santa Cruz. Transfer students are strongly encouraged to complete ANTH 1, ANTH 2, and ANTH 3 before transferring to UC Santa Cruz, however, it is not required for admission.

Getting Started in the Major: Transfer Students

Transfer Credit Toward Major/Minor Requirements

Students may transfer courses equivalent to ANTH 1, ANTH 2, and ANTH 3 from California community colleges and universities with existing articulation agreements (www.assist.org).

Students may also petition to transfer courses equivalent to ANTH 1, ANTH 2, and ANTH 3 from other community colleges or from four-year institutions.

Students may petition up to 10 quarter credits (equivalent to two UC Santa Cruz courses) of upper-division transfer credit toward the elective requirements under the following circumstances:

- A student has taken an upper-division anthropology course at another four-year university (including

courses taken through study abroad) and wants to petition for the course to count toward the anthropology major or minor elective.

- A student was enrolled in an accredited Field School Program and wants to petition for the course to count toward the anthropology elective requirements.

Prior to Enrolling in Your First Quarter at UCSC

Complete Lower-Division Requirements

Most upper-division courses have one of the following lower-division introductory courses as a prerequisite:

- ANTH 1 Introduction to Biological Anthropology
- ANTH 2 Introduction to Cultural Anthropology
- ANTH 3 Introduction to Archaeology

Confirm Transfer Credit Has Been Processed

After you have been admitted to UCSC and all your final official transcripts from other colleges have been received, the Office of Admissions will evaluate your transfer credit. The evaluation shows which of your past courses are transferable to UCSC and how many credits you have accrued. It also shows which general education requirements you have satisfied, whether you have satisfied the Intersegmental General Education Transfer Curriculum (IGETC), and whether you have satisfied the University of California Entry Level Writing and American History and Institutions requirements. Students access this information through MyUCSC by viewing the Degree Progress Report from the My Academics area of the Student Center. If this information is not available for your first enrollment period, contact a college or major advisor to help you select appropriate classes. It is an excellent idea to keep an unofficial copy of your transcripts from your previous schools. You should take these documents with you to all academic advising appointments.

Confirm Transfer Credit Articulates with UCSC Courses

Courses taken at community colleges or four-year universities may be used to satisfy the lower-division requirements for the major. View the UC Articulation Agreements to determine which California community college courses are equivalent to our ANTH 1, ANTH 2 and ANTH 3. ***Please note that courses approved by the Office of Admissions for transfer credit do not necessarily satisfy major requirements. Courses must have an articulation agreement to count automatically toward major requirements.***

If your transfer credit course does not articulate with a UC Santa Cruz course, you may submit an Anthropology Coursework Petition which can be found on the Anthropology Department web site. ***Senate Faculty are not in service during summer, so fall admits will likely need to wait until after the beginning of fall quarter for coursework petitions to be approved.***

Enrolling in Your First Quarter at UCSC

We strongly recommended that transfer students take ANTH 150, Communicating Anthropology, during their first quarter at UCSC. This course is designed to provide transfer students with a transition to UCSC coursework. It emphasizes critical reading and writing skills and is an excellent foundation for further upper-division coursework. This class fulfills the anthropological theory core requirement.

We also recommend taking only one additional upper-division course in anthropology during your first quarter at UCSC. Most upper-division anthropology courses are offered only on an every-other-year basis. Transfer students are advised to plan accordingly.

"Free Quarter" for Transfer Students with Unarticulated, Lower-Division Courses

Any student who has taken a course analogous to ANTH 1, ANTH 2, or ANTH 3 will be issued a permission code by the undergraduate advisor for courses listing ANTH 1, ANTH 2, or ANTH 3 as a prerequisite (provided the class has not reached maximum enrollment) in their first quarter at UCSC. Students must provide unofficial transcripts as evidence that they have completed courses analogous to ANTH 1, ANTH 2, or ANTH 3.

If the student fails to petition for a course substitution during their first quarter, they must receive instructor permission to enroll in courses with ANTH 1, ANTH 2, or ANTH 3 as prerequisites thereafter until the prerequisite is satisfied either by taking the class or approved course substitution petition.

Major Qualification Policy and Declaration Process

Major Qualification

In order to qualify for the major, students must have received a "C/P" or better in at least one lower-division anthropology course (ANTH 1, ANTH 2, or ANTH 3) and have either received a "C/P" or better in a second lower-division anthropology course or be enrolled in a second lower-division anthropology course at the time of declaration. Transfer students should consult the Transfer Information and Policy section of this program statement.

Appeal Process

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

How to Declare a Major

Students should submit a petition to declare by completing the petition for major/minor declaration form as soon as they complete the major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with

conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed major qualification courses.

STEP 1: Make a copy of the UCSC Academic Planning Form.

STEP 2: Make an appointment in Slug Success to meet an anthropology peer adviser to review major requirements and start making your academic plan.

STEP 3: Share your Academic Planning Form Google Doc with the anthropology undergraduate adviser (anthugra@ucsc.edu). ***It is very important that you complete this step, as you will not be declared until you do so!***

STEP 4: Complete a Petition for Major/Minor Declaration (once you have completed Major Qualifications) in MyUCSC. If you are not logged into MyUCSC, you will need to navigate to your Student Homepage and select the Undergraduate Student eForms tile > Petition for Major/Minor to access the form.

Recommended: Meet with an Anthropology Senate faculty member to discuss your major plans and academic plan. It is best to meet with faculty during their quarterly office hours or email them to schedule an appointment. The Anthropology Department does not assign faculty advisers – we suggest that you meet with a faculty member whose work coincides with your interests. In addition to reviewing the required declaration paperwork, you should also talk with the faculty member about your intellectual and career interests, graduate school preparation, opportunities for experiential learning (e.g. internships or research), and options for satisfying the senior comprehensive requirement.

If you are a transfer student, you must provide the department with an unofficial copy of your transcript from any institution where you took anthropology courses that you would like to apply to the major requirements. *Please do this as soon as possible as it may effect your enrollment in anthropology courses that have prerequisites.*

Letter Grade Policy

Anthropology students can choose to take courses required for the major or minor for a Pass/No Pass (P/NP) grading option. Students receive a P (Pass) for work that is performed at C level or better. However, all students must abide by the campus policy that no more than 25% of their UCSC credits applied toward graduation may be graded on a Pass/No Pass basis. The Anthropology Department does not set any additional restrictions on how many required anthropology courses students can take for Pass/No Pass. However, it is recommended that students take very few of their upper-division anthropology courses for Pass/No Pass.

Course Substitution Policy

Courses from California Community Colleges

Courses taken at community colleges or four-year universities may be used to satisfy the lower-division requirements for the major. View the UC Articulation Agreements to determine which California community college courses are equivalent to our ANTH 1, ANTH 2, and ANTH 3.

Courses from Other Four-Year Universities

The Anthropology Department may also accept introductory anthropology courses equivalent to ANTH 1, ANTH 2 and ANTH 3 from other four-year universities but students must petition to have these courses count toward the anthropology major or minor requirements.

You may also apply up to 10 credits (two classes) of upper-division credit toward the major. These credits must be taken at four-year universities, through EAP, or through an approved field study program. The director of undergraduate studies must approve each course. For more information about the approval and waiver process, see the Anthropology Coursework Petition which can be found on the Anthropology Department web site.

Anthropology courses from other universities that are approved by the Anthropology Department will count toward the elective requirement. Students **must** complete the Anthropology Senior Comprehensive requirement at UCSC—course petitions will not be accepted for this requirement.

Coursework Petition Process

STEP 1: Initiate the Anthropology Coursework Petition which can be found on the Anthropology Department web site.

STEP 2: Complete and sign the form in DocuSign. It will be sent to the anthropology undergraduate advisor for review.

STEP 3: The Director of Undergraduate Studies reviews petitions to approve/deny to satisfy lower-division/upper-division elective major/minor requirements.

STEP 4: The undergraduate advisor processes coursework in MyUCSC and completes the petition, and the student saves the completed form for their records.

Approval of ANTH 1, ANTH 2, and/or ANTH 3

Anthropology undergraduate advisor processes "Other Credit Quick" to indicate satisfaction of the course prerequisite.

Anthropology Undergraduate Advisor processes "Requirement Waiver" in the Degree Progress Report in MyUCSC to indicate that the major/minor requirement is satisfied.

Approval for Upper-Division Elective Credit

If Admissions processed credit transferred from another institution, the anthropology undergraduate advisor processes the "Course Directive" in their Degree Progress Report in MyUCSC to indicate that one elective is satisfied.

If Admissions has not processed credit transferred from another institution, the anthropology undergraduate advisor processes "Requirement Waiver" in the Degree Progress Report to indicate that one elective is satisfied.

Independent Study

Independent study (or individual study) courses are opportunities for students to pursue personalized learning experiences under the guidance of a faculty member. These courses focus on either lab work (ANTH 197, Lab Tutorial), internships (ANTH 198, Independent Field Study), or general research (ANTH 199, Tutorial). We offer independent study courses for 2 credits (six hours of work per week) or 5 credits (15 hours of work per week). For more on the types of opportunities you can pursue through independent study, see our Experiential Learning page.

Enrollment Process

Step 1: Student meets with a faculty sponsor to outline the proposed work.

Step 2: Initiate the Anthropology Petition for Undergraduate Individual Studies on the Anthropology Department web site.

Step 3: Complete and sign the form in DocuSign. It will be sent to the faculty sponsor to review and e-sign.

Step 4: The student saves the completed form for their records and enrolls in class using the class number provided via MyUCSC.

Limitations

Undeclared students may not take more than 7 credits of independent study courses per quarter. Students who are declared in a major may only take more than 7 credits of independent study courses per quarter with authorization from the department. Only one 5-credit independent study course can count toward the major requirements as an elective. Independent study courses cannot count toward the minor requirements.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Anthropology is a very international discipline: the classes and coursework in this department draw upon studies of many different places and peoples. Most anthropologists work in foreign countries and all engage with scholarship from around the world. Anthropology students are strongly encouraged to make study abroad part of their education and the department is currently developing a plan of study to enable students to conduct independent research abroad with which to write a senior thesis.

Anthropology students who participate in EAP can petition up to two upper-division anthropology courses taken abroad to count toward the anthropology major or minor requirements. When approved, these courses count toward major/minor requirements as upper-division electives.

Note: The Anthropology Department at most will accept up to **two** upper-division courses from another university—this includes universities throughout the country and courses taken abroad.

The Anthropology Department **does not** pre-approve EAP courses to count toward the major/minor requirements. Students must petition for EAP courses to count toward requirements after returning from abroad by completing the Coursework Petition Form found on the department web site. It is very important that students save all of their EAP coursework as it may be needed for the course petition. Syllabi that are submitted for course petitions must include detailed information about the course—brief descriptions of courses and syllabi written in languages other than English will not be accepted. It is the student's responsibility to ask for a more detailed course description if the EAP instructor does not provide it.

Only anthropology courses taken through EAP are normally eligible to count toward anthropology major/minor requirements; however, if a university abroad does not have an anthropology department, other related courses may be considered.

Again, **save all EAP coursework.** It is the student's responsibility to retain all relevant course materials for EAP programs. It can often be difficult to contact instructors after an EAP program has ended.

Honors

The Anthropology Department awards honors in the major and highest honors in the major based on a ranked departmental grade point average (GPA) that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their ranked departmental GPA through the quarter before graduation. The criteria for awarding highest honors in the major are overall superlative performance in the major (top 5 percent of ranked departmental GPA) and general breadth of excellence across the subfields of anthropology. Receiving honors on the senior comprehensive requirement is also considered as a factor in awarding highest honors, but is not always determinative.

Anthropology Website

The Anthropology website outlines information on department procedures and requirements, program planning, independent study, faculty interests, and campus resources for anthropology majors.

Requirements and Planners

Course Requirements

To graduate with an anthropology major, students must successfully complete the following courses:

Lower-Division Courses

ANTH 1	Introduction to Biological Anthropology	5

ANTH 2	Introduction to Cultural Anthropology	5
ANTH 3	Introduction to Archaeology	5

Upper-Division Courses

Ten upper-division courses

Five core requirements

- one course in anthropological theory
- one course in sociocultural anthropology
- one course in regional specialization
- one course in archaeology
- one course in biological, medical or environmental anthropology

Four anthropology electives (any additional upper-division anthropology courses)

Two-credit courses do not count toward the 10 upper-division courses required for the major. Only one 5-credit individual studies course (ANTH 197, ANTH 198, or ANTH 199) may be counted toward the 10 required upper-division courses. Theory courses can only be counted toward the theory requirement or an upper-division elective. See the section on Transfer Credit Toward Major/Minor Requirements for information on receiving credit for upper-division coursework taken at other institutions to be applied toward electives.

Students who are given permission to take a graduate seminar in anthropology may use the course to satisfy an upper division elective.

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. Anthropology's DC requirement aims especially at cultivating high-level skills in critical and ethnographic writing.

To satisfy the DC requirement students must complete a senior seminar series course or complete an independent senior thesis following the guidelines below.

Senior Seminar

Either a course in the ANTH 194 series or a course in the ANTH 196 series.

Senior Thesis

	Either these courses	
ANTH 195A	Biological Anthropology Senior Thesis Series: Research Design	5
ANTH 195B	Biological Anthropology Senior Thesis Series: Guided Laboratory Research	2
ANTH 195C	Biological Anthropology Senior Thesis Series: Thesis Writing	5
	or this course	
ANTH 195S	Senior Thesis	5

Students should only enroll in ANTH 195S during the quarter in which they intend to submit their thesis.

Comprehensive Requirement

Students can fulfill the senior comprehensive requirement in anthropology either by passing a senior seminar (ANTH 194/ANTH 196-series course) or by writing an acceptable independent senior thesis (ANTH 195S or ANTH 195A, ANTH 195B and ANTH 195C).

Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses ANTH 1, ANTH 2, and ANTH 3; senior seminars are restricted to senior anthropology majors.

Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a senior seminar) should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25–30 pages) to a professional journal article in its subfield. Students who wish to complete the senior comprehensive requirement through and independent thesis will enroll in a section of ANTH 195S supervised by their thesis sponsor or ANTH 195A, ANTH 195B and ANTH 195C series.

The senior comprehensive requirement can be satisfied in one of two ways:

Senior Seminar

Either a course in the ANTH 194 series or a course in the ANTH 196 series.

Senior Thesis

Students who are interested in completing their senior comprehensive requirement by independent thesis, rather than seminar, must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25-30 pages) to a professional journal article in its subfield.

Students who plan to write an independent senior thesis must begin planning well in advance—typically three quarters before they plan to graduate. The senior thesis process usually takes about a full academic year and requires that students be highly self-motivated and committed to their thesis topic. Most students spend at least one quarter conducting research and one quarter writing the thesis.

Either this course

ANTH 195S	Senior Thesis or these courses	5
ANTH 195A	Biological Anthropology Senior Thesis Series: Research Design	5
ANTH 195B	Biological Anthropology Senior Thesis Series: Guided Laboratory Research	2
ANTH 195C	Biological Anthropology Senior Thesis Series: Thesis Writing	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans: (1) a four-year plan for frosh students as preparation for the anthropology B.A. major and (2) a two-year plan for transfer students for the anthropology B. A. major. ANTH 1 and ANTH 3 satisfy the SI general education requirement, and ANTH 2 satisfies the CC general education requirement.

Four-Year Plan

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	ANTH 1 College 1	ANTH 2 WRIT 1/WRIT 1E (if needed)	ANTH 3	
2nd (soph)	Bio/Med/Env WRIT 2**	Sociocultural	Archaeology	
3rd (junior)	Theory	Regional	Upper-division elective Upper-division elective	
4th (senior)	Upper-division elective	Upper-division elective	Senior Seminar *	

*Alternatives listed in the section Requirements of the B.A.

** WRIT 2 should be taken in or before spring quarter of the second year.

Students must complete all other GE requirements, some of which are satisfied by anthropology courses.

Two-Year Plan

Year	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	Theory Upper-division elective	Regional Sociocultural	Archaeology Bio/Med/Env	
4th (senior)	Upper-division elective Upper-division elective	Upper-division elective	Senior Seminar*	

*Alternatives listed in the section Requirements of the B.A.

It is assumed that a student has completed ANTH 1, ANTH 2, and ANTH 3 before transferring to UCSC.

ANTHROPOLOGY PH.D.

Information and Policies

Note: The Anthropology Ph.D. Program is not accepting applications in the 2025-26 Academic Year.

Introduction

The anthropology doctoral program at UCSC consists of three tracks: cultural anthropology, anthropological archaeology, and biological anthropology.

Although applicants are accepted only for the doctor of philosophy (Ph.D.) program, students may obtain an en route master of arts (M.A.) degree after fulfilling specific requirements during the first two years.

The theme of emerging worlds—culture and power after progress—unites the research interests of faculty in the cultural anthropology graduate program.

Our concentration on “emerging worlds” and on the construction of anthropological knowledge is especially well suited for drawing together diverse scholars and specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of anthropology, we explore how recombination of these approaches can elucidate specific anthropological problems.

The Ph.D. program in anthropological archaeology focuses on the pre-colonial and early post-colonial history of Africa, the Caribbean, and western North America. It is distinctive in insisting that theories of power, production and exchange, human ecology, gender, ethnicity, and technological practice be explored through rigorous laboratory and field research methods.

The Ph.D. program in biological anthropology has a methodological emphasis in innovative approaches to human and non-human primate ecology and diversity founded on our expertise in genomics and isotope biochemistry, as well as a longstanding expertise in skeletal biology and its application in bioarchaeology and forensic anthropology.

Residency Requirement

In accordance with Senate Regulation 686, the minimum residence requirement for the Ph.D. degree is six quarters, three of which must be spent in residence at the University of California, Santa Cruz campus. Residence is established by the satisfactory completion of one course per quarter.

Good Academic Standing and Academic Notice

A duly registered graduate student is considered to be in good standing so long as the student's department determines that the student is making satisfactory progress toward a terminal degree. The department and the graduate dean review the academic progress of each continuing graduate student annually.

If the Anthropology Department deems a student's work unsatisfactory, the student may be placed on academic notice. A student whose academic progress has been found unsatisfactory in two successive annual reviews will be subject to dismissal from the university.

The letter recommending academic notice for a student will state:

1. Reason why (failed X class etc.)
2. Steps that must be taken to restore satisfactory academic standing
3. The timeline for completion of the required work

The letter to the student will also state that the failure to meet any one of the requirements may result in dismissal. No action for dismissal is taken until and unless the department recommends dismissal.

A student who has completed 12 or more quarters of full-time work in the same graduate program without advancing to candidacy for the Ph.D. is not considered to be making satisfactory progress. In such cases, the student will be recommended for dismissal or placed on academic notice until advancement is achieved. A student advanced to candidacy for more than nine quarters who has yet to complete the Ph.D. is not considered to be making satisfactory academic progress. Consult the Graduate Student Handbook for more information about academic progress, academic notice, dismissal, and the appeal process.

Consult the Graduate Division’s Graduate Student Handbook for more information about academic progress, academic notice, dismissal, and the appeal process.

Grading Policy

Satisfactory/Unsatisfactory Grading

All graduate students in graduate or undergraduate courses will be graded Satisfactory (S), Unsatisfactory (U) or Incomplete (I) (Academic Senate 13.1.1). A grade of U requires immediate resolution with the course instructor and/or director of Graduate Studies or the student will be brought up for review before the entire department.

Incomplete Grades

The Anthropology Department does not allow Incompletes in the first year graduate Core Courses and strongly discourages the issuing of Incompletes in other graduate courses. We also recommend that graduate students in anthropology not request Oncomplete grades for courses taken outside the department.

We understand that an Incomplete may be appropriate in some instances, particularly in cases of serious medical and personal emergencies. In such cases, the department strongly urges all graduate students to submit the required coursework to the instructor before the end of the sixth week of instruction in the quarter following the issuing of an Incomplete grade. In any case, per University policy, if the coursework is not completed within one calendar year, the Incomplete grade will automatically revert to an Unsatisfactory (U) for Pass/Fail courses and a Fail (F) for letter graded courses.

Failure to complete coursework in a timely manner can severely hamper a student's progress toward the degree and will reflect unfavorably on his/her performance during scheduled periodic reviews. For example:

1.
The current status of Incomplete grades is a factor in reviewing a student's first year dossier. A favorable review and recommendation for continuance in the program by the first year review committee is conditional upon the timely completion of all outstanding coursework.

2.
No student is allowed to advance to candidacy with outstanding Incomplete grades on their transcript.

3.
Any student who allows an Incomplete grade to revert to a U or F is subject to immediate review by the department. Receiving a U or F in an anthropology course is considered potential grounds for dismissal from the program.

Repeating Graduate Courses

Students may repeat a course in which they earn a grade of U. Degree credit for a repeated course will be granted only once and the most recently earned grade will be used to determine whether a degree requirement has been met.

Annual Reviews

At the end of each academic year, graduate students are expected to meet with their advisors to discuss their future plans and progress. For each of the first three years of the program, students have special instructions for completing the end-of-year review (which usually occurs in May).

First-Year Review

First year faculty advisors are assigned by the graduate director in consultation with department faculty. There is no expectation that you will keep your first-year advisor as your primary advisor after the first year. Students who wish to change advisors may do so at any point after the first-year review. Students need to obtain email approval from their new advisor before notifying their old advisor of the change. Students should then list their new advisor on their second-year review form.

Before the end of the first year, in consultation with their first-year advisor, students are expected to establish a Preliminary Committee made up of the first-year advisor and one other Anthropology faculty member. The student will submit a statement or progress and portfolio of work to their committee in May, and then meet with their committee before the department meets as a whole to discuss the progress of all first-years. It is the student’s responsibility to establish their committee and ensure that materials are in on time for their first year review.

Portfolios

First-year students will be asked to submit to their Preliminary Committee:

1. A short (2-3 page) statement of progress and plans
2. A portfolio containing all written work done during the current academic year

The portfolio and statement are due to the student's advisor and other Committee member at least two weeks before the first-year review meeting at the end of the Spring quarter. This meeting allows the preliminary committee to provide feedback on the student’s first year work with recommendations moving forward. The statement of progress and plans should include:

- a discussion of intellectual progress made during the previous year (courses taken, grants applied for, qualifying exam (QE) requirements met, etc.);
- detailed plans for the summer and following academic year (with respect to courses, grant/fellowship applications and deadlines, fieldwork, study off-campus, expected date of QE, etc.);
- any plans for later study, research, and writing;
- a concrete plan and timetable for completion of the language requirement.

Continuation in the Program

The purpose of this process is to support and assist students to be ready to take their qualifying exam in the third year of study, in accordance with university requirements for satisfactory academic progress as described above.

Students are responsible for submitting their portfolios and yearly statements to their Preliminary Committee in a timely fashion at the end of the year.

After the first-year review meeting, the Preliminary Committee will share their feedback at a departmental faculty meeting. Based on the report by the Preliminary Committee, the faculty as a whole will vote to recommend:

1. Continuation in the program and award the M.A. upon completion of requirements
2. Continuation in the program and award the M.A. upon completion of requirements with conditions and actions for remediation

Students will be notified of their status following this faculty meeting.

Upon completion of the first-year review, students will coordinate with their committee to submit a summary evaluation and first-year review form to the graduate program coordinator. (This form can be found on the Anthropology Department website.)

Second-Year Review

Second-year students should complete the Second-Year Review Form in early spring quarter of the second year. (This form can be found on the Anthropology Department website.) In consultation with their advisor, students are expected to put together a QE committee (subject to change), detail their timeline to the Qualifying Exam, and make progress on the language requirement. Students may attach a detailed letter to the form explaining their progress to date, including courses taken, work completed to advance the dissertation project (including pre-dissertation fieldwork), and schedule for taking the Qualifying Exam in their third year.

Third-Year Review

Students are expected to pass their Qualifying Exam and advance to candidacy by the summer of their third year.

Third-year students who will not pass their Qualifying Exam by the end of their third year are required to write a detailed letter to their advisor explaining their progress to date, why they do not plan to take their Qualifying Exam by the end of the third year, and establishing a firm timeline to advance to candidacy.

Students who have passed their Qualifying Exam do not have to submit a report but should discuss their plans for the coming year with their advisor.

Independent Study

Learn more about incorporating independent study into coursework through degree requirements. To plan for and enroll in independent study, follow the steps below.

Step 1	Step 2	Step 3	Step 4
Student meets with faculty sponsor and agree to an outline of the proposed work to be completed before filling out the petition.	Log in to your UCSC Google account and access the Graduate Individual Studies Petition through the department web site, enter your name, select your faculty sponsor, and complete all fields.	Complete the form in DocuSign. Once the student has signed the form, it will be sent to the faculty sponsor to review and e-sign.	Student saves the completed form for their records and enrolls via MyUCSC in ANTH 297, 298, or 299 using the class number provided in DocuSign.

Intercampus Exchange

If students wish to take advantage of the educational opportunities available at another UC campus, students may become an intercampus exchange graduate student there for one or more quarters. Students may take courses on more than one campus of the university during the same quarter. (Please note that UC Berkeley and UC Merced are on a semester system; all other UCs are on a quarter system.) Students should refer to the Fees and Registration section of the UCSC Graduate Handbook for authoritative guidance on Intercampus Exchange and may find the Application for the Intercampus Exchange Program for Graduate Students on the Graduate Division web site.

Advancement to Candidacy

Anthropology Ph.D. students are expected to advance to candidacy by the end of their third year in the program in order to maintain satisfactory academic progress.

Course Requirements

Both the department and the university define the major requirements for each stage of study. The first year of the program is geared toward giving students a theoretical foundation so that they may begin to formulate ideas for a research project. All graduate students are expected to be in residence (on campus) during their first year in the program. At the end of the first year, students will submit a portfolio of substantive work to their first-year committee.

Archaeology Track Requirements

Students are expected to pass a first-year review and have advanced to Ph.D. candidacy by the end of their third year. In order to advance to candidacy in archaeology, students must complete:

Two Core Theory Courses

Must be completed during first year in the program.

ANTH 270A	Archaeology Graduate Core Course: History of Archaeological Theory	5
ANTH 270B	Current Directions in Archaeological Theory	5

Two Research Methods/Laboratory Courses

Student may substitute courses in another department with advisor approval.

Note: Lecture and lab combinations count as a single course.

ANTH 202A	Skeletal Biology	5
ANTH 280	Advanced Ceramic Analysis	5
ANTH 283	Introduction to Geographic Information Systems for Anthropology	5
ANTH 285	Osteology of Mammals, Birds, and Fish	5

Two Courses on the Archaeology of a Geographical,

Temporal, or Topical Area

Student may substitute courses in another department with advisor approval.

ANTH 273	Origins of Farming	5
ANTH 274	Origins of Complex Societies	5
ANTH 275	Tutorial in African Archaeology	5
ANTH 276A	Advanced Topics in North American Archaeology	5
ANTH 276B	Mesoamerican Archaeology	5
ANTH 276G	Archaeology of Colonial Borderlands	5
ANTH 287	Advanced Topics in Archaeology	5
ANTH 287A	Advanced Topics: Indigenous Archaeology	5
ANTH 287B	Advanced Topics: Archaeology in the Age of Big Data	5

Two Additional Graduate Seminars

Students may substitute a graduate seminar in cultural or biological anthropology or in another department with advisor approval. Tutorials that are taught in conjunction with undergraduate courses do not count toward this requirement.

ANTH 225	The Anthropology of Things: Sign, Gift, Commodity, Tool	5
ANTH 279	Feminism and Gender in Archaeology	5
ANTH 282	Household Archaeology	5

One Course in Grant Writing or Research Design

ANTH 228	Grant Writing	5
ANTH 272	Advanced Archaeological Research	5

Quantitative Methods Requirement

Students in the archaeology Ph.D. track must demonstrate competency in statistical or computational analysis techniques appropriate to their specific dissertation research projects and professional goals. Plans for gaining and demonstrating this competency should be developed as part of the first-year review for each student, in consultation with their advisor and first-year committee and with the approval of the department. This competency must be demonstrated and approved by the department prior to taking the qualifying exam and advancing to candidacy.

Two Laboratory Apprenticeships

ANTH 298	Advanced Laboratory Apprenticeship	5

Cultural Track Requirements

Students are expected to pass a first-year review and have advanced to Ph.D. candidacy by the end of their third year. In order to advance to candidacy in cultural anthropology, students must complete:

Core Courses

Must be completed in fall/winter of the first year in the program.*

ANTH 200A	Cultural Graduate Core Course	5
ANTH 200B	Cultural Graduate Core Course	5

* ANTH 252, Survey of Cultural Anthropology, is recommended if the student comes from a non-anthropological background.

Graduate Colloquium

All first-year cultural track students are expected to enroll and participate in ANTH 292, Graduate Colloquium, for all three quarters.

ANTH 292	Graduate Colloquium	2

Ethnographic Writing Requirement

This requirement may be completed by passing Ethnographic Practice (ANTH 280A) or, upon approval from the department, through an independent research project in which the student engages in research based on participant observation or other ethnographic methodology and in which the student adequately translates that research experience into a written text.

Three Additional Cultural Anthropology Graduate Seminars

Grant Writing (ANTH 228), Colloquia (ANTH 292), Independent Study (ANTH 297/ANTH 299), and tutorials do not count toward this requirement. Tutorials that are taught in conjunction with undergraduate courses do not count toward this requirement.

Note: Not all of these courses are offered each year.

ANTH 208C	Design Anthropology	5
ANTH 220	Cartographies of Culture	5
ANTH 224	Anthropology of Secularism	5
ANTH 229	Constructing Regions	5
ANTH 233	Politics of Nature	5
ANTH 235	Language and Culture	5
ANTH 238	Advanced Topics in Cultural Anthropology	5
ANTH 241	Social Justice	5
ANTH 247	Critical Perspectives on Nutrition	5
ANTH 248	Shadowy Dealings: Anthropology of Finance, Money, and Law	5
ANTH 249	Ecological Discourses	5
ANTH 253	Advanced Cultural Theory	5
ANTH 255	Regulating Religion/Sex	5
ANTH 259	Race in Theory and Ethnography	5
SOCY 268A	Science and Justice: Experiments in Collaboration	5
SOCY 268B	Science and Justice Research Seminar	5

ANTH 269	Global History and the Longue Duree	5

Biological Anthropology Track Requirements

Students are expected to pass a first-year review and have advanced to Ph.D. candidacy by the end of their third year. In order to advance to candidacy in biological anthropology, students must complete:

Core Course

Must be completed in Fall/Winter of first year in program.

ANTH 295A	Scientific Method: Biological Anthropology	5

Ecology and Evolutionary Theory Requirement

Students in the biological anthropology Ph.D. track must demonstrate competency in ecology and evolutionary theory appropriate to their specific dissertation research projects and professional goals. Plans for gaining and demonstrating this competency should be developed during the first quarter in the program, in consultation with their advisor. This competency must be demonstrated and approved by the department by the end of the first year.

One Advanced Anthropological Methods and Research Course

Students in the biological anthropology Ph.D. track must demonstrate competency in advanced methods in human skeletal biology, forensics and bioarchaeology, molecular analysis (genetics), or stable isotope analysis . Plans for gaining and demonstrating this competency should be developed during the first quarter in the program, in consultation with their advisor. This competency must be demonstrated and approved by the department by the end of the first year.

One Additional Advanced Methods and Research Course

Must be completed by the end of the second year. Student may substitute courses in another department with advisor approval.

One Graduate Seminar in Archaeology or Cultural Anthropology

Tutorials that are taught in conjunction with undergraduate courses do not count toward this requirement.

Must be completed by the end of the second year.

Quantitative or Computational Requirement

Students in the biological anthropology Ph.D. track must demonstrate competency in statistical or computational analysis techniques appropriate to their specific dissertation research projects and professional goals. Plans for gaining and demonstrating this competency should be developed as part of the first-year review for each student, in consultation with their advisor and first-year committee and with the approval of the department. This competency must be demonstrated and approved by the department prior to taking the qualifying examination and advancing to candidacy.

Nine Quarters of Advanced Reading in Biological Anthropology

Students are expected to enroll in ANTH 294R, Advanced Readings in Biological Anthropology, every quarter prior to advancing to candidacy.

ANTH 294R	Advanced Readings in Biological Anthropology	5

Two Laboratory Apprenticeships

Students are required to enroll in ANTH 298, Advanced Laboratory Apprenticeship, or equivalent in another department.

ANTH 298	Advanced Laboratory Apprenticeship	5

Six Quarters of Methods in Biological Anthropology

Students are expected to enroll in ANTH 216, Methods in Biological Anthropology, in every quarter prior to advancing to candidacy starting their second year.

ANTH 216	Methods in Biological Anthropology	5

Nine Quarters of Seminar Series

Students are required to attend at least 8 talks per quarter in the Anthropology Colloquia, Arch-BioAnth Lunch Series, EEB Seminar Series, or EPS Seminar Series.

Comprehensive Exam

This must be completed prior to the end of the second year. Students must demonstrate knowledge in Ecological and Evolutionary Theory, expertise in at least two subfields of Biological Anthropology, and sufficient background in either Archaeology or Cultural Anthropology, especially Medical or Environmental Anthropology. The exam format is a written essay and a two-hour oral exam.

Students may satisfy both the oral and written requirement with a manuscript (worthy of submission to a professional journal) based on a research project undertaken in the second year with advisor approval. They have to be first author of this manuscript in order to satisfy the requirement.

First-Year Review

First-year faculty advisors are assigned by the graduate director in consultation with department faculty. Students who wish to change advisors may do so at any point after the first-year review.

Before the end of the first year, in consultation with their first-year advisor, students are expected to establish a Preliminary Committee made up of the first-year advisor and one other anthropology senate faculty member. The student will submit a statement or progress and portfolio of work to their Preliminary Committee in early-May, and then meet with their Preliminary Committee before the department meets as a

whole to discuss the progress of all first-year students. It is the student's responsibility to establish their committee and ensure that materials are submitted on time for their first-year review.

The purpose of this process is to ensure students are prepared for their Qualifying Exam in the third year of study, in accordance with university requirements for satisfactory academic progress as described above.

After the first-year review meeting, the Preliminary Committee will share its feedback at a departmental faculty meeting. Based on the report by the Preliminary Committee, the faculty as a whole will vote to recommend:

1. Continuation in the program and award the M.A. upon completion of requirements
2. Continuation in the program and award the M.A. upon completion of requirements with conditions and actions for remediation
3. Terminal M.A. degree upon completion of 45 credits.

Master of Arts in Anthropology

After students have passed their first-year review and completed 45 credits of graduate study, they may apply for their Master of Arts in Anthropology (Plan II: Capstone).

Foreign Language Requirements

The foreign language requirement must be fulfilled before taking the qualifying examination. A qualifying examination cannot be scheduled until the requirement has been met.

It is the responsibility of each graduate student to work with their advisor to identify the language competencies necessary for fieldwork and scholarship and to initiate study toward meeting these needs. To meet the language requirement, competency in one language must be formally demonstrated. Each student's advisor will recommend how this requirement should be met, as well as what additional skills should be sought. Generally accepted ways of meeting the language requirement include:

- passing a standardized test at a predetermined level;
- taking and passing a translation examination administered by a UCSC language instructor or an outside assessor approved by the advisor. If necessary (i.e. for uncommon languages), a translation examination may be administered by a UCSC faculty member who is not a language instructor.
- taking and passing a series of language courses at a specified advanced level at UCSC or elsewhere, again, to be determined in consultation with the advisor.

In some cases, the language in which a relevant scholarly literature exists will be the logical language of examination. In other cases, the language in which fieldwork will be conducted will be the most logical language for examination.

In the case of non-native English speakers who plan to undertake research in their own native language, English can meet the foreign language requirement. In the case of English native speakers who plan to do research in their native language, the requirement should be met by another language relevant to the field research or scholarly resources.

In cases where a foreign language is not necessary for field research nor for scholarly work, and learning a foreign language would significantly delay progress to degree and/or conflict with time needed to learn other necessary technical skills, students may apply to the department for an Exemption to Policy for the foreign language requirement. (The exemption form may be found on the Anthropology Department website.)

Pre-Qualifying Requirements

Biological Anthropology Track students must present a seminar on proposed research.

Qualifying Examination

All anthropology graduate students are required to pass the Qualifying Exam (QE) to advance to candidacy and continue toward the doctoral degree.

Timing of the Exam

Students are required to take their QE by the end of their third year. A student’s second year review form should indicate in which quarter students expect to take the QE.

Students must be enrolled during the quarter in which the Qualifying Exam is scheduled. In cases of a summer QE, students do not need to be enrolled for summer courses so long as they were enrolled in the preceding spring quarter. However, faculty are not required to serve on Qualifying Exam committees during summer, when they are not in service.

See the graduate program coordinator to schedule a room and time for your exam. The Graduate Division mandates that students must submit their QE nomination form and schedule their exam time at least 30 days prior to the date of the examination. A student who does not take the QE by the end of the third year is required to submit an explanatory letter to their advisor requesting a deferral. The student should send duplicate copies to the graduate director and graduate coordinator. This letter should clearly state the student's projected schedule for taking the exam. The department will review the request and send a written response to the student with the department's decision. Please keep in mind that deferrals will be granted on a case-by-case basis. A student who does not pass the QE by the end of the fourth year may be asked to leave the program. At the end of the fourth year, the Financial Aid office will automatically put a hold on the loans and fellowships of any student who has not advanced to candidacy.

Note: Students may not schedule the QE until any Incompletes have been removed from their academic record.

Qualifying Exam Committee

In all cases, the QE Committee should be formed before the end of the fall quarter of the third year or in the quarter before taking the QE, whichever comes first.

The Graduate Division sets the general structure of the QE Committee based on Academic Senate Policy: https://senate.ucsc.edu/manual/santacruz-division-manual/part-three-appendices/appendix-d/index.html. The QE Committee should be made up of at least three faculty members from the department–including a QE committee chair and the primary advisor–and one outside member. The Graduate Division will have to approve committees with two departmental faculty members and two external members. The QE committee chair (who will write the QE report for the Graduate Division) cannot be the student's primary advisor (who will also eventually serve as dissertation advisor/chair). Both the outside member of the QE committee and the QE chair must be tenured.

The outside member may be a UCSC faculty from another department/discipline, or an anthropology faculty member from another campus. (**Note:** Travel expenses of QE Committee members are not covered by either the Graduate Division or the Anthropology Department, and students are responsible for travel expenses and lodging of committee members from other campuses. It is possible for the outside committee member to join the QE exam via Zoom.)

Members of the QE Committee are chosen by the student in consultation with their faculty advisor and already appointed committee members, then approved by the department and officially appointed by the graduate dean.

In order to take the QE, the student must submit a Nomination Form to the graduate program coordinator confirming the composition of the QE Committee a minimum of 30 days prior to the exam date.

Structure of the Exam

The Qualifying Exam consists of two parts: a written file and a three-hour oral examination with the QE Committee during which the student presents and discusses the file.

1. The student must submit the written file to the committee six weeks prior to the date of the exam (for archaeology students, this file must have already been signed off by the faculty advisor and one other committee member).

The advisor will meet with the student to transmit comments two weeks later. At this point, a decision is made as to whether the student can proceed with the exam and, if so, the date of the exam will be confirmed with the Graduate Division.

The student then has a further two weeks to revise the QE materials before final delivery of the file to the committee two weeks prior to the exam date.

QE File

For cultural track students, the file comprises:

1. A dissertation research prospectus that is theoretically focused and also includes a methods section (approximately 18-25 pages, double-spaced, actual length to be determined by QE committee).
2. Two field statements on two anthropological topics selected and developed in consultation with the QE committee. Field statements typically review fields of literature that have (a) an area/regional focus and (b) a thematic/theoretical focus (approximately 18-25 pages, double-spaced, each; actual length to be determined by QE committee).

For archaeology track students, the file comprises:

1. A theoretically focused dissertation research prospectus (approximately 18-25 pages, double-spaced, actual length to be determined by the QE Committee).
2. Three field statements reviewing literature of 18-25 pages each on (a) a geographic cultural area, (b) a set of research methods, and (c) a theoretical tradition or theme

For biological anthropology track students, the file comprises:

1. A theoretically focused dissertation research prospectus (approx. 18-25 pages, double-spaced, actual length to be determined by the QE Committee).

Oral Examination

The oral examination is a three-hour meeting in which the student presents and defends their work to the committee. Although the committee will decide on the form of the oral exam, it typically begins with a presentation by the student outlining the proposed research and elaborating on critical theoretical and empirical aspects of the project. The meeting will then normally move to a detailed discussion of the student's file.

Toward the end of the oral exam, the student will be asked to leave the room. At this point the committee will review the entire QE and decide on one of three actions: Pass, Conditional Pass (requiring revisions to be submitted according to a specified timetable), and No Pass/Fail (leading to the student's termination in the program). **Note:** Students who earn a Conditional Pass will not formally advance to candidacy until acceptable revisions are submitted.

The QE Exam is open to all faculty members. Students are encouraged to attend, but may do so only with the permission of the examinee.

Report on Qualifying Exam

Following the examination, the QE committee chair will write a formal report on the QE for the Graduate Division, summarizing the student's performance in written and oral portions of the exam and outlining any recommendations

from the committee. The student will receive a copy of the report.

Students may find Report on Qualifying Examination Forms here

Following the exam and the completion of any revisions, the student is required to submit a copy of their QE file to the graduate program coordinator.

Post QE

Once students have submitted the Report on the Qualifying Exam and Nominations for Dissertation Committee to the graduate program coordinator, students will be Advanced to Candidacy during the following quarter for which they are registered. An "Advancement to Candidacy fee" will be applied to students' accounts.

The Division of Graduate Studies requires that students be registered for at least one quarter after the Advancement to Candidacy and prior to awarding the degree. It does not mean the student has to physically be at UCSC.

Formation of Dissertation Committee

The Graduate Division requires that students who have passed their Qualifying Exams form their Dissertation Reading Committee before they are considered Advanced to Candidacy.

The Dissertation Committee must include a minimum of three faculty members, one of whom must be designated as the dissertation advisor. Normally these readers are selected from the QE Committee, but this is not required.

At least two of these readers must be members of the UCSC Anthropology Department. A majority of committee members must be part of the UCSC Academic Senate. It is highly recommended that you have at least one member from another campus.

Students must submit the Nominations for Dissertation Committee Members Form after passing the Qualifying Exam. Students may find the Nominations for Dissertation Committee Members Form here.

Students have the option of changing their dissertation committee composition at a later date. To make changes to the dissertation committee, students must simply resubmit the Nominations for Dissertation Reading Committee form to the graduate program coordinator.

Post-Qualifying Requirements

Biological Anthropology Track students must complete two quarters as a teaching assistant. Archaeology and Cultural Anthropology Track students must complete one quarter as a teaching assistant. This requirement may be satisfied pre- or post-qualifying exam.

Dissertation

Ph.D. candidates must prepare and submit a dissertation that is based on original research and meets the requirements of their dissertation reading committee.

Students are required to conduct research, typically field/lab work and/or archival work, after Advancement to Candidacy. Students should enroll in at least 5 credits of dissertation research (ANTH 299A) per quarter with their dissertation advisor. If a student's dissertation advisor is on leave, the student is responsible for arranging for another member of the faculty to supervise the dissertation research during that quarter. The graduate program coordinator will provide the class number and permission code.

Once students Advance to Candidacy, they are not required to register as full-time students. However, students who are employed as a TA, GSR, or teaching fellow must register as full-time students. Students who have Advanced to Candidacy need only to register for 5 credits per quarter to be considered full-time.

Please see the graduate program coordinator if you are unsure of your status.

Dissertation Defense

Applying for Graduation

The Application for the Doctor of Philosophy Degree form must be completed with all necessary signatures obtained and submitted to the Division of Graduate Studies. Application deadlines are posted in the Academic and Administrative Calendar.

Students may request an extension for submission of their dissertation until June 30 with approval of their advisor. To request an extension from the Graduate Division, contact the Anthropology Graduate Program coordinator.

If the student does not complete all the requirements for the degree, including submission of the dissertation by the deadline date, a new application form must be filed for the quarter in which the student will complete the requirements.

Summer Dissertation Submission

Students who are registered for spring quarter or on approved leave of absence may submit their dissertation to the Division of Graduate Studies during the summer. Students who plan on submitting their dissertation during the summer need not register for Summer Session or apply for filing fee status unless they were not enrolled or on approved leave of absence in spring quarter; however, students must submit an Application for the Doctor of Philosophy.

ANTHROPOLOGY DESIGNATED EMPHASIS

Introduction

A designated emphasis (DE) denotes a broadening of training that comes from adding course work, training, and/or research work from an external department, degree-granting program, or cross-departmental grouping of faculty who together offer a designated emphasis.

Requirements

Committee Composition and Departmental Approvals

One member of the student's qualifying examination committee must be Senate Faculty appointed in the Department of Anthropology. In addition, Senate Faculty appointed in the Department of Anthropology must serve on the student's doctoral thesis committee.

Prospective students must complete a form to declare their intention to pursue the designated emphasis. Please contact the Anthropology Graduate Program Coordinator (adgc@ucsc.edu) for more information.

Course Requirements

The student must take four graduate courses in the Department of Anthropology. An independent study with a faculty member of the Anthropology Department may count as only one of the four courses. Grant Writing (ANTH 228) may not be counted toward these requirements. Tutorials that are taught in conjunction with undergraduate courses do not count toward these requirements.

Writing, Research and/or Teaching Requirements

At the time of the qualifying examination, the student must submit to the Anthropology Department a full statement, up to five pages, summarizing the pre-qualifying examination work done in anthropology (courses, papers, research projects, independent studies) and characterizing how that work and the dissertation to follow draw from and contribute to anthropological and ethnographic inquiry. The dissertation research will normally include a fieldwork component.

In the quarter prior to announcing candidacy for graduation, the student must contact the graduate program coordinator to review their progress and confirm that all course and committee requirements have been met for the designated emphasis. In the quarter in which the student announces candidacy for graduation, the faculty member from the anthropology department serving on the student's doctoral thesis committee will evaluate the depth of engagement with anthropology displayed in the doctoral thesis and decide whether the thesis fulfills the requirement to contribute to anthropological and ethnographic inquiry.

Academic Progress

[Optional Catchall]

ANTHROPOLOGY COURSE LIST

Anthropology Course Lists

Course Lists

Anthropological Theory Courses

Note: Each course may only be used to satisfy a single major requirement. Courses cannot be double-counted for requirements within the anthropology major. Students may not substitute coursework from another program or institution for core requirements.

ANTH 100	History and Theory of Biological Anthropology	5
ANTH 150	Communicating Anthropology	5
ANTH 152	Survey of Cultural Anthropological Theory	5
ANTH 170	History of Archaeological Theory	5

Sociocultural Anthropology Courses

Note: Each course may only be used to satisfy a single major requirement. Courses cannot be double-counted for requirements within the anthropology major. Students may not substitute coursework from another program or institution for core requirements. Not all of these courses are offered each year.

ANTH 119	Indigenous Visual Culture	5
ANTH 125	Magic, Science, and Religion	5
ANTH 126	Contraband: Shadow Economies and the Law	5
ANTH 129	Beyond Borders: Other Globalizations and Histories of Interconnection	5
ANTH 131	Gender in Cross-Cultural Context	5
ANTH 132	Food, Culture, and Justice in Israel/Palestine	5
ANTH 134	Medical Anthropology: An Introduction	5
ANTH 135A	Cities	5
ANTH 136	The Biology of Everyday Life	5
ANTH 137	Consuming Culture	5
ANTH 138	Political Anthropology	5

PROGRAMS OFFERED

Community Studies B.A. (p. 674)

Founded in 1969, community studies is the oldest interdisciplinary academic program at the University of California, Santa Cruz. The hallmarks of community studies are its focus on social justice and its distinctive pedagogy integrating classroom learning and extended field study. Community studies was a national pioneer in experiential

education and its curricular model has been emulated widely. Community studies also was a pioneer in addressing principles of social justice, specifically inequities arising from race, class and gender dynamics in society at large, and in critically engaging with strategies for achieving social change.

Community studies alumni pursue a wide variety of professional careers in health care, K-12 education, public policy, social work, urban planning, higher education, and law. According to a 2005 alumni survey, more than 100 alumni have founded non-profit social justice organizations and many more have served on non-profit boards and/or in executive director positions. The phrase “we are everywhere” is an apt description of the myriad contributions community studies alumni make to society through their work and in their everyday lives.

COMMUNITY STUDIES B.A.

Information and Policies

Introduction

Community studies is an undergraduate B.A.-granting program in which students and faculty seek to understand how social change happens in theory and practice. Founded in 1969, community studies is only available at UC Santa Cruz. But it has earned a global reputation for its critical approach to understanding social justice and community-based experiential learning.
The heart of community studies is a six-month field study in which students are embedded within and work with social change organizations. Students work closely with faculty to choose their field study site, to navigate the experience of an internship at the site and to finally analyze their organization’s approaches and strategies for achieving social justice. Community studies students have worked with organizations dedicated to labor and economic justice, feminist and queer liberation, racial justice, Indigenous sovereignty, food justice, climate justice, abolition and opposition to war, homelessness, and domestic violence. They are supported to find an organization that speaks to their own personal passions. Though their focus is on a single site, community studies students develop ways to understand how our overlapping social and ecological injustices and crises are deeply interconnected. Following their field study, each student draws from the critical social theory in our courses to craft an independent research paper and poster, which they present, analyzing their experiences.

On campus, students complete a core curriculum examining the histories and contemporary dynamics of the social movements, the nonprofit sector organizations, and public policies aimed at affording people greater capacity to live flourishing lives. The core curriculum works in tandem with a wide variety of topical electives, to give students a deeper understanding of the particular conditions their field site seeks to address.

Students graduate from community studies having engaged with the world through a mix of critical thinking and analysis and direct experience interning with a social change organization. Through our distinct curricular design, students develop a mix of intellectual, professional and social/emotional skills that prepare them for a wide variety of careers in the nonprofit, human services, education, policy and research fields, as well as the theoretically informed vision and practical wisdom necessary to help co-create a liberated, fair, democratic, and ecologically sustainable planet.

Program Learning Outcomes

Community studies identifies eight Program Learning Outcomes (PLOs) that capture exciting cross currents within the major. The PLOs combine classroom and experiential learning related to the social justice domains of health equity and economic justice. They also enumerate expectations for student achievement in social science research and writing and communication skills within a diverse society.

Critical Analysis

Students earning a B.A. in community studies will be able to:

1. demonstrate deep knowledge of the history, causes, and contemporary manifestations of specific social justice issues related to health and economic inequality;
2. deconstruct institutional power residing in private enterprise, government, the media, and/or the non--profit sector;
3. analyze how communities attempt to overcome problems associated with inequality, cultural stigma, prejudice, and discrimination;
4. articulate research questions, methods, and findings appropriate to social science inquiry; and
5. demonstrate analytical writing ability that effectively integrates theoretical and experiential knowledge about social justice.

Community Engagement

Students earning a B.A. in community studies will be able to:

1. identify, analyze, and help to construct strategies for social change through participation in the social justice work of an organization;
2. exhibit ethnographic observation skills by maintaining a regular record of detailed field notes;
3. demonstrate effective communication with the diverse constituencies involved in social justice work.

Academic Advising for the Program

Rachel Carson College Academic Building
200 Heller Dr.
Santa Cruz, CA 95064-1011
(831) 459-2371

To receive advising for the community studies major, students should schedule an appointment via slug success, email or call the program adviser. Full contact information is available on

the program webpage. Our office is located on the first floor of the Rachel Carson College Academic Building in room 128. The office telephone number is 831-459-2371. Students are encouraged to meet early on with the program adviser to develop an academic plan enabling them to take full advantage of the many learning opportunities available at UC Santa Cruz.

Transfer students should also consult the Transfer Information and Policy section.

Getting Started in the Major: Frosh

Students interested in pursuing the community studies major should communicate with the program adviser to learn about the program's distinctive curriculum and requirements. This is a moderately course-intensive sequential program, and students who intend to pursue this major should begin taking classes for the major in their first or second year at UC Santa Cruz. Completing lower-division general education courses that build an understanding of and engagement with social justice issues is a great way to satisfy university requirements while building a solid foundation for the upper-division coursework required in the community studies major. The sequence of required courses for the major is:

Lower-Division Requirements:

- CMMU 10 Introduction to Community Activism

Upper-Division Requirements:

- CMMU 101 Communities, Social Movements, and the Third Sector
- CMMU 102 Preparation for Field Studies
- Three upper-division topical courses (see major requirements) from the approved list. Completion of the writing requirements before taking the first upper-division topical is strongly encouraged.

Field Placement:

- CMMU 105A Field Study
- CMMU 105B Field Study
- CMMU 105C Field Study
- CMMU 107 Analysis of Field Materials

Transfer students should consult the Transfer Information and Policy section for specific recommendations to prepare for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Prospective students are encouraged to complete the Intersegmental General Education Transfer Curriculum (IGETC) or to complete all UC Santa Cruz general education requirements before matriculation. The community studies program can easily accommodate students who transfer to UCSC for the fall quarter.

Transfer students who plan to major in community studies will also find it useful to obtain a background in politics, sociology, psychology, anthropology, or community action and service. Prior to their first quarter at UC Santa Cruz, transfer students should meet with the program advisor to prepare a program of study. Once on campus, they should meet with the community studies program adviser to discuss the focus of their academic and field study plans.

Getting Started in the Major: Transfer Students

Transfer students are strongly encouraged to participate in the campus orientation program and connect with the community studies program adviser to develop an academic plan prior to their fall course enrollment.

All the requirements above also apply to transfer students**.** Students must successfully complete both **CMMU 10**, Introduction to Community Activism (offered only in the summer and fall quarters) and one topical course (see the Community Studies website). This should be done in either Summer Edge or during their first fall term in order to declare the major by the transfer student university deadline. Major qualification courses must be taken for a letter grade. Satisfactory completion is defined by a grade of C or better in both of these major qualifying courses.

As part of the declaration process, transfer students meet with the program director and/or staff adviser to review their academic plan for the major, including a discussion of field study possibilities and appropriate courses to meet topical requirements. Students must submit their approved academic plan and declaration petition to the community studies staff adviser.

Winter transfers, like all community studies majors, are required to complete CMMU 10. However, this course is only offered in the summer and fall. Students may petition for articulation of equivalent coursework.

Significant changes to the student's academic plan must be approved by the program director.

Major Qualification Policy and Declaration Process

Major Qualification

Petition to declare your major as soon as you have met qualification requirements and/or reach your declaration deadline quarter, whichever comes first. Students qualify to declare the community studies major by satisfactorily completing CMMU 10, Introduction to Community Activism, and at least one upper-division topical course from the approved list of courses. Major qualification courses must be taken for a letter grade. Satisfactory completion is defined by a grade of C or better in both major qualifying courses. Students must declare prior to enrolling in CMMU 102, Preparation for Field Study.

Students can file a petition to declare the major while still enrolled in major qualification courses if they are approaching their campus declaration deadline (i.e., in their sixth quarter, if admitted as frosh).

Transfer students should also consult the Transfer and Information Policy Section.

Appeal Process

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter addressed to the community studies program director within 15 days from the date of notification. Appeal letters should be submitted via email to the community studies program adviser. Within 15 days of receipt of the appeal, the program will notify the student and college of the decision.

How to Declare a Major

As part of the declaration process, students meet with the program director and/or staff adviser to review their academic plan for the major, including discussion of field study possibilities and appropriate courses to meet topical requirements. Students must submit their approved academic plan and declaration petition to the community studies staff adviser. Significant changes to the student's academic plan must be approved by the program director.

Letter Grade Policy

All courses for the major must be taken for a letter grade. Satisfactory completion of all major course requirements (core curriculum and topical courses) is defined by a grade of C or higher.

[Optional Catchall]

Course Substitution Policy

Double Majors and Major/Minor Combinations Policy

Many students combine community studies with another major. Students wishing to pursue community studies and a second major (i.e., "double major") should consult with the program adviser as early as possible to plan their course work to satisfy all their degree requirements.

Community Studies does not offer a minor.

Study Abroad

Participation in the Education Abroad Program (EAP) and other off-campus programs is strongly encouraged but requires advanced planning. Students considering EAP should schedule a meeting with the community studies adviser to determine the best quarter(s) for participation in such programs. Students may petition to have EAP coursework satisfy one (1) of their topical courses for the major if the EAP course work clearly relates to the student's academic plan in the major. Petitions will be evaluated on a case by case basis. Students are encouraged to learn more about study abroad and other opportunities on UC Santa Cruz's Global Learning website.

Honors

Honors in the community studies major are awarded to graduating seniors whose performance, including coursework, field study, and the senior capstone, is judged by a faculty committee to have achieved excellence. Highest honors in the major are reserved for students with consistently outstanding academic performance in all areas.

[Optional Catchall]

Requirements and Planners

Course Requirements

Community studies majors are required to take a total of 11 courses (one lower-division course in preparation for the major; seven upper-division core classes, two of which are 15 credits each; and three topical classes). In addition, they must successfully complete the senior capstone prior to graduation.

Lower-Division Courses

Students are advised to complete CMMU 10 as early as possible. The course is only offered in the summer and fall quarters and is one of two required courses to declare the major.

CMMU 10	Introduction to Community Activism	5

Upper-Division Courses

Community Studies core curriculum courses follow a sequential pattern and are only offered during specific academic quarters. Therefore it is very important to develop an academic plan as early as possible that takes the core curriculum sequence into account.

In addition to the core curriculum, students must successfully complete three topical courses to develop expertise in specific areas. Students are required to take all three topical courses prior to their field study (CMMU 105, CMMU 105B, and CMMU 105C, full-time Field Study, 15 credits per quarter, completed in the summer and fall)

CMMU 101	Communities, Social Movements, and the Third Sector	5
CMMU 100	Preparation for Field Studies	5
CMMU 105A	Field Study	5
CMMU 105B	Field Study	5
CMMU 105C	Field Study	5
CMMU 107	Analysis of Field Materials	5

Topical Courses

Students must complete three upper-division courses on topics related to health equity, economic justice, or other fields relevant to community studies from the available approved courses. The program director also may approve other courses as appropriate. Topical courses are an essential component of the community studies major because they help define the focus of students’ overall academic plan and their work on full-time Field Study. The topical courses also permit students to work across academic disciplines by taking courses from community studies affiliate faculty. Note that not all topical

courses are offered every academic year. Check the program website for current academic year offerings.

Topical courses for the major must be taken for a letter grade and satisfactory completion of the topical courses is defined by a grade of C or higher. All three topical courses must be completed before a student begins full-time field study (CMMU 105A-B-C).

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division DC requirement. The community studies program’s model of experiential pedagogy relies heavily on writing

instruction to develop students' analytical, reflexive, and communication skills. Although students in the major develop disciplinary writing skills throughout the core curriculum, they fulfill the DC requirement with two courses:

CMMU 100	Preparation for Field Studies	5
CMMU 107	Analysis of Field Materials	5

Comprehensive Requirement

Senior Capstone Requirement

In addition to the full-time field study, another distinctive feature of the major is the emphasis placed on the capstone. Each student must fulfill this requirement whether through a Capstone Analytic Essay, a senior thesis, or a student-directed seminar. For a thesis or student-directed seminar, the student must work directly with a faculty adviser.

Capstone Analytic Essay

All students complete a Capstone Analytic Essay that incorporates field study observations and contextualizes their findings historically and theoretically. The minimum length is 25 pages, plus bibliography. The Capstone Analytic Essay is completed entirely in CMMU 107 Analysis of Field Materials.

CMMU 107	Analysis of Field Materials	5

Senior Thesis

Outstanding students may choose to complete a senior thesis, which is comprised of field-study observations, historical and theoretical contextualizations of the field study, and deeper analysis of the social justice issues and histories at the heart of the field study. The thesis also involves post-field-study research; typical length is 40–50 pages, including bibliography. The Capstone Analytic Essay completed during CMMU 107 will become the foundation for the thesis, whether as a template to be elaborated or as one or more chapters of the completed thesis. Students electing to write a senior thesis must have a faculty thesis adviser and under direction of the adviser, may enroll in the following courses for variable units in order to complete the thesis.

CMMU 195A	Senior Thesis	5
CMMU 195B	Senior Thesis	5
CMMU 195C	Senior Thesis	5

Student-Directed Seminar (SDS)

The SDS capstone option is reserved for exceptional students with a clear vision of a unique lower-division course they would like to offer other UC Santa Cruz students. Under the direction of a faculty adviser, the student develops and teaches a CMMU 42 course related to the student's field study and academic coursework and submits a seminar completion report. Student-directed seminars required considerable advance planning; a proposal for the SDS must be completed before beginning the field study, i.e., a full year before the seminar would be offered. All proposed SDS courses must be reviewed and approved by the campus Academic Senate's Committee on Courses of Instruction.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Suggested Major Planning Table

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	CMMU 10 College 1	WRIT 1/WRIT 1E (if needed)		
2nd (soph)	Topical course 1 WRIT 2*		Topical course 2	
3rd (junior)	Topical course 3	CMMU 101	CMMU 102 DC REQ part 1	CMMU 105 (15 credits)
4th (senior)	CMMU 105 (15 credits)	CMMU 107 DC REQ part 2 COMP REQ		

* WRIT 2 should be taken in or before spring quarter of the second year.

If CMMU 10 is not taken in the fall of the first year, it can be taken one year later. Likewise, the topical courses need not be taken in the quarters indicated as long as they are completed before CMMU 105. *Students in their third year can still begin and complete the major as shown in the sample transfer planner (below).* In addition to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education and degree requirements.

Sample Transfer Planner

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	CMMU 10	CMMU 101	CMMU 102	CMMU 105 (15 credits)
	Topical course 1	Topical course 2	DC REQ part 1	
			Topical course 3	
4th (senior)	CMMU 105 (15 credits)	CMMU 107

Bachelor's/Master's Contiguous Pathway in Quantitative Economics and Finance (p. 712)

Economics Ph.D. (p. 712)

OTHER PROGRAMS OF INTEREST

Environmental Studies/Economics B.A.

An understanding of economics is a vital component of a liberal arts education and a necessity for anyone interested in how the economic system actually works. Subject areas include business, environmental policy, economic development, immigration, educational reform, international competitiveness and trade, economic inequality, and transformations in the global economy.

The programs offered by the UC Santa Cruz Economics Department are designed to acquaint students with a broad range of economic issues and with the tools economists use.

UNDERGRADUATE PROGRAM

The economics curriculum begins at the introductory level; no specific high school preparation is required. All economics majors study a substantial core of economic theory and mathematical and statistical methods, and then choose among a wide variety of upper-division electives.

Economics majors may combine their upper-division elective choices in a variety of ways to achieve specialization in a number of possible areas, including environmental economics, public policy, political economy, international economics, economic development, and quantitative methods.

GRADUATE PROGRAM

The Department of Economics offers programs leading to the Ph.D. degree in economics and M.S. degree in quantitative economics and finance.

The Ph.D. program in economics provides students with training in modern microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance and international trade and options to pursue specializations in economic development, monetary economics, applied microeconomics, experimental economics and other areas. The core emphasis of the program is on

international trade and finance, and the program offers more intensive course work in these areas, as well as greater faculty depth in various aspects of international economics, than do traditional Ph.D. programs in economics that offer international economics as a single subfield. However, the department is also home to a large number of internationally recognized faculty whose work is outside of international and who regularly supervise Ph.D. students. Graduates of the program have conducted research on a wide variety of topics; examples include monetary economics, experimental economics, environmental economics, and economic growth and development as well as international economics.

Past graduates of the Ph.D. program have gone on to successful careers in the academic and research sectors with placements at a diverse range of companies and institutions, including Central Banks, Federal Reserve Board of Governors, Facebook, Microsoft, Amazon, UBER, Middlebury College, Occidental College, IMPAQ International, California State University, University of Wisconsin, Purdue University, Bank of International Settlements and many more.

The M.S. program in quantitative economics and finance is designed for students who wish to supplement their undergraduate work in economics with analytical graduate training that prepares them for careers in business, international and domestic banking, consulting firms, government, and nonprofit organizations. The program combines theory with meaningful applications that students are likely to face in their professional careers. The program is more practical than a typical M.A. program and provides more training in economics and statistics than most MBA programs.

Past graduates of this program have gone on to successful careers in the private and public sectors with placements at a diverse range of companies and institutions, including ADM Associates, Inc., Anderson Tax, SoFi, Cisco Systems, Seagate Technology, Google, Sony Computer Entertainment, Plantronics, Wells Fargo, Securities and Exchange Commission, all of the big four accounting firms, McKesson Corp., Pepsi Corp., Visa, Square Trade, the California Franchise Tax Board, Guardian News (UK), Blue Cross, the World Bank, Stanford University, and the Bank of Japan. Other graduates have gone on to earn Ph.D.s in economics.

BUSINESS MANAGEMENT ECONOMICS B.A.

Information and Policies

Introduction

The business management economics major provides students who are interested in careers in business or management with a foundation in economics and a selection of applied fields related to business management. This course of study prepares students for entrance into the business world or admission to graduate programs—either the master's program in applied economics and finance at UCSC or graduate programs in business and management at other universities.

The program provides a business and management education embedded within a broader economics and liberal arts context and is closely related to the economics and global economics majors and the technology and information management major. The department also offers a series of accounting courses that prepare students interested in certified public accountant (CPA) licensure. Students in the business management economics major have the option of adding an accounting concentration designation on their transcripts, provided they meet the curricular criteria. Electing to complete the accounting course sequence will prepare students for the Uniform Certified Public Accountants' Exam and the credits will count toward exam eligibility. It will assist students in documenting their concrete expertise in accounting and thus help them compete for entry- level accounting positions in industry and public accounting as well as secure internship opportunities. For the concentration the eight (8) required courses include: ECON 110: Managerial Cost Accounting and Control, ECON 111A: Intermediate Accounting I, ECON 111B: Intermediate Accounting II, ECON 111C: Intermediate Accounting III, ECON 112: Audit, ECON 116: Advanced Topics in Accounting and Ethics, ECON 117A: Tax Factors for Individuals, and ECON 117B: Tax Factors for Business. Students electing the accounting concentration may also reduce their computer literacy requirements by one course (from two to one).

This major has several important elements. First, it combines the strong analytic approach of economics with the technical aspects of management. Second, it recognizes that computing is intrinsic to business and is an essential skill for those who wish to enter this field. Students in this major gain knowledge about using computing as a tool of analysis for economic, statistical, and financial data. Third, the major offers field placements (arranged with the economics advisors) which provide an excellent way to apply students' academic knowledge of economics, business, and management to issues and problems in the real world; they provide marketable skills as well as important job contacts.

Students who are committed to the major early in their academic career should plan to complete ECON 1, ECON 2, ECON 10A, ECON 10B, AM 11A, AM 11B, STAT 17 and STAT 17L and preferably ECON 100A, ECON 100B, and ECON 113 no later than the end of their sophomore year.

Program Learning Outcomes

Program learning outcomes for economics, economics and mathematics, business management economics, and global economics majors:

Critical Thinking Skills: Students are expected to be able to apply economic analysis to everyday problems in real world situations, to understand current events and evaluate specific policy proposals, and to evaluate the role played by assumptions in arguments that reach different conclusions to a specific economic or policy problem.

Quantitative Reasoning Skills: Students are expected to understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical

methodology, interpret statistical results, and conduct appropriate statistical analysis of data.

Problem-Solving Skills: Students are expected to be able to solve problems that have clear solutions and to address problems that do not have clear answers and explain conditions under which these solutions may be correct.

Specialized Knowledge and Application of Skills: Students are expected to develop critical and quantitative thinking skills specific to business and accounting.

Communication Skills: Students are expected to be able to communicate effectively in written, oral, and graphical form about specific issues, and to formulate well-organized written arguments that state assumptions and hypotheses supported by evidence.

Academic Advising for the Program

The Economics Department office is located at 401 Engineering 2. There are four staff undergraduate advisors, peer advisors (except summer), a field study coordinator, as well as a faculty director for each of the Economics Department's undergraduate programs. Our faculty, staff advisors and peer advisors play an important role in advising on all aspects of the major and assisting you to maximize your educational opportunities. Please check the department website for more information about drop-in hours.

Getting Started in the Major: Frosh

The economics curriculum begins at the introductory level: no specific high school preparation is required.

This is a course-intensive and sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

All majors study a substantial core of economic theory and statistical methods and they then choose among a wide variety of subfields.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

One of the following:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Plus both of the following:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Getting Started in the Major: Transfer Students

The department requests that new transfer students send unofficial transcripts of any previously completed coursework to econ_ugrad_coor@ucsc.edu. For coursework completed outside of a California community college submitting course syllabi for articulation purposes is required. The advisors will then be able to make course recommendations for fall quarter or summer session courses prior to the first fall quarter.

All transfer students must complete the three-course senior comprehensive requirement (ECON 100A, ECON 100B, ECON 113) and the Disciplinary Communication (DC) requirement (ECON 104 or ECON 197) at UC Santa Cruz. Business management economics majors must take at least three of their upper-division economics electives at UCSC. Courses taken for credit elsewhere may not be repeated for credit here.

Students who were admitted under a different proposed major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Admission to the major is not guaranteed.

Major Qualification Policy and Declaration Process

Major Qualification

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics.

Students must complete three courses, with combined GPA of 2.8 or higher, to qualify for entry to the business management economics major:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

And one of the following calculus courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Appeal Process

Students who have a grade point average (GPA) lower than 2.8 in ECON 1, ECON 2, and the calculus course are not eligible to declare an economics major. Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. The appeal letter must be filed no later than the first quarter of their junior year. Please check

the "Appeals" area on the department web site for further information on declaring a major or appealing ineligibility and deadlines.

How to Declare a Major

Students can initiate the major declaration process by completing the Petition for Major/Minor Declaration and the Academic Planning forms and by supplying evidence of their grades in the three pre-major courses. Candidates must meet major qualifications listed above under "Major Qualification" prior to declaring the major.

Declaration sessions are mandatory for those seeking to declare the major/minor. If you cannot attend a workshop, you must meet with an economics peer advisor first before obtaining signatures from a staff advisor. Workshop schedules and drop-in advising hours are available online, on our bulletin board outside the office, and in the department office. All students are advised to bring verification of their grades, which can be printed off the student portal, to the declaration of major advising session. Students who do not bring in verification of their grades could have the approval of their petition for major declaration delayed by up to two working days.

Letter Grade Policy

All classes included for major qualification determination must be taken for a letter grade. If students have not taken a letter grade, they must appeal by submitting a letter to the Economics Department.

The Economics Department allows classes toward major requirements taken for the Pass/No Pass (P/NP) grade notification. We recommend no more than two courses in the major be taken P/NP. Overall no more than 25 percent of a student's UC Santa Cruz classes can be taken P/NP.

[Optional Catchall]

Course Substitution Policy

For courses not already articulated through assist.org, students must present their transfer credit summary (available on the student portal) and course syllabi or descriptions to an Economics Department advisor. The department approves courses applicable for economics prerequisites and major requirements. The course substitution form can be found on the department website under "Forms for students".

Double Majors and Major/Minor Combinations Policy

Study Abroad

UC Education Abroad Program (UCEAP) is the University of California's official study abroad program and a global leader in international education for over 50 years. All the benefits of home—UC credit, grades, and financial aid—travel with you. Approximately 600 UC Santa Cruz students study abroad on UCEAP every year.

Students can petition UCEAP courses to count toward their major or minor requirements. In addition, there are scholarships available and financial aid can be applied to UCEAP programs. UCEAP provides opportunities in:

- 46 countries around the world
- 420 summer quarter, semester or yearlong programs
- Internships, volunteer work, and research programs

Economics at the Autonomous University of Barcelona--Direct Exchange Program

Located in Spain, the Autonomous University of Barcelona (UAB) is an institution known for its excellent research and teaching. Unlike UCEAP, this direct exchange program through the UC Santa Cruz Economics Department offers the opportunity for students to enroll in three courses that will fulfill economics major requirements and one course outside of economics. Students must take a total of four courses and will receive transfer credit for all courses. Along with enrolling in courses, students may enjoy the renowned architecture, food, and art. This program is open to students who are economics majors in junior or senior class standing and have a 3.0 cumulative GPA or above. Students must also be in good academic standing and 18 years of age or older at the time of departure to Barcelona. Economics courses at UAB may also be taken in Spanish if students have completed two years of university-level Spanish with a minimum GPA of 2.85 in those language courses.

Honors

The Economics Department awards honors and highest honors to students who have completed a major program with superior or exceptional academic work. All students are reviewed for honors during the quarter in which they graduate. Honors decisions are made based on performance in upper-division economics courses with particular emphasis on performance in the three core courses (ECON 100A, ECON 100B, and ECON 113). Typically, honors are awarded to between 10 and 15 percent of each year's graduating class.

[Optional Catchall]

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. ECON 199, Tutorial, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work in areas connected to economics or business. Students secure field-study internships under the supervision of a faculty sponsor and a professional at the workplace. Students can participate in a wide variety of field-study opportunities such as with accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students

apply for field-study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), and ECON 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A 5-credit field study requires 12-14 hours per week spent working on internship duties (a 2-credit field study requires 5-6 hours per week spent on internship duties) and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12-14 internship hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or email econintern@ucsc.edu for assistance.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics and environmental studies/economics. Requirements for these majors may be reviewed under their separate entries in this catalog.

General Business Management Economics Major

Course Requirements

ECON 1 and ECON 2, ECON 10A, ECON 10B, AM 11A, AM 11B, STAT 17 and STAT 17L, ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), ECON 113 or equivalent courses are required for all business management economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, should plan to complete at least ECON 1, ECON 2, AM 11A, AM 11B, STAT 17 and STAT 17L and preferably ECON 100A, ECON 100B, and ECON 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

Students who major in business management economics are required to take the following courses:

Lower-Division Courses

All of the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ECON 10A	Economics of Accounting	5
ECON 10B	Economics of Accounting	5

Plus one of the following mathematics content options:

	Either these courses	
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
AM 30	Multivariate Calculus for Engineers	5
	or these courses	
MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
AM 11B	Mathematical Methods for Economists II	5

MATH 11A, MATH 11B, MATH 23A may be taken to satisfy the mathematics content only by petition via the Mathematics Department.

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Enrollment in STAT 17 requires concurrent enrollment in STAT 17L (2-credit lab). Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Computer literacy requirement

Students in the general major complete two courses from the following list:

Note: Lecture/lab combinations count as one course.

Students with no prior programming experience are encouraged to take CSE 5J, CSE 10 or CSE 20. With department approval, a student may substitute other computing courses.

(CSE 10 is not offered regularly.)

CSE 5J	Introduction to Programming in Java	5
CSE 10	Introduction to Computer Science	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
CSE 80N	Introduction to Networking and the Internet	5
ECE 13	Computer Systems and C Programming	7
ECON 22P	Introduction to Python for Data Science	5
TIM 50	Business Information Systems	5
TIM 58	Systems Analysis and Design	5

CSE 20 has a test out option which counts as one of the two required courses.

Upper-Division Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Plus one of the following disciplinary communication (DC) courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Upper-division electives

Students are required to take five additional courses: one in finance, three in business management and one other economics elective. See the lists below for options.

Students may only use one of ECON 130, ECON 159, ECON 160A, or ECON 160B. No course may satisfy both an elective and another requirement of the major.

Finance Electives (choose one)

ECON 101	Managerial Economics	5
ECON 133	Security Markets and Financial Institutions	5
ECON 135	Corporate Finance	5

Business Management Electives (choose three)

ECON 101	Managerial Economics	5
ECON 110	Managerial Cost Accounting and Control	5
ECON 111A	Intermediate Accounting I	5
ECON 111B	Intermediate Accounting II	5
ECON 111C	Intermediate Accounting III	5
ECON 112	Auditing and Attestation	5
ECON 115	Introduction to Management Sciences	5
ECON 117A	Income Tax Factors for Individuals	5
ECON 117B	Tax Factors of Business and Investment	5
ECON 119	Advanced Accounting	5
ECON 124	Machine Learning for Economists	5
ECON 130	Money and Banking	5
ECON 131	International Financial Markets	5
ECON 133	Security Markets and Financial Institutions	5
ECON 135	Corporate Finance	5
ECON 136	Business Strategy	5
ECON 138	The Economics and Management of Technology and Innovation	5
ECON 139A	The Economics of Electronic Commerce	5
ECON 139B	E-Commerce Strategy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 161A	Marketing	5
ECON 161B	Marketing Research	5
ECON 164	Economics and the Telecommunications Industry	5

ECON 188	Management in the Global Economy	5
ECON 194	Advanced Topics in Management	5

Economics Electives (choose one)

ECON 105	Topics in Macroeconomics	5
ECON 114	Advanced Quantitative Methods	6
ECON 120	Development Economics	5
ECON 121	Economic Growth	5
ECON 125	Economic History of the U.S	5
ECON 128	Poverty and Public Policy	5
ECON 130	Money and Banking	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 143	Policy Issues in the International Economy	5
ECON 149	The Economies of East and Southeast Asia	5
ECON 150	Public Finance	5
ECON 156	Health Economics and Policy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 165	Economics as an Experimental Science	5
ECON 166A	Game Theory and Applications I	5
ECON 166B	Game Theory and Applications II	5
ECON 169	Economic Analysis of the Law	5
ECON 170	Environmental Economics	5
ECON 171	Natural Resource Economics	5
ECON 175	Energy Economics	5
ECON 180	Labor Economics	5
ECON 182	Unemployment	5
ECON 183	Women in the Economy	5
ECON 190	Senior Proseminar	5

Field-study

One quarter of field study is strongly recommended. Participation and credit for course ECON 193 are arranged through the economics field-study coordinator. See above under field-study program description.

Electives

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' disciplinary communication (DC) requirement. The DC requirement in economics is satisfied by completing one of the following courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C/P or better here at UC Santa Cruz:

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Sample Frosh Planner

	Fall	Winter	Spring	Summer
Entering				College 1A
				Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3	ECON 1	ECON 2	
		AM 11A	AM 11B	
		WRIT 1/WRIT 1E (if needed)		
2nd (soph)	ECON 100A	ECON 100B	ECON 113	
	ECON 10A	STAT 17	ECON 10B	

		STAT 17L		(optional)
	WRIT 2*			
3rd (junior)	Econ elective	Business Management elective Computer Course	Business Management elective	
4th (senior)	Business Management elective Computer course	ECON 104 or ECON 197 ECON 101, ECON 133 or ECON 135 (Business Management elective) Field Study internship (optional)	Field Study (optional)	

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge
3rd (junior)	AM 11B ECON elective ECON 10A	ECON 100A Computer course ECON 10B	ECON 100B Business Management elective STAT 17 STAT 17L	
4th (senior)	ECON 113 Business Management elective	Business Management elective ECON 101, ECON 133 or ECON 135 (Business Management elective) ECON 104 or ECON 197	Field Study (optional) Computer Course	

This planner assumes that a student has completed the major preparation requirements (ECON 1, ECON 2 and at least first calculus course) before coming to UC Santa Cruz. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UCSC general education requirements as well as credit requirements. Transfer students are encouraged to complete "core courses," ECON 100A, ECON 100B and ECON 113 by fall of their fourth year. Core courses are offered every summer.

Business Management with Accounting Concentration

Only students in the business management economics major have the option of adding an accounting concentration designation on their transcripts, provided they meet the curricular criteria. Electing to complete the accounting course sequence will prepare students for the Uniform Certified Public Accountants' Exam and the credits will count toward exam eligibility. It will assist students in documenting their

concrete expertise in accounting and thus help them compete for entry-level accounting positions in industry and public accounting as well as secure internship opportunities. For the concentration the eight (8) required courses include: ECON 110: Managerial Cost Accounting and Control, ECON 111A: Intermediate Accounting I, ECON 111B: Intermediate Accounting II, ECON 111C: Intermediate Accounting III, ECON 112: Audit, ECON 116: Advanced Topics in Accounting and Ethics, ECON 117A: Tax Factors for Individuals, and ECON 117B: Tax Factors for Business. Students electing the accounting concentration may also reduce their computer literacy requirements by one course (from two to one).

Course Requirements

ECON 1 and ECON 2, ECON 10A, ECON 10B, AM 11A, AM 11B, ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), ECON 113, and STAT 17 STAT 17L or equivalent courses are required for all business management economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, should plan to complete at least ECON 1, ECON 2, AM 11A, AM 11B, and preferably ECON 100A, ECON 100B, and ECON 113 by the end of their sophomore year. Those students interested in the accounting concentration should also complete ECON 10A and ECON 10B by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

Students who major in business management economics with the accounting concentration are required to take the following courses:

Lower-Division Courses

All of the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ECON 10A	Economics of Accounting	5
ECON 10B	Economics of Accounting	5

Plus one of the following mathematics options:

	Either these courses	
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
AM 30	Multivariate Calculus for Engineers	5
	or these courses	
MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
AM 11B	Mathematical Methods for Economists II	5

MATH 11A, MATH 11B, MATH 23A may be taken to satisfy the mathematics content only by petition via the Mathematics Department.

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Enrollment in STAT 17 requires concurrent enrollment in STAT 17L (2-credit lab). Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Computer literacy requirement

Students in the accounting concentration complete one course from the following list:

Note: Lecture/lab combinations count as one course.

Students with no prior programming experience are encouraged to take CSE 5J, CSE 10 or CSE 20. With department approval, a student may substitute other computing courses.

(CSE 10 is not offered regularly.)

CSE 5J	Introduction to Programming in Java	5
CSE 10	Introduction to Computer Science	5
CSE 12	Computer Systems and Assembly Language and Lab	7

CSE 13S	Computer Systems and C Programming	7
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
CSE 80N	Introduction to Networking and the Internet	5
ECE 13	Computer Systems and C Programming	7
ECON 22P	Introduction to Python for Data Science	5
TIM 50	Business Information Systems	5
TIM 58	Systems Analysis and Design	5

CSE 20 has a test out option which may count as the required course.

Upper-Division Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Plus one of the following disciplinary communication (DC) courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Plus one of the following finance courses:

ECON 101	Managerial Economics	5
ECON 133	Security Markets and Financial Institutions	5
ECON 135	Corporate Finance	5

Plus the following accounting courses:

ECON 110	Managerial Cost Accounting and Control	5
ECON 111A	Intermediate Accounting I	5
ECON 111B	Intermediate Accounting II	5
ECON 111C	Intermediate Accounting III	5
ECON 112	Auditing and Attestation	5
ECON 116	Advanced Topics in Accounting and Ethics	5
ECON 117A	Income Tax Factors for Individuals	5
ECON 117B	Tax Factors of Business and Investment	5

Plus one economics elective from the following:

Courses ECON 191, ECON 192, ECON 193, ECON 193F may not be used to meet major requirements. Either course ECON 195 or ECON 199 may be used to fill the upper-division economics elective.

ECON 105	Topics in Macroeconomics	5
ECON 114	Advanced Quantitative Methods	6
ECON 120	Development Economics	5
ECON 121	Economic Growth	5
ECON 125	Economic History of the U.S	5
ECON 128	Poverty and Public Policy	5
ECON 130	Money and Banking	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 143	Policy Issues in the International Economy	5
ECON 149	The Economies of East and Southeast Asia	5
ECON 150	Public Finance	5
ECON 156	Health Economics and Policy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 165	Economics as an Experimental Science	5
ECON 166A	Game Theory and Applications I	5
ECON 166B	Game Theory and Applications II	5
ECON 169	Economic Analysis of the Law	5
ECON 170	Environmental Economics	5
ECON 171	Natural Resource Economics	5
ECON 175	Energy Economics	5
ECON 180	Labor Economics	5
ECON 182	Unemployment	5
ECON 183	Women in the Economy	5

Field Study

One quarter of field study is strongly recommended. Participation and credit for course ECON 193 are arranged through the economics field study coordinator. See above under field study program description. ECON 193 also fulfills the PR general education requirement.

Electives

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' Disciplinary Communication (DC) requirement. The DC requirement in economics is satisfied by completing one of the following courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C/P or better at UC Santa Cruz:

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Sample Frosh Planner

	Fall	Winter	Spring	Summer
Entering				College 1A
				Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3	ECON 1	ECON 2	
	Writing course	AM 11A	AM 11B	
	College 1	WRIT 1/WRIT 1E (if needed)		
2nd (soph)	ECON 100A	ECON 100B	ECON 113	
	ECON 10A	ECON 10B	ECON 110	
	WRIT 2**	STAT 17 STAT 17L	Computer Literacy course	
3rd (junior)	ECON 111A	ECON 111B	ECON 111C	
	ECON elective	ECON 112	ECON 116	
		Ethics course (optional)*		
4th (senior)	ECON 117B	ECON 117A		
	Field Study internship (optional)	ECON 104 or ECON 197	Field Study (optional)	
		ECON 101, ECON 133 or ECON 135		

*Not required for the concentration, but required for California CPA Licensure. At the time of publication, a total of 15 qualified units in ethics is required for the California CPA licensure, 10 of which are satisfied by required courses ECON 112 and ECON 116.

** WRIT 2 should be taken in or before spring quarter of the second year.

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner

	Fall	Winter	Spring	Summer
Entering				KRSG 1T
				Summe

			r Edge (optiona l)
3rd (junior)	AM 11B	ECON 100A	ECO N 100B
	ECON 111A	ECON 111B	ECO N 111C
	Comput er literacy course	Ethics course (optional)*	STA T 17 STA T 17L
4th (senior)	ECON 113	ECON 101, ECON 133 or ECON 135	ECO N 110
	ECON 117B	ECON 117A	ECO N 116
	ECON UD elective	ECON 112	ECO N 104 or ECO N 197 (DC)

*Not required for the concentration, but required for California CPA Licensure. At the time of publication, a total of 15 qualified units in ethics is required for the California CPA licensure, 10 of which are satisfied by required courses ECON 112 and ECON 116.

This planner assumes that a student has completed ECON 10A, ECON 10B and major preparation requirements (ECON 1, ECON 2 and at least first calculus course) before coming to UC Santa Cruz. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UCSC general education requirements as well as credit requirements. Transfer students are encouraged to complete "core courses," ECON 100A, ECON 100B and ECON 113 by fall of their fourth year. Core courses are offered every summer.

ECONOMICS B.A.

Information and Policies

Introduction

Economics studies how individuals, firms, governments, and other organizations within our society make choices, and how these choices affect the society's use of its available resources. Economists study a wide range of questions such as: How do individuals make decisions in the face of uncertainty? What are the causes of the Great Recession of 2009? Why do Europeans work fewer hours than Americans? Why have health care and education costs risen so much? What are the consequences of government deficits? Why has the gap between rich and poor in many countries risen? Why have some poor countries grown faster than many rich countries in recent years?

Economics majors study a substantive core of theory and mathematical and statistical methods that aid in addressing these questions. This required core can be combined with electives that emphasize specialized areas such as international economics, finance, public policy, applied microeconomics, law and economics, economic development, quantitative methods, macroeconomics, game theory and behavioral economics. A focus on core theory as well as mathematical and quantitative tools provides a foundation for graduate studies in economics. Selecting a range of electives to sample the broad domain of economics offers an excellent background for students who plan to enter careers in the private sector, in public service, the non-profit sector or to attend law school or other professional schools.

Program Learning Outcomes

Program learning outcomes for economics, economics and mathematics, business management economics, and global economics majors:

Critical Thinking Skills: Students are expected to be able to apply economic analysis to everyday problems in real world situations, to understand current events and evaluate specific policy proposals, and to evaluate the role played by assumptions in arguments that reach different conclusions to a specific economic or policy problem.

Quantitative Reasoning Skills: Students are expected to understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical methodology, interpret statistical results, and conduct appropriate statistical analysis of data.

Problem-Solving Skills: Students are expected to be able to solve problems that have clear solutions and to address problems that do not have clear answers and explain conditions under which these solutions may be correct.

Specialized Knowledge and Application of Skills: Students are expected to develop critical and quantitative thinking skills specific to business and accounting.

Communication Skills: Students are expected to be able to communicate effectively in written, oral, and graphical form about specific issues, and to formulate well-organized written arguments that state assumptions and hypotheses supported by evidence.

Academic Advising for the Program

The Economics Department office is located at 401 Engineering 2. There are four staff undergraduate advisors, peer advisors (except summer), a field study coordinator, as well as a faculty director for each of the Economics Department's undergraduate programs. Our faculty, staff advisors and peer advisors play an important role in advising on all aspects of the major and assisting you to maximize your educational opportunities. Please check the department website for more information about drop-in hours.

Getting Started in the Major: Frosh

The economics curriculum begins at the introductory level: no specific high school preparation is required. This is a course-intensive and sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

All majors study a substantial core of economic theory and statistical methods and they then choose among a wide variety of subfields.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

One of the following courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Plus both of these courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Getting Started in the Major: Transfer Students

The department requests that new transfer students send unofficial transcripts of any previously completed coursework to econ_ugrad_coor@ucsc.edu. For coursework completed outside of a California community college, submitting course syllabi for articulation purposes is required. The advisors will then be able to make course recommendations for fall quarter or summer session courses prior to the first fall quarter.

All transfer students must complete the three-course comprehensive requirement (ECON 100A, ECON 100B, ECON 113) and the disciplinary communication requirement (ECON 104 or ECON 197) at UC Santa Cruz. Economics majors must take at least three of their upper-division economics electives at UCSC. Courses taken for credit elsewhere may not be repeated for credit here.

Students who were admitted under a different proposed major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Admission to the major is not guaranteed.

Major Qualification Policy and Declaration Process

Major Qualification

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics.

(Qualifications for the environmental/economics combined major differ from above; see environmental studies for details.) Students should declare the major as soon as they have completed these requirements.

Students must complete three courses, with combined GPA of 2.8 or higher, to qualify for entry to the economics major:

Take the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

And one of the following calculus courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Appeal Process

Students who have a grade point average (GPA) lower than 2.8 in ECON 1, ECON 2, and the calculus course are not eligible to declare an economics major. Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. The appeal letter must be filed no later than the first quarter of their junior year. Please check the "Appeals" area on the department web site for further information on declaring a major or appealing ineligibility and deadlines.

How to Declare a Major

Students can initiate the major declaration process by completing the Petition for Major/Minor Declaration and the Academic Planning forms and by supplying evidence of their grades in the three pre-major courses**.** Candidates must meet major qualifications listed above under "Major Qualification" prior to declaring the major.

Declaration sessions are mandatory for those seeking to declare the major/minor. If you cannot attend a workshop, you must meet with an economics peer advisor first before obtaining signatures from a staff advisor. Workshop schedules and drop-in advising hours are available online, on our bulletin board outside the office and in the department office. All students are advised to bring verification of their grades, which can be printed off the student portal, to the declaration of major advising session. Students who do not bring in verification of their grades could have the approval of their petition for major declaration delayed by up to two working days.

Letter Grade Policy

All classes included for major qualification determination must be taken for a letter grade. If students have not taken a letter grade, they must appeal by submitting a letter to the Economics Department.

The Economics Department allows classes toward major requirements taken for the pass/no pass (P/NP) grade notification. We recommend no more than two courses in the major be taken P/NP. Overall no more than 25 percent of a student's UC Santa Cruz classes can be taken P/NP.

[Optional Catchall]

Course Substitution Policy

For courses not already articulated through assist.org, students must present their transfer credit summary (available on the student portal) and course syllabi or descriptions to an Economics Department advisor. The department approves courses applicable for economics prerequisites and major requirements. The course substitution form can be found on the department website under "Forms for students".

Double Majors and Major/Minor Combinations Policy

Study Abroad

UC Education Abroad Program (UCEAP) is the University of California's official study abroad program and a global leader in international education for more than 50 years. All the benefits of home—UC credit, grades, and financial aid—travel with you. Approximately 600 UC Santa Cruz students study abroad on UCEAP every year.

Students can petition UCEAP courses to count toward their major or minor requirements. In addition, there are scholarships available and financial aid can be applied to UCEAP programs. UCEAP provides opportunities in:

- 46 countries around the world
- 420 summer quarter, semester or year-long programs
- Internships, volunteer work, and research programs

Economics at the Autonomous University of Barcelona -- Direct Exchange Program
Located in Spain, the Autonomous University of Barcelona (UAB) is an institution known for its excellent research and teaching. Unlike UCEAP, this direct exchange program through the UC Santa Cruz Economics Department offers the opportunity for students to enroll in three courses that will fulfill economics major requirements and one course outside of economics. Students must take a total of four courses and will receive transfer credit for all courses. Along with enrolling in courses, students may enjoy the renowned architecture, food, and art. This program is open to students who are economics majors in junior or senior class standing and have a 3.0 cumulative GPA or above. Students must also be in good academic standing and 18 years of age or older at the time of departure to Barcelona. Economics courses at UAB may also be taken in Spanish if students have completed two years of university-level Spanish with a minimum GPA of 2.85 in those language courses.

Honors

The Economics Department awards honors and highest honors to students who have completed a major program with superior or exceptional academic work. All students are reviewed for honors during the quarter in which they graduate. Honors decisions are made based on performance in upper-division economics courses with particular emphasis on performance in the three core courses (ECON 100A, ECON 100B, and ECON 113). Typically, honors are awarded to between 10 and 15 percent of each year's graduating class.

[Optional Catchall]

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. ECON 199, Tutorial, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work in areas connected to economics or business. Students secure field-study internships under the supervision of a faculty sponsor and a professional at the workplace. Students can participate in a wide variety of field-study opportunities such as with accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field-study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), and ECON 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A 5-credit field study requires 12-14 hours per week spent working on internship duties (a 2-credit field study requires 5-6 hours per week spent on internship duties) and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12-14 internship hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or email econintern@ucsc.edu for assistance.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics and environmental studies/economics. Requirements for these majors may be reviewed under their separate entries in this catalog.

Requirements and Planners

Course Requirements

ECON 1 and ECON 2, AM 11A, AM 11B, ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), ECON 113, and STAT 17 and STAT 17L or equivalent courses are required for all economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, should plan to complete at least ECON 1, ECON 2, AM 11A, AM 11B, STAT 17 and STAT 17L and preferably ECON 100A, ECON 100B, and ECON 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

Students who major in economics are required to take the following courses:

Lower-Division Courses

All of the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Plus one of the following mathematics content options:

	Either these courses	
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
AM 30	Multivariate Calculus for Engineers	5
	or these courses	
MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
AM 11B	Mathematical Methods for Economists II	5

MATH 11A, MATH 11B, MATH 23A may be taken to satisfy the mathematics content only by petition via the Mathematics Department.

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Enrollment in STAT 17 requires concurrent enrollment in STAT 17L (2-credit lab). Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Upper-Division Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Plus one of the following disciplinary communication

(DC) courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Plus five economics electives:

Students take five additional economics electives from the following three lists. At least three courses must come from the General Economics Electives list. No more than two courses may come from the Finance Electives list. No more than one course may come from the Business Management Electives.

General Economics Electives

ECON 105	Topics in Macroeconomics	5
ECON 114	Advanced Quantitative Methods	6
ECON 120	Development Economics	5
ECON 121	Economic Growth	5
ECON 124	Machine Learning for Economists	5
ECON 125	Economic History of the U.S	5
ECON 128	Poverty and Public Policy	5
ECON 130	Money and Banking	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 143	Policy Issues in the International Economy	5
ECON 149	The Economies of East and Southeast Asia	5
ECON 150	Public Finance	5
ECON 156	Health Economics and Policy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 165	Economics as an Experimental Science	5
ECON 166A	Game Theory and Applications I	5
ECON 166B	Game Theory and Applications II	5
ECON 169	Economic Analysis of the Law	5
ECON 170	Environmental Economics	5
ECON 171	Natural Resource Economics	5
ECON 175	Energy Economics	5
ECON 180	Labor Economics	5
ECON 182	Unemployment	5
ECON 183	Women in the Economy	5
ECON 190	Senior Proseminar	5

Finance Electives

ECON 131	International Financial Markets	5
ECON 133	Security Markets and Financial Institutions	5
ECON 135	Corporate Finance	5

Business Management Electives

ECON 101	Managerial Economics	5
ECON 110	Managerial Cost Accounting and Control	5
ECON 111A	Intermediate Accounting I	5
ECON 111B	Intermediate Accounting II	5
ECON 111C	Intermediate Accounting III	5
ECON 112	Auditing and Attestation	5
ECON 115	Introduction to Management Sciences	5
ECON 117A	Income Tax Factors for Individuals	5
ECON 117B	Tax Factors of Business and Investment	5
ECON 119	Advanced Accounting	5
ECON 136	Business Strategy	5
ECON 138	The Economics and Management of Technology and Innovation	5
ECON 139A	The Economics of Electronic Commerce	5
ECON 139B	E-Commerce Strategy	5
ECON 161A	Marketing	5
ECON 161B	Marketing Research	5
ECON 164	Economics and the Telecommunications Industry	5
ECON 188	Management in the Global Economy	5
ECON 194	Advanced Topics in Management	5

Electives

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' disciplinary communication (DC) requirement. The DC requirement in economics is satisfied by completing one of the following courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C/P or better at UC Santa Cruz:

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Sample Frosh Planner

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	Course MATH 3 or AM 3 College 1	Course ECON 1 AM 11A WRIT 1/WRIT 1E (if needed)	Course ECON 2 AM 11B	
2nd (soph)	ECON 100A WRIT 2*	ECON 100B STAT 17 STAT 17L	ECON 113	
3rd (junior)	ECON elective ECON elective	ECON elective Field Study (Internship) *optional*	ECON elective Field Study *optional*	
4th (senior)	ECON elective	ECON 104 or ECON 197	ECON elective	

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	AM 11B ECON elective	ECON 100A	ECON 100B ECON elective STAT 17 STAT 17L	
4th (senior)	ECON 113	ECON elective	Field Study *optional*	

ECON elective	ECON 104 or ECON 197 (DC) Field Study (Internship) *optional*	ECON elective

This planner assumes that a student has completed the major preparation requirements (ECON 1, ECON 2 and at least first calculus course) before coming to UC Santa Cruz. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UCSC general education requirements as well as credit requirements. Transfer students are encouraged to complete "core courses," ECON 100A, ECON 100B and ECON 113 by fall of their fourth year. Core courses are offered every summer.

GLOBAL ECONOMICS B.A.

Information and Policies

Introduction

Global economics is an economics major focusing on global issues with an interdisciplinary element. It is designed to prepare students to understand and participate in the global economy; the program aims to deepen the student's knowledge of economics within a culturally and linguistically diverse world. The major is particularly useful to students contemplating careers at home or overseas in international relations, in international business, or with international organizations. Hence the major requires overseas study, regional area study, and second-language proficiency in addition to the basic economics requirements and additional emphasis in international economics.

Program Learning Outcomes

Program learning outcomes for economics, economics and mathematics, business management economics, and global economics majors:

Critical Thinking Skills: Students are expected to be able to apply economic analysis to everyday problems in real world situations, to understand current events and evaluate specific policy proposals, and to evaluate the role played by assumptions in arguments that reach different conclusions to a specific economic or policy problem.

Quantitative Reasoning Skills: Students are expected to understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical methodology, interpret statistical results, and conduct appropriate statistical analysis of data.

Problem-Solving Skills: Students are expected to be able to solve problems that have clear solutions and to address problems that do not have clear answers and explain conditions under which these solutions may be correct.

Specialized Knowledge and Application of Skills: Students are expected to develop critical and quantitative thinking skills specific to business and accounting.

Communication Skills: Students are expected to be able to communicate effectively in written, oral, and graphical form about specific issues, and to formulate well-organized written arguments that state assumptions and hypotheses supported by evidence.

Academic Advising for the Program

The Economics Department office is located at 401 Engineering 2. There are four staff undergraduate advisors, peer advisors (except summer), a field study coordinator, as well as a faculty director for each of the Economics Department's undergraduate programs. Our faculty, staff advisors and peer advisors play an important role in advising on all aspects of the major and assisting you to maximize your educational opportunities. Please check the department website for more information about drop-in hours.

Getting Started in the Major: Frosh

The economics curriculum begins at the introductory level: no specific high school preparation is required.

This is a course-intensive and sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

This major requires students to complete a language of their choosing through level 6 (two year equivalent). Students interested in this major should start taking language courses in their first year at UC Santa Cruz. For more information, please review Language Placement.

All majors study a substantial core of economic theory and statistical methods and they then choose among a wide variety of subfields.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

One of the following:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Plus both of the following:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Getting Started in the Major: Transfer Students

The department requests that new transfer students send unofficial transcripts of any previously completed coursework to econ_ugrad_coor@ucsc.edu. For coursework completed outside of a California community college submitting course syllabi for articulation purposes is required. The advisors will then be able to make course recommendations for fall quarter or summer session courses prior to the first fall quarter.

This major requires students to complete a language of their choosing through level 6 (two-year equivalent). Students with prior knowledge in a foreign language need to contact the language department for assessment of their language skills. For more information, please review Language Placement.

All transfer students must complete the three-course comprehensive requirement (ECON 100A, ECON 100B, ECON 113) and the disciplinary communication requirement (ECON 104 or ECON 197) at UC Santa Cruz. Global economics majors must take at least two of their upper-division economics electives at UC Santa Cruz. Courses taken for credit elsewhere may not be repeated for credit here.

Students who were admitted under a different proposed major and have advanced standing when they come to UCSC require permission from the department to change into the major. Admission to the major is not guaranteed.

Major Qualification Policy and Declaration Process

Major Qualification

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics.

(Qualifications for the environmental/economics combined major differ from above; see environmental studies for details.) Students should declare the major or minor as soon as they have completed these requirements.

Students must complete three courses, with combined GPA of 2.8 or higher, to qualify for entry to the global economics major:

Take these courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Plus one of the following calculus courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Appeal Process

Students who have a grade point average (GPA) lower than 2.8 in ECON 1, ECON 2, and the calculus course are not eligible to declare an economics major. Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. The appeal letter must be filed no later than the first quarter of their junior year. Please check the "Appeals" area on the department web site for further information on declaring a major or appealing ineligibility and deadlines.

How to Declare a Major

Students can initiate the major declaration process by completing the Petition for Major/Minor Declaration and the Academic Planning forms and by supplying evidence of their grades in the three pre-major courses. Candidates must meet major qualifications listed above under "Major Qualification" prior to declaring the major.

Declaration sessions are mandatory for those seeking to declare the major/minor. If you cannot attend a workshop, you must meet with an economics peer advisor first before obtaining signatures from a staff advisor. Workshop schedules and drop-in advising hours are available on the department's website, on our bulletin board outside the office, and in the department office. All students are advised to bring verification of their grades, which can be printed from the student portal, to the declaration of major advising session. Students who do not bring in verification of their grades could have the approval of their petition for major declaration delayed by up to two working days.

Letter Grade Policy

All classes included for major qualification determination must be taken for a letter grade. If students have not taken a letter grade, they must appeal by submitting a letter to the Economics Department.

The Economics Department allows classes toward major requirements taken for the Pass/No Pass (P/NP) grade notification. We recommend no more than two courses in the major be taken P/NP. Overall no more than 25 percent of a student's UC Santa Cruz classes can be taken P/NP.

[Optional Catchall]

Course Substitution Policy

For courses not already articulated through assist.org, students must present their transfer credit summary (available on the student portal) and course syllabi or descriptions to an Economics Department advisor. The department approves courses applicable for economics prerequisites and major requirements. The course substitution form can be found on the department website under "Forms for students."

Double Majors and Major/Minor Combinations

Policy

Study Abroad

UC Education Abroad Program (UCEAP) is the University of California's official study abroad program and a global leader in international education for over 50 years. All the benefits of home—UC credit, grades, and financial aid—travel with you. Approximately 600 UC Santa Cruz students study abroad on UCEAP every year.

Students can petition UCEAP courses to count toward their major or minor requirements. In addition, there are scholarships available and financial aid can be applied to UCEAP programs. UCEAP provides opportunities in:

- 46 countries around the world
- 420 summer quarter, semester or yearlong programs
- Internships, volunteer work, and research programs

Economics at the Autonomous University of Barcelona -- Direct Exchange Program

Located in Spain, the Autonomous University of Barcelona (UAB) is an institution known for its excellent research and teaching. Unlike UCEAP, this direct exchange program through the UC Santa Cruz Economics Department offers the opportunity for students to enroll in three courses that will fulfill economics major requirements and one course outside of economics. Students must take a total of four courses and will receive transfer credit for all courses. Along with enrolling in courses, students may enjoy the renowned architecture, food, and art. This program is open to students who are economics majors in junior or senior class standing and have a 3.0 cumulative GPA or above. Students must also be in good academic standing and 18 years of age or older at the time of departure to Barcelona. Economics courses at UAB may also be taken in Spanish if students have completed two years of university-level Spanish with a minimum GPA of 2.85 in those language courses.

Honors

The Economics Department awards honors and highest honors to students who have completed a major program with superior or exceptional academic work. All students are reviewed for honors during the quarter in which they graduate. Honors decisions are made based on performance in upper-division economics courses with particular emphasis on performance in the three core courses (ECON 100A, ECON 100B, and ECON 113). Typically, honors are awarded to between 10 and 15 percent of each year's graduating class.

[Optional Catchall]

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. ECON 199, Tutorial, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work in areas connected to economics or business. Students secure field-study internships under the supervision of a faculty sponsor and a professional at the workplace. Students can participate in a wide variety of field-study opportunities such as with accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field-study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), and ECON 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A 5-credit field study requires 12-14 hours per week spent working on internship duties (a 2-credit field study requires 5-6 hours per week spent on internship duties) and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12-14 internship hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor’s evaluation of performance. Economics field-study courses do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or email econintern@ucsc.edu for assistance.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics and environmental studies/economics. Requirements for these majors may be reviewed under their separate entries in this catalog.

Requirements and Planners

Course Requirements

ECON 1 and ECON 2, AM 11A, AM 11B, ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), ECON 113, and STAT 17 STAT 17L or equivalent courses are required for all economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, should plan to complete at least ECON 1, ECON 2, AM 11A, AM 11B, STAT 17 STAT 17L, and preferably ECON 100A, ECON 100B, and ECON 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

Students who major in global economics are required to take the following courses:

Lower-Division Courses

Take the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Plus one of the following mathematics content options:

	Either these courses	
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
AM 30	Multivariate Calculus for Engineers	5
	or these courses	
MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
AM 11B	Mathematical Methods for Economists II	5

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Enrollment in STAT 17 requires concurrent enrollment in STAT 17L (2-credit lab). Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Foreign Language Study

The global economics major requires a foreign language since students who plan to work in the larger world must have fluency in a language other than English. This language should be relevant to their regional area of interest. Students can meet this requirement be completing level 6 of a language course offered at UC Santa Cruz or its equivalent. For languages not offered at UCSC, or languages not offered through level 6, contact the department.

Upper-Division Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Plus one of the following disciplinary communication (DC) courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Plus four electives:

Students complete four additional upper-division electives as follows:

Students must take three from the following list:

ECON 120	Development Economics	5
ECON 121	Economic Growth	5
ECON 131	International Financial Markets	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 143	Policy Issues in the International Economy	5
ECON 149	The Economies of East and Southeast Asia	5
ECON 156	Health Economics and Policy	5
ECON 188	Management in the Global Economy	5

Plus one additional economics course:

The fourth elective may be any additional 5-credit economics course numbered 100-189.

Area Study

The major requires students to take two additional courses selected from the offerings of departments other than economics in order to learn about the history, political economy, or culture of some other part of the world. These can be lower- or upper-division courses; the courses must focus on the area of the student's language study and overseas study. The Economics Department provides a list of approved courses as a reference. The area studies course plan must be pre-approved by an economics advisor. Substitute courses are welcomed when they are part of the student's overseas program or from other UC Santa Cruz departments, but must be approved by an advisor for the global economics major.

Study Abroad

All students are required to spend at least one term abroad in an approved course of study in their regional area of concentration; students may also choose a year-long program. Typically, a student will do this through the UC Education Abroad Program (UCEAP). Numerous overseas study sites are available through UCEAP. Students desiring to fulfill their required study abroad through UCEAP must apply directly to the UCEAP office for the selected program and are subject to the admission requirements determined by UCEAP. In countries and at universities where UCEAP programs are not available, students may make their own arrangements for study with the permission of the director of the program. Students may use the time abroad to further their language study, to meet the area study course requirements, to meet some of the upper-division economics course requirements, or to take courses unrelated to the major. Students who are not accepted to an overseas program or who cannot meet the language or area course requirements are advised to complete the general economics major as an alternative.

Electives

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' disciplinary communication (DC) requirement. The DC requirement in economics is satisfied by completing one of the following courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C/P or better here at UC Santa Cruz:

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Students may elect to complete a senior thesis with consent of an instructor in addition to completing the intermediate core courses.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Sample Frosh Planner

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3 Language College 1	ECON 1 AM 11A Language WRIT 1/WRIT 1E (if needed)	ECON 2 AM 11B Language	
2nd (soph)	ECON 100A Language WRIT 2*	ECON 100B STAT 17 STAT 17L Langua	ECON 113 Language	

		ge	
3rd (junior)	**Study abroad for at least one quarter.** Students can apply up to two courses from study abroad toward major requirements. Could be upper-division ECON electives or Area Studies or a combination of both.		
4th (senior)	ECON elective	ECON 104 or ECON 197	ECON elective
	ECON elective	ECON elective	Field Study (optional)
	Area Study	Field Study Internship (optional)	Area Study

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition, to the specific courses shown in these planners, a student must complete courses satisfying all UC Santa Cruz general education requirements.

Sample Transfer Planner

	Fall	Winter	Spring	Summer
Entering				**Study abroad** (or fall quarter senior year). Students can apply up to two courses from study abroad toward major requirements. Could be upper-division ECON electives or Area Studies or a combination of both. KRSG 1T Summer Edge (optional)
3rd (junior)	AM 11B	ECON 100A	ECON 100B	
	ECON elective	Area Study	ECON elective	
	STAT 17 STAT 17L		Area Study	
4th (senior)	ECON 113	ECON elective	Field Study (optional)	
	ECO	ECON		

N elect ive	104 or ECON 197 Field Study interns hip (optio nal)

This planner assumes that a student has completed two years of foreign language study, and major preparation requirements (ECON 1, ECON 2 and at least first calculus course) before coming to UC Santa Cruz. In addition, to the specific courses shown in these planners, a student must complete courses satisfying the UCSC general education requirements. Transfer students are encouraged to complete "core courses," ECON 100A, ECON 100B and ECON 113 by fall of their fourth year. Core courses are offered every summer.

ECONOMICS/MATHEMATICS COMBINED B.A.

Information and Policies

Introduction

The major in economics and mathematics is designed to meet the needs of undergraduate students who plan to pursue doctoral study in economics or business, or who wish to pursue a career as an actuary or other professional requiring a sophisticated understanding of economics and mathematics. The major combines the main undergraduate content of both economics and mathematics within a programmatic structure that joins the two disciplines. It provides a coursework combination required to prepare for an economics doctoral (Ph.D.) program, or for a group of technically demanding professional careers.

Program Learning Outcomes

Program learning outcomes for economics, economics and mathematics, business management economics, and global economics majors:

Critical Thinking Skills: Students are expected to be able to apply economic analysis to everyday problems in real world situations, to understand current events and evaluate specific policy proposals, and to evaluate the role played by assumptions in arguments that reach different conclusions to a specific economic or policy problem.

Quantitative Reasoning Skills: Students are expected to understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical methodology, interpret statistical results, and conduct appropriate statistical analysis of data.

Problem-Solving Skills: Students are expected to be able to solve problems that have clear solutions and to address problems that do not have clear answers and explain conditions under which these solutions may be correct.

Specialized Knowledge and Application of Skills: Students are expected to develop critical and quantitative thinking skills specific to business and accounting.

Communication Skills: Students are expected to be able to communicate effectively in written, oral, and graphical form about specific issues, and to formulate well-organized written arguments that state assumptions and hypotheses supported by evidence.

Academic Advising for the Program

The Economics Department office is located at 401 Engineering 2. There are four staff undergraduate advisors, peer advisors (except summer), a field study coordinator, as well as a faculty director for each of the Economics Department's undergraduate programs. Our faculty, staff advisors and peer advisors play an important role in advising on all aspects of the major and assisting you to maximize your educational opportunities. Please check the department website for more information about drop-in hours.

Getting Started in the Major: Frosh

The economics curriculum begins at the introductory level: no specific high school preparation is required.

This is a course-intensive and sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

All majors study a substantial core of economic theory and statistical methods and they then choose among a wide variety of subfields.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

One of these courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Students with credit in MATH 11A or AM 11A as their first calculus course must have a grade of "B" or better in order to qualify for the next calculus course in the sequence for this major, MATH 19B.

And both of these courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Getting Started in the Major: Transfer Students

The department requests that new transfer students send unofficial transcripts of any previously completed coursework to econ_ugrad_coor@ucsc.edu. For coursework completed outside of a California community college, submitting course syllabi for articulation purposes is required. The advisors will then be able to make course recommendations for fall quarter or summer session courses prior to the first fall quarter.

All transfer students must complete the three-course senior comprehensive requirement (ECON 100A, ECON 100B, ECON 113) and the DC requirement at UC Santa Cruz. Economics/mathematics majors must take at least one of their upper-division economics electives at UC Santa Cruz. Courses taken for credit elsewhere may not be repeated for credit here.

Students who were admitted under a different proposed major and have advanced standing when they come to UCSC require permission from the department to change into the major. Admission to the major is not guaranteed.

Students who have met all lower-division requirements through articulations before transferring will need at least six economics and five mathematics upper-division courses at UC Santa Cruz to complete the major.

Major Qualification Policy and Declaration Process

Major Qualification

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics. The qualification requirements for major declaration are the same for all four.

Students must complete three courses, with combined GPA of 2.8 or higher, to qualify for entry to the economics/mathematics major:

Take all of the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Appeal Process

Students who have a grade point average (GPA) lower than 2.8 in ECON 1, ECON 2, and the calculus course are not eligible to declare an economics major. Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. The appeal letter must be filed no later than the first quarter of their junior year. Please check the "Appeals" area on the department website for further information on declaring a major or appealing ineligibility and deadlines.

How to Declare a Major

Students can initiate the major declaration process by completing the Petition for Major/Minor Declaration and the Academic Planning forms and by supplying evidence of their grades in the three pre-major courses. Candidates must meet major qualifications listed above prior to declaring the major.

Declaration sessions are mandatory for those seeking to declare the major or minor. If you cannot attend a workshop, you must meet with an economics peer advisor first before obtaining signatures from a staff advisor. Workshop schedules and drop-in advising hours are available online, on our bulletin board outside the office, and in the department office. All are advised to bring in verification of their grades, which can be printed off the student portal, to the declaration of major advising session. Students who do not bring in verification of their grades could have the approval of their petition for major declaration delayed by up to two working days.

Letter Grade Policy

All classes included for major qualification determination must be taken for a letter grade. If students have not taken a letter grade, they must appeal by submitting a letter to the Economics Department.

The Economics Department allows classes toward major requirements taken for the Pass/No Pass (P/NP) grade notification. We recommend no more than two courses in the major be taken P/NP. Overall no more than 25 percent of a student's UC Santa Cruz classes can be taken P/NP.

[Optional Catchall]

Course Substitution Policy

For courses not already articulated through assist.org, students must present their transfer credit summary (available on the student portal) and course syllabi or descriptions to an Economics Department advisor. The department approves courses applicable for economics prerequisites and major requirements. The course substitution form can be found on the department website under "Forms for students."

Double Majors and Major/Minor Combinations Policy

Study Abroad

UC Education Abroad Program (UCEAP) is the University of California's official study abroad program and a global leader in international education for more than 50 years. All the benefits of home—UC credit, grades, and financial aid—travel with you. Approximately 600 UC Santa Cruz students study abroad on UCEAP every year.

Students can petition UCEAP courses to count toward their major or minor requirements. In addition, there are scholarships available and financial aid can be applied to UCEAP programs. UCEAP provides opportunities in:

- 46 countries around the world
- 420 summer quarter, semester or yearlong programs
- Internships, volunteer work, and research programs

Economics at the Autonomous University of Barcelona--Direct Exchange Program

Located in Spain, the Autonomous University of Barcelona (UAB) is an institution known for its excellent research and teaching. Unlike UCEAP, this direct exchange program through the UC Santa Cruz Economics Department offers the opportunity for students to enroll in three courses that will fulfill economics major requirements and one course outside of economics. Students must take a total of four courses and will receive transfer credit for all courses. Along with enrolling in courses, students may enjoy the renowned architecture, food, and art. This program is open to students who are economics majors in junior or senior class standing and have a 3.0 cumulative GPA or above. Students must also be in good academic standing and 18 years of age or older at the time of departure to Barcelona. Economics courses at UAB may also be taken in Spanish if students have completed two years of university-level Spanish with a minimum GPA of 2.85 in those language courses.

Honors

The Economics Department awards honors and highest honors to students who have completed a major program with superior or exceptional academic work. All students are reviewed for honors during the quarter in which they graduate. Honors decisions are made based on performance in upper-division economics courses with particular emphasis on performance in the three core courses (ECON 100A, ECON 100B, and ECON 113). Typically, honors are awarded to between 10 and 15 percent of each year's graduating class.

[Optional Catchall]

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. ECON 199, Tutorial, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work in areas connected to economics or business. Students secure field-study internships under the supervision of a faculty sponsor and a professional at the workplace. Students can participate in a wide variety of field-study opportunities such as with accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field-study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), and ECON 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A 5-credit field study requires 12-14 hours per week spent working on internship duties (a 2-credit field study requires 5-6 hours per week spent on internship duties) and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12-14 internship hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or email econintern@ucsc.edu for assistance.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics and environmental studies/economics. Requirements for these majors may be reviewed under their separate entries in this catalog.

Requirements and Planners

Course Requirements

Lower-Division Courses

Economics Required Courses

Take the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Mathematics Required Courses

Take the following courses:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 21	Linear Algebra	5

Plus one of the following options:

	Either this course	
MATH 22	Introduction to Calculus of Several Variables	5
	or these courses	
MATH 23A	Vector Calculus	5

MATH 23B	Vector Calculus	5

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Enrollment in STAT 17 requires concurrent enrollment in STAT 17L (2-credit lab). Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Upper-Division Courses

Economics Required Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Mathematics Required Courses

Take both of these courses:

MATH 100	Introduction to Proof and Problem Solving	5
MATH 105A	Real Analysis	5

Electives

Students complete five electives. Two courses in economics and three in mathematics, as follows:

Economics Electives

Choose two from the following:

ECON 101	Managerial Economics	5
ECON 114	Advanced Quantitative Methods	6
ECON 115	Introduction to Management Sciences	5
ECON 120	Development Economics	5
ECON 121	Economic Growth	5
ECON 124	Machine Learning for Economists	5
ECON 125	Economic History of the U.S	5
ECON 128	Poverty and Public Policy	5
ECON 130	Money and Banking	5
ECON 131	International Financial Markets	5
ECON 133	Security Markets and Financial Institutions	5
ECON 135	Corporate Finance	5
ECON 136	Business Strategy	5
ECON 138	The Economics and Management of Technology and Innovation	5
ECON 139A	The Economics of Electronic Commerce	5
ECON 139B	E-Commerce Strategy	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 149	The Economies of East and Southeast Asia	5
ECON 150	Public Finance	5
ECON 156	Health Economics and Policy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 161A	Marketing	5
ECON 164	Economics and the Telecommunications Industry	5
ECON 165	Economics as an Experimental Science	5
ECON 166A	Game Theory and Applications I	5
ECON 166B	Game Theory and Applications II	5
ECON 169	Economic Analysis of the Law	5
ECON 170	Environmental Economics	5
ECON 171	Natural Resource Economics	5
ECON 175	Energy Economics	5
ECON 180	Labor Economics	5
ECON 182	Unemployment	5
ECON 183	Women in the Economy	5
ECON 188	Management in the Global Economy	5

Mathematics Electives

Choose three three from the following:

Note: Lecture/lab combinations (i.e., MATH 145 and MATH 145L, MATH 148 and MATH 148L) count as one course.

AM 114	Introduction to Dynamical Systems	5
AM 147	Computational Methods and Applications	5
MATH 105B	Real Analysis	5
MATH 106	Systems of Ordinary Differential Equations	5
MATH 107	Partial Differential Equations	5
MATH 114	Introduction to Financial Mathematics	5
MATH 115	Graph Theory	5

MATH 116	Combinatorics	5
MATH 117	Advanced Linear Algebra	5
MATH 124	Introduction to Topology	5
MATH 134	Cryptography	5
MATH 140	Industrial Mathematics	5
MATH 145	Introductory Chaos Theory	5
MATH 145L	Introductory Chaos Laboratory	1
MATH 148	Numerical Analysis	5
MATH 148L	Numerical Analysis Laboratory	1
MATH 152	Programming for Mathematics	5
STAT 131	Introduction to Probability Theory	5
STAT 132	Classical and Bayesian Inference	5

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' Disciplinary Communication (DC) requirement. The DC requirement in the economics/mathematics combined major is satisfied by completing one of the following options:

Option 1: Economics

Take one of the following:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Option 2: Mathematics

Take this course

MATH 100	Introduction to Proof and Problem Solving	5

Plus one of the following courses:

MATH 194	Senior Seminar	5
MATH 195	Senior Thesis	5

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C/P or better here at UC Santa Cruz:

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Sample Frosh Planner

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 19A College 1 WRIT 2*	MATH 19B ECON 1 WRIT 1/WRIT 1E (if needed)	ECON 2	
2nd (soph)	MATH 23A MATH 21	ECON 100A MATH 23B	ECON 100B MATH 100	
3rd (junior)	MATH 105A STAT 17 STAT 17L	ECON 113 Math elective	Econ elective Math elective	
4th (senior)	Econ elective	Math elective ECON 104 or	Field Study (optional)	

				ECON 197
				Field Study internship (optional)

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition, to the specific courses shown in these planners, a student must complete courses satisfying all UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner One

	Fall	Winter	Spring	Summer
Entering				KRSG 1T
				Summer Edge (optional)
3rd (junior)	MATH 19B	MATH 22 or MATH 23A	MATH 23B*	
	MATH 21	MATH 100	Math elective	
	Econ elective			
4th (senior)	ECON 100A	ECON 113	ECON 100B	
	MATH 105A	Econ elective	Math elective	
	STAT 17 STAT 17L	Math elective	ECON 104 or ECON 197	

*If MATH 23A is taken in the winter term, otherwise ECON 100A

This planner assumes that a student has completed the following major requirements: ECON 1, ECON 2, MATH 19A. In addition, to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner Two

	Fall	Winter	Spring	Summer
3rd (junior)	ECON 100A	ECON 100B	ECON 113	
	MATH 23B	MATH 21	MATH 100	
		STAT 17 STAT 17L		
4th (senior)	MATH 105A	Econ elective	Econ elective	
	Math elective	ECON 104 or ECON 197	Math elective	
		Math elective	Field Study (optional)	

This planner assumes that the student has completed the following major requirements: ECON 1, ECON 2, MATH 19A, MATH 19B, MATH 23A. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements. Transfer students are encouraged to complete "core courses," ECON 100A, ECON 100B and ECON 113 by fall of their fourth year. Core courses are offered every summer.

ECONOMICS MINOR

Course Requirements

Students earn a minor in economics by completing the following requirements. Courses may be taken for a letter grade or pass/no pass, but any courses taken pass/no pass cannot later be used toward an economics major since majors require letter grades. For that reason, taking courses for a letter grade is encouraged, but not required.

Lower-Division Courses

Take these courses

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Plus one of the following options

	Either these courses	
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
AM 30	Multivariate Calculus for Engineers	5
	or these courses	
MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
AM 11B	Mathematical Methods for Economists II	5

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Enrollment in STAT 17 requires concurrent enrollment in STAT 17L (2-credit lab). Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Upper-Division Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5

Plus three economics electives

Students complete three additional 5-credit electives chosen from ECON 100-189, excluding ECON 104. No course may satisfy more than one requirement of the minor.

QUANTITATIVE ECONOMICS AND FINANCE M.S.

Introduction

The M.S. program in quantitative economics and finance is a one-year Plan II (capstone) master's program that provides analytical graduate training designed to prepare students for careers in business, international and domestic banking, consulting firms, government, and nonprofit organizations. The program combines core training in economic theory with meaningful applications that students are likely to face in their professional careers. Students have an option to choose one of three tracks: quantitative economics, finance or general emphasis. Compared to a typical M.A. in economics, our program has a more applied orientation. Compared to most M.B.A. programs, our program provides more training in economics, statistics, and econometrics. The curriculum stresses mastery of core principles in micro and macroeconomics and finance. In addition, each student learns how to solve practical problems and to communicate the results clearly. The emphasis of the program, and perhaps its greatest strength, is exposing students to cutting edge data analytics approaches, advanced econometric techniques, statistical and data analysis software packages (R, Stata, Python), and large-scale financial and microeconomic data sets throughout their coursework.

International students in the M.S. program are eligible to apply for optional practical training (OPT) through the Global Engagement Division. Our M.S. program in applied economics and finance is also eligible for the OPT STEM Extension. For more information please visit the International Student Services and Programming (ISSP) website.

Past graduates of this program have gone on to successful careers in the private and public sectors with placements at a diverse range of companies and institutions, including tech giants such as Apple, Amazon, Google, Twitter; smaller tech firms such as ZipRecruiter, Zillow, Expedia; biotech and industrial companies including Genentech and Toyota; financial companies including traditional such as Bloomberg, Citigroup, Morgan Stanley, new such as SoFi, as well as regional and foreign commercial banks; all of the "Big Four" accounting firms; and government and regulatory institutions such as Federal Reserve, the California Franchise Tax Board, State Bar of California, and local governments and agencies. Other graduates have gone on to earn Ph.D. degrees in economics.

Requirements

Course Requirements

All M.S. students take the same courses in the fall quarter. In winter and spring, course requirements will vary based on the track that the student pursues. The three tracks offered are quantitative economics, finance, and general emphasis. Please refer to the capstone sections for your chosen track, listed in the table below, when selecting winter and spring courses. Students may also take additional classes if they desire.

Courses by Track and Quarter:

	Quantitative Econ	Finance	General
Fall	ECON 186 (pre-fall) ECON 200 ECON 216 ECON 233 ECON 294A	ECON 186 (pre-fall) ECON 200 ECON 216 ECON 233 ECON 294A	ECON 186 (pre-fall) ECON 200 ECON 216 ECON 233 ECON 294A
Winter	ECON 217 ECON 294A ECON 294B Elective Elective	ECON 217 or ECON 114 ECON 294A ECON 294B Elective Elective	ECON 217 or ECON 114 ECON 294A ECON 294B Elective Elective
Spring	ECON 202 ECON 294B Elective Elective	ECON 202 ECON 294B Elective Elective	ECON 202 ECON 294B Elective Elective
Electives (5 credits)	ECON 201, 259B+ others	ECON 231, 234, 235, 236+ others	ECON 201, 236+ others
Capstone Sections	4 from:ECON 200 ECON 201 ECON 216 ECON 217 ECON 259B	4 from:ECON 231 ECON 233 ECON 234 ECON 235 ECON 236	All:ECON 200 ECON 201 ECON 233 ECON 236

Courses and Program Requirements

Fall

ECON 186	Mathematical Methods for Economic Analysis	5
ECON 200	Microeconomic Analysis	5
ECON 216	Applied Econometric Analysis I	5
ECON 233	Finance I	5
ECON 294A	Applied Economics and Finance Laboratory	2

ECON 186 Note: M.S. students are required to enroll in and attend the in-person ECON 186 mathematics course, which is highly beneficial to students' success in the program. ECON 186 is offered as an accelerated short course taught over the three-week period immediately before the formal start of fall quarter. Students may test out of taking ECON 186 by passing an exam at any time after June 15 and by July 31.

Winter

ECON 217	Applied Econometric Analysis II	5
ECON 294A	Applied Economics and Finance Laboratory	2

ECON 294B	Applied Economics and Finance Seminar	2
	Master's elective (5 credits)	
	Master's elective (5 credits)	

Students need a minimum of 19 credits in winter quarter. UCSC students who have already taken some of the pre-approved master's elective courses as an undergraduate can use those elective courses to fulfill the master's course requirements, if they already have enough course credits to satisfy the requirements of the bachelor's degree. Students who use elective courses they have already taken previously to fulfill the requirements of the master's degree must comply with campus-wide policy which states that a minimum of 35 credits must be completed as a master's student, after the student has completed the bachelor's degree. We will follow existing campuswide policy stating that courses used to satisfy the requirements for a bachelor's major must include a minimum of 40 upper-division credits (UCSC Senate Manual 10.4.3) that are not used to satisfy the required courses or minimum credits for any other major (or in this case the master's degree). Courses used to satisfy the requirements for the master's degree cannot be used to satisfy the minimum 40 upper-division credits for the bachelor's degree.

Students who choose the general or finance track for their capstone may take ECON 114 (6 credits) instead of ECON 217.

Electives for the finance track may include ECON 231, ECON 234, ECON 235, and ECON 236. Electives for the quantitative economics track may include ECON 201 and ECON 259B. Students on the general track may choose any combination of the electives. Students on all tracks may also choose any electives from the approved electives list, but need to make sure they take the electives necessary for the capstone exam.

Please refer to capstone sections for your chosen track when selecting winter courses.

Master's elective courses must be at least 5 credits (see list of "Pre-approved M.S. Electives").

Spring

ECON 202	Macroeconomic Analysis	5
ECON 294B	Applied Economics and Finance Seminar	2
	Master's elective (5 credits)	
	Master's elective (5 credits)	

Students need a minimum of 17 credits in spring quarter. UCSC students who have already taken some of the pre-approved master's elective courses as an undergraduate can use those elective courses to fulfill the master's course requirements, if they already have enough course credits to satisfy the requirements of the bachelor's degree. Students who use elective courses they have already taken previously to fulfill the requirements of the master's degree must comply with campuswide policy which states that a minimum of 35 credits must be completed as a master's student, after the student has completed the bachelor's degree. We will follow existing campus-wide policy stating that courses used to satisfy the requirements for a bachelor's major must include a minimum of 40 upper-division credits (UCSC Senate Manual 10.4.3) that are not used to satisfy the required courses or minimum credits for any other major (or in this case the master's degree). Courses used to satisfy the requirements for the master's degree cannot be used to satisfy the minimum 40 upper-division credits for the bachelor's degree.

Electives for the finance track may include ECON 231, ECON 234, ECON 235, and ECON 236. Electives for the quantitative economics track may include ECON 201 and ECON 259B. Students on the general track may choose any combination of the electives. Students on all tracks may also choose any electives from the approved electives list, but need to make sure they take the electives necessary for the capstone exam.

Please refer to capstone sections for each track when selecting spring courses.

Master's elective courses must be at least 5 credits (see list of "Pre-approved M.S. Electives").

Electives

Students may satisfy the elective requirements by taking approved courses within the Economics Department or from another discipline. The department has assembled a list of pre-approved master's electives (curricular offerings are subject to change annually). Students will need to file a departmental petition for review and approval of courses that are not on the pre-approved elective list.

Pre-Approved M.S. Electives

Please note courses are not offered every quarter or every year.

Economics

ECON 111A	Intermediate Accounting I	5
ECON 111B	Intermediate Accounting II	5
ECON 111C	Intermediate Accounting III	5
ECON 114	Advanced Quantitative Methods	6
ECON 124	Machine Learning for Economists	5
ECON 188	Management in the Global Economy	5
ECON 201	Applications in Microeconomics	5
ECON 211C	Advanced Econometrics III	5
ECON 222	Data Science and Applied Microeconomics	5
ECON 231	International Financial Management	5
ECON 234	Financial Institutions and Markets	5
ECON 235	Corporate Finance	5
ECON 236	Financial Engineering	5
ECON 238	Market Design: Theory and Pragmatics	5
ECON 259B	Public Policy Analysis	5

Enrollment in these ECON courses requires permission of instructor: ECON 111A, ECON 111B, ECON 111C, ECON 211C.

Applied Mathematics

AM 216	Stochastic Differential Equations	5

Computer Science and Engineering (CSE)

CSE 20	Beginning Programming in Python	5
CSE 101	Introduction to Data Structures and Algorithms	5
CSE 102	Introduction to Analysis of Algorithms	5
CSE 182	Introduction to Database Management Systems	5

CSE 20 Note: As it is a lower-division course, CSE 20 does not count toward the 35 credits required by the university to obtain a master's degree. However, since it broadens the skill-set of students in the program, we allow for it as a master's elective to satisfy department requirements. Before enrolling in this course, students should take care to ensure that they will have 35 eligible credits for graduation.

CSE Pre-Approved course electives (require permission of instructor)

CSE 111	Advanced Programming	5
CSE 142	Machine Learning	5
CSE 201	Analysis of Algorithms	5
CSE 202	Combinatorial Algorithms	5
CSE 243	Data Mining	5
CSE 270B	Management of Technology II	5
CSE 271	E-Business Technology and Strategy	5
CSE 272	Information Retrieval	5
CSE 277	Random Process Models in Engineering	5

Enrollment in these computer science and engineering courses requires permission of instructor: CSE 111, CSE 142, CSE 201, CSE 202, CSE 243, CSE 270B, CSE 271, CSE 272, CSE 277.

Environmental Studies

ENVS 140	National Environmental Policy	5

Statistics

STAT 206	Applied Bayesian Statistics	5
STAT 206B	Intermediate Bayesian Inference	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 208	Linear Statistical Models	5
STAT 226	Spatial Statistics	5

Capstone Requirements by Track

Students must pass a comprehensive capstone requirement in their selected track to receive their degree.

To complete the capstone exam requirement, students must declare the intended emphasis for the capstone **prior to May 1** in spring quarter.

This capstone requirement consists of a comprehensive examination, which will take place on the Friday of week nine of spring quarter. The capstone exam sections for spring courses may only include material from the first five weeks of these courses. Students who do not pass the May examination may take it again at a date scheduled by the department. Further attempts at passing the comprehensive examination will be approved by the master's committee on an appeal-only basis, with appeals only given for extraordinary or extenuating circumstances.

The comprehensive exam consists of four sections, with each section corresponding to one course required for the track. For students in the general emphasis track, the four courses are fixed, while students in the quantitative economics and finance tracks can choose four of five listed courses. Please refer to the capstone sections in the Courses by Track and Quarter table at the top.

Academic Progress

Along with enrolling in the necessary number of credits, students are expected to maintain satisfactory academic standing during their time at UC Santa Cruz. Students not making satisfactory progress will be placed on academic notice, and students will be dismissed from the program if

they do not remove their notice status within one quarter. For example, if a student is placed on notice starting in the winter quarter, they must improve to the extent that their notice status is removed by the beginning of the spring quarter.

Specifically, a student will be placed on academic notice if they fail any of the core (i.e., non-elective), 5-credit courses in the program. Students will be dismissed from the program if they fail core courses in consecutive quarters. The core courses are: ECON 200, ECON 202, ECON 216, ECON 233, and ECON 217 OR ECON 114.

Note that notice and dismissal can only be formally issued by the Graduate Division (under recommendation from the Economics Department). More details on these procedures, as well as student's right to appeal such decisions, can be found in the Graduate Division Handbook.

Applying for Graduation

By the end of the second week of instruction in the quarter you intend to graduate, you must file an "Application for Degree" form with the Division of Graduate Studies.

Optional Catchall

BACHELOR'S/MASTER'S CONTIGUOUS PATHWAY IN QUANTITATIVE ECONOMICS AND FINANCE

The Economics Department offers a Plan II (Capstone) Contiguous Bachelor's/Master's pathway in Quantitative Economics and Finance. The contiguous bachelor's/master's pathway provides highly motivated undergraduate majors the opportunity to earn separate bachelor's and master's degrees in five years. Students apply to be accepted into the contiguous bachelor's/master's pathway in consultation with their faculty undergraduate advisor, no later than the end of spring quarter of the junior year.

To be accepted to the path, students will need to prepare an application and plan for their pathway, providing evidence of solid academic performance in general and in their undergraduate major. The application should be submitted no later than June 1 of the junior year, and should include:

- A one-page personal statement describing a) the student's motivation and academic preparation for entering the pathway, b) the student's goals for the pathway, and c) future professional goals.
- A copy of unofficial transcripts. Applicants should possess an overall GPA of 3.0 or above.
- A course planner which lists when the student plans to complete the core Economics courses ECON 1, ECON 2, and ECON 100A.
- A letter of recommendation from any UC Santa Cruz faculty member attesting to the student's promise for a M.S. degree.

Students accepted to the contiguous bachelor's/master's pathway will, in their senior year, be able to apply to the Quantitative Economics and Finance M.S. through a streamlined process in the Graduate Division's admissions portal. They will be required to submit:

- A copy of unofficial transcripts. Applicants need an overall GPA of 3.0 or above.
- One letter of recommendation from any UC Santa Cruz faculty member attesting to the student's promise for a M.S. degree. The letter for admission into the pathway and the letter for the M.S. application package can be from the same faculty member, but the content of the letters must be different from each other.
- An application fee of $135 which will be reimbursed if the student enrolls in the program.

Students in the bachelor's/master's pathway who use undergraduate elective courses to fulfill the requirements of the master's degree must comply with campuswide policy which states that a minimum of 35 credits must be completed as a master's student, after the student has completed the bachelor's degree. Courses used to satisfy the requirements for the master's degree cannot be used to satisfy the minimum upper-division credits for the bachelor's degree.

ECONOMICS PH.D.

Introduction

The Ph.D. program in economics provides students with training in modern microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance, international trade, economic development, monetary economics, applied microeconomics, experimental economics, and other areas.

Advancement to Candidacy

Course Requirements

First-year Ph.D. students are required to enroll in the following courses:

- ECON 210B*, and the three sequences:
- ECON 204A-ECON 204B-ECON 204C, Advanced Micro Theory I-II-III;
- ECON 205A-ECON 205B-ECON 205C, Advanced Macro Theory I-II-III; and
- ECON 211A-ECON 211B-ECON 211C, Advanced Econometrics I-II-III.

* Scheduled in pre-fall as a three-week math camp that precedes the start of fall quarter. The three sequences are taken during the traditional academic year.

First-year Ph.D. students should plan to attend an annual “Introduction to field courses" workshop to learn about course options for satisfying second-year course requirements, as described in the next paragraph.

Second-year Ph.D. students are required to complete two fields (e.g. macroeconomics, international finance, labor) based on completion of 30 credits of coursework (two courses per quarter). The fields and associated courses will be proposed by the student with guidance from the faculty and subject to the approval of the Ph.D. program director. Each field will be constructed by selecting two coherent courses from the set of second-year economics Ph.D. courses listed below. Alternative graduate economics courses that satisfy this requirement may be approved by the Ph.D. program director. See the extensive list of second year course options below.

Students are required to submit a second-year field paper which is **due on Aug. 31**, just before the start of the third year. The department's graduate online handbook details the evaluation procedure for the field papers.

Third-year Ph.D. students must attempt and pass the Oral Qualifying Exam by the end of the spring quarter (of the third year). They enroll in ECON 297A with their field paper advisor (in fall only). Each quarter, students must enroll in a workshop focused on advanced topics in their field of interest: ECON 274, ECON 275, or ECON 276. In addition, students enroll in ECON 299B, Doctoral Thesis Research (10 credits), with their advisor, each quarter.

Fourth-year Ph.D. students and beyond are focused on their dissertation research and enroll in ECON 299B, Doctoral Thesis Research (10 credits), and a workshop focused on advanced topics in their field of interest: ECON 274, ECON 275, or ECON 276.

All graduate courses must be taken for letter grade with the exception of ECON 210B, ECON 274, ECON 275, ECON 275 and courses numbered ECON 293 and higher. Only courses with a letter grade of B- or higher can be counted toward the degree requirements.

Ph.D. Courses and Program Requirements

First Year

ECON 204A	Advanced Microeconomic Theory I	5
ECON 204B	Advanced Microeconomic Theory II	5
ECON 204C	Advanced Microeconomic Theory III	5
ECON 205A	Advanced Macroeconomic Theory I	5
ECON 205B	Advanced Macroeconomic Theory II	5
ECON 205C	Advanced Macroeconomic Theory III	5
ECON 211A	Advanced Econometrics I	5
ECON 211B	Advanced Econometrics II	5
ECON 211C	Advanced Econometrics III	5
ECON 210B	Mathematical Methods for Economic Analysis	5

Second Year

Second-year Ph.D. students are required to complete 30 credits of coursework (a total of six courses, two courses per quarter). Four of these courses must be designated for field study, two courses for each of the two fields (e.g. macroeconomics, international finance, labor). The fields and associated courses will be proposed by the student with guidance from the faculty and subject to the approval of the Ph.D. program director. Each field will be constructed by selecting two coherent courses from the set of second-year economics Ph.D. courses listed below. Alternative graduate economics courses that satisfy this requirement may be approved by the Ph.D. program director.

ECON 220A	Development Economics I	5
ECON 220B	Development Economics II	5
ECON 221A	Advanced Methods in Macroeconomics I	5
ECON 221B	Advanced Methods in Macroeconomics II	5
ECON 221C	Advanced Methods in Macroeconomics	5
ECON 224	Economic Applications of Machine Learning	5
ECON 238	Market Design: Theory and Pragmatics	5
ECON 240A	International Trade I	5
ECON 240B	International Trade II	5
ECON 241A	Advanced International Finance I	5
ECON 241C	Advanced International Finance III	5
ECON 241B	Advanced International Finance II	5
ECON 250A	Applied Microeconomics I	5
ECON 250B	Applied Microeconomics II	5
ECON 250C	Applied Microeconomics III	5
ECON 270A	Advanced Topics in Microeconomics I	5
ECON 270B	Advanced Topics in Microeconomics II	5
ECON 272	Evolutionary Game Theory	5

Please note that all courses are not offered every quarter or every year.

Third Year

Students enroll in ECON 299B plus one workshop plus each quarter, and also enroll in ECON 297A in fall quarter with their second-year paper advisor.

ECON 297A	Independent Study	5
ECON 274	Macroeconomics Workshop	3
ECON 275	Applied Microeconomics Workshop	3

ECON 276	Behavioral, Experimental, and Theoretical Economics Workshop	3
ECON 299B	Doctoral Thesis Research	10

Enroll in ECON 297A in fall quarter only.

Fourth Year and Beyond

Students enroll in ECON 299B and one workshop each quarter.

ECON 274	Macroeconomics Workshop	3
ECON 275	Applied Microeconomics Workshop	3
ECON 276	Behavioral, Experimental, and Theoretical Economics Workshop	3
ECON 299B	Doctoral Thesis Research	10

Foreign Language Requirements

Teaching Requirement

Pre-Qualifying Requirements

First-year students take two written preliminary examinations; one each in Micro and Macro, in the second week after final exams in June. Students who do not pass either exam may attempt the exam again in September at a date scheduled by the department. Students who fail either exam twice are not allowed to continue in the program.

Second-year students must complete a field paper that consists of original research demonstrating the student's readiness to undertake the Ph.D. in economics. The paper is due on Aug. 31 in the summer after the second year in the program.

Qualifying Examination

Advancement to candidacy for the Ph.D. degree requires completion with satisfactory grades or better of the required coursework, preliminary examinations, the field paper, and the oral examination. The oral examination is taken after all other requirements have been completed. A student cannot advance to candidacy before clearing any incomplete grades from their record. Students are expected to complete the oral qualifying examination (QE) during the spring quarter of their third year.

Qualifying Examination Committee:

The Graduate Division sets the general structure of the QE committee. The QE committee must be made up of at least three faculty members from the department and one outside member. The chair of the student's qualifying committee may not act as the chair for the dissertation committee. Both the outside member of the QE committee and the QE chair (one of the two additional economics members) must be tenured.

The outside member may be a UC Santa Cruz faculty from another discipline, or an economics faculty member from another campus. (**NOTE:** Travel expenses of QE committee members are not covered by either the Graduate Division or the Economics Department, and students are responsible for travel expenses and lodging of committee members from other campuses). Skype/Zoom may be used during the exam for outside members.

Members of the QE committee are chosen by the student in consultation with his/her faculty advisor and already appointed committee members, approved by the department and officially appointed by the Graduate Division dean.

Post-Qualifying Requirements

[Optional Catchall]

Dissertation

Dissertation

The final requirement for the Ph.D. degree is acceptance of the student's dissertation under the rules of the academic senate. A three-member dissertation advisory committee, headed by the student's research advisor, evaluates the dissertation for the department. The dissertation advisory committee must be approved by both the economics Ph.D. committee and the Graduate Division. The committee may require a formal public defense of the dissertation.

Dissertation Committee

The Graduate Division requires that students who have passed their qualifying exams (QE) form their dissertation reading committee before they are considered advanced to candidacy.

The dissertation committee must include a minimum of three faculty members, one of whom must be designated as the dissertation advisor. Normally these readers are selected from the QE committee, but this is not required.

At least two of these readers must be members of the UC Santa Cruz Economics Department. A majority of committee members must be part of the UC Santa Cruz academic senate.

Academic Progress

The main requirements for the program are as follows:

- Students must pass all first-year courses.
- Students must pass the micro and macro preliminary exams within the maximum two attempts.
- Students must pass the 2nd-year paper, due on Aug. 31 in the summer after the second year.
- Students must pass the oral qualifying exam. This is expected to be completed by the end of the spring quarter of the third year.
- Students must pass a workshop in each quarter in years three and above.

Students who fail to meet any of these requirements within the timeline specified will be placed on academic notice with the Graduate Division. Students who fail to rectify the terms of their notice within the timeline specified in their notice will be dismissed from the program. Note that notice and dismissal

can only be formally issued by the Graduate Division (under recommendation from the Economics Department). More detail on these procedures, as well as student's right to appeal such decisions, can be found in the Graduate Division Handbook. The minimum residency requirement for a Ph.D. degree at UC Santa Cruz is six quarters. To receive a graduate degree from UC Santa Cruz, you must be registered at the Santa Cruz campus for at least three of the six quarters. A minimum of one quarter in residence must elapse between advancement to candidacy and awarding of degree.

Applying for Graduation

By the end of the second week of instruction in the quarter you intend to graduate, you must file an "Application for Degree" form with the Division of Graduate Studies.

Latin American and Latino Studies/Education, Democracy, and Justice B.A. (p. 800)

Latin American and Latino Studies (LALS) and Education Department 4+1 Contiguous Bachelor's/Master's Pathway (p. 815)

Science Education B.S. (p. 490)

Mathematics Education B.A. (p. 406)

The purpose of the Education Department's instructional programs is to prepare all students—both undergraduates and graduates—to engage in the analysis and integration of educational theory, research, and practice for an increasingly diverse society. Our commitment is built around four interrelated domains: 1) schools, families, and communities; 2) teacher education and teacher development; 3) language, literacy, and learning; and 4) mathematics and science education. Foundational to our programs is an acknowledgment of the social, cultural, and political contexts in which all aspects of education occur.

The Education Department offers a doctor of philosophy (Ph.D.) (p. 733) program for students who have exemplary academic preparation as well as experience working in educational settings. We offer a master's level/teaching credential (MA/C) (p. 729)teacher-preparation program; an

education major, Education, Democracy and Justice B.A. (p. 717); and we have two vibrant undergraduate education minor tracks, the education minor (p. 722) and the STEM education minor (p. 723), that serve more than 300 undergraduates each year.

UNDERGRADUATE PROGRAM

The UC Santa Cruz undergraduate courses in education engage students in histories of educational thought and philosophy, the politics and economics of education, multiple approaches to learning theory and teaching pedagogy, and contemporary issues of cultural and linguistic diversity in education.

The state of California does not allow academic majors in education that lead to a teaching credential. Instead, UC Santa Cruz offers an undergraduate major in education and two minors in education for students who are considering a career in teaching or who hold a more general interest in educational studies. Please note that the major and minors in education do not provide a California Teaching Credential. Additionally, please note that the UC Santa Cruz teaching credential program is a graduate program and coursework taken in the major or minor cannot be substituted for credential requirements, except in specifically designated pathways.

In addition to students with a general interest in educational studies, the undergraduate major in education is an option for students considering a career in K-6 teaching and planning to enter a credential program after undergraduate degree completion. Students in other majors who are considering a career in K-6 or 7-12 teaching should start planning in their junior year. Find out more about K-12 school teaching careers here.

GRADUATE PROGRAMS

The master of arts (M.A.) in education and California teaching credential program prepares prospective teachers to work with California's culturally and linguistically diverse student population. Students in this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a 12-month, five-quarter program comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in K–12 public schools. The program also offers the Bilingual Authorization (in Spanish) for primary language instruction or dual language immersion instruction in a K–12 setting.

The goal of the Ph.D. in education is to support graduate students in becoming creative scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. To achieve this goal, this program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. The courses and research experiences are closely related to practice in K-12 classrooms and informal settings. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and teaching within the multiple contexts of classroom, school, family, and community. Graduates of this program will be qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in research and regional universities. Graduates may also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development.

EDUCATION, DEMOCRACY, AND JUSTICE B.A.

Information and Policies

Introduction

The Education, Democracy and Justice major (EDJ; pronounced as "Edge") will provide opportunities to examine critical questions, theories, practices, and research in the field of education considered broadly and not only in relation to formal schooling. Courses in the major will provide the conceptual knowledge for students to engage in critical thinking about social and policy contexts as well as everyday practices affecting inequitable structures in schooling, society, and culture that have enduring impacts on the quality of our democracy and communities. The major's course of study will explore the history and politics of education and public schooling and their relation to the formation of just and democratic societies; theories of cognition, learning, and pedagogy; and issues of equity and cultural and linguistic diversity in education and in public school policies and practices. The major will not focus on education in international contexts but will address the effects of immigration and globalization on U.S. education.

The department faculty and the program's social justice orientations bridge theory and practice, drawing on a variety of fields and areas of study in the humanities and social sciences—including sociology, psychology, anthropology, history, philosophy—as well as critical interdisciplinary theories and the learning sciences. Core required courses and elective field experiences will incorporate history and insights from action and participatory forms of research and community organizing to highlight the relationship between education and democratic politics. These studies and field experiences will ground students in an understanding of the transformative power of the linguistic, cultural, epistemic, and social resources that individuals, families, social groups, and communities bring to bear on their circumstances, and how these resources provide the foundations for personal and social change to address historic and enduring inequities that have been barriers to education as a democratic project. The aim of the EDJ major is to provide students with the knowledge, skills, and dispositions to become leaders in their communities who can impact a wide array of educational and social institutions, including schools, and put their combination of coursework, research, and fieldwork

experiences to work in improving the lives of the least advantaged to advance the welfare of all.

The Education, Democracy, and Justice (EDJ) major does not provide a professional education degree or teaching credential. However, for students interested in a future career as an elementary school teacher, it will provide a strong background for applying to a master's (M.A. or M.Ed.) or multiple subject teaching credential program. Students interested in 6-8 or 9-12 levels of teaching might wish to double-major in education to provide a strong educational context to support their major in a subject area (e.g. literature, history, science, math) if they intend to apply to a graduate program in teacher education. Students cannot teach in 9-12 grades in California schools with a single major in education. Students who complete the major with at least a 3.0 GPA along with other advised coursework and experiences will be given priority for admission into UCSC's Master of Arts and Credential program in K-5 (multiple subjects) on the recommendation of the faculty.

The Education, Democracy, and Justice (EDJ) major's sociocultural perspective emphasizes equity and social justice related education in and out of school, with a particular focus on how cognition, language, and knowledge production, circulation, and mobilization are related to social, cultural, and other identities and their processes of formation. Students will examine critical, transformative pedagogies that focus on meeting the needs of low-income, ethnically, racially, and linguistically non-dominant students and their families, and how these pedagogies support the development of more healthy and flourishing children and youth and a more just and democratic society.

Program Learning Outcomes

1. Students will demonstrate an understanding of the key theoretical perspectives and existing research on innovative teaching and learning approaches that value and promote historically disadvantaged and under-served communities and their cultural and linguistic resources.
2. Students will apply critical perspectives in reflecting on and/or conducting research and/or fieldwork, and present their findings in multi-modal forms.
3. Students will demonstrate knowledge of broad historical, social, and political contexts that impact equal opportunity to learn and contribute to society, and the role that education and schooling can play in expanding opportunity.
4. Students will demonstrate basic knowledge of transformative teaching and learning principles that can be applied in a wide range of learning environments and youth serving educational organizations.
5. Students will demonstrate oral and written communication skills through individual and group presentations and assignments in their courses.

Academic Advising for the Program

Undergraduate Advisor

The undergraduate advisor offers specific information about navigating through the program and the curriculum and assists students with prerequisites, requirements, policies, procedures, learning support, guidance on internships, scholarships, and opportunities for undergraduate research. Please contact the EDJ undergraduate advisor at educationadvising@ucsc.edu.

Transfer Students should also consult the Transfer Information and Policy section below.

Getting Started in the Major: Frosh

Students interested in pursuing the Education, Democracy, and Justice (EDJ) major should complete EDUC 10, and EDUC 60 and attend a declaration workshop or meet with the department advisor. After completing these requirements, students may petition to declare the education major.

New frosh who are exploring majors may have chosen an "Advising Cluster" on their UC application, and can find information about getting started on the Advising Clusters site.

Transfer Information and Policy

Transfer Admission Screening Policy

Students planning to apply to UC Santa Cruz in the Education, Democracy, and Justice (EDJ) major are not required to complete specific courses for consideration of admission.

Transfer students considering the education major are strongly encouraged to complete most, if not all, general education requirements before transfer. Introductory education courses completed by transfer students at their prior institution will be reviewed to determine equivalency for EDUC 10 and EDUC 60**.** To ensure that students desiring a transfer to UCSC's EDJ major are on track for meeting these goals, they need to connect with their community college or university advisors for guidance and course planning.

EDUC 10	Introduction to Learning	5
EDUC 60	Schooling, Democracy, and Justice	5

Getting Started in the Major: Transfer Students

Transfer students can designate the Education, Democracy, and Justice (EDJ) major as their intended major and begin working on the requirements as soon as they arrive at UCSC.

Transfer students interested in pursuing the education, democracy, and justice (EDJ) major should complete EDUC 10, and EDUC 60 or courses taken at their previous institution that the Education Department has approved as equivalent. Transfer students should also attend a declaration workshop or meet with the department advisor.

After completing these requirements, students may petition to declare the education major.

Students who wish to pursue the education major should arrange to meet with the education undergraduate advisor as early as possible to discuss plans for enrolling in EDUC 10 and EDUC 60, if needed, declaring the major, and other course planning. Students should bring a copy of their UCSC Transfer Credit Summary to the meeting with the undergraduate advisor. This may be printed from the student portal.

EDUC 10	Introduction to Learning	5
EDUC 60	Schooling, Democracy, and Justice	5

Major Qualification Policy and Declaration Process

Major Qualification

To qualify to declare the EDJ major, students must have:

- Attended an Education, Democracy, and Justice (EDJ) Major Workshop or meet with the advisor
- Completed EDUC 10, Introduction to Education, and EDUC 60, Schooling, Democracy, and Justice. (Students may still petition to declare if they have completed one required lower-division course and are currently enrolled in the second required lower-division course.)

The Committee on Educational Policy on Major Declaration Process and Deadlines can be found here.

EDUC 10	Introduction to Learning	5
EDUC 60	Schooling, Democracy, and Justice	5

Appeal Process

Students who are informed that they are not qualified to declare the Education, Democracy, and Justice (EDJ) major may appeal this decision by submitting a letter to the program director within 15 days from the date the notification was made. Within 15 days of receipt of the appeal, the program will notify the student, college, and the Office of the Registrar of the decision.

How to Declare a Major

To officially declare the education, democracy, and justice (EDJ) major, students petition in MyUCSC and create and share an Academic Planning Form with the department's undergraduate advisor. Students pursuing the major should meet with the Education Department's undergraduate advisor or peer advisor as early as possible.

Letter Grade Policy

Any requirement of the major, including major qualification, may be taken for a letter grade or Pass/No Pass. No more than 25 percent of credits earned at UCSC may be graded on a Pass/No Pass basis. Students must be in good academic standing to choose the Pass/No Pass option. See the Pass/No Pass option section of the catalog for more information.

[Optional Catchall]

Course Substitution Policy

Education, Democracy, and Justice (EDJ) B.A. students may substitute up to two of the upper-division elective requirements with upper-division electives from other UCSC departments, individual study courses, education abroad electives, or other four-year institution electives. Students are limited in the number of outside electives accepted toward the major and must petition for approval of the course prior to applying it to the major. Review the department's Petition for a Course Exception page for information about the petition process.

Double Majors and Major/Minor Combinations Policy

The department accepts proposals for double majors. A student pursuing a double major meets the full requirements of the Education, Democracy, and Justice (EDJ) major as well as the full requirements of the other major.

Education Abroad Program (EAP)

Students seeking to study abroad must be declared in their major prior to studying abroad.

It is recommended that the students have the courses intended to be taken abroad reviewed and approved by the Education Department prior to departure. Up to two relevant courses taken through study abroad programs from which credits are transferable to UCSC may be used toward satisfaction of the Education, Democracy, and Justice (EDJ) B.A. elective requirements when the content is deemed appropriate and approved by the Education Department.

Honors

A student with a major GPA of 3.75 or better qualifies for honors in the Education, Democracy, and Justice (EDJ) major. A student with a major GPA of 3.90 or better qualifies for highest honors in the major. In general, no more than approximately 15 percent of the graduating class can be considered for honors or highest honors in the major. Courses and units taken at UCSC to satisfy the major requirements are used to calculate the major GPA. Courses transferred from other institutions (with the exception of study abroad programs through UCSC) are not calculated into major GPA.

[Optional Catchall]

Requirements and Planners

Course Requirements

Education, Democracy, and Justice (EDJ) majors are required to take 10 5-credit courses for a total of 50 credits:

Lower-Division Courses

Both of the following

EDUC 10	Introduction to Learning	5

EDUC 60	Schooling, Democracy, and Justice	5

Upper-Division Courses

The upper-division requirements consist of two foundational courses which satisfy the disciplinary communication and comprehensive requirements, and six electives.

One of the following:

EDUC 110	Popular Education, Democracy, and Social Movements	5
EDUC 180	Introduction to Teaching	5

Plus the following course:

EDUC 190	Senior Seminar Capstone	5

Electives

Beyond the two foundational required courses above, students take six, 5-credit electives from EDUC 102–187. The course lists below separate these education courses by topic area. The Outside Electives list includes courses which may count as electives with department approval, and count toward the program's course substitution policy, outlined in the Information and Policies section.

Outside Electives

The following courses may also be counted toward the six electives:

EDUC 194	Group Projects	5
ENVS 177	Teaching Environmental Education	5
PSYC 108	Educational Psychology	5
SOCY 148	Educational Inequality	5

EDUC 194 can only count once toward the six electives

Social Contexts and Educational Foundations

EDUC 110 is required

EDUC 102	Education, Media, and Society	5
EDUC 128	Immigrants and Education	5
EDUC 135	Gender and Education	5
EDUC 141	Bilingualism and Schooling	5
EDUC 164	Urban Education	5
EDUC 166	Technology and Education	5
EDUC 160	Issues in Educational Reform	5
EDUC 173	Seminar in Critical Pedagogy	5
EDUC 174	Ethnographic Research in Schools and Communities	5
EDUC 178	Special Topics in Education	5
EDUC 181	Race, Class, and Culture in Education	5
CRES 121	The Struggle for K-12 Ethnic Studies	5

Learning and Teaching

EDUC 180 is required

EDUC 104	Ethical Issues and Teaching	5
EDUC 115	K-12 Student Assessment	5
EDUC 120	The Arts in Schools: Aesthetic Education Theory and Practice	5
EDUC 125	Multicultural Children's Literature for Elementary Classrooms	5
EDUC 126	Foundations of Literacy Learning: Contemporary Perspectives	5
EDUC 140	Language, Diversity, and Learning	5
EDUC 177	Teaching Linguistically Diverse Students	5
EDUC 187	Cognition and Instruction	5
EDUC 183	Children's Mathematical Thinking	5
EDUC 182	Social and Political Contexts of Teachers' Work	5
EDUC 166	Technology and Education	5
EDUC 173	Seminar in Critical Pedagogy	5
EDUC 141	Bilingualism and Schooling	5
EDUC 185B	Introduction to Mathematics Education	5
EDUC 185C	Introduction to Teaching Science	5
EDUC 178	Special Topics in Education	5
CRES 121	The Struggle for K-12 Ethnic Studies	5

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement in Education, Democracy, and Justice B.A. is satisfied by completing EDUC 110 or EDUC 180, and EDUC 190.

One of the following courses

EDUC 110	Popular Education, Democracy, and Social Movements	5
EDUC 180	Introduction to Teaching	5

Plus

EDUC 190	Senior Seminar Capstone	5

Comprehensive Requirement

EDUC 190 (5 credits) will satisfy the senior capstone requirement with a focus on advanced topics in education, emphasizing at least one of the following: critical and analytical thinking, field research, advanced research methods (qualitative or quantitative), or advanced theory.

EDUC 190	Senior Seminar Capstone	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

A four-year course plan for frosh majoring in education, democracy, and justice (EDJ) and a two-year course plan for transfer students are provided below.

Following are two recommended academic plans for frosh, and two plans for transfer students. Plan One is a suggested guideline for frosh who may choose social contexts and educational foundations (EDUC 110 is recommended) as an area of emphasis. Plan Two is for frosh who may choose learning and teaching (EDUC 180 is recommended) as an area of emphasis. The third and fourth planners are suggested two-year guidelines for transfer students. Students may choose to take education electives in summer quarters.

Plan One for Incoming Frosh

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	EDUC 60 College 1	WRIT 1/WRIT 1E (if needed)	EDUC 10	
2nd (soph)	WRIT 2*			
3rd (junior)	EDUC 180	EDUC elective EDUC elective	EDUC elective	
4th (senior)	EDUC elective EDUC elective	EDUC elective	EDUC 190	

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses listed above will satisfy the PR-S and DC general education requirements. Other GE requirements may be satisfied by elective courses. All other GE requirements have to be satisfied.

Plan Two for Incoming Frosh

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	EDUC 10	WRIT 1/WRIT 1E (if needed)	EDUC 60	
2nd (soph)	WRIT 2*			
3rd (junior)	EDUC elective EDUC elective	EDUC 110	EDUC elective	
4th (senior)	EDUC elective EDUC elective	EDUC elective	EDUC 190	

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses listed above will satisfy the PR-S and DC general education requirements. Other GE requirements may be satisfied by elective courses. All other GE requirements have to be satisfied.

Sample Plan One Transfer Planner

Year	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	EDUC 60* EDUC elective	EDUC 180	EDUC 10* EDUC elective	
4th (senior)	EDUC elective EDUC elective	EDUC elective EDUC elective	EDUC 190	

The courses listed above will satisfy the PR-S and DC general education requirements. Other GE requirements may be satisfied by elective courses. All other GE requirements have to be satisfied.

*Articulated equivalent courses may be taken prior to transfer.

Plan Two for Transfer Students

Year	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	EDUC 10* EDUC elective	EDUC 110	EDUC 60* EDUC elective	
4th (senior)	EDUC elective EDUC elective	EDUC elective EDUC elective	EDUC 190	

The courses listed above will satisfy the PR-S and DC general education requirements. Other GE requirements may be satisfied by elective courses. All other GE requirements have to be satisfied.

* Approved equivalent courses may be taken prior to transfer.

EDUCATION MINOR GENERAL

Declaring the Minor

To officially declare a general minor in education, students must submit a petition in MyUCSC and share their major Academic Planning Form with the department's undergraduate advisor. Students pursuing a minor in education should meet with the Education Department's peer advisor as early as possible.

To be eligible to declare the general minor in education, students must have:

- completed or be enrolled in EDUC 60, Schooling, Democracy, and Justice ; and
- be declared in a major.

Course Requirements

The general minor in education consists of six courses totaling 30 credits. Courses may be taken for a letter grade or Pass/No Pass.

Lower-Division Courses

Take the following course:

EDUC 60	Schooling, Democracy, and Justice	5

Upper-Division Courses

Take one of the following courses:

EDUC 110	Popular Education, Democracy, and Social Movements	5
EDUC 180	Introduction to Teaching	5

EDUC 180 includes a 30-hour classroom observation practicum, plus additional travel time to school sites.

For EDUC 180, background checks (Live Scan Fingerprinting), evidence of a negative TB test or Risk Assessment Form, and Online Mandated Reporter training are required of all participants prior to the first day of instruction. The department will contact enrolled students with information about how to complete these items.

Upper-Division Electives

Students take four 5-credit electives chosen EDUC 102-187.

Electives may be taken before EDUC 110/180.

SCIENCE TECHNOLOGY ENGINEERING AND MATHEMATICS STEM EDUCATION MINOR

The Science, Technology, Engineering, and Mathematics (STEM) education minor specifically serves students in STEM majors who are considering careers in secondary mathematics or science teaching.

Students pursuing the STEM education minor should meet with the Cal Teach staff as early as possible. Entry into EDUC 50 is by application only, and interested students must submit an application to the Cal Teach program (see the Cal Teach website or email calteach@ucsc.edu). Entry into EDUC 100 and EDUC 185L is contingent upon successful completion of previous Cal Teach internships and sufficient university-level science or mathematics coursework.

Declaring the STEM Minor

To officially declare a STEM minor in education, students must submit a petition in MyUCSCand share the Academic Planning Form from the major to the department's undergraduate advisor. Students pursuing a minor in education should meet with the Education Department's undergraduate advisor as early as possible.

To be eligible to declare the STEM minor in education, students must have:

- attended an Education Minor Workshop or met with the Education undergraduate advisor;
- completed or be enrolled in EDUC 50 (which requires being accepted into the Cal Teach Program); and
- successfully declared a major.

Course Requirements

The STEM minor in education consists of eight courses, totaling 32 credits and including approximately 75 hours of classroom field placements. Students may take courses for a letter grade or Pass/No Pass.

Lower-Division Courses

Choose one of the following courses

EDUC 50A	CAL Teach 1: Science and Mathematics	2
EDUC 50B	CAL Teach 1: Mathematics	2
EDUC 50C	CAL Teach 1: Science	2

Plus the following course

EDUC 60	Schooling, Democracy, and Justice	5

Upper-Division Courses

Choose one of the following courses:

EDUC 100A	Cal Teach 2: Science and Mathematics	2
EDUC 100B	Cal Teach 2: Mathematics	2
EDUC 100C	Cal Teach 2: Science	2

Plus one of the following courses:

EDUC 185B	Introduction to Mathematics Education	5
EDUC 185C	Introduction to Teaching Science	5

Plus the following course:

EDUC 185L	Introduction to Teaching: Cal Teach 3	3

Plus one cultural and linguistic diversity course:

EDUC 125	Multicultural Children's Literature for Elementary Classrooms	5
EDUC 128	Immigrants and Education	5
EDUC 135	Gender and Education	5
EDUC 140	Language, Diversity, and Learning	5
EDUC 141	Bilingualism and Schooling	5
EDUC 164	Urban Education	5
EDUC 177	Teaching Linguistically Diverse Students	5
EDUC 181	Race, Class, and Culture in Education	5
EDUC 110	Popular Education, Democracy, and Social Movements	5

Plus two electives:

Students take two additional 5-credit courses numbered EDUC 102-EDUC 187. Please refer to the Education Department's website for a list of approved upper-division courses being offered during the current academic year.

CRITICAL RACE AND ETHNIC STUDIES AND EDUCATION MA/C CONTIGUOUS BACHELOR'S/MASTER'S PATHWAY

The 4+1 pathway into the M.A./Credential Master's program is an option that allows undergraduates in the critical race and ethnic studies (CRES) major at U.C. Santa Cruz to:

- Finish the master's degree in just one additional year (5 Quarters July to July).
- Apply to the Education master's program through a streamlined application process.

Undergraduate students currently enrolled in the CRES major have the opportunity, any time after the start of their junior

year until Dec. 1 of their senior year, to apply to be admitted to the 4+1 contiguous pathway leading to the Education Master's Degree.

The requirements for admission into the 4+1 pathway are:

- Undergraduate major in CRES
- A GPA in the major of 3.0 or more
- Overall GPA of 3.0 or higher
- Junior or senior standing
- Complete two upper-division courses selected from the following with a grade of B or higher: EDUC 104, EDUC 115, EDUC 125, EDUC 126, EDUC 135, EDUC 141, EDUC 160, EDUC 162, EDUC 164, EDUC 174, EDUC 177.

Interested students should schedule a meeting with the CRES undergraduate advisor to discuss their curriculum plan and complete the application forms. The deadline for application to the pathway is Dec. 1 of the senior year, although students are encouraged to apply earlier.

While students in the pathway are not guaranteed admission to the MA/Credential Program, the Education Department expects to admit students who:

1. have met the requirements for admission to the 4+1, above;
2. have classroom experience with youth; and
3. have a commitment to teaching in communities serving traditionally underserved populations, barring any extenuating circumstances, or if the applicant does not obtain clearance from the State of California. Additionally, students will be eligible for a streamlined admission process if, at the time of application, they have met the state Basic Skills and Subject Matter requirements, typically by providing passing scores on California state tests: the CBEST and the CSET (applicants must pass the required subtests for a secondary Single Subject Social Science credential or the Multiple Subjects credential).

CSET Social Science consists of three subtests:

- Social Science Subtest I (test code 114)
- Social Science Subtest II (test code 115)
- Social Science Subtest III (test code 116)

CSET Multiple Subjects consists of three subtests:

- Multiple Subjects Subtest I (test code 101)
- Multiple Subjects Subtest II (test code 214)
- Multiple Subjects Subtest III (test code 103)

After entering into the Master's/Credential Program, students from the pathway will follow the same requirements as any other students in the MA/C program with expected graduation in July of the year after their graduation from the UC Santa Cruz CRES program.

Students who have completed one of these identified undergraduate education courses will have the course EDUC 205 waived from their MA/Credential requirements.

- EDUC 102, Education, Media and Society,
- EDUC 128, Immigrants and Education,
- EDUC 140, Language, Diversity Learning,
- EDUC 173, Critical Pedagogy,
- EDUC 181, Race, Class and Culture in Education.

Students intending to apply for the MA/Credential Program may also choose to complete these courses in Summer Session II between their junior and senior years, instead of during the MA/Credential Program:

- EDUC 210, Health, Safety and Community, 2 credits,
- EDUC 213, Child and Adolescent Development for Educators, 2 credits,

The following State of California requirements for a California teaching credential, which have to be completed before the end of the final quarter of the MA/Credential Program, can also be completed at the undergraduate stage if a student chooses:

- The US Constitution Examination, when offered by the Education Department. (Completion of any of the courses POLI 20, POLI 111A, POLI 120A or HIS 10A also satisfies this requirement.)
- The UC Santa Cruz Extension online course EDUC.XSC209 can be completed any time it is offered to satisfy the Preliminary Technology Requirement.
- A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed before the end of the final quarter of the MA/Credential Program and be valid at the time of application for the preliminary credential in the final summer session of the MA/Credential Program. (A CPR course that will remain valid through the preliminary credential application may be taken during the undergraduate state; 12-month certifications will not be sufficient. Student must check with course provider.)

MATHEMATICS AND EDUCATION MA/C CONTIGUOUS BACHELOR'S/MASTER'S PATHWAY

Mathematics and Education MA/C Contiguous Bachelor's/Master's Pathway

The 4+1 pathway into the Master of Arts/Credential (MA-C) Program is an option that allows undergraduates in the

mathematics education major at the University of California, Santa Cruz to:

▪ Finish the master's degree in just one additional year (five quarters, July to July).

▪ Apply to the Education master's program through a streamlined application process.

Undergraduate students currently enrolled in the mathematics education major have the opportunity, any time after the start of their junior year until Dec. 1 of their senior year, to apply to be admitted to the 4+1 contiguous pathway leading to the Education master's degree.

The requirements for admission into the 4+1 pathway are:

1. a GPA in the major of 3.0 or more;

2. completion of EDUC 185B, Introduction to Mathematics Education, with a grade of B or better. It is recommended students take 185B by the end of their junior year. The course previews the reading and writing workload required in most of the courses in the MA-C Program. EDUC 185B is typically offered in winter; and

3. completion or current enrollment or plan to enroll by fall of the senior year in all of the required Cal Teach courses.

Interested students email the UCSC Credential Analyst to request the application for the Mathematics Education 4+1 Pathway, complete the form, obtain the signature of the Mathematics undergraduate advisor, and email the completed form and supporting documents to the M.A./Credential program coordinator. The deadline for application to the pathway is Dec. 1 of the senior year, although students are encouraged to apply earlier.

While students in the pathway are not guaranteed admission to the MA/Credential Program, the Education Department expects to admit students who have met the MA/Credential admissions requirements and three requirements for admission to the 4+1 pathway described above, barring any extenuating circumstances, or if the applicant does not obtain clearance from the State of California, as described in the program statement for the MA/Credential Master's Program. Additionally, students will be eligible for a streamlined admission process if, at the time of application, they have met the state Basic Skills and Subject Matter requirements, typically by providing passing scores on California State tests: the CBEST and the CSET (applicants must pass the required sub test for a secondary Single Subject Mathematics credential or the Foundational-Level Mathematics credential). CSET Mathematics consists of three subtests: Subtest I, Subtest II, and Subtest III. Students seeking the Foundational-Level Mathematics Credential only required to pass Subtest I and Subtest II.

After entering into the Master's/Credential Program, students from the pathway will follow the same requirements as any other students in the MA/C Program with expected graduation in July of the year after their graduation from the UC Santa Cruz Mathematics Education program.

Students who have completed EDUC 177 will have the course EDUC 205 waived from their MA/Credential requirements. Students intending to apply for the MA/Credential program may also choose to complete these courses in Summer Session II between their junior and senior years, instead of during the MA/Credential Program:

EDUC 210, Health, Safety and Community, 2 credits;

EDUC 213, Child and Adolescent Development for Educators, 2 credits.

The following State of California requirements for a California teaching credential, which have to be completed before the end of the final quarter of the MA/Credential Program, can also be completed at the undergraduate stage if a student chooses:

- The U.S. Constitution Examination, when offered by the Education Department. (Completion of any of the courses POLI 20, POLI 111, POLI 120A or HIST 10A also satisfies this requirement.)
- The UCSC Extension online course EDUC.XSC209 can be completed any time it is offered to satisfy the Preliminary Technology Requirement.
- A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed before the end of the final quarter of the MA/Credential Program and be valid at the time of application for the preliminary credential in the final summer session of the MA/Credential Program. (A CPR course that will remain valid through the preliminary credential application may be taken during the undergraduate state; 12-month certifications will not be sufficient. Student must check with course provider.)

Course planner and sample program

During their undergraduate years, a student follows the planner for the Math Education B.S. program. The program has different sample plans, depending on where students start, frosh and transfer planners for each plan published in the General Catalog. The sample plan below is for students starting at Math 19A or MATH 20A.

Sample Math Education Four-Year Planner

	Fall	**Winter**	**Spring**
1st (frosh)	MATH 19A or MATH 20A	MATH 19B or MATH 20B	MATH 21
	Core/Writing	Core/Writing	MATH 23A
	GE/ME*	GE/ME*	GE/ME*

2nd (soph)	MATH 23B	MATH 100	MATH 128A
	GE/ME*: EDUC 10, EDUC 60, or EDUC 180	STAT 5	EDUC 100B (2 credits)
	EDUC 50B (2 credits)		
3rd (jr)	MATH 110	MATH 181	EDUC 177
	MATH 101	EDUC 185B	MATH 111T

Summer Term II (July-August): EDUC 210 and EDUC 213

4th (sr)	STAT 131	MATH 103A or MATH 105A	MATH 194
	EDUC 177	CSE 20	EDUC 185L

* General Education/Major Exploration

Extra Math course: MATH 101 (offered Fall) or CSE 16 (offered FWS)

MATH 101, Math Problem Solving (F), highly recommended out of all these choices

Education Summer courses:

EDUC 210, Health, Safety and Community, (2 credits) Summer Term II (July-August);

EDUC 213, Child and Adolescent Development for Educators, (2 credits) Summer Term II (July-August);

Education online course (XSC 209), Introduction to Technology in Schools, UCSC Extension.

Math Subject Matter Program

Students following the Math ED 4+1 are likely to also wish to complete the Math Subject Matter Program to waive the CSET exams. The requirements (or equivalents taken at another university) for the CSET waiver are as follows:

Introductory Math Education Concentration Coursework:

- MATH 19A or MATH 20A
- MATH 19B or MATH 20B
- MATH 21
- MATH 23A
- MATH 23B
- STAT 5

Advanced Math Education Concentration Coursework:

- MATH 100
- MATH 103A or MATH 105A
- MATH 110
- MATH 111A or MATH 111T
- MATH 128A
- MATH 181
- MATH 194 or MATH 195
- STAT 131
- Both EDUC 50B and EDUC 100B

Additional Courses Specific to the SMP in addition to the Math Education Curriculum:

- EDUC 185B
- 1 Extra Math course--MATH 24 or MATH 101* or MATH 115 or CSE 16
- 1 Coding Course--CSE 5J or CSE 10/CSE 10L or CSE 20

The Sample course plan for the MA/Credential will be largely unaltered, with the exceptions that EDUC 205** may be waived and EDUC 210 and EDUC 213*** may have been completed by the student as an undergraduate (see Section II.1.A earlier in this proposal).

*Highly recommended for Math Education majors
**May substitute EDUC 177 taken as an undergraduate for EDUC 205
***EDUC 210 and EDUC 213 may be taken in Summer Session II between junior and senior years

Note: Beginning placement begins on the first day of our partner schools' and continues through to the end of their K-12 academic year in June; both winter and spring quarter breaks align to the breaks of the partner schools and not the UC Santa Cruz calendar.

SCIENCE EDUCATION AND EDUCATION MA/C CONTIGUOUS BACHELOR'S/MASTER'S PATHWAY

The 4+1 pathway into the Master of Arts (M.A.)/Credential Master's program is an option for UC Santa Cruz Science Education majors at U.C. Santa Cruz to apply to the M.A./Credential program through a streamlined application process.

Undergraduate students currently enrolled in the science education major may, any time after the start of their junior year until Dec. 1 of their senior year, apply to be admitted to the 4+1 contiguous pathway leading to the education master's degree and teaching credential.

The requirements for admission into the 4+1 pathway are:

1. a GPA in the major of 3.0 or higher;
2. Completion of EDUC 185C Introduction to Teaching Science, and with a grade of B or better; and
3. Completion or current enrollment or plan to enroll by fall of the senior year in all of the required Cal Teach courses.

Interested students should schedule a meeting with the science education undergraduate advisor to discuss their curriculum plan and complete the application forms. The deadline for application to the pathway is Dec. 1 of the senior year, although students are encouraged to apply earlier.

While students in the pathway are not guaranteed admission to the M.A./Credential Program, the Education Department expects to admit students who have met the MA/Credential admissions requirements and the three requirements for admission to the 4+1 pathway described above, barring any extenuating circumstances or if the applicant does not obtain clearance from the State of California as described in the program statement for the M.A./Credential Master's program. Additionally, students will be eligible for a streamlined admission process if, at the time of application, they have met the state Basic Skills and Subject Matter requirements, typically by providing passing scores on California State tests: the CBEST and the CSET (applicants must pass the required sub tests[1] for a secondary Single Subject Science credential or the Foundational-Level General Science credential).

After entering into the Master's/Credential program, students from the pathway will follow the same requirements as any other students in the M.A./Credential program with expected graduation in July of the year after their graduation from the UCSC Science Education program.

Students who have completed EDUC 177 for the UCSC Science Education program will have the course EDUC 205 waived from their M.A./Credential requirements. Students intending to apply for the M.A./Credential program may also choose to complete EDUC 210 (Health, Safety and Community) and EDUC 213 (Child and Adolescent Development for Educators) in Summer Session II between their junior and senior years, instead of during the M.A./Credential program.

The following State of California requirements for a California teaching credential, which have to be completed before the end of the final quarter of the M.A./Credential program, can also be completed at the undergraduate stage if a student chooses:

- The U.S. Constitution Examination, when offered by the Education Department. Completion of any of the courses POLI 20, POLI 111A, POLI 120A or HIS 10A also satisfies this requirement.
- The UCSC Extension online course EDUC.XSC209.
- A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult). A CPR course that will remain valid through the preliminary credential application may be taken during the undergraduate state; 12-month certifications will not be sufficient. Students must check with the course provider.

[1]CSET Science consists of two subtests: Subtest I (test code 215) and Subtest II -- Life Sciences (test code 217), Chemistry (test code 218), Earth and Space Sciences (test code 219), or Physics (test code 220). Students seeking the Foundational-Level General Science Credential take only Subtest I.

LITERATURE AND EDUCATION MA/C CONTIGUOUS BACHELOR'S/MASTER'S PATHWAY

The Contiguous Literature and Education 4+1 Pathway allows students to complete a Master's in Education (M.A.) in just one additional year (five quarters, July - July) following completion of the literature major.

The 4+1 pathway program streamlines application and acceptance into the Education M.A. by allowing literature majors to receive priority enrollment in impacted education undergraduate courses, and to complete state-mandated tests and some program requirements prior to the start of the M.A./Credential Program while completing the literature major. Upon completing these requirements and formally applying to the graduate program, graduating literature majors are able to complete the Education M.A./Credential Program in one year (five quarters, July - July; the Education Department expects to admit all graduating literature majors who have met the 4+1 pathway requirements, barring extenuating circumstances; application fees apply).

Undergraduate students currently enrolled in the literature major have the opportunity, any time after the start of their junior year until December 1 of their senior year, to apply to be admitted to the 4+1 contiguous pathway leading to the Education Master's Degree.

The requirements for admission into the 4+1 pathway are:

- Applicant must be an undergraduate major in Literature;
- Applicant must have a 3.0 or higher grade point average in upper-division Literature coursework;
- Applicant must have an overall UCSC grade point average of 3.0 or higher;
- Applicant must have junior or senior standing;

- Applicant must provide a copy of unofficial transcripts;
- Applicant must provide a one-page personal statement describing (a) your motivation and academic preparation for entering the pathway, (b) your goals for the pathway, and (c) your professional goals.

Interested students should schedule a meeting with the literature undergraduate advisor to discuss their curriculum plan and complete the application forms. The deadline for application to the LIT/EDUC 4+1 Contiguous Bachelor's/Master's Pathway is Dec. 1 of the senior year, although students are encouraged to apply earlier.

Students in the LIT/EDUC 4+1 Contiguous Bachelor's/Master's Pathway are not guaranteed admission to the M.A./Credential Program. However, the Education Department expects to admit students who:

1. have met admissions requirements;
2. have 30 or more hours of experience with middle and/or high school-aged youth (classroom experience, tutoring, or coaching sports teams are just a few ways to satisfy this requirement; reach out to litdept@ucsc.edu about opportunities and with questions about whether your existing experience qualifies);
3. have completed two upper-division courses selected from the following with a grade of B or higher: EDUC 120, EDUC 125, EDUC 126, EDUC 135, EDUC 141, EDUC 160, EDUC 164, EDUC 180;
4. have a commitment to teaching in communities serving traditionally underserved populations.

Additionally, students will be eligible for a streamlined admission process if, at the time of application, they have met the state Basic Skills and Subject Matter requirements, typically by providing passing scores on California state tests: the CBEST and the CSET (applicants must pass the required subtests for a secondary Single Subject English Language Arts credential).

CSET English Language Arts consists of four subtests:

- English Subtest I (test code 105),
- English Subtest II (test code 106),
- English Subtest III (test code 107),
- English Subtest IV (test code 108).

After entering into the Master's/Credential Program, students from the LIT/EDUC 4+1 Contiguous Bachelor's/Master's Pathway will follow the same requirements as any other students in the MA/C program with expected graduation in July of the year after their graduation from the UC Santa Cruz literature major.

Students who have completed one of the following undergraduate Education courses will have the course EDUC 205 waived from their M.A./Credential requirements:

- EDUC 102, Education, Media and Society,
- EDUC 128, Immigrants and Education,
- EDUC 140, Language, Diversity Learning,
- EDUC 173, Critical Pedagogy,
- EDUC 181, Race, Class and Culture in Education.

Students intending to apply for the M.A./Credential Program may also choose to complete these courses in Summer Session II between their junior and senior years, instead of during the M.A./Credential Program:

- EDUC 210, Health, Safety and Community, 2 credits,
- EDUC 213, Child and Adolescent Development for Educators, 2 credits.

The following State of California requirements for a California teaching credential, which must be completed before the end of the final quarter of the M.A./Credential Program, can also be completed at the undergraduate stage if a student chooses:

- The U.S. Constitution Examination, when offered by the Education Department. (Completion of any of the courses POLI 20, POLI 111A, POLI 120A or HIS 10A also satisfies this requirement.)
- The UC Santa Cruz Extension online course EDUC.XSC209 can be completed any time it is offered to satisfy the Preliminary Technology Requirement.
- A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed before the end of the final quarter of the M.A./Credential Program and be valid at the time of application for the preliminary credential in the final summer session of the M.A./Credential Program. (A CPR course that will remain valid through the preliminary credential application may be taken by students in the LIT/EDUC 4+1 pathway prior to beginning the M.A./Credential Program; 12-month certifications will not be sufficient. Students must check with the CPR course provider.)

There are a number of sources of financial aid for individuals seeking a teaching credential, as well as state and federal loan forgiveness programs. Of note is the Cal Grant 5th year for individuals seeking a credential.

For additional information, please visit the MA/Credential Program page.

Course planner and sample program

General Literature Concentration Four-Year Planner with Education Fifth-Year Planner

	Fall	Winter	Spring	Summer
1st (frosh)	LIT 60/61 or LIT 80/81		WRIT 2	
	2nd (soph)	LIT 1	LIT 101	EDUC 60
	Upper-division LIT course		Upper-division LIT course	
Language quarter one	Language quarter two	Language quarter three		
3rd (jr)	Upper-division LIT course	LIT 102	Upper-division LIT course	EDUC 210*
	Upper-division EDUC course	EDUC 180 or other Upper-division EDUC course		EDUC 213*
4th (sr)	Upper-division LIT course	LIT 190	Upper-division LIT course	EDUC 207
	Upper-division LIT course	EDUC elective (sub for EDUC 205)	XSC 209	Student Teaching 10 Observation hrs
		U.S. Constitution Exam (or course)		
5th (EDUC + 1 MA/Single Subject Credential)	EDUC 211	EDUC 201A	EDUC 214	EDUC 208 (Portfolio Development)
	EDUC 204	EDUC 227	EDUC 225	
	EDUC 226	EDUC 212B**	EDUC 212C**	EDUC 212A**
	EDUC 200: Beginning Student Teaching: 15 hrs/week	EDUC 201: Intermediate Student Teaching: Nov.--15 hrs/week; Dec.-March--20-25 hrs/week	EDUC 202: Advanced Student Teaching: March-June--20-25 hrs/week	

* Literature students in the 4+1 pathway have the option of taking EDUC 210 and/or EDUC 213 during the summer between their junior and senior years. If one or both are not taken at this time, they can be taken during the 5th year +1 MA/Single Subject Credential part of the program.

** EDUC 212A, EDUC 212B, EDUC 212C are for Bilingual Authorization Spanish Candidates only.

EDUCATION AND CALIFORNIA TEACHER CREDENTIAL PROGRAM M.A.

Introduction

The Master of Arts (M.A.) in Education and California Teaching Credential Program prepares prospective teachers to work with California's culturally and linguistically diverse student population. Students in this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a 12-month, five-quarter program comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in TK–12 public schools. The program also

offers the Bilingual Authorization (in Spanish) for primary language instruction or dual language immersion instruction in a TK–12 setting.

Please note that we do not offer a stand-alone Master of Arts in Education nor a stand-alone credential program. Additionally, holders of a previously issued California or out-of-state credential are not eligible for admission to the program.

Students who complete the program are eligible to apply for a California Preliminary Multiple Subject Teaching Credential or a California Preliminary Single Subject Teaching Credential. The Multiple Subject Teaching Credential authorizes the holder to teach in a TK—12, self-contained public school classroom, where two or more subjects are taught by the same teacher. The Single Subject Teaching Credential authorizes the holder to teach in his/her credential subject area in a 6-12 departmentalized classroom setting within a public school system.

The UC Santa Cruz Single Subject Teacher-Credential Program offers the following subject areas: mathematics, English, social science, and science. Programs of study are subject to change.

Because program requirements are authorized by statutes and regulated by a state entity, the California Commission on Teacher Credentialing program requirements must be responsive to new legislation and regulatory policies. Admission requirements and programs of study referred to are subject to change to comply with regulatory mandates.

Prerequisite Admission Requirements

A bachelor's degree or higher from a regionally accredited institution meets California Basic Skills Requirement (BSR) per Senate Bill (SB) 153, effective 6/29/24. No additional documents are required at time of application to meet the Basic Skills Requirement (BSR). If admitted to the program, we will use your official transcripts to verify completion of the bachelor's degree.

Subject-Matter Requirement

California state law mandates that all teachers provide evidence of their subject-matter knowledge. Exam registration confirmations, exam score reports, or documentation of an approved waiver program must be submitted on the online application. Deadline to complete this requirement is June 10 of each year (prior to official enrollment in the program). However, it is highly recommended that documentation of meeting the subject matter requirement be submitted with the application. **Please note that admission priority may be given to applicants who provide documentation at the time of application.** In addition to the options listed below, the Subject Matter Requirement may be met if your bachelor's degree is in the same area as the credential that you seek. Additionally, there is a college course work option. Please see the MA/C Program website for details on the various options to meet the state Subject Matter Requirement.

Options to meet the Subject Matter Requirement

- Passing scores on the appopriate CSET tests
- Completion of a CTC-Approved Subject Matter Program
- College coursework in each of the identified subject domains
- B.A./B.S. in the same area as the credential sought
- The Subject Matter Requirement may also be met through a combination of college coursework and CSET exams to meet the content for all required CSET subtests.

The deadline to submit evidence of satisfying Subject Matter Competency Requirement is June 10. However, it is **highly recommended** that documentation of satisfying the Subject Matter Competency Requirement be submitted at the time of application.

More information on each of the Subject Matter Requirements can be found here.

Certificate of Clearance

In accordance with Education Code Section 44320(b), each credential candidate for an initial credential, prior to admission to any credential program, must obtain a Certificate of Clearance from the California Commission on Teacher Credentialing (CTC). This certificate is a document issued by the commission to an individual who has completed the commission's fingerprint character and identification process. Please note that the CTC requires either a United States-issued Social Security Number (SSN) or Individual Tax Identification Number (ITIN) to apply for a Certificate of Clearance. The IRS issues ITINs regardless of immigration status, primarily for the purpose of federal tax reporting. Detailed instructions for obtaining a Certificate of Clearance may be found here. Additional information can be found on the Education website here.

Applicants should be aware that a criminal conviction on their record may preclude them from obtaining a Certificate of Clearance.

Bilingual Authorization Candidates

Applicants seeking Bilingual Authorization must obtain it concurrently with a preliminary multiple subjects or single subject credential. While the state allows the Bilingual Authorization to be obtained after the candidate receives their credential, the UC Santa Cruz program is a concurrent model. Bilingual Program applicants will be required to submit a 1-2-page essay in Spanish with their application to the M.A./Credential Program. The essay should address topical questions listed on the Education Department website here.

For Further Information

Please contact the department by email to edma@ucsc.edu, or view the Education M.A./Credential Program admissions requirement webpage for full details about the M.A./Credential program.

Requirements

Course Requirements

Capstone Requirements

Students will complete a capstone portfolio, which includes a teaching performance assessment and reflective papers. Prompts for these assignments may vary from year to year as they reflect the most current California state credentialing requirements.

Multiple Subject Course Requirements

Take all of the following:

EDUC 200	Beginning Student Teaching	5
EDUC 201	Intermediate Student Teaching	5
EDUC 202A	Advanced Student Teaching	5
EDUC 202B	Advanced Student Teaching	5
EDUC 202C	Advanced Student Teaching	5
EDUC 203	Teaching English Language Development: Foundations, Approaches, and Strategies	5
EDUC 205	Teaching, Learning, and Schooling in a Diverse Society	5
EDUC 207	Social Foundations of Education	5
EDUC 208	Portfolio Development	2
EDUC 210	Health, Safety, and Community	2
EDUC 211	Teaching Special Populations in the General Education Classroom	2
EDUC 213	Child and Adolescent Development for Educators	2
EDUC 214	Contemporary Issues in Education	2
EDUC 217	Topics in Elementary Education: Physical Education	2
EDUC 218	Topics in Elementary Education: Visual Arts	2
EDUC 219	Topics in Elementary Education: Performing Arts	2
EDUC 220	Reading and Language Arts for Elementary Classrooms	5
EDUC 221	Science Learning and Teaching in Elementary Classrooms	5
EDUC 222	Mathematics Learning and Teaching in Elementary Classrooms	5

EDUC 212A, EDUC 212B, EDUC 212C: Bilingual Authorization students only

Single Subject Course Requirements

Take all of the following:

EDUC 200	Beginning Student Teaching	5
EDUC 201	Intermediate Student Teaching	5
EDUC 201A	Intermediate Student Teaching: Single Subject	5
EDUC 202A	Advanced Student Teaching	5
EDUC 202B	Advanced Student Teaching	5
EDUC 202C	Advanced Student Teaching	5
EDUC 204	Methods of English Language Development: Single Subject	5
EDUC 205	Teaching, Learning, and Schooling in a Diverse Society	5
EDUC 207	Social Foundations of Education	5
EDUC 208	Portfolio Development	2
EDUC 210	Health, Safety, and Community	2
EDUC 211	Teaching Special Populations in the General Education Classroom	2
EDUC 213	Child and Adolescent Development for Educators	2
EDUC 214	Contemporary Issues in Education	2
EDUC 225	Reading Across the Curriculum in Middle School and Secondary	5

EDUC 212A, EDUC 212B, EDUC 212C: Bilingual Authorization students only

Single Subject Credential students enroll in the two methods courses related to their subject area:

EDUC 226	English Teaching: Theory and Curriculum	5
EDUC 227	English Teaching for Secondary Classrooms	5
EDUC 228	Math Education: Research and Practice	5
EDUC 229	Teaching Mathematics in the Secondary Classroom	5
EDUC 230	Science Education: Research and Practice	5
EDUC 231	Teaching Science in the Secondary Classroom	5
EDUC 232	Social Science: Theory and Curriculum	5
EDUC 233	Social Science Teaching for Secondary Classrooms	5

Bilingual Authorization Course Requirements

Take all of the following:

EDUC 212A	Bilingualism and Biliteracy: History, Politics, Theory, and Practice	2
EDUC 212B	Bilingualism and Biliteracy: Language, Literacy and Content Instruction	2

EDUC 212C	Bilingualism and Biliteracy: Community and School Partnerships	2

Other Requirements

Program and State of California Requirements

Additional California State Requirements for a Preliminary Credential

(Not Required for Initial Admission to the Program)

In addition to the Basic Skills and Submit Matter Requirements, the following state requirements may be met prior to or while enrolled in the program, and must be met to be eligible for a California teaching credential upon completion of the M.A./Credential program.

U.S. Constitution Requirement

A course on the U.S. Constitution (or completion of an examination offered by the Education Department to enrolled students) is required. UCSC-approved courses that meet this requirement are POLI 20, American Politics; POLI 111A/LGST 111A, Constitutional Law; POLI 120A, Congress, President, and the Court in American Politics; and HIS 10A, United States History to 1877. Passage of the AP exam in U.S. History or Government are acceptable for meeting the U.S. Constitution requirement if the applicant received college credit for the exam.

Admitted applicants must submit verification of completing the U.S. Constitution Requirement prior to completing the final quarter of the M.A./Credential program.

Preliminary Technology Requirement

All candidates for their credential must fulfill the requirements for technology skills which includes general and specialized skills in the use of computers in educational settings.

UC Santa Cruz students meet this requirement in one of two ways:

- Option 1: Pass the CSET Preliminary Educational Technology Subsets I II, (CSET test codes 133 134). For more information, see the Technology Subsets I II information on the CSET website.
- Option 2: Pass the UCSC approved course offered through the UCSC Extension Program, XSC209, Technology in Schools, Introduction (online format).

Admitted applicants must submit verification of completing the Technology Requirement **prior** to completing the final quarter of the M.A./Credential program.

Reading Instruction Competence Assessment (RICA)

Multiple Subjects candidates are required—prior to completion of the program and in order to be recommended for a preliminary credential—to pass the RICA examination. The RICA measures the knowledge, skills, and abilities essential to offer effective reading instruction to TK–12 students. For more information on the RICA examination, see the RICA examination information on the CSET website.

Admitted applicants must submit verification of having passed the RICA **prior** to completing the final quarter of the M.A./Credential program.

CPR

A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed and valid upon application for the credential.

Admitted applicants must submit verification of obtaining certification in Infant/Child/Adult CPR prior to completing the final quarter of the M.A./Credential program.

Tuberculosis (TB) Test

All TK-12 schools require anyone working with children to be tested for TB. You can get tested through the UCSC Student Health Center (831-459-2500 to make an appointment) or your private doctor. A copy of your official results must be turned into the Education Department before the end of the first summer quarter.

Student Teaching

The successful development of teaching skills in the classrooms is the culmination of a teacher education program. Therefore, candidates must demonstrate, by the end of their program, teaching competence in the classroom. Credentialed public school teachers are responsible for the nurturing of children and youth. Therefore, teaching credential candidates must consistently display conduct befitting the profession. To this end, the candidate must be able to cope with the demands and responsibilities of teaching as outlined below:

- Meet university and program requirements and deadlines (including school expectations during field experiences).
- Plan ahead to anticipate the transportation needs and potential demands of student teaching.
- Be able to adapt to institutional and/or professional expectations and policies.
- Relate appropriately to children, parents, and school staff.
- Demonstrate sensitivity to the social, cultural, and economic context of the school environment.
- Adhere to school expectations for dress, appearance, and personal hygiene.

Candidates whose professional behavior does not meet these minimal standards may be recommended for dismissal from the program.

Beginning Student Teaching, which begins in August during the Summer Bridge between the university summer and fall quarters, constitutes the first classroom observation experience for students in the program, and continues through most of fall quarter. Student teachers are in their classroom placements from 15–16 hours a week. Students must have a Certificate of Clearance issued and on file with the California Commission on Teacher Credentialing.

Intermediate and advanced student teaching begins late fall and continues through winter and spring, until the end of the academic year in June. Student teachers are placed with cooperating teachers in local schools throughout Santa Cruz County and beyond. Students gradually assume responsibility for preparation, instruction, and evaluation of the class during this period. Supervisors of teacher education give ongoing and frequent support to students in their classroom placements and in seminars at UCSC. Multiple Subject candidates typically obtain classroom experience in both primary and intermediate grades. Single Subject candidates typically obtain classroom experience in middle school/junior high and high school.

Admission to EDUC 201 and EDUC 201A, Intermediate Student Teaching, and EDUC 202A-EDUC 202B-EDUC 202C, Advanced Student Teaching, is based on an assessment of academic performance, experience, leadership, and initiative shown in public school placements and required courses taken earlier in the program. Please note meeting the state Subject Matter Requirement is necessary for enrollment in Advanced Student Teaching.

[Optional Catchall]

Applying for Graduation

EDUCATION PH.D.

Introduction

Education Ph.D. graduate students become creative scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. The program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. Courses and research experiences are closely related to practice in K-12 classrooms and informal settings. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and teaching within the multiple contexts of classroom, school, family, and community. Graduates are qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in research and regional universities. Graduates also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development.

Together with their faculty adviser, each student develops an integrated program of study that includes advanced coursework, seminars, and electives. Students learn through an apprenticeship model in which they develop expertise through active participation in research. Courses may be taken in other departments, when appropriate.

Ph.D. Admissions Guidelines

The minimum GPA established by the University of California for admission to graduate school is 3.0. In general, the Ph.D. in education program admits based on a holistic assessment of potential for excellence in graduate study, whether this manifests itself in a high GPA, strong letters of recommendation, or a strong Statement of Purpose. Applicants are evaluated on their individual merits and also with regard to how well their proposed doctoral research can be supported by the existing resources of the program.

Admission Requirements

- Bachelor's degree, or its equivalent, from an accepted university prior to the quarter for which admission is sought
- 3.0 GPA or above
- Experience working with culturally and linguistically diverse students and/or communities
- Statement of Purpose
- Personal History Statement
- A writing sample, preferably in education or a related field. The sample can be a term paper, a field report, a research proposal, or an essay written especially for the application
- Official transcripts from all colleges/universities attended after high school
- Three current recommendation letters specifying potential for academic or scholarly work
- Current résumé
- Application fee
- International applicants must take the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS) test. A minimum score of 550 on the TOEFL (paper), 220 on the TOEFL (computer), or 83 on the Internet-based test is required for admission. For those choosing to take the IELTS, a minimum overall score of 7 is required. The program follows Graduate Division guidelines when considering TOEFL waivers.

Prior to completing an application, we highly recommend identifying a potential faculty advisor and making contact with them by email. Please contact the education faculty

member(s) whose research interest is similar to your own and explore the possible fit in your interests and their expertise. (For descriptions of faculty research, please visit the Education Department website).

Financial Support

UC Santa Cruz guarantees five years of funding to all admitted Ph.D. students. Financial support for students includes a variety of fellowships, research assistantships, and teaching assistantships. Students may participate in research projects under the auspices of several interdisciplinary research centers and research projects. In the past, these have included the Chicano/Latino Research Center (CLRC), the Vocabulary Innovations in Education (VINE) project, The Teachers With Computers: Ward Annotations for Vocabulary Education (tecWAVE) project, English Language and Literacy Integration in Subject Areas (ELLISA), Effective Science Teaching for English Language Learners (ESTELL) project, The Center for Collaborative Research for an Equitable California (CCREC), and the Center for Educational Research in the Interest of Underserved Students (CERIUS). Recently, students have participated in research projects with the Center for Research on Equity and Collaborative Evaluation (CRECE) and the History Civics Project (HCP).

For Further Information

Contact the doctoral student adviser by sending an email to edgrada@ucsc.edu or view the Education Department's home page where potential applicants can obtain full details about the programs.

Advancement to Candidacy

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAship or teaching internship, pass a qualifying examination, and meet the specific requirements of the Division of Graduate Studies.

Course Requirements

During the first two years of study, all students are expected to enroll in a set of required courses, including foundational courses, methodology courses, and elective courses. The student and his/her faculty adviser will determine the overall program of study, depending on the student's preparation, interests, and plans. The program encourages interdisciplinary study.

Course Requirements and Sequencing

The following courses constitute the minimum requirements: four foundational courses, five research methods courses, four elective courses, one additional course in any category, a second-year project independent study, a second-year doctoral proseminar sequence, and a research apprenticeship.

Incoming students consult with their faculty advisers about the current course offerings to determine the order in which they will complete required courses. Students are encouraged to consider these as the foundation and minimum required for doctoral studies. In consultation with their advisers, students will determine the full set of research methods and elective courses they will complete based on their intellectual interests and professional goals. All required courses must be completed prior to advancement to candidacy but students may continue to take classes throughout their program.

The department typically offers approximately eight doctoral courses during each year. The Education Department annually admits 4-6 Ph.D. students, leaving room for doctoral students from other departments to take courses in education.

Courses required before advancing to candidacy:

EDUC 235	Introduction to Educational Inquiry	5
EDUC 236	Quantitative Research Methods	5
EDUC 237	Qualitative Research Methods	5
EDUC 250	Teaching and Teachers	5
EDUC 255	Intermediate Quantitative Methods	5
EDUC 256	Intermediate Qualitative Analysis	5
EDUC 261	Thinking and Learning	5
EDUC 262	Social and Cultural Context of Education	5
EDUC 272	Language in Education and Society	5

And four electives, two of which must be from the list below:

Choose two of the following:

EDUC 263	Educational Reform	5
EDUC 264	Research on Teacher Development and Teacher Education	5
EDUC 268	Schools, Communities, and Families	5
EDUC 280	Language and Literacy Across Disciplines	5
EDUC 286	Research in STEM Education	5
EDUC 295	Critical Perspectives on Education	5

Plus one additional course from any category

Plus the following courses

A total of 16 credits from the following:

Both of the following courses

EDUC 293B	Research Apprenticeship	5
EDUC 294	Second-Year Research Project	5

EDUC 293A is a 2-credit course and can fulfill the requirement for EDUC 293B if it is taken three times.

Plus 6 credits from the following Second-Year Doctoral Proseminar series

EDUC 277A	Second-year Doctoral Proseminar	2
EDUC 277B	Second-year Doctoral Proseminar	2
EDUC 277C	Second-year Doctoral Proseminar	2

EDUC 277A, EDUC 277B, EDUC 277C must each be taken to satisfy the requirement.

The following may also be counted toward meeting elective requirements:

- M.A. course in education with additional readings and assignments. (Do not count toward the four electives and/or the additional course.)
- Independent Study. (One maximum to count toward the four electives and/or the additional course.)
- Undergraduate upper-division course with additional readings and assignments. (One maximum to count toward the four electives and/or additional course.)

Other Requirements

Students are required to attend the Education Department's colloquium series during their first and second years in the program.

Students are required to complete a second-year project paper (the same project to be approved for the en route M.A.). The final version must be approved by two faculty readers by the end of spring quarter of their second year.

Foreign Language Requirements

Teaching Requirement

The education Ph.D. program emphasizes teaching experience, and all students are required to complete one TAship or teaching internship in education prior to advancement to candidacy.

Pre-Qualifying Requirements

Students are required to attend the Education Department's colloquium series during their first and second years in the program.

Students are required to complete a second-year project paper (the same project to be approved for the en route M.A.). The final version must be approved by two faculty readers by the end of spring quarter of their second year.

Qualifying Examination

The qualifying examination is intended to assess a student's depth and breadth of knowledge in their areas of concentration and his/her competence to do extended dissertation-level research. Normally taken near the end of the third year of enrollment, the examination consists of both written and oral components. For the written portion, the student prepares three papers, two of which advance a position based on a review of related research, theoretical framework, or research design/methods; the third is a dissertation prospectus. The student presents and defends their work at the oral examination.

Post-Qualifying Requirements

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAship or teaching internship, pass a qualifying examination (QE), and meet the specific requirements of the Division of Graduate Studies.

Advancement to Candidacy

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAship or teaching internship, pass a qualifying examination, and meet the specific requirements of the Division of Graduate Studies.

Requirements for the M.A. Degree

Although applications for a master's degree independent of the Ph.D. program are not accepted, students in the Ph.D. program may obtain a M.A. degree after successfully completing a minimum of six quarters residency, a total of 81 course credits (including four foundational courses, five research methods courses, at least four elective courses, a minimum of two from the Education Electives list, one more course from any category, a 5-credit course for the second-year research project, a three-quarter second-year proseminar sequence), and an approved and completed second-year research project. Students seeking an M.A. degree must adhere to the guidelines set forth by the Graduate Division.

Optional Catchall

Dissertation

Dissertation

A dissertation based on substantive original research is required.

Dissertation Defense

After the dissertation has been completed, students must defend the dissertation in an oral examination.

Academic Progress

Applying for Graduation

[Optional Catchall]

EDUCATION DESIGNATED

EMPHASIS

Introduction

The Designated Emphasis in Education enables doctoral students in other departments to pursue interests in education and obtain formal certification of competence in the field of education. Most Education Department Ph.D. courses are offered every other year; the Education Department welcomes D.E. students from other departments to take courses in education. Students should work closely with their education adviser to develop a plan for taking the coursework in a timely fashion.

Education is an institutional field in which scholars from a wide variety of disciplines—including sociology, psychology, politics, economics, mathematics and science—have scholarly interests. A Designated Emphasis in Education enables graduate students from other departments to ground their work in theory and research on important issues in education.

Requirements

The requirements for obtaining a designated emphasis in education are the following:

Committee Composition and Departmental Approvals

Obtain a designated faculty advisor from the faculty in the Education Department. This faculty advisor will be in addition to the faculty advisor from the student's home department. The education faculty advisor must serve on the student's qualifying examination committee and, as appropriate, may also serve on the student's dissertation committee.

Course Requirements

Complete at least five EDUC 5-credit doctoral courses for a total of 25 credits, and 25 credits, from the following list, with no more than two in research methods. Any requests for substitutions must be approved by the Education Department graduate director.

Choose five courses from the following options:

Choose five courses from the following options:

EDUC 235	Introduction to Educational Inquiry	5
EDUC 236	Quantitative Research Methods	5
EDUC 237	Qualitative Research Methods	5
EDUC 250	Teaching and Teachers	5
EDUC 255	Intermediate Quantitative Methods	5
EDUC 256	Intermediate Qualitative Analysis	5
EDUC 261	Thinking and Learning	5
EDUC 262	Social and Cultural Context of Education	5
EDUC 263	Educational Reform	5
EDUC 264	Research on Teacher Development and Teacher Education	5
EDUC 268	Schools, Communities, and Families	5
EDUC 272	Language in Education and Society	5
EDUC 280	Language and Literacy Across Disciplines	5
EDUC 286	Research in STEM Education	5
EDUC 295	Critical Perspectives on Education	5

With no more than two courses from the following group:

EDUC 235	Introduction to Educational Inquiry	5
EDUC 236	Quantitative Research Methods	5
EDUC 237	Qualitative Research Methods	5
EDUC 255	Intermediate Quantitative Methods	5
EDUC 256	Intermediate Qualitative Analysis	5

And the remainder from this group:

EDUC 250	Teaching and Teachers	5
EDUC 261	Thinking and Learning	5
EDUC 262	Social and Cultural Context of Education	5
EDUC 263	Educational Reform	5
EDUC 264	Research on Teacher Development and Teacher Education	5
EDUC 268	Schools, Communities, and Families	5
EDUC 272	Language in Education and Society	5
EDUC 280	Language and Literacy Across Disciplines	5
EDUC 285	Culture and Learning	5
EDUC 295	Critical Perspectives on Education	5

Writing, Research and/or Teaching Requirements

Prepare a significant piece of writing in some area of education. This writing may take the form of a substantial position paper (QE paper) grounded in the literature of educational research, as determined by the graduate advisor in education. In the event the education faculty advisor serves on the dissertation committee then the writing may instead be a dissertation chapter.

Academic Progress

For Further Information

Contact the doctoral student advisor by sending an email to edgrada@ucsc.edu or view the Education Department's home page where potential applicants can obtain full details about the programs.

PROGRAMS OFFERED

Environmental Studies B.A. (p. 739)

Agroecology B.A. (p. 757)

Environmental Studies/Biology B.A. (p. 763)

Environmental Studies/Earth Sciences B.A. (p. 770)

Environmental Studies/Economics B.A. (p. 776)

Geographic Information Systems (GIS) M.A. (p. 782)

Environmental Studies Ph.D. (p. 784)

Environmental Studies Designated Emphasis (D.E.) (p. 785)

Environmental Studies is a field of study that views the Earth and our place in it, as a set of complex, interacting socio-ecological systems. At UC Santa Cruz, we use an interdisciplinary approach to study the social, cultural, and scientific relationships with the environment. Courses in environmental studies provide training not only in the physical and social sciences, but also in writing, critical thinking, quantitative analysis, project and team management, and more. Environmental studies alumni are making a difference in conservation organizations, habitat restoration, sustainable agriculture, environmental mediation, biodiversity research, and many other areas.

UNDERGRADUATE PROGRAM

The environmental studies major prepares students for meaningful lifetime engagement with the environmental challenges that are facing society. UCSC environmental studies graduates hold leadership positions as legislative and policy analysts, environmental lawyers, environmental managers, city and state planners, educators, restoration ecologists, organic farmers and agroecology specialists, conservation biologists, environmental engineers, museum curators, business consultants, and political advocates. In addition, many graduates go on to obtain professional, master's, or doctoral degrees at the nation's finest institutions.

Students pursue an interdisciplinary curriculum that combines coursework in the natural and social sciences. Introductory courses cover the ecological, political, and economic aspects of historic, current and future environmental issues. The core course, Environmental Studies 100/L, Ecology and Society builds on the skills acquired in the lower-division classes, and encourages students to apply ecological, economic, and political skills toward environmental and ecosystem management. The remaining upper-division elective courses further emphasize the integration of ecological knowledge with an understanding of social institutions and policies. The program emphasizes active, interdisciplinary learning with the overall objective of instilling the necessary skills to conserve biodiversity and integrate the principles of sustainability with respect to management of complex environmental systems. Faculty work on these issues at local, regional, and global levels, providing a unique, proactive, and progressive academic environment for students wishing to pursue a degree program within the Environmental Studies Department.

As a complement to classroom instruction and research, many courses have field components. The Environmental Studies Internship Program helps qualified students find placements with government and educational agencies, community organizations, and private firms. Furthermore, faculty-directed, independent, or field-oriented research courses allow environmental studies students the opportunity to learn more about their specific academic career or personal interests, often while earning academic credit.

In addition to the single environmental studies major, students can also choose to pursue the agroecology major. The major will provide students with a depth of expertise in interdisciplinary knowledge and skills related to agroecology and sustainable food systems. UCSC students pursuing the B.A. in agroecology will gain knowledge and skills in multiple disciplines and an increased understanding of complex agricultural systems.

Students may also choose to pursue one of three combined majors with biology, earth sciences, or economics. The combined major curricula offer the unique integration of the underlying concepts of environmental studies with a focus on the application of these concepts in a closely related field (or vice versa).

The general environmental studies B.A. major offers three concentrations in addition to the major without a concentration. Below are the concentrations offered in the environmental studies B.A. major.

Geographic Information Systems Concentration

Geographic Information Systems (GIS) is an interdisciplinary field that links ecology, geography, and society to evaluate and facilitate environmental planning, policy, management and conservation. Within environmental studies, GIS addresses complex and interconnected social and ecological problems and fosters more sustainable environmental futures by supporting the visualization of geographical distribution of environmental problems and solutions. GIS is also an information technology field that acquires, manages, interprets, integrates, displays, analyzes, or otherwise uses socio-economic and environmental data focusing on geographic, temporal, and spatial contexts. Students in the GIS concentration will develop a strong foundation in environmental problem solving that is linked to geospatial data acquisition and management, computer-based GIS technologies, and advanced geospatial analysis. GIS is a key

emerging industry in the U.S. today and job growth is rapidly expanding. GIS specialists work in many areas, including research and analysis in resource and environmental management, biology, sociology, marine sciences, commercial business and marketing, and urban and regional planning.

The GIS concentration provides students within environmental studies majors with a set of foundational courses in introductory geospatial data management and visualization, information technology and software in GIS, and advanced geospatial analytical approaches for environmental applications. The program learning outcomes and student competencies that are achieved through the concentration include the successful development of basic geospatial technology skills and abilities, advanced geo-spatial data analysis abilities for environmental applications, enhanced understanding of scale, co-production of space, politics and power of representation, and the preparation of students for entry and mid-level careers as GIS specialists.

Global Environmental Justice Concentration

According to the United States Environmental Protection Agency (EPA), environmental justice is defined as 'the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.' Today, environmental justice is a pillar of national environmental policy, with a swathe of laws and legislation that covers a wide range of sectors. It is a growing area in policy, advocacy and scholarship internationally, embracing topics as diverse as indigenous rights, gender equity and climate justice. In recent years, a parallel idea—of human rights and the environment—has emerged in legal and policy contexts. Environmental justice and human rights are thus among the fastest growing subjects in environmental public policy globally.

This concentration provides students within environmental studies majors with special depth of understanding of the issues and approaches central to global environmental justice The global environmental justice concentration is premised on the assertion that the distribution of environmental problems reflects longstanding, uneven terrains of power and privilege, exploitation, and dispossession. Globalization and the fluidity of corporate capital, commodity chains and community campaigns require approaches that conceptualize the frictions between the local and global, legacies of colonialism, and multiplicity of responses— human and non-human—in the face of oppression, adaptation, and resistance. The inextricable interconnections between ecological and social degradation, and the social implications of efforts to remedy ecological degradation, are an intrinsic and important core of environmental studies.

Conservation Science and Policy Concentration

Effective conservation of biological diversity requires integrating principles of conservation biology and environmental policy. Conservation science is built on a foundation of natural history embedded into a framework of modern ecological theory. Conservation policy reflects social values and provides the economic and legislative tools to achieve desired goals surrounding the conservation of species and ecosystems. The purpose of the conservation science and policy concentration is to provide students within environmental studies majors with the depth and necessary skills in natural history, conservation biology, and environmental policy to effectively engage in this intrinsically interdisciplinary field. Students completing this concentration will be prepared for positions with government agencies and conservation organizations concerned with biodiversity conservation and ecosystem management.

The concentration requires upper-division core courses in both natural and social science aspects of conservation, as well as a field-based course in ecology, natural history, or conservation. The field-based course is important because effective work in the conservation field requires a deep understanding of natural ecosystems. This is best learned through immersive, experiential field courses that develop a natural history-based understanding of ecosystems as well as how to ask and answer critical ecological and conservation questions.

GRADUATE PROGRAM

GIS Masters Program

ENVS is launching our new GIS masters program in 2024-2025. More information will be shared on envs.ucsc.edu as it becomes available.

Environmental Studies Ph.D. Program

Established in 1994, the doctoral program* in the Department of Environmental Studies at UC Santa Cruz emphasizes close faculty-student interactions, department-wide intellectual exchange, and cross-discipline innovation. The goal of our Ph.D. program is to develop exceptional individuals with strong foundations in their own fields, and the ability to work with those in other relevant specialties.

The program draws from two main areas: ecology and social science. These are historically independent fields and UCSC's Environmental Studies program is one of the first to link them.

Graduates of the Environmental Studies Doctoral Program at UC Santa Cruz are expected to be informed in conservation biology, global change ecology, agroecology, environmental policy, and political economy of the environment. Our students have deep intellectual strength in their area of specialty, and make substantial contributions toward the understanding of an environmental problem.

Please contact our Graduate Program coordinator with any questions or inquiries you may have.

DESIGNATED EMPHASIS

The Designated Emphasis is the equivalent of a "minor" for doctoral study. It will provide you with a framework for in-depth study in specialized fields in your area, and an opportunity for recognition of particular scholarly expertise.

Discuss your intention to declare the Environmental Studies Designated Emphasis with your primary advisor and the Graduate Program coordinator, in your primary Ph.D. program.

Please see this page for information about the Designated Emphasis in Environmental Studies.

**Our program is doctoral only, we do not offer a terminal master's degree at our program.*

ENVIRONMENTAL STUDIES B.A.

Information and Policies

Introduction

The environmental studies major provides an interdisciplinary approach to learning how to move toward a more sustainable future for human and ecological systems. Courses in environmental studies provide training not only in the physical, biological, and social sciences, but also in writing, critical thinking, quantitative analysis, project and team management, and more. Most students extend their learning outside the classroom through the departmental internship program.

The major is available either without a concentration or in conjunction with one of three more specialized concentrations that provide depth in particular areas of expertise. See the Undergraduate Program page for a description of each of the concentrations offered.

Program Learning Outcomes

Students graduating with a B.A. degree in environmental studies will be able to:

- Identify the societal (social, political, economic and ethical) agents and structures that contribute to environmental change. (social science competency)
- Describe the structure and functioning of major physical and ecological components of the earth's systems. (natural science competency)
- Access and analyze a complex literature addressing specific topics in environmental studies, and evaluate the usefulness and limitations of individual sources of information. (analytic thinking)
- Demonstrate effective oral and written communication skills. (communication skills).

Academic Advising for the Program

Advising is one way to make the most of your university experience. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadvi@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall.

One of the following:

ENVS 23	The Physical and Chemical Environment	5
CHEM 3A	General Chemistry	5
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5

Plus one of the following:

AM 3	Precalculus for the Social Sciences	5
MATH 3	Precalculus	5
AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Recommended Courses

In addition, the following courses are recommended prior to transfer to ensure timely graduation.

One of these courses:

BIOE 20C	Ecology and Evolution	5
ENVS 24	General Ecology	5

Plus one of these:

ENVS 25

or

A course in national or international politics and a course in macroeconomics or microeconomics

Plus both of these courses:

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
ENVS 26	Culture and the Environment	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

General Education Courses (GEs)

Prospective students are also encouraged to complete the Intersegmental General Education Transfer Curriculum (IGETC) or to complete all UC Santa Cruz general education requirements before matriculation.

Getting Started in the Major: Transfer Students

Transfer students pursuing environmental studies majors are encouraged to transfer in the fall quarter.

Transfer students should complete as many lower-division requirements as possible before transferring. All remaining lower-division requirements should be completed in enroll in summer, fall, and winter of their first year in order to take ENVS 100 ENVS 100L in winter or spring quarter of their first year. Transfer students can formally declare their major once qualification courses are successfully completed, following the declaration steps on the ENVS department website.

ENVS 25 and ENVS 23 are usually offered during Summer Session at UC Santa Cruz, and transfer students are encouraged to take these classes if they have not yet completed a substitute requirement or if they want a better understanding of the relevant material. If you are transferring, compare catalog descriptions, consult your current institution's advisor, and refer to the ASSIST website to determine equivalency.

Students who are proposed in a different major and have advanced standing when they come to UCSC require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

To qualify for the environmental studies major, students must complete the specific courses listed below, or their approved equivalents. Some courses may be satisfied via exam credit.

For transfer requirements see Transfer Admission Screening Requirements. Transfer students must have ENVS major listed on their application in order to pursue the major, unless approved by appeal. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

One of the following:

	Either this course	
ENVS 23	The Physical and Chemical Environment	5
	or these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Plus one of the following:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus this course:

ENVS 25	Environmental Politics, Economics and Justice	5

Plus one of these statistics series:

	Either these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
	or these courses	
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Determining Qualification

- Students who complete all the qualification courses with a grade of P, or letter grade of C or better are qualified to declare the major.
- Students who have received **one** grade of NP, C-, D+, D, D-, or F in one of the qualification courses taken at UC Santa Cruz will only be qualified to declare the major after successfully completing the same or an equivalent course with a grade of P, or letter grade of C or better.
- Students with **two or more** grades of NP, C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not qualified to declare the major. See appeal process below.
- Students with AP credit (score of 3 or higher) for any of the qualification course(s) are qualified to declare after successfully completing the remaining qualification courses.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

How to Declare this Major

Petition to declare your major as soon as you have met qualification requirements and/or reach your declaration deadline quarter, whichever comes first.

Students wishing to declare within the Environmental Studies Department should visit the Environmental Studies Department website and follow the declaration steps.

Letter Grade Policy

This program does not have a letter grade policy, except that the comprehensive (senior exit) requirement must be taken for a letter grade.

[Optional Catchall]

Course Substitution Policy

Single environmental studies students can petition up to two upper-division courses to count toward the single environmental studies major requirements. These two substitutions courses may be the following:

- Pre-approved substitution courses: See the department website for a list of classes that can be taken without petition, as a substitution for an ENVS elective.
- By petition: You may petition to substitute courses taken outside of ENVS and/or UC Santa Cruz such as: other institutions, other departments, courses not listed on the pre-approved substitution list, other programs including Educational Abroad Program (EAP), Wildlands Studies, or the Sierra Institute. Please review the petitioning process here.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in environmental studies are encouraged to participate in Study Abroad programs and other off-campus programs. Students who are interested in these programs shall note the following policies:

- Students who are planning to take part in Study Abroad programs must be declared in their major prior to studying abroad.
- Students must have their courses they plan to take abroad reviewed and approved by Environmental Studies Advising.
- Single environmental studies majors may petition to substitute up to two courses taken abroad to count toward the environmental studies upper-division electives. Please review the petitioning process here prior to your EAP program.
- For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements. To be considered for departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Senior Comprehensive Honors. Honors must be nominated by the student's faculty sponsor, and a second faculty member must concur.

Highest Departmental Honors. Students must have a 3.75 grade point average (GPA) in in all courses used to satisfy the environmental studies upper-division requirements and must also receive senior comprehensive honors (see above). To be considered for highest departmental honors, students are limited to no more than one grade of P in those upper-division courses.

[Optional Catchall]

Major Without a Concentration

Course Requirements

Continuing students must complete all lower-division course requirements before taking ENVS 100 and ENVS 100L. Some courses may be satisfied via exam credit.

Lower-Division Courses

One of the following options:

	Either this course	
ENVS 23	The Physical and Chemical Environment	5
	or these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Note: This requirement may also be satisfied with prior completion of CHEM 1A or equivalent.

Previous to July 1, 2023, the General Chemistry series, offered by the Department of Chemistry and Biochemistry, was listed in the General Catalog as CHEM 1A, CHEM 1B and CHEM 1C, with associated laboratories CHEM 1M and CHEM 1N. As of academic year 2023-24, this series was replaced with two distinct series: CHEM 3A, CHEM 3B and CHEM 3C, with labs CHEM 3BL and CHEM 3CL; or CHEM 4A and CHEM 4B with labs CHEM 4AL and CHEM 4BL. Descriptions of these two series are given here.

Plus one of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following course:

ENVS 25	Environmental Politics, Economics and Justice	5

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

May also be satisfied with a score of 3 or higher on the AP Calculus exam or a score of 300 or higher on the ALEKS Math Placement Exam.

Plus one of these statistics series:

	Either these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
	or these courses	
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Plus one of the following:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ENVS 26	Culture and the Environment	5

Upper-Division Courses

Students are required to complete the following upper-division courses:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

ENVS 100 and ENVS 100L are offered twice yearly, during the winter and spring quarters.

Electives

Students take seven, 5-credit or more upper-division electives from ENVS 101-179. Lecture/Lab combinations count as one course. Associated labs are required only when required by the lecture. Among those seven courses:

- At least one course must be from the list below of courses based in the natural sciences
- At least one course must be from the list below of courses based in the social sciences

A list of all courses offered by the Environmental Studies Department is available in the courses section of the catalog. A list of which upper-division courses offered in the current year by the Environmental Studies Department are based in the natural sciences and which in the social sciences is available on the department website.

Environmental studies electives based in natural sciences:

Lecture/Lab combinations count as one course. Associated labs are required only when required by the lecture.

ENVS 104A	Introduction to Environmental Field Methods	2
ENVS 104L	Field Methods Laboratory	5
ENVS 106A	Natural History of Birds	5
ENVS 107A	Natural History Field Quarter	5
ENVS 107B	Natural History Field Quarter	5
ENVS 107C	Natural History Field Quarter	5
ENVS 108	General Entomology	5
ENVS 108L	General Entomology Laboratory	3
BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods	5
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5
BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	5
ENVS 120	Conservation Biology	5
ENVS 122	Tropical Ecology and Conservation	5
ENVS 123	Animal Ecology and Conservation	5
BIOE 125	Ecosystems of California	5
ENVS 130A	Agroecology and Sustainable Agriculture	5
ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 131	Insect Ecology	5
ENVS 133	Agroecology Practicum	5
ENVS 135	Sustainable Aquaculture	5
ENVS 160	Restoration Ecology	5
ENVS 161A	Soils as Living Systems	5
ENVS 162	Plant Physiological Ecology	5
ENVS 162L	Plant Physiological Ecology Laboratory	2
ENVS 163	Plant Disease Ecology	5
ENVS 163L	Plant Disease Ecology Lab	2
ENVS 164	Projects and Practices in Soil Ecology	5
ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 167	Freshwater and Wetland Ecology	5
ENVS 167L	Freshwater and Wetland Ecology Lab	2
ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 169	Climate Change Ecology	5
ENVS 170	Agriculture and Climate Change	5

Environmental studies electives based in the social sciences:

ENVS 110	Institutions, the Environment, and Economic Systems	5
ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 140	National Environmental Policy	5
ENVS 141	Ecological Economics	5
ENVS 143	The Future of Sustainable Development	5
ENVS 144	Global Climate Change Politics	5
ENVS 145	Green Cities	5
ENVS 147	Global Environmental Justice	5
ENVS 149	Environmental Law and Policy	5
ENVS 150	Coastal and Marine Policy	5
ENVS 151	Environmental Assessment	5
ENVS 152	International Environmental Politics	5
ENVS 154	Amazonian Cultures and Conservation	5
ENVS 158	Political Ecology and Social Change	5
ENVS 165	Sustainable Water Systems	5
ENVS 172	Environmental Risks and Public Policy	5
ENVS 173	An Introduction to World Environmental History	5
ENVS 174	Gender and the Environment	5
ENVS 176	Vulnerability, Complex Systems, and Disasters	5
ENVS 178	Race and the Environment	5

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in environmental studies is satisfied by completing

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following:

BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5

ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B is taken after successfully completing ENVS 183A, and ENVS 195B is taken after successfully completing ENVS 195A.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. **All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.**

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional independent research, and at least a two-quarter commitment.

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

	Either this course	
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
	or these courses	
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
	or this course	
ENVS 190	Capstone Course: Environmental Problem Solving	5
	or these courses	
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
	or this course	
ENVS 196	Senior Seminar	5

ENVS 190 is offered in the spring and summer.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major without a concentration. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3		SOC/ANTH/PHIL course ENVS 25 WRIT 1/WRIT 1E (if needed)	ENVS 23
2nd (soph)	ENVS 24 or BIOE 20C STAT 7 STAT 7L WRIT 2**		ENVS 100 ENVS 100L*	Upper-division ENVS
3rd (junior)	Upper-division ENVS (social science)		Upper-division ENVS (natural science)	Upper-division ENVS
4th (senior)	Upper-division ENVS		Upper-division ENVS	Upper-division ENVS Comprehensive requireme

		nt		

*This course is also offered in the spring term.

** WRIT 2 should be taken in or before spring quarter of the second year.

Students completing this major will have satisfied the SI, IN, PE-E, IS, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	STAT 7 STAT 7L	ENVS 100 ENVS 100L* Upper-division ENVS	Upper-division ENVS	
4th (senior)	Upper-division ENVS Upper-division ENVS	Upper-division ENVS Upper-division ENVS	Comprehensive requirement	

		(natural science)		

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower-division courses—including UCSC or community college general education requirements—with the exception of STAT 7 and STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Geographic Information Systems Concentration

Course Requirements

Continuing students must complete all lower-division courses before taking ENVS 100 ENVS 100L. Some courses may be satisfied via exam credit.

Lower-Division Courses

One of the following courses:

	Either this course	
ENVS 23	The Physical and Chemical Environment	5
	or these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Note: This requirement may also be satisfied with prior completion of CHEM 1A or equivalent.

Previous to July 1, 2023, the General Chemistry series, offered by the Department of Chemistry and Biochemistry, was listed in the General Catalog as CHEM 1A, CHEM 1B

and CHEM 1C, with associated laboratories CHEM 1M and CHEM 1N. As of academic year 2023-24, this series was replaced with two distinct series: CHEM 3A, CHEM 3B and CHEM 3C, with labs CHEM 3BL and CHEM 3CL; or CHEM 4A and CHEM 4B with labs CHEM 4AL and CHEM 4BL. Descriptions of these two series are given here.

Plus one of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following course:

ENVS 25	Environmental Politics, Economics and Justice	5

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

May also be satisfied with a score of 3 or higher on the AP Calculus exam or a score of 300 or higher on the ALEKS Math Placement Exam.

Plus one of the following statistics series:

	Either these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
	or these courses	
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ENVS 26	Culture and the Environment	5

Upper-Division Courses

Students are required to complete the following upper-division courses:

All of the following

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

ENVS 100 and 100L are offered twice yearly during the winter and spring quarters.

Plus all of the following:

ENVS 115A	Geographic Information Systems and Environmental Applications	5
ENVS 115L	Exercises in Geographic Information Systems	2
ENVS 115B	Intermediate Geographic Information Systems (GIS)	5
ENVS 115C	Advanced Geographic Information Systems	5

Electives

Students take four, 5-credit or more upper-division electives from ENVS 101-179. Lecture/Lab combinations count as one course. Associated labs are required only when required by the lecture. Among those seven courses:

- At least one course must be from the list below of courses based in the natural sciences
- At least one course must be from the list below of courses based in the social sciences

A list of all courses offered by the Environmental Studies Department is available in the courses section of the catalog. A list of which upper-division courses offered in the current year by the Environmental Studies Department are based in the natural sciences and which in the social sciences is available on the department website.

In addition to coursework, it is strongly recommended that students complete at least one internship related to GIS applications environmental problem-solving (either upper- or lower-division).

Environmental studies electives based on natural sciences:

Lecture/Lab combinations count as one course. Associated labs are required only when required by the lecture.

ENVS 104A	Introduction to Environmental Field Methods	2
ENVS 104L	Field Methods Laboratory	5
ENVS 106A	Natural History of Birds	5

ENVS 107A	Natural History Field Quarter	5
ENVS 107B	Natural History Field Quarter	5
ENVS 107C	Natural History Field Quarter	5
ENVS 108	General Entomology	5
ENVS 108L	General Entomology Laboratory	3
BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods	5
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5
BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	5
ENVS 120	Conservation Biology	5
ENVS 122	Tropical Ecology and Conservation	5
ENVS 123	Animal Ecology and Conservation	5
BIOE 125	Ecosystems of California	5
ENVS 130A	Agroecology and Sustainable Agriculture	5
ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 131	Insect Ecology	5
ENVS 133	Agroecology Practicum	5
ENVS 135	Sustainable Aquaculture	5
ENVS 160	Restoration Ecology	5
ENVS 161A	Soils as Living Systems	5
ENVS 162	Plant Physiological Ecology	5
ENVS 162L	Plant Physiological Ecology Laboratory	2
ENVS 163	Plant Disease Ecology	5
ENVS 163L	Plant Disease Ecology Lab	2
ENVS 164	Projects and Practices in Soil Ecology	5
ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 167	Freshwater and Wetland Ecology	5
ENVS 167L	Freshwater and Wetland Ecology Lab	2
ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 169	Climate Change Ecology	5
ENVS 170	Agriculture and Climate Change	5

Environmental studies electives based on the social sciences:

ENVS 110	Institutions, the Environment, and Economic Systems	5
ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 140	National Environmental Policy	5
ENVS 141	Ecological Economics	5
ENVS 143	The Future of Sustainable Development	5
ENVS 144	Global Climate Change Politics	5
ENVS 145	Green Cities	5
ENVS 147	Global Environmental Justice	5
ENVS 149	Environmental Law and Policy	5
ENVS 150	Coastal and Marine Policy	5
ENVS 151	Environmental Assessment	5
ENVS 152	International Environmental Politics	5
ENVS 154	Amazonian Cultures and Conservation	5
ENVS 158	Political Ecology and Social Change	5
ENVS 165	Sustainable Water Systems	5
ENVS 172	Environmental Risks and Public Policy	5
ENVS 173	An Introduction to World Environmental History	5
ENVS 174	Gender and the Environment	5
ENVS 176	Vulnerability, Complex Systems, and Disasters	5
ENVS 178	Race and the Environment	5

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in environmental studies is satisfied by completing

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following:

ENVS 183B	Senior Internship	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B is taken after successfully completing ENVS 183A, and ENVS 195B is taken after successfully completing ENVS 195A.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. **All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.** The topic engaged in the senior comprehensive courses must be relevant to the field of Geographic

Information Systems. The relevance of the topic will be reviewed by the instructor of the senior comprehensive course.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship options require careful planning, additional independent research, and at least a two-quarter commitment.

	Either these courses	
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
	or these courses	
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
	or this course	
ENVS 196G	Senior Seminar in Geographic Information Systems (GIS)	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major with a concentration in geographic information systems. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3	ENVS 25 SOC/ANTH/PHIL course WRIT 1/WRIT 1E (if needed)	ENVS 23	
2nd (soph)	ENVS 24 or BIOE 20C STAT 7 STAT 7L WRIT 2**	ENVS 100L*	ENVS upper-division	
3rd (junior)	ENVS 115A ENVS 115L	ENVS 115B	ENVS 115C	
4th (senior)	ENVS upper-division (social science)	ENVS upper-division (natural science)	ENVS upper-division Comprehensive requirement	

*This course is also offered in the spring term.

** WRIT 2 should be taken in or before spring quarter of the second year.

This planner assumes that a student has placed into MATH 3 or AM 3.

Students completing this major will have satisfied SI, IN, PE-E, IS, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS

183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
1st (junior)	STAT 7 STAT 7L	ENVS 100 ENVS 100L*	ENVS upper-division	
		ENVS upper-division (social science)	ENVS upper-division (natural science)	
2nd (senior)	ENVS 115A ENVS 115L	ENVS 115B	ENVS 115C	
		ENVS upper-division	Comprehensive requirement	

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower division courses—including UCSC or community college General Education requirements—with the exception of STAT 7 STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Global Environmental Justice Concentration

Course Requirements

Continuing students must complete all lower-division courses before taking ENVS 100 ENVS 100L. Some courses may be satisfied via exam credit.

Lower-Division Courses

One of the following:

	Either this course	
ENVS 23	The Physical and Chemical Environment	5
	or these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Note: This requirement may also be satisfied with prior completion of CHEM 1A or equivalent.

Previous to July 1, 2023, the General Chemistry series, offered by the Department of Chemistry and Biochemistry, was listed in the General Catalog as CHEM 1A, CHEM 1B and CHEM 1C, with associated laboratories CHEM 1M and CHEM 1N. As of academic year 2023-24, this series was replaced with two distinct series: CHEM 3A, CHEM 3B and CHEM 3C, with labs CHEM 3BL and CHEM 3CL; or CHEM 4A and CHEM 4B with labs CHEM 4AL and CHEM 4BL. Descriptions of these two series are given here.

Plus one of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following course:

ENVS 25	Environmental Politics, Economics and Justice	5

Plus one of the following courses:

The math requirement may be satisfied by taking one of the classes below, or by testing out via AP score or ALEKS math placement.

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

May also be satisfied with a score of 3 or higher on the AP Calculus exam or a score of 300 or higher on the ALEKS Math Placement Exam.

Plus one of these statistics series:

	Either these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
	or these courses	
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ENVS 26	Culture and the Environment	5

Upper-Division Courses

Students are required to complete the following upper-division courses:

Both of the following courses:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

ENVS 100 and 100L are offered twice yearly during the winter and spring quarters.

Plus four of the following environmental justice electives:

ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 140	National Environmental Policy	5
ENVS 143	The Future of Sustainable Development	5
ENVS 144	Global Climate Change Politics	5
ENVS 147	Global Environmental Justice	5
ENVS 152	International Environmental Politics	5
ENVS 154	Amazonian Cultures and Conservation	5
ENVS 158	Political Ecology and Social Change	5
ENVS 172	Environmental Risks and Public Policy	5
ENVS 173	An Introduction to World Environmental History	5
ENVS 174	Gender and the Environment	5
ENVS 176	Vulnerability, Complex Systems, and Disasters	5
ENVS 178	Race and the Environment	5
JRLC 135	Apprenticeship in Community Engaged Research	5
SOCY 185	Environmental Inequality	5

Plus three additional upper-division electives:

Students take three, 5-credit or more upper-division electives from ENVS 101-179. Lecture/Lab combinations count as one course. Associated labs are required only when required by the lecture. Among those four courses, at least one course must be from the list below of courses based in the natural sciences.

A list of all courses offered by the Environmental Studies Department is available in the courses section of the catalog. A list of which upper-division courses offered in the current year by the Environmental Studies Department are based in the natural sciences and which in the social sciences is available on the department website.

Natural sciences

Lecture/Lab combinations count as one course. Associated labs are required only when required by the lecture.

ENVS 104A	Introduction to Environmental Field Methods	2
ENVS 104L	Field Methods Laboratory	5
ENVS 106A	Natural History of Birds	5
ENVS 107A	Natural History Field Quarter	5
ENVS 107B	Natural History Field Quarter	5
ENVS 107C	Natural History Field Quarter	5
ENVS 108	General Entomology	5

ENVS 108L	General Entomology Laboratory	3
BIOE 125	Ecosystems of California	5
BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods	5
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5
BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	5
ENVS 120	Conservation Biology	5
ENVS 122	Tropical Ecology and Conservation	5
ENVS 123	Animal Ecology and Conservation	5
ENVS 130A	Agroecology and Sustainable Agriculture	5
ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 131	Insect Ecology	5
ENVS 135	Sustainable Aquaculture	5
ENVS 133	Agroecology Practicum	5
ENVS 160	Restoration Ecology	5
ENVS 161A	Soils as Living Systems	5
ENVS 162	Plant Physiological Ecology	5
ENVS 162L	Plant Physiological Ecology Laboratory	2
ENVS 163	Plant Disease Ecology	5
ENVS 163L	Plant Disease Ecology Lab	2
ENVS 164	Projects and Practices in Soil Ecology	5
ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 167	Freshwater and Wetland Ecology	5
ENVS 167L	Freshwater and Wetland Ecology Lab	2
ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 169	Climate Change Ecology	5
ENVS 170	Agriculture and Climate Change	5

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in environmental studies is satisfied by completing

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following:

ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B is taken after successfully completing ENVS 183A, and ENVS 195B is taken after successfully completing ENVS 195A.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. **All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.** The topic engaged in the senior comprehensive courses must be relevant to the field of global environmental justice.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship options require careful planning, additional independent research, and at least a two-quarter commitment.

	Either these courses	
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
	or this course	
ENVS 190	Capstone Course: Environmental Problem Solving	5
	or these courses	
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
	or this course	
ENVS 196	Senior Seminar	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major with a concentration in global environmental justice. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

Fall	Winter	Spring	Summer

Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3	ENVS 25 SOC/ANTH/PHIL course WRIT 1/WRIT 1E (if needed)	ENVS 23	
2nd (soph)	ENVS 24 or BIOE 20C STAT 7 STAT 7L WRIT 2**	ENVS 100 ENVS 100L*	ENVS 147 or ENVS 172	
3rd (junior)	ENVS 158 or ENVS 173	ENVS upper-division (concentration elective)	ENVS upper-division (concentration elective)	
4th (senior)	ENVS upper-division (natural science)	ENVS upper-division	ENVS upper-division	Comprehensive requirement

*This course is also offered in the spring term.

** WRIT 2 should be taken in or before spring quarter of the second year.

Students completing this major will have satisfied SI, IN, PE-E, IS, IN, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	**Winter**	**Spring**	**Summer**
Entering				KRSG 1T Summer Edge (optional)
1st (junior)	STAT 7 STAT 7L	ENVS 100 ENVS 100L* ENVS 147 or ENVS 172	ENVS upper-division (concentration elective)	
2nd (senior)	ENVS 158 or ENVS 173 ENV	ENVS upper-division (concentration elective) ENVS	ENVS upper-division Comprehe	

S upper-division (natural science)	upper-division	nsive requirement

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower division courses—including UCSC or community college general education requirements—with the exception of STAT 7 STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Conservation Science and Policy Concentration

Course Requirements

Continuing students are required to complete all six lower-division courses before taking ENVS 100 ENVS 100L. See the course descriptions for more specific information. Some courses may be satisfied via exam credit.

Lower-Division Courses

One of the following courses:

	Either this course	
ENVS 23	The Physical and Chemical Environment	5
	or these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Note: This requirement may also be satisfied with prior completion of CHEM 1A or equivalent.

Previous to July 1, 2023, the General Chemistry series, offered by the Department of Chemistry and Biochemistry, was listed in the General Catalog as CHEM 1A, CHEM 1B and CHEM 1C, with associated laboratories CHEM 1M and CHEM 1N. As of academic year 2023-24, this series was replaced with two distinct series: CHEM 3A, CHEM 3B and CHEM 3C, with labs CHEM 3BL and CHEM 3CL; or CHEM 4A and CHEM 4B with labs CHEM 4AL and CHEM 4BL. Descriptions of these two series are given here.

Plus one of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following course:

ENVS 25	Environmental Politics, Economics and Justice	5

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

May also be satisfied with a score of 3 or higher on the AP Calculus exam or a score of 300 or higher on the ALEKS Math Placement Exam.

Plus one of these statistics series:

	Either these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
	or these courses	
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5

PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ENVS 26	Culture and the Environment	5

Upper-Division Courses

Students are required to complete the following upper-division courses:

Both of the following:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

ENVS 100 and 100L are offered twice yearly, during the winter and spring quarters.

Plus one of the following:

ENVS 120	Conservation Biology	5
ENVS 160	Restoration Ecology	5
BIOE 165	Marine Conservation Biology	5

Plus one of the following:

ENVS 140	National Environmental Policy	5
ENVS 150	Coastal and Marine Policy	5

Plus two of the following CSP electives:

No duplicate courses from lists above.

Lecture/lab combinations count as a single course.

ENVS 110	Institutions, the Environment, and Economic Systems	5
ENVS 115A	Geographic Information Systems and Environmental Applications	5
ENVS 115L	Exercises in Geographic Information Systems	2
ENVS 115B	Intermediate Geographic Information Systems (GIS)	5
ENVS 120	Conservation Biology	5
ENVS 122	Tropical Ecology and Conservation	5
ENVS 123	Animal Ecology and Conservation	5
ENVS 140	National Environmental Policy	5
ENVS 141	Ecological Economics	5
ENVS 149	Environmental Law and Policy	5
ENVS 150	Coastal and Marine Policy	5
ENVS 151	Environmental Assessment	5
ENVS 160	Restoration Ecology	5
ENVS 165	Sustainable Water Systems	5
ENVS 167	Freshwater and Wetland Ecology	5
BIOE 125	Ecosystems of California	5
ENVS 106A	Natural History of Birds	5
ENVS 108	General Entomology	5
ENVS 152	International Environmental Politics	5
ENVS 154	Amazonian Cultures and Conservation	5

Field course

One of the following options:

Lecture/Lab combinations count as one course. If a lecture has a lab offered (required or optional), the lab must be taken to count for this requirement.

One of the following field courses:

ENVS 104A	Introduction to Environmental Field Methods	2
ENVS 104L	Field Methods Laboratory	5
ENVS 106A	Natural History of Birds	5
ENVS 106M	Natural History of Birds Laboratory	2
ENVS 107A	Natural History Field Quarter	5
ENVS 107B	Natural History Field Quarter	5
ENVS 107C	Natural History Field Quarter	5
ENVS 108	General Entomology	5
ENVS 108L	General Entomology Laboratory	3
ENVS 167	Freshwater and Wetland Ecology	5
ENVS 167L	Freshwater and Wetland Ecology Lab	2
BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods	5
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5
BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	5
BIOE 112	Ornithology	5
BIOE 112L	Ornithology Field Studies	2
BIOE 114	Herpetology	5
BIOE 114L	Field Methods in Herpetological Research	2
BIOE 117	Systematic Botany of Flowering Plants	5
BIOE 117L	Systematic Botany of Flowering Plants Laboratory	2
BIOE 124	Mammalogy	5
BIOE 124L	Mammalogy Laboratory	2
BIOE 128L	Large Marine Vertebrates Field Course	7

BIOE 141L	Behavioral Ecology Field Course	7
BIOE 145	Plant Ecology	5
BIOE 145L	Field Methods in Plant Ecology	5
BIOE 150	Ecological Field Methods	5
BIOE 150L	Ecological Field Methods Laboratory	5
BIOE 161	Kelp Forest Ecology	5
BIOE 161L	Kelp Forest Ecology Laboratory	5
EART 189A	Geographic Information Systems with Applications in Earth Sciences	5
BIOE 163	Ecology of Reefs, Mangroves, and Seagrasses	5
BIOE 163L	Ecology of Reefs, Mangroves, and Seagrasses Laboratory	2

Or the CEC field course

Or the California Ecology and Conservation (CEC) field course through the University of California Natural Reserve System (XENV 188).

Electives

Students take two, 5-credit or more upper-division electives from ENVS 101-179. Lecture/Lab combinations count as one course. Associated labs are required only when required by the lecture.

A list of all courses offered by the Environmental Studies Department is available in the courses section of the catalog.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in environmental studies is satisfied by completing

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following:

BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B is taken after successfully completing ENVS 183A, and ENVS 195B is taken after successfully completing ENVS 195A.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. **All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.** The topic engaged in senior comprehensive courses must be relevant to the field of conservation science and policy. The relevance of the topic will be reviewed by the instructor of the senior comprehensive course.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. These courses require careful planning, additional independent research, and at least a two-quarter commitment.

	Either this course	
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
	or these courses	
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
	or this course	
ENVS 190	Capstone Course: Environmental Problem Solving	5
	or these courses	
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
	or this course	
ENVS 196	Senior Seminar	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major with a concentration in conservation science and policy. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring	Summer
Entering				College 1A
				Summer Edge (optional)

1st (frosh)	MATH 3 or AM 3	ENVS 25	ENVS 23
	College 1	SOC/ANTH/PHIL course	
		WRIT 1/WRIT 1E (if needed)	
2nd (soph)	ENVS 24 or BIOE 20C	ENVS 100 ENVS 100L*	ENVS 140 or ENVS 150
	STAT 7 STAT 7L		
	WRIT 2**		
3rd (junior)	ENVS 120 or ENVS 160	ENVS upper-division (concentration elective)	ENVS upper-division (concentration elective)
4th (senior)	ENVS upper-division	ENVS upper-division (field course)	ENVS upper-division
			Comprehensive requirement

*This course is also offered in the spring term.

** WRIT 2 should be taken in or before spring quarter of the second year.

Students completing this major will have satisfied SI, SR, IN, PE-E, IS, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring	Summer
Entering				KRSG 1A
				Summer Edge (optional)
1st (junior)	STAT 7 STAT 7L	ENVS 100 ENVS 100L*	ENVS 140 or ENVS 150	
			ENVS upper-division (concentration elective)	
2nd (senior)	ENVS 120 or ENVS 160	ENVS upper-division (concentration elective)	ENVS upper-division	
	ENVS upper-division (field course)	ENVS upper-division	Comprehensive requirement	

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower division courses—including UCSC or community college General Education requirements—with the exception of STAT 7 STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

AGROECOLOGY B.A.

Information and Policies

Introduction

The agroecology major provides ecological concepts that can be applied to the development of sustainable agricultural systems. Students will develop their understanding of social, political, and economic aspects of agriculture . Students will also engage in hands-on experiences, and obtain skills in research, fieldwork, production, and communication in order to achieve multiple sustainability goals in complex, social-ecological food systems.

The agroecology major does not have any concentrations offered. Students interested in the available concentrations should pursue the environmental studies bachelor of arts (B.A.) degree.

Program Learning Outcomes

Students graduating with a B.A. degree in agroecology will be able to:

- Analyze the problems faced in agriculture and food systems by identifying the societal (historical, social, political, economic, cultural, and ethical) agents and structures that contribute to environmental change. (Social science competency)
- Describe the structure and functioning of major physical and ecological components of earth's systems, including agricultural systems. (Natural science competency)
- Access and assess complex literature and review specific topics in agroecology and sustainable food systems, and evaluate the usefulness and limitations of individual methods. (Analytical thinking)
- Demonstrate effective oral and written communication skills. (Communication skills)
- Demonstrate an introductory level of competence in horticulture or agronomy or aquaculture. (Production skills)

Academic Advising for the Program

Advising is one way to make the most of your university experience. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadvi@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall:

One of the following:

ENVS 23	The Physical and Chemical Environment	5
CHEM 3A	General Chemistry	5
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5

Plus one of the following:

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 16A	Mathematics for Life Sciences	5

General Education Courses (GEs)

Prospective students are also encouraged to complete the Intersegmental General Education Transfer Curriculum (IGETC) or to complete all UC Santa Cruz general education requirements before matriculation.

Recommended Courses

In addition, we recommend transfer students complete the following lower-division courses before transferring:

One of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus both of the following:

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus:

ENVS 25, or a course in macroeconomics or microeconomics **plus** a course in national or international politics

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ENVS 26	Culture and the Environment	5

Plus the following course:

ENVS 80F	Introduction to Agroecology and Sustainable Food Systems	5

Getting Started in the Major: Transfer Students

Transfer students pursuing agroecology majors are encouraged to transfer in the fall quarter.

Transfer students should complete as many lower divisions as possible before transferring. All remaining lower-division requirements should be completed in summer, fall, and winter of their first year in order to take ENVS 100 ENVS 100L in winter or spring quarter of their first year. Transfer students can formally declare their major once qualification courses are successfully completed, following the declaration steps on the ENVS department website.

ENVS 25 and ENVS 23 are usually offered during Summer Session at UC Santa Cruz, and transfer students are encouraged to take these classes if they have not yet completed a substitute requirement or if they want a better understanding of the relevant material. If you are transferring, compare catalog descriptions and consult your current institution's advisor to determine equivalency.

Students who are proposed in a different major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

Some courses may be satisfied via exam credit. For transfer requirements, see Transfer Admission Screening Requirements above. Transfer students must have the agroecology major listed on their application in order to pursue the major, unless approved by the department. Contact envsadvi@ucsc.edu with any questions.

One of the following:

	Either this course	
ENVS 23	The Physical and Chemical Environment	5
	or these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Plus one of the following:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus both of the following:

ENVS 25	Environmental Politics, Economics and Justice	5
ENVS 80F	Introduction to Agroecology and Sustainable Food Systems	5

Plus one of the following statistics series:

	Either these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
	or these courses	
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Determining Qualification

Students who complete all the qualification courses with a grade of P, or letter grade of C or better are qualified to declare the major.

Students who have received one grade of NP, C-, D+, D, D-, or F in one of the qualification courses taken at UC Santa Cruz will only be qualified to declare after successfully completing the same or an equivalent course with a grade of P, or letter grade of C or better.

Students with two or more grades of NP, C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not qualified to declare the major.

Students with AP credit (score of 3 or higher) for any of the qualification course(s) are qualified to declare after successfully completing the remaining qualification courses.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major here within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

How to Declare the Agroecology Major

Petition to declare your major as soon as you have met qualification requirements and/or reach your declaration deadline quarter, whichever comes first.

Students wishing to declare within the Environmental Studies Department should visit the Environmental Studies Department website and follow the declaration steps.

Letter Grade Policy

This program does not have a letter grade policy, except that the comprehensive (senior exit) requirement must be taken for a letter grade.

[Optional Catchall]

Course Substitution Policy

Of the four elective courses, agroecology students can petition to substitute one of the agroecology upper-division elective courses from:

- Another ENVS upper-division course (ENVS 104-ENVS 179) not listed as one of the four elective course options.
- A relevant course in SOCY, LALS, ANTH by petition*
- A relevant course taken in a study abroad program by petition*

*By petition: You may petition to substitute a course taken outside of ENVS and/or UC Santa Cruz such as other institutions, other departments, courses not listed on the pre-approved substitution list, other programs including Educational Abroad Program (EAP), Wildlands Studies, or the Sierra Institute. Please review the petitioning process on the department's website.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in agroecology are encouraged to participate in Study Abroad programs and other off-campus programs. Students who are interested in these programs shall note the following policies:

- Students planning to study abroad must be declared in their major prior to studying abroad.
- Students must have the courses they plan to take abroad reviewed and approved by Environmental Studies Advising.
- Agroecology majors may petition for one course to fulfill their four electives. Please review the petitioning process here prior to your EAP program. For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the agroecology upper-division requirements. To be considered for departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Senior Comprehensive Honors. Honors must be nominated by the student's faculty sponsor, and a second faculty member must concur.

Highest Departmental Honors. Students must have a 3.75 GPA in in all courses used to satisfy the agroecology upper-division requirements and must also receive senior comprehensive honors (see above). To be considered for highest departmental honors, students are limited to no more than one grade of P in those upper-division courses.

[Optional Catchall]

Requirements and Planners

Course Requirements

Continuing students must complete all lower-division course requirements before taking ENVS 100 and ENVS 100L. Some courses may be satisfied via exam credit.

Lower-Division Courses

One of the following options:

	Either this course	
ENVS 23	The Physical and Chemical Environment	5
	or these courses	
CHEM 3A	General Chemistry	5

CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Note: This requirement may also be satisfied with prior completion of CHEM 1A or equivalent.

Previous to July 1, 2023, the General Chemistry series, offered by the Department of Chemistry and Biochemistry, was listed in the General Catalog as CHEM 1A, CHEM 1B and CHEM 1C, with associated laboratories CHEM 1M and CHEM 1N. As of academic year 2023-24, this series was replaced with two distinct series: CHEM 3A, CHEM 3B and CHEM 3C, with labs CHEM 3BL and CHEM 3CL; or CHEM 4A and CHEM 4B with labs CHEM 4AL and CHEM 4BL. Descriptions of these two series are given here.

Plus one of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus both of the following:

ENVS 25	Environmental Politics, Economics and Justice	5
ENVS 80F	Introduction to Agroecology and Sustainable Food Systems	5

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

May also be satisfied with a score of 3 or higher on the AP Calculus exam or a score of 300 or higher on the ALEKS Math Placement Exam.

Plus one of these statistics series:

	Either these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
	or these courses	
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ENVS 26	Culture and the Environment	5

Upper-Division Courses

All of the following courses:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5
ENVS 130A	Agroecology and Sustainable Agriculture	5
ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ENVS 130B	Justice and Sustainability in Agriculture	5

ENVS 100 and ENVS 100L are offered twice yearly, during the winter and spring quarters. ENVS 130A and ENVS 130L are offered fall quarter only. ENVS 130B is offered winter quarter only.

Plus one of the following courses:

ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 133	Agroecology Practicum	5
ENVS 133B	Agroecology Practicum	6
ENVS 135	Sustainable Aquaculture	5

Plus four Agroecology electives:

Not duplicating any courses used to fulfill the above requirements, students take four courses from the following list. Lecture/lab combinations count as one course. Associated labs are required only when required by the lecture. ENVS 133 and ENVS 133B may not both be counted toward the major.

ENVS 108	General Entomology	5
ENVS 108L	General Entomology Laboratory	3

ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 131	Insect Ecology	5
ENVS 133	Agroecology Practicum	5
ENVS 133B	Agroecology Practicum	6
ENVS 135	Sustainable Aquaculture	5
ENVS 142	Sustainable Energy	5
ENVS 143	The Future of Sustainable Development	5
ENVS 160	Restoration Ecology	5
ENVS 161A	Soils as Living Systems	5
ENVS 162	Plant Physiological Ecology	5
ENVS 162L	Plant Physiological Ecology Laboratory	2
ENVS 163	Plant Disease Ecology	5
ENVS 163L	Plant Disease Ecology Lab	2
ENVS 164	Projects and Practices in Soil Ecology	5
ENVS 165	Sustainable Water Systems	5
ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 169	Climate Change Ecology	5
ENVS 170	Agriculture and Climate Change	5
BIOE 118	Plants and Society: the Biology of Food, Shelter, and Medicine	5
CMMU 149	Political Economy of Food and Agriculture	5
CMMU 186	Food and Agriculture Social Movements	5

If students wish to petition to substitute a course not on the agroecology elective list, contact envsadvi@ucsc.edu.

Required Internship or Independent Study

Complete one of the following in a topic related to agroecology, aquaculture, or sustainable food systems:

ENVS 83	Environmental Studies Internship	5
ENVS 84	Environmental Studies Internship	2
ENVS 99F	Tutorial	2
ENVS 199F	Tutorial	2

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the agroecology major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in agroecology is satisfied by completing:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following:

ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B and ENVS 195B are usually taken after successfully completing ENVS 183A and ENVS 195A respectively.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. **All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.** The topic engaged in the senior comprehensive courses must be relevant to the field of agroecology.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional independent research, and at least a two-quarter commitment.

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

One of the following options:

	Either these courses	
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
	or this course	
ENVS 190	Capstone Course: Environmental Problem Solving	5
	or these courses	
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
	or this course	
ENVS 196	Senior Seminar	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans for students pursuing the Agroecology B.A. major. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

Fall	Winter	Spring	Summer

Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3	SOCY/ANTH/PHIL course	ENVS 23	
	ENVS 80F	ENVS 25		
	College 1	WRIT 1/WRIT 1E (if needed)		
2nd (soph)	ENVS 24 or BIOE 20C	ENVS 100 ENVS 100L*	Upper-division elective	
	STAT 7 STAT 7L		ENVS 83 or ENVS 84 or ENVS 199F	
	WRIT 2**			
3rd (junior)	ENVS 130A ENVS 130L	ENVS 130B	ENVS 130C or ENVS 133	
		ENVS 133 or ENVS 135		
4th (senior)	Upper-division elective	Upper-division elective	Upper-division elective	

				Comprehensive requirement

*This course is also offered in the spring term.

** WRIT 2 should be taken in or before spring quarter of the second year.

Students completing this major will have satisfied the SI, IN, PE-E, IS, and PR-E general education requirements needed to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	**Winter**	**Spring**	**Summer**
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	STAT 7 STAT 7L	ENVS 100 ENVS 100L*	ENVS 130C or ENVS 133	
	ENVS 80F	ENVS 130B	Upper-division elective	
	ENVS 83 or ENVS 84 or ENVS 199F			
4th (senior)	ENVS 130A ENVS 130L	ENVS 133 or ENVS 135	ENVS 130C	

Upper-division elective	Upper-division elective	Upper-division elective
		Comprehensive requirement

*This course is also offered in the spring term

This planner assumes a student has completed all lower-division courses except STAT 7 STAT 7L and ENVS 80F before transferring to UCSC.

Students completing this major will have satisfied the SI, IN, PE-E, IS, and PR-E general education requirements needed to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

ENVIRONMENTAL STUDIES/BIOLOGY COMBINED MAJOR B.A.

Information and Policies

Introduction

This course of study provides students with the basic tools of biological science and sufficient understanding of resource conservation, conservation biology, and concerns about environmental sustainability to apply these tools to environmental problems.

Program Learning Outcomes

Students graduating with a B.A. degree in environmental studies/biology combined will be able to:

- Identify the societal (social, political, economic and ethical) agents and structures that contribute to environmental change. (social science competency)
- Describe the structure and functioning of major physical and ecological components of the earth's systems. (natural science competency)
- Access and analyze a complex literature addressing specific topics in environmental studies (ENVS), and evaluate the usefulness and limitations of individual sources of information. (analytic thinking)
- Demonstrate effective oral and written communication skills. (communication skills).

Academic Advising for the Program

Advising is one way to make the most of your university experience. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadvi@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall:

All of the following courses:

BIOE 20C	Ecology and Evolution	5
BIOL 20A	Cell and Molecular Biology	5
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3C	General Chemistry	3

Plus one of the following:

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Recommended Courses

In addition, taking the following courses prior to transfer is recommended prior to ensure timely graduation.

The following course:

BIOE 20B	Development and Physiology	5

Plus one of the following options:

ENVS 25

or

A course in microeconomics or macroeconomics PLUS a course in national or international politics

Plus the following courses:

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
ENVS 26	Culture and the Environment	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

General Education Courses

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

Transfer students pursuing any of the environmental studies majors are encouraged to transfer in the fall quarter. Transfer students should complete as many lower-division courses as possible before transferring. All remaining lower-division requirements should be completed in summer, fall, and winter of their first year in order to start upper-division courses in winter or spring of the first year. Transfer students can formally declare their major once qualification courses are successfully completed, following the declaration steps on the ENVS department website.

ENVS 25 and general chemistry are usually offered during Summer Session at UC Santa Cruz, and transfer students are encouraged to take these courses if they have not completed a substitute requirement or want a better understanding of the relevant material. If you are transferring, compare catalog descriptions, consult your current institution's advisor, and refer to the ASSIST website to determine equivalency.

Students who are proposed in a different major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

To qualify for the environmental studies/biology combined major, students must complete the specific courses listed below, or their approved equivalents. Some courses may be satisfied via exam credit. For transfer requirements see Transfer Admission Screening Requirements. Transfer students must have ENVS major listed on their application in order to pursue the major, unless approved by appeal. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

Students must take all of these courses for a letter grade.

All of the following courses

BIOL 20A	Cell and Molecular Biology	5
BIOE 20C	Ecology and Evolution	5
ENVS 25	Environmental Politics, Economics and Justice	5
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one of the following:

	Either these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Determining qualification

- Students who complete all the qualification courses with a letter grade of C or better are eligible to declare a major.
- Students who have received one grade of C-, D+, D, D-, or F in one of the qualification courses taken at UC Santa Cruz will only be eligible to declare after successfully completing the same or an equivalent course with a letter grade of C or better.
- Students with two or more grades of C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not eligible to declare.

- Students with non-letter grades in any of the qualification courses for the environmental studies/biology combined B.A. major will not be eligible to declare until a grade of C or better has been assigned.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

How to Declare a Major

Petition to declare your major as soon as you have met qualification requirements and/or reach your declaration deadline quarter, whichever comes first.

To declare the ENVS/BIO major, students should visit the department website and follow declaration steps.

Letter Grade Policy

All requirements for the environmental studies/biology combined major must be taken for a letter grade.

[Optional Catchall]

Course Substitution Policy

Students pursuing the environmental studies/biology combined major cannot substitute courses to count toward their ENVS upper-division electives. Any substitutions for ecology and evolutionary biology (BIOE) upper-division courses must be approved by the Ecology and Evolutionary Biology Department.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in environmental studies are encouraged to participate in Study Abroad programs and other off-campus programs. Students who are interested in these programs shall note the following policies:

- Students planning to study abroad must be declared in their major prior to studying abroad.
- Students must have their courses they plan to take abroad reviewed and approved by environmental studies advising.
- Environmental studies/biology combined majors cannot petition their courses taken abroad for ENVS upper-division course substitution. Any substitutions for BIOE upper division courses must be approved by the Ecology and Evolutionary Biology Department.
- For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the major's upper-division requirements.

Senior Comprehensive Honors. Honors must be nominated by the student's faculty sponsor, and a second faculty member must concur.

Highest Departmental Honors. Students must have a 3.75 grade point average (GPA) in in all courses used to satisfy the major's upper-division requirements and must also receive senior comprehensive honors (see above).

[Optional Catchall]

Requirements and Planners

Course Requirements

Complete the following requirements. Some courses may be satisfied via exam credit.

Lower-Division Courses

Chemistry and mathematics courses may require placement examinations. See the course descriptions for prerequisite information.

All of the following courses:

BIOL 20A	Cell and Molecular Biology	5
BIOE 20B	Development and Physiology	5
BIOE 20C	Ecology and Evolution	5
ENVS 25	Environmental Politics, Economics and Justice	5

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
ENVS 26	Culture and the Environment	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
AM 11A	Mathematical Methods for Economists I	5

AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

May also be satisfied with a score of 3 or higher on the AP Calculus exam or a score of 300 or higher on the ALEKS Math Placement Exam.

Plus both of the following:

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one of the following chemistry series:

	Either these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
CHEM 3C	General Chemistry	3
CHEM 3CL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Note: This requirement may also be satisfied with prior completion of CHEM 1A, 1B, 1C, and 1N, or equivalent.

Previous to July 1, 2023, the General Chemistry series, offered by the Department of Chemistry and Biochemistry, was listed in the General Catalog as CHEM 1A, CHEM 1B and CHEM 1C, with associated laboratories CHEM 1M and CHEM 1N. As of academic year 2023-24, this series was replaced with two distinct series: CHEM 3A, CHEM 3B and CHEM 3C, with labs CHEM 3BL and CHEM 3CL; or CHEM 4A and CHEM 4B with labs CHEM 4AL and CHEM 4BL. Descriptions of these two series are given here.

Plus one of the following physics options:

	Either this course	
PHYS 1A	Physics for Everyone	5
	or this course	
PHYS 1B	Physics for Everyone	5
	or these courses	
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1
	or these courses	
PHYS 7A	Elementary Physics I	5
PHYS 7L	Elementary Physics Laboratory	1

Upper-Division Courses

Students are required to complete nine upper-division courses, plus the senior comprehensive requirement.

All of the following courses:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5
BIOL 105	Genetics	5
BIOE 109	Evolution	5

Electives

Students take six 5-credit or more upper-division electives as follows. A single course may not satisfy more than one requirement.

- Three electives from environmental studies (ENVS 101-179). At least one of these courses must be from the ENVS electives based in the social sciences list below.
- One course from the lab-based elective list below
- Two courses from BIOE 107-188 and/or BIOL 100-140

Lecture/lab combinations count as one course. Associated labs are required only when required by the lecture for the three ENVS and two EEB/MCD requirements. Labs must be taken for the one lab-based elective.

ENVS electives based in the social sciences:

ENVS 110	Institutions, the Environment, and Economic Systems	5
ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 140	National Environmental Policy	5
ENVS 141	Ecological Economics	5
ENVS 143	The Future of Sustainable Development	5
ENVS 144	Global Climate Change Politics	5
ENVS 145	Green Cities	5
ENVS 147	Global Environmental Justice	5
ENVS 149	Environmental Law and Policy	5
ENVS 150	Coastal and Marine Policy	5
ENVS 151	Environmental Assessment	5
ENVS 152	International Environmental Politics	5
ENVS 154	Amazonian Cultures and Conservation	5
ENVS 158	Political Ecology and Social Change	5

ENVS 165	Sustainable Water Systems	5
ENVS 172	Environmental Risks and Public Policy	5
ENVS 173	An Introduction to World Environmental History	5
ENVS 174	Gender and the Environment	5
ENVS 176	Vulnerability, Complex Systems, and Disasters	5
ENVS 178	Race and the Environment	5

Lab-based elective options:

If course has a lab offered, the lab must be taken to count for this requirement. Combined lecture/lab classes count as one course.

BIOE 112	Ornithology	5
BIOE 112L	Ornithology Field Studies	2
BIOE 114	Herpetology	5
BIOE 114L	Field Methods in Herpetological Research	2
BIOE 117	Systematic Botany of Flowering Plants	5
BIOE 117L	Systematic Botany of Flowering Plants Laboratory	2
BIOE 120	Marine Botany	5
BIOE 120L	Marine Botany Laboratory	2
BIOE 122	Invertebrate Zoology	5
BIOE 122L	Invertebrate Zoology Laboratory	2
BIOE 124	Mammalogy	5
BIOE 124L	Mammalogy Laboratory	2

BIOE 129L	Biology of Marine Mammals Laboratory	2
BIOE 137	Molecular Ecology	5
BIOE 141L	Behavioral Ecology Field Course	7
BIOE 145	Plant Ecology	5
BIOE 145L	Field Methods in Plant Ecology	5
BIOE 150	Ecological Field Methods	5
BIOE 150L	Ecological Field Methods Laboratory	5
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 153C	Disciplinary Communication for Biologists	5
BIOE 158L	Field Methods in Marine Ecology	5
BIOE 159A	Marine Ecology Field Quarter: Marine Ecology with Laboratory	5
BIOE 161L	Kelp Forest Ecology Laboratory	5
BIOE 171	Disciplinary Communication for Biologists	5
BIOE 172	Population Genetics	5

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. All courses used to satisfy the senior comprehensive requirement, as well as all other major requirements for ENVS/BIO, must be taken for a letter grade.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional independent research, and at least a two-quarter commitment.

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

	Either this course	
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
	or these courses	
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
	or this course	
ENVS 190	Capstone Course: Environmental Problem Solving	5
	or these courses	
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
	or this course	
ENVS 196	Senior Seminar	5

ENVS 190 is offered in the spring and summer.

ENVS 183B is taken after successfully completing ENVS 183A, and ENVS 195B is taken after successfully completing ENVS 195A.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans for students pursuing the environmental studies/biology combined B.A. major. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3	CHEM 3A	CHEM 3B/CHEM 3L	
	College 1	ENVS 25	SOCY/ANTH/PHIL course	
		WRIT 1/WRIT 1E (if needed)		
2nd (soph)	BIOE 20C	ENVS 100 ENVS 100L*	BIOE 20B	
	STAT 7 STAT 7L	BIOL 20A	CHEM 3C	
	WRIT 2**			
3rd (junior)	BIOL 105	BIOE 109	Upper-division BIOE	
	Upper-division ENVS	PHYS 1	Upper-division ENVS	
4th (senior)	Upper-division BIOE	Upper-division BIO	Comprehensive requirement	
			E	
	Upper-division ENVS (social sciences)			

*This course is also offered in the spring term.

** WRIT 2 should be taken in or before spring quarter of the second year.

This plan does not explicitly show the required lab course among the ENVS or BIOE electives.

Students completing this major will have satisfied the SI, PE-E, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	STAT 7 STAT 7L	ENVS 100 ENVS 100L*	Upper-division ENVS	
		BIOL 105	BIOE 109	
4th (senior)	Upper-divisio	Upper-divisi	Upper-division BIOE	

n ENVS (social scienc es)	on ENV S	
Upper - divisio n BIOE	Uppe r- divisi on BIOE	Comprehen sive requirement
	PHY S 1	

*This course is also offered in the spring term.

This plan does not include the required lab based course. Students must complete the lab-based requirement with the courses listed in the course requirements.

This planner assumes that a student has completed all required lower-division courses—including UCSC or community college general education requirements—with the exception of STAT 7 and STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

ENVIRONMENTAL STUDIES/EARTH SCIENCES COMBINED MAJOR B.A.

Information and Policies

Introduction

As of the 2024-2025 academic year, the Environmental Studies/ Earth Sciences combined bachelor of arts (B.A.) program has been discontinued. For continuing students who proposed or declared ENVS/EART prior to 2024-2025, please refer to the degree requirements published at the time of entering UC Santa Cruz or subsequent catalog(s). New students interested in the ENVS/EART major may want to instead consider the Environmental Sciences B.S. program -- contact epsadvising@ucsc.edu with questions about the Environmental Sciences B.S. major.

This course of study provides students with the basic tools of Earth sciences and environmental studies needed to address environmental problems.

Program Learning Outcomes

Students graduating with a B.A. degree in environmental studies/Earth sciences combined will be able to:

- Identify the societal (social, political, economic and ethical) agents and structures that contribute to environmental change. (social science competency)
- Describe the structure and functioning of major physical and ecological components of the Earth's systems. (natural science competency)
- Access and analyze a complex literature addressing specific topics in environmental studies, and evaluate the usefulness and limitations of individual sources of information. (analytic thinking)
- Demonstrate effective oral and written communication skills. (communication skills).

Academic Advising for the Program

Advising is one way to make the most of your university experience. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadvi@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall:

One of the following:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus one of the following chemistry series:

	Either these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
CHEM 3C	General Chemistry	3

	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4BL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

GPA Requirement

To be considered for admission in the environmental studies majors, transfer students must pass the following courses or their equivalents of the following courses with a C (2.0) or better in the required courses.

Recommended courses

In addition, the following courses are recommended prior to transfer to ensure timely graduation.

The following courses:

MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
EART 5	California Geology	5
EART 5L	California Geology Laboratory	1
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1
PHYS 6B	Introductory Physics II	5
PHYS 6M	Introductory Physics II Laboratory	1
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus the following:

ENVS 25

or

A course in macroeconomics or microeconomics, **plus** a course in national or international politics

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

Transfer students pursuing environmental studies majors are encouraged to transfer in the fall quarter.

Transfer students should complete as many lower divisions as possible before transferring. All remaining lower-division requirements should be completed in summer, fall, and winter of their first year in order to start upper divisions in winter or spring of the first year. Transfer students can formally declare their major once qualification courses are successfully completed, following the declaration steps on the ENVS department website.

ENVS 25 and general chemistry are usually offered during Summer Session at UC Santa Cruz, and transfer students are encouraged to take them if they have not completed a substitute requirement or want a better understanding of the relevant material. If you are transferring, compare catalog descriptions, consult your current institution's adviser, and refer to the ASSIST website to determine equivalency.

Students who are proposed in a different major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

To qualify for the environmental studies/Earth sciences combined major, students must complete the specific courses listed below, or their approved equivalents. For transfer requirements, see Transfer Admission Screening Requirements. Transfer students must have ENVS major listed on their application in order to pursue the major, unless approved by appeal. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

One of the following:

ENVS 24	General Ecology	5
	OR	

BIOE 20C	Ecology and Evolution	5

Plus one of the following:

CHEM 3B	General Chemistry	3
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5

Plus all of the following:

ENVS 25	Environmental Politics, Economics and Justice	5
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Determining qualification

- Students who complete all the qualification courses with a grade of P, or letter grade of C or better are qualified to declare a major.
- Students who have received one grade of C-, D+, D, D-, or F in one of the qualification courses taken at UC Santa Cruz will only be qualified to declare after successfully completing the same or an equivalent course with a letter grade of C or better.
- Students with two or more grades of C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not qualified to declare the major.
- Students with AP credit (score of 3 or higher) for any of the qualification course(s) are qualified to declare after successfully completing the remaining qualification courses.
- If student chooses to take the advanced general chemistry series (CHEM 4A, 4B, etc), they can substitute CHEM 4B as the major qualification requirement instead of CHEM 3B.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

How to Declare a Major

Petition to declare your major as soon as you have met qualification requirements and/or reach your declaration deadline quarter, whichever comes first.

Students wishing to declare the ENVS/EART major should visit the Environmental Studies Department website and follow the declaration steps.

Letter Grade Policy

This program does not have a letter grade policy, except that the comprehensive (senior exit) requirement must be taken for a letter grade.

[Optional Catchall]

Course Substitution Policy

Students pursuing the Environmental Studies/Earth Sciences Combined Major cannot substitute courses to count toward their upper-division electives.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in environmental studies-are encouraged to participate in Study Abroad programs and other off-campus programs. Students who are interested in these programs shall note the following policies:

- Students planning to study abroad must be declared in their major prior to studying abroad.
- Environmental studies combined majors cannot petition their courses taken abroad for upper division course substitution.
- For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the upper-division major requirements. To be considered for departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Senior Comprehensive Honors. Honors must be nominated by the student's faculty sponsor, and a second faculty member must confer.

Highest Departmental Honors. Students must have a 3.75 grade point average (GPA) in in all courses used to satisfy the upper-division major requirements and must also receive senior comprehensive honors (see above). To be considered for highest departmental honors, students are limited to no more than one grade of P in those upper-division courses.

[Optional Catchall]

Requirements and Planners

Course Requirements

Lower-Division Courses

Both of the following:

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one of the following math options:

	Either these courses	
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Plus one of the following chemistry series:

	Either these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
CHEM 3C	General Chemistry	3
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Plus one of the following physics options:

	Either these courses	
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1
PHYS 6B	Introductory Physics II	5
PHYS 6M	Introductory Physics II Laboratory	1
	or these courses	
PHYS 5A	Introduction to Physics I	5
PHYS 5L	Introduction to Physics I Laboratory	1
PHYS 5B	Introduction to Physics II	5
PHYS 5M	Introduction to Physics II Laboratory	1

Plus one of the following Earth science options:

	Either these courses	
EART 20	Environmental Geology	5
EART 20L	Environmental Geology Laboratory	1
	or these courses	
EART 5	California Geology	5
EART 5L	California Geology Laboratory	1
	or these courses	
EART 10	How the Earth Works	5
EART 10L	Geologic Principles Laboratory	1

Plus one of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following course:

ENVS 25	Environmental Politics, Economics and Justice	5

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Courses

One of the following options:

	Either this course	
EART 110A	Evolution of the Earth	7
	or these courses	
EART 110B	Earth as a Chemical System	5
EART 110M	Earth as a Chemical System Laboratory	2
	or these courses	
EART 110C	The Dynamic Earth	5
EART 110N	The Dynamic Earth Laboratory	2

Plus both of the following:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Electives

The upper-division courses should be selected in pursuit of a coherent plan of study, such as water policy-hydrology, restoration ecology-geochemistry, agroecology-soil physical processes, or environmental policy-climate change, among others, in consultation with faculty from both the Environmental Studies and Earth and Planetary Sciences

departments. Please note that lecture/lab combinations count as a single elective.

Three upper-division environmental studies courses

Of the three required upper-division environmental studies electives (numbered ENVS 101-ENVS 179), at least **one** must be taken from the following list of social science electives:

ENVS 110	Institutions, the Environment, and Economic Systems	5
ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 140	National Environmental Policy	5
ENVS 141	Ecological Economics	5
ENVS 143	The Future of Sustainable Development	5
ENVS 145	Green Cities	5
ENVS 147	Global Environmental Justice	5
ENVS 149	Environmental Law and Policy	5
ENVS 150	Coastal and Marine Policy	5
ENVS 151	Environmental Assessment	5
ENVS 152	International Environmental Politics	5
ENVS 154	Amazonian Cultures and Conservation	5
ENVS 158	Political Ecology and Social Change	5
ENVS 165	Sustainable Water Systems	5
ENVS 172	Environmental Risks and Public Policy	5
ENVS 173	An Introduction to World Environmental History	5
ENVS 174	Gender and the Environment	5
ENVS 176	Vulnerability, Complex Systems, and Disasters	5
ENVS 178	Race and the Environment	5

None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

Three upper-division Earth sciences courses

Three additional upper-division Earth sciences courses (Earth and Planetary Sciences courses numbered EART 100-EART 191C). A list of the upper-division courses offered by the Earth and Planetary Sciences Department is available in the courses section of the catalog.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for the Environmental Studies/Earth Sciences Combined Major is satisfied by completing:

The following courses:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following options:

	Either one of these courses	
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5
EART 195	Senior Thesis	5
	or these courses	
EART 189A	Geographic Information Systems with Applications in Earth Sciences	5
EART 189B	Summer Field Study	5

Comprehensive Requirement

Students satisfy the senior comprehensive requirement in environmental studies or Earth sciences by completing either:

- One of the senior comprehensive options for single environmental studies B.A. majors (see options listed below);
- One of the senior comprehensive options for Earth sciences B.S. (see Comprehensive Requirement under the Earth Sciences B.S.).

The senior comprehensive may be satisfied by completing one of the options listed below. **All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.**

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional independent research, and at least a two-quarter commitment.

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

	Either this course	
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
	or these courses	
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
	or this course	
ENVS 190	Capstone Course: Environmental Problem Solving	5
	or these courses	
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
	or this course	

ENVS 196	Senior Seminar	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major without a concentration. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3	ENVS 25	CHEM 3A	
	College 1	EART 5 EART 5L	SOCY/ANTH/PHIL course	
		WRIT 1/WRIT 1E (if needed)		
2nd (soph)	ENVS 24 or BIOE 20C	ENVS 100 ENVS 100L*	CHEM 3B CHEM 3BL	
	STAT 7 STAT 7L	MATH 11A	PHYS 6A PHYS 6L or PHYS 5A PHYS 5L	
	WRIT 2*			
3rd (junior)	CHEM 3C	Upper-division ENVS	PHYS 6B PHYS 6M or PHYS 5B PHYS 5M	
	MATH 11B	EART 110B EART 110M	Upper-division ENVS	
4th (senior)	Upper-division EART	Upper-division EART	Upper-division EART	
	Upper-division ENVS (social sciences)		Comprehensive requirement	

*This course is also offered in the spring term.

** WRIT 2 should be taken in or before spring quarter of the second year.

This planner assumes that a student has placed into MATH 3 or AM 3.

Students completing this major will have satisfied the SI, PE-E, MF, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge

				(optional)
3rd (junior)	STAT 7 STAT 7L	ENVS 100 ENVS 100L*	Upper-division EART	
	MATH 11B	EART 110B EART 110M	Upper-division ENVS	
4th (senior)	Upper-division ENVS	Upper-division ENVS (social sciences)	Comprehensive requirement	
	Upper-division EART	Upper-division EART		

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower-division courses—including UCSC or community college general education requirements—with the exception of STAT 7 and STAT 7L, which is only offered at UC Santa Cruz.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

ENVIRONMENTAL STUDIES/ECONOMICS COMBINED MAJOR B.A.

Information and Policies

Introduction

This major provides students with the basic tools of economic analysis and an understanding of the mechanics of resource production, conservation, and use, in both ecological and economic terms.

This combined major in environmental studies (ENVS) and economics (ECON) does not offer any concentrations.

Program Learning Outcomes

Students graduating with a B.A. degree in environmental studies/economics combined will be able to:

- Identify the societal (social, political, economic and ethical) agents and structures that contribute to environmental change. (social science competency)
- Describe the structure and functioning of major physical and ecological components of the earth's systems. (natural science competency)
- Access and analyze a complex literature addressing specific topics in environmental studies, and evaluate the usefulness and limitations of individual sources of information. (analytic thinking)
- Demonstrate effective oral and written communication skills. (communication skills).

Academic Advising for the Program

Advising is one way to make the most of your university experience. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadvi@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall:

One of the following:

ENVS 23	The Physical and Chemical Environment	5
CHEM 3A	General Chemistry	5

CHEM 3B	General Chemistry	3

Plus the following course:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5

Plus one of the following:

ENVS 25

or

A course in national or international politics

Plus one of the following courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Recommended Courses

In addition, the following courses are recommended prior to transfer to ensure timely graduation.

The following courses:

ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
AM 11B	Mathematical Methods for Economists II	5
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Plus one of the following courses:

BIOE 20C	Ecology and Evolution	5
ENVS 24	General Ecology	5

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
ENVS 26	Culture and the Environment	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

General Education (GEs)

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

Transfer students pursuing any of the environmental studies majors are encouraged to transfer in the fall quarter.

Transfer students should complete as many lower-division courses as possible before transferring. All remaining lower-division requirements should be completed in summer, fall, and winter of the first year in order to start upper divisions in winter or spring of the first year. Transfer students can formally declare their major once qualification courses are successfully completed, following the declaration steps on the ENVS department website.

ENVS 25 and ENVS 23 are usually offered during Summer Session at UC Santa Cruz, and transfer students are encouraged to take them if they have not completed a substitute requirement or want a better understanding of the relevant material. If you are transferring, compare catalog descriptions, consult your current institution's advisor, and refer to the ASSIST website to determine equivalency. Prospective transfer students should review the transfer information.

Students who are proposed in a different major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

To qualify for the environmental studies/economics combined major, students must complete the specific courses listed below, or their approved equivalents. Some courses may be satisfied via exam credit.

For transfer requirements, see Transfer Admission Screening Requirements. Transfer students must have the ENVS/ECON major listed on their application in order to pursue the major, unless approved by exception. If a student has questions about this, they should contact envsadvi@ucsc.edu.

One of the following courses:

	Either this course	
ENVS 23	The Physical and Chemical Environment	5
	or these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5

CHEM 4BL	Advanced General Chemistry Lab	2

Plus one of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus all of the following courses:

ENVS 25	Environmental Politics, Economics and Justice	5
ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
AM 11A	Mathematical Methods for Economists I	5
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Determining Qualification

- Students who complete all the qualification courses with a grade of P, or letter grade of C or better are qualified to declare the major.
- Students who have received one grade of C-, D+, D, D-, or F in one of the qualification courses taken at UC Santa Cruz will only be qualified to declare the major after successfully completing the same or an equivalent course with a letter grade of C or better.
- Students with two or more grades of C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not qualified to declare the major.
- Students with AP credit (score of 3 or higher) for any of the qualification course(s) are qualified to declare after successfully completing the remaining qualification courses.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

How to Declare a Major

Petition to declare your major as soon as you have met qualification requirements and/or reach your declaration deadline quarter, whichever comes first.

Students wishing to declare ENVS/ECON should visit the Environmental Studies Department website and follow declaration steps.

Letter Grade Policy

This program does not have a letter grade policy, except that the comprehensive (senior exit) requirement must be taken for a letter grade.

[Optional Catchall]

Course Substitution Policy

Students pursuing the environmental studies/economics combined major cannot substitute courses to count toward their upper-division electives.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in environmental studies are encouraged to participate in Study Abroad programs and other off-campus programs. Students who are interested in these programs shall note the following policies:

- Students planning to study abroad must be declared in their major prior to studying abroad.
- Environmental studies combined majors cannot petition their courses taken abroad for ENVS upper division course substitution.
- For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements **AND** must be approved by the Department of Economics for department honors. To be considered for departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Senior Comprehensive Honors. Honors must be nominated by the student's faculty sponsor, and a second faculty member must confer.

Highest Departmental Honors. Students must have a 3.75 grade point average (GPA) in in all courses used to satisfy the environmental studies upper-division requirements, and must be approved by the Department of Economics for department honors, and must also receive senior comprehensive honors (see above). To be considered for highest departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Students must fulfill all requirements for honors from both the Environmental Studies and Economics departments to receive honors.

[Optional Catchall]

Requirements and Planners

Course Requirements

Complete the following requirements. Some courses may be satisfied via exam credit.

Lower-Division Courses

All of the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ENVS 25	Environmental Politics, Economics and Justice	5
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Plus one of the following courses:

	Either this course	
ENVS 23	The Physical and Chemical Environment	5
	or these courses	
CHEM 3A	General Chemistry	5
CHEM 3B	General Chemistry	3
CHEM 3BL	General Chemistry Lab	2
	or these courses	
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4AL	Advanced General Chemistry Lab	2
CHEM 4B	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 4BL	Advanced General Chemistry Lab	2

Plus one of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus one of the following calculus series:

We encourage all ENVS/ECON students to do the AM 11A AM 11B series. However, the other options will suffice.

	Either these courses	
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5
	or these courses	
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5
	or these courses	
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5

Plus one of the following courses:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
ENVS 26	Culture and the Environment	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Courses

One of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus all of the following courses:

ECON 113	Introduction to Econometrics	5
ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Electives

Six upper-division elective courses as follows:

- Three courses from the Economics Electives list below
- Three courses from ENVS 101-179. At least one course must be from the list of environmental studies electives in the natural sciences list below.

Lecture/lab combinations count as one course. Associated labs are required only when required by the lecture.

Economics Electives

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5
ECON 101	Managerial Economics	5

ECON 114	Advanced Quantitative Methods	6
ECON 115	Introduction to Management Sciences	5
ECON 120	Development Economics	5
ECON 128	Poverty and Public Policy	5
ECON 130	Money and Banking	5
ECON 131	International Financial Markets	5
ECON 133	Security Markets and Financial Institutions	5
ECON 135	Corporate Finance	5
ECON 136	Business Strategy	5
ECON 138	The Economics and Management of Technology and Innovation	5
ECON 139A	The Economics of Electronic Commerce	5
ECON 139B	E-Commerce Strategy	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 150	Public Finance	5
ECON 156	Health Economics and Policy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 161A	Marketing	5
ECON 162	Legal Environment of Business	5
ECON 165	Economics as an Experimental Science	5
ECON 169	Economic Analysis of the Law	5
ECON 170	Environmental Economics	5
ECON 175	Energy Economics	5
ECON 180	Labor Economics	5
ECON 183	Women in the Economy	5

Environmental studies electives in the natural sciences

Lecture/lab combinations count as one course. Associated labs are required only when required by the lecture.

BIOE 125	Ecosystems of California	5
ENVS 104A	Introduction to Environmental Field Methods	2
ENVS 104L	Field Methods Laboratory	5
ENVS 106A	Natural History of Birds	5
ENVS 107A	Natural History Field Quarter	5
ENVS 107B	Natural History Field Quarter	5
ENVS 107C	Natural History Field Quarter	5
ENVS 108	General Entomology	5
ENVS 108L	General Entomology Laboratory	3
BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods	5
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5
BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	5
ENVS 120	Conservation Biology	5
ENVS 122	Tropical Ecology and Conservation	5
ENVS 123	Animal Ecology and Conservation	5
ENVS 130A	Agroecology and Sustainable Agriculture	5
ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 131	Insect Ecology	5
ENVS 133	Agroecology Practicum	5
ENVS 135	Sustainable Aquaculture	5
ENVS 160	Restoration Ecology	5
ENVS 161A	Soils as Living Systems	5
ENVS 162	Plant Physiological Ecology	5
ENVS 162L	Plant Physiological Ecology Laboratory	2
ENVS 163	Plant Disease Ecology	5
ENVS 164	Projects and Practices in Soil Ecology	5
ENVS 163L	Plant Disease Ecology Lab	2
ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 167	Freshwater and Wetland Ecology	5
ENVS 167L	Freshwater and Wetland Ecology Lab	2
ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 169	Climate Change Ecology	5
ENVS 170	Agriculture and Climate Change	5

None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for the environmental studies/economics combined major is satisfied by completing:

The following courses:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following:

BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B is taken after successfully completing ENVS 183A, and ENVS 195B is taken after successfully completing ENVS 195A.

Comprehensive Requirement

Students in ENVS/ECON satisfy the senior comprehensive requirement by completing both of the following:

- One of the senior exit options for environmental studies B.A. (see options below). **All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.**
- Pass those portions of the economics comprehensive examination administered in ECON 100A and ECON 113.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional independent research, and at least a two-quarter commitment.

	Either this course	
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
	or these courses	
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
	or this course	
ENVS 190	Capstone Course: Environmental Problem Solving	5
	or these courses	
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
	or this course	
ENVS 196	Senior Seminar	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

The following are two sample academic plans for students pursuing the environmental studies/economics combined B.A. major. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring	Summer
Entering				College 1A
				Summer Edge (optional)
1st (frosh)	MATH 3 or AM 3	ENVS 25	ENVS 23	
	College 1	ECON 1	ECON 2	
		WRIT 1/WRIT 1E (if needed)		
2nd (soph)	ENVS 24 or BIOE 20C	STAT 7 STAT 7L	SOCY/ANTH/PHIL course	
	AM 11A	AM 11B	ECON 100A or ECON 100M	
	WRIT 2**			
3rd (junior)	ECON 113	ENVS 100 ENVS 100L *	Upper-division ENVS (natural science)	
		Upper-division ECON	Upper-division ECON	

4th (senior)	Upper-division ENVS Upper-division ECON	Upper-division ENVS	Senior exit requirement

*This course is also offered in the spring term.

** WRIT 2 should be taken in or before spring quarter of the second year.

This planner assumes that a student has placed into MATH 3 or AM 3.

Students completing this major will have satisfied the SI, IN, PE, MF, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	ECON 100A or ECON 100M STAT 7 STAT 7L	ECON 113 ENVS 100 ENVS 100L	Upper-division ENVS (natural sciences) Upper-division ECON	
4th (senior)	Upper-division ENVS Upper-division ECON	Upper-division ENVS Upper-division ECON	Senior exit requirement	

This planner assumes that a student has completed all required lower-division courses—including UCSC or community college general education requirements.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

GEOGRAPHIC INFORMATION SYSTEMS, SPATIAL TECHNOLOGIES, APPLICATIONS AND RESEARCH M.A.

Introduction

Students in the University of California, Santa Cruz's Geographic Information Systems, Spatial Technologies, Applications, and Research (GISTAR) program will develop comprehensive knowledge of geospatial technologies, applications, and research and develop innovative and transdisciplinary expertise in emergent methodological, analytical, and technological applications. We offer students the ability to master geospatial theory and research, conduct advanced geospatial analyses, utilize advanced geospatial technologies, and develop professional geospatial research projects and skills. Students will also engage in extensive interactions with faculty and researchers engaged in advanced geospatial initiatives.

In year one of the two-year master's degree program, students take foundational core courses that focus on training in geospatial theory, geographic information systems (GIS), and advanced geospatial applications and analysis. In the second year, each student completes courses in advanced GIS systems, geospatial technologies and applications, and develops topical expertise in focus areas of specific interest. During the second year, students develop the focus of their

capstone project and conduct innovative applied research with an affiliated program faculty member to complete the project. Graduates of the program will be prepared for advanced job opportunities in geospatial systems, research and analysis as well as new technological innovations, applications, and project development.

The program provides applied geospatial research opportunities with faculty in research areas in which UCSC is an established leader. This includes:

- ecological and biological conservation, coastal science and policy, climate change, ecological modeling, animal ecology, restoration ecology, remote sensing, geomorphology;
- environmental justice, political ecology, marine and coastal law and policy, climate change adaptation and mitigation, agroecology;
- machine learning, embedded systems, agricultural technology, autonomous vehicles, drones, environmental sensors;
- archaeology, data analytics and visualization, digital humanities, urban sociology, historical cartography.

Preparation for Graduate Work in Geographic Information Systems, Spatial Technologies, Applications and Research

Students admitted to the Master of Arts (M.A.) in Geographic Information Systems, Spatial Technologies, Applications and Research program will have completed a bachelor's degree from an accredited institution or equivalent. Relevant fields include a broad range of backgrounds ranging from the social sciences, humanities, physical and biological sciences and engineering and computer science. Students currently employed in related fields or seeking professional additional training and skills are encouraged to apply. Students from underrepresented and diverse racial, ethnic, cultural, socioeconomic, and disciplinary backgrounds are also encouraged to apply

Requirements

Course Requirements

The master's degree in Geographic Information Systems, Spatial Technologies, Applications and Research is a Plan II (capstone project) degree.

The M.A. program will include a core set of six courses and one development course or applications course.

Core Courses

ENVS 215A	Geographic Information Systems and Environmental Applications	5
ENVS 215B	Intermediate Geographic Information Systems	5
ENVS 215C	Advanced Geographic Information Systems	5
ENVS 215L	Exercises in Geographic Information Systems	2
GIST 220	Cartography and Visualization	5
GIST 230	Remote Sensing	5

GIST 215A, GIST 215B, and GIST 215C are crosslisted with (also offered as) ENVS 215A, ENVS 215B, and ENVS 215C.

GIST 215L is crosslisted with (also offered as) ENVS 215L.

Development Course

GIST 240	GIS Development and Programming	5

Applications Course

GIST 250	Geospatial Technology Applications	5

Elective Courses

M.A. students are recommended to take one elective course during their first year and are required to take one elective course during their second year. The elective courses should provide additional training in quantitative or qualitative research design, tools, and analysis or disciplinary knowledge in their focus area of interest. The electives also prepare the students for their capstone project.

Other Requirements

GIST 290A	GISTAR Capstone Project	10
GIST 290B	GISTAR Capstone Project	10

Capstone Project

In the second year, students implement a capstone project by enrolling in and fulfilling the requirements for GIST 290, Geographic Information Systems, Spatial Technologies, Applications and Research (10 credits/quarter). This project is typically developed during Year 1 of the program in collaboration with an affiliated faculty member in the GISTAR program and with oversight from the program. The project should: a) include advanced GIS research and analysis; and b) be applied in nature focusing on the affiliated faculty sponsor's research. Students provide a final written report and oral presentation to GISTAR students at the end of Year 2.

Planners

	Fall	Winter	Spring
1st Year	GIST 215A/ENVS 215A	GIST 215B/ENVS 215B	GIST 215C/ENVS 215C
	GIST 215L/ENVS 215L	GIST 215L/ENVS 215L	GIST 215L/ENVS 215L
	GIST 220	GIST 230	Elective (optional)
	Total	Total	Total

	credits=12	credits=12	credits=12
2nd Year	GIST 240 or GIST 250	GIST 290A	GIST 290B
	Elective course (required)		
	Total credits=10	Total credits=10	Total credits=10

Applying for Graduation

ENVIRONMENTAL STUDIES PH.D.

Advancement to Candidacy

A three-person interdisciplinary guidance committee works to ensure that each student's preparation is individually designed to meet particular needs and interests, to help ensure their success as scholars, and to help students fully engage interdisciplinary dimensions of their training and research. One committee member is the major professor and at least one member needs to be from a complementary meta-discipline from the student's general research area. For instance, a student whose interests are in conservation science may have two committee members who are ecologists and one who is a political scientist.

Course Requirements

The following course:

ENVS 201A	Research Approaches in Environmental Studies	5

Plus one of the following courses from natural sciences

ENVS 220	Conservation Biology	5
ENVS 230	Agroecology and Sustainable Agriculture	5

Plus one of the following courses from social sciences:

ENVS 210	Political Ecological Thought and Environment	5
ENVS 240	Public Policy and Conservation	5

Plus all of the following:

- an approved graduate course in quantitative methods that provides a basis in research design and analysis;
- an approved graduate course in qualitative methods that provides a basis in research design and analysis;
- two approved graduate elective courses that provide focused expertise.

In addition, all students are required to participate in three quarters of:

ENVS 290L	Graduate Research Seminar	2

Before advancement to candidacy:

Every quarter before advancement to candidacy, all students are required to participate in:

ENVS 290	Interdisciplinary Research Seminar AND	2
ENVS 292	Topics in Research in Environmental Studies	2

Foreign Language Requirements

If the venue of a student's research is in a non-English-speaking country, certification of competence in the language of that country may be required before advancement to candidacy.

Teaching Requirements

Students are expected to serve as teaching assistants in undergraduate courses for two quarters.

Pre-Qualifying Requirements

The interdisciplinary guidance committee helps guide the student in preparation for pre-qualifying examinations in three general areas of scholarly interest, and depending on the student's background, interests, and intentions, may require additional coursework, including courses from other departments. The pre-qualifying examination must be taken no later than winter quarter of the third year.

Qualifying Examination

The qualifying examination committee includes an additional member from outside the Environmental Studies Department, and helps guide the student to define and plan their dissertation research. This committee is responsible for certifying that the student is qualified to advance to candidacy for the Ph.D. degree. The qualifying examination must be completed by the end of the third year.

Post-Qualifying Requirements

Dissertation

Dissertation

A dissertation in environmental studies is expected to present an original contribution to the understanding of a significant environmental problem or issue. It should demonstrate a clear understanding of the relevant literature, careful and rigorous research design and data analysis, and effective communication of the results within the context of the student's area of emphasis. The dissertation is guided by a committee that includes both natural and social scientists.

Dissertation Defense

Optional Catchall

Academic Progress

The typical duration of the doctoral program is five to six years.

Applying for Graduation

ENVIRONMENTAL STUDIES DESIGNATED EMPHASIS

Introduction

The designated emphasis is the equivalent of a "minor" for doctoral study. It will provide you with a framework for in-depth study in specialized fields in your area, and an opportunity for recognition of particular scholarly expertise.

Requirements

Complete the Environmental Studies Designated Emphasis Plan and contact the Graduate Program coordinator if you are interested in taking the Environmental Studies Designated Emphasis Plan. You must declare your intent to complete a designated emphasis in environmental studies before you officially advance to candidacy.

Committee Composition and Departmental Approvals

An environmental studies faculty member is required to act as your designated emphasis advisor. They will advise you about coursework as you complete the Environmental Studies Designated Emphasis Plan, serve on your qualifying examination committee, and your dissertation reading committee.

Course Requirements

Doctoral students from other departments at UC Santa Cruz may complete a designated emphasis in environmental studies by completing ENVS 201A, three advanced ENVS graduate courses or seminars (from the list below), and at least two quarters in an environmental studies graduate research group registered under ENVS 292, Topics in Research in Environmental Studies.

ENVS 201A	Research Approaches in Environmental Studies	5

Three advanced graduate courses or seminars

Take three advanced graduate courses or seminars from the departmentally approved list below (current list is also provided on the ENVS DE Plan), and participate for at least two quarters in an environmental studies graduate research group registered under ENVS 292, Topics in Research in Environmental Studies.

ENVS 210	Political Ecological Thought and Environment	5
ENVS 220	Conservation Biology	5
ENVS 230	Agroecology and Sustainable Agriculture	5
ENVS 235	Social Theories of Nature	5
ENVS 240	Public Policy and Conservation	5
ENVS 247	Regional Approaches to Environmental Policy	5
ENVS 263	Plant Disease Ecology	5
ENVS 271	Valuing the Environment	5
ENVS 280	Advanced Topics in Environmental Studies	5
ENVS 291	Advanced Readings in Environmental Studies	3
ENVS 291C	Advanced Readings in Risk and Public Policy	3
ENVS 291D	Advanced Readings in Tropical Ecology, Agriculture, and Development	3
ENVS 291M	Advanced Readings in Biogeochemistry	3
ENVS 291P	Advanced Readings in Environmental History and Anthropology	3

Plus

Participate for at least two quarters in an environmental studies graduate research group registered under ENVS 292, Topics in Research in Environmental Studies.

ENVS 292	Topics in Research in Environmental Studies	2

Writing, Research and/or Teaching Requirements

Include a significant scholarly written component (i.e., a chapter of the student's dissertation or a paper to be submitted for publication) on an appropriate environmental topic.

[Optional Catchall]

ENVIRONMENTAL STUDIES COURSE LISTS

Pre-Approved Upper-Division Substitutions for ENVS Single Majors

Lecture/Lab combinations count as one course. Associated labs are required only when required by the lecture.

Course Lists

Global and Community Health B.S. (p. 441)

GLOBAL AND COMMUNITY HEALTH B.A.

Information and Policies

Introduction

Global and Community Health (GCH) is an interdisciplinary field of study that is connected both to urgent practical work in the world at large and the core concerns of a liberal arts education. Since GCH topics are embedded in and reflective of wide-ranging social forces, their study is situated at the intersection of diverse traditional disciplines ranging from art, literature, and history, to anthropology, sociology, psychology, politics, economics, and the natural and environmental sciences. Other interdisciplinary fields such as feminist studies and Latin American and Latino studies also intersect in influential ways with GCH, creating exciting opportunities for double majors.

University of California, Santa Cruz, students have many opportunities in the GCH curriculum for practical work in the world beyond the university. Students reflect repeatedly through the major on how their own personal learning can be effectively connected with and communicated to external audiences ranging from community organizations to employers to graduate schools.

More than two hundred courses offered by faculty from all five divisions of UC Santa Cruz contribute to the GCH curriculum. These faculty are committed to the value of interdisciplinary learning, as well as to the possibilities of connecting student research and writing with GCH concerns in the world beyond the university.

No specific courses at the high school level are required for admission to the GCH Bachelor of Arts (B.A.) at UC Santa Cruz. Whether taken at the high school or college level, courses in the natural sciences, social sciences, and humanities are appropriate background and preparation.

The GCH B.A. is appropriate for students interested in careers ranging from medicine, nursing, dentistry and pharmacy to public health and environmental health work in governmental agencies, to global health and community health work with non-governmental organizations, law firms and universities. Many of these careers also require additional post baccalaureate degrees for which the GCH B.A. provides an excellent foundation. There are also jobs open to those with a bachelor's degree in GCH in community health, counseling and educational settings as well as in business sectors such as human resources, administration, hospitality, recreation, food services, farming and construction.

Program Learning Outcomes

Students completing requirements for the B.A. in GCH will develop knowledge and competency in the following five domains:

1. the biological and environmental contexts of global and community health;
2. the social and cultural contexts of global and community health;
3. the institutional and policy contexts of global and community health;
4. the methods, skills and humanities-informed analysis of global and community health; and,
5. the interdisciplinary design and implementation of global and community health work.

Academic Advising for the Program

Additional advising information for new and continuing students is available on the GCH B.A. Advising website. Students may also make an appointment with the B.A. advisor via Navigate Slug Success or contact us at any time at gchBAadvising@ucsc.edu. We look forward to hearing from you!

GCH BA Program Advising
Social Sciences 1, Suite #117
(831) 459-3727
gchBAadvising@ucsc.edu

Getting Started in the Major: Frosh

Students who intend to pursue this major should begin taking classes for the major in their first year at UC Santa Cruz. The GCH B.A. major includes some sequential courses and as a result, it is strongly recommended to meet with the GCH B.A. advisor to discuss your academic planning form.

Students are encouraged to take GCH 1 (Foundations for Global and Community Health) in the first year; this course may be offered during the summer session as well.

Additionally, the GCH B.A. program requires language competency at the first-year level. Some or all of this requirement may be satisfied upon entry with a language placement assessment. Students with language experience other than English are strongly encouraged to take the relevant language placement assessment, so as to support effective academic planning with the GCH B.A. advisor.

It is also critical that students check whether there are prerequisites for offered GCH BA electives that they wish to take. For example, although a student can complete the program without a Math Placement exam, a number of the electives have math prerequisite(s).

Transfer Information and Policy

Transfer Admission Screening Policy

Students planning to apply in this major are not required to complete specific major preparation courses before they come to UC Santa Cruz.

Getting Started in the Major: Transfer Students

All transfer students who have not completed an articulated course equivalent to GCH 1 must take it in either in their first fall quarter or the summer quarter before.

Courses from another institution may be considered only if they appear on the student's Transfer Credit Summary. Students who wish to substitute transferable courses taken elsewhere for the GCH B.A. major's requirements should discuss the procedure with the GCH B.A. program advisor.

Additionally, the GCH B.A. program requires language competency at the first-year level. Some or all of this requirement may be satisfied upon entry with a language placement assessment. Students with language experience other than English are strongly encouraged to take the relevant language placement assessment, so as to support effective academic planning with the GCH B.A. advisor.

It is also critical that students check whether there are prerequisites for offered GCH B.A. electives that they wish to take. For example, although a student can complete the program without a Math Placement exam, a number of the electives have math prerequisite(s).

Major Qualification Policy and Declaration Process

Students may declare the major after completing the required lower-division GCH course (GCH 1) with a grade of C or better.

Major Qualification

Appeal Process

A student who has not been able to satisfy the pre-declaration requirement may petition the GCH program for an exception by using this Appeal to Qualify form within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact gchBAadvising@ucsc.edu.

How to Declare the GCH B.A. Major

Students should submit a petition to declare by completing the online declaration petition as soon as they complete the major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed major qualification courses.

To initiate the process to declare, please complete the GCH B.A. Academic Planning Form located on the GCH website. For assistance, please contact GCH B.A. advising at gchBAadvising@ucsc.edu.

Letter Grade Policy

All courses that are taken to satisfy any major requirement must be completed with a letter grade of C or better.

Course Substitution Policy

Students may request to substitute GCH B.A. elective requirements with courses taken from other institutions outside of California, individual study courses, study abroad electives, or other four-year institutions. To do so, students must submit a complete Course Substitution request form and receive approval from either the GCH co-director. A complete course substitution request includes appropriate class details (e.g., number of credits received and class title), a copy of the course syllabus, and any relevant materials the student believes should be included in the review process.

The same substitution request procedure is required for any UC Santa Cruz courses that are not included in the Requirements and Planners tab of the GCH B.A. general catalog.

Double Majors and Major/Minor Combinations Policy

Students interested in pursuing multiple majors may **NOT** declare a combination of the Global and Community Health B.S. and B.A. Double majors with other degrees are permitted so long as students qualify for and complete all requirements for each of the majors, including the Disciplinary Communication and comprehensive requirements.

Study Abroad

Students can petition for transferable credits from Global Learning programs to count toward GCH B.A. major requirements via course substitution. It is recommended that students seeking to participate in any Study Abroad opportunity check in with the GCH B.A. advisor to discuss academic planning and progression in the major, and to screen potential course substitutions. Students may not fulfill the Upper-Division Common Core electives and Disciplinary Communications (DC) requirement abroad. All study abroad

courses used to satisfy GCH B.A. major requirements must be reviewed and approved by a GCH director. Please review the Course Substitution Policy section above for more details about the course substitution process.

Students are encouraged to review UC Education Abroad Program (UCEAP) study abroad courses focused on public and global health to fulfill the Area IV upper-division elective requirement for the major after approval of a request submitted to the GCH B.A. advisor.

Honors

Honors in the GCH B.A. are awarded to graduating seniors, based primarily on a review of grades, whose academic performance is judged to be consistently excellent by a committee of GCH faculty. Highest honors in the major are reserved for students with consistently outstanding academic performance.

Independent and Field Studies

Students may petition the program to substitute one upper-division independent study or field study toward the elective requirements of the major.

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the specific programs to which they plan to apply.

Requirements and Planners

Course Requirements

Lower-Division Courses

One lower-division GCH requirement

All students are required to complete and pass Foundations for Global and Community Health (GCH 1).

GCH 1	Foundations for Global and Community Health	5

Four Lower Division GCH Electives

All students are required to take four lower-division electives from the four lists below: A) one from the natural science and bio-environmental competency list; B) one from the social science and political-cultural competency list; C) one from the quantitative competency list; and, D) one from the language competency list. These courses are normally taken during the student's first year. All lecture/lab combinations count as one course. For courses with a required concurrently enrolled lab, only successful completion of the lecture is required for the major. Successful completion of the lab may count toward total degree credits.

One course required from each of the four lists.

Natural science and bio-environmental competency for Global and Community Health

ANTH 1	Introduction to Biological Anthropology	5
BIOE 19	Biodiversity in the Age of Humans	5
BIOL 20A	Cell and Molecular Biology	5
BIOL 80A	Female Physiology and Gynecology	5
BIOL 80J	Biology of Emerging and Pandemic Diseases	5
BIOL 86	Research Deconstruction: MCD Biology	3
BIOL 88	Studies in Medicine: Its Art, History, Science, and Philosophy	5
BME 5	Introduction to Biotechnology	5
BME 18	Scientific Principles of Life	5
BME 80H	The Human Genome	5
CHEM 3A	General Chemistry	5
CHEM 4A	Advanced General Chemistry: Molecular Structure and Reactivity	5
CHEM 8A	Organic Chemistry	5
CSE 80A	Universal Access: Disability, Technology, and Society	5
ENVS 24	General Ecology	5
ENVS 25	Environmental Politics, Economics and Justice	5
ENVS 80F	Introduction to Agroecology and Sustainable Food Systems	5

Social science and political-cultural competency for Global and Community Health

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
CMMU 10	Introduction to Community Activism	5
CMPM 20	Climate Resilience, Health, and Wellbeing	5
ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 20	Economics for Non-Majors	5
FMST 10	Feminisms of/and the Global South	5
FMST 30	Feminism and Science	5
FMST 31	Disability Studies	5
FMST 41	Trans Gender Bodies	5
GCH 10	COVID, Culture and Community Health	5
HAVC 48	Climate Justice Now! Art, Activism, Environment Today	5
HIS 81	Science in the Colonial World	5
JRLC 60	Understanding Sustainability: Researching Environmental Justice at UCSC	5

LALS 5	Introduction to Human Rights and Social Justice	5
LALS 45	Intersections of Race, Class, and Gender	5
LALS 54	Racism, Science, and Health: Colonial and Carceral Legacies	5
LALS 55	AIDS Across the Americas	5
LALS 56	The Right to Health	5
LALS 57	Drugs, Addiction, and Recovery in the Americas	5
LALS 80J	Race, Nation, and War	5
LALS 80S	Sexualities and Genders in Latin American and Latina/o Studies	5
LIT 80K	Topics in Medical Humanities	5
MERR 41	Pandemics and Planetary Health	5
POLI 17	U.S. and the World Economy	5
POLI 61	Politics of Social Policy	5
PSYC 1	Introduction to Psychology	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Quantitative Competency for Global and Community Health

	Either one of these courses	
BIOE 80S	Lies, Damn Lies, and Statistics	5
CMMU 30	Numbers and Social Justice	5
LALS 15	Truth, Justice, and Statistics	5
STAT 5	Statistics	5
	or these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
	or these courses	
STAT 17	Statistical Methods for Business and Economics	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Language competency for Global and Community Health (complete or test-out of one of the listed courses)

ARBC 3	First-Year Arabic	5
CHIN 3	First-Year Chinese	5
FREN 3	First-Year French	5
HEBR 3	First-Year Hebrew	5
ITAL 3	First-Year Italian	5
JAPN 3	First-Year Japanese	5
PUNJ 3	First-Year Punjabi 3	5
SPAN 3	First-Year Spanish	5
SPAN 5M	Medical Spanish	5
SPHS 6	Spanish for Heritage Speakers	5
YIDD 3	First-Year Yiddish	5

For information on placement exams, go to Languages and Applied Linguistics Department Placement and Articulation Information page and click on the language of interest.

Upper-Division Courses

Upper-division Global and Community Health requirements

All students are required to complete and pass two common core courses: the first, a course in Community Analysis for Global and Community Health; the second, a course in Social Analysis for Global and Community Health. All upper-division major requirement electives must be satisfied by unique, single courses; no one course can be used to satisfy multiple requirements.

Required Common Core Courses

Requirement 1: Community Analysis for Global and Community Health

Choose one course:

ANTH 134	Medical Anthropology: An Introduction	5
CMMU 165	Community Analysis for Global Health	5
METX 108	Introduction to Research Methods in Global and Community Health	5

Requirement 2: Social Analysis for Global and Community Health

Choose one course:

GCH 123	Migration as a Social Determinant of Health	5
GCH 186	Global Health Politics	5
SOCY 146	Introduction to Population Health	5

Six upper-division electives from the four GCH "context" areas

The following four groups of context courses constitute the core upper-division courses of the GCH B.A. One course must be taken from each of the four GCH context areas, plus two additional electives from any of the areas. All lecture/lab combinations count as one course. For courses with a required concurrently enrolled lab, only successful completion of the lecture is required for the major. Successful completion of the lab may count toward total degree credits.

Area I: Biological and environmental contexts

ANTH 104	Human Variation and Adaptation	5
ANTH 110F	Evolution of Human Diet	5
ANTH 111	Human Ecology	5
ANTH 112	Life Cycles	5

ANTH 136	The Biology of Everyday Life	5
BIOE 118	Plants and Society: the Biology of Food, Shelter, and Medicine	5
BIOL 117	Global Health and Neglected Diseases	5
BIOL 188	A Life in Medicine	3
CMMU 162	Community Gardens and Social Change	5
ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 135	Sustainable Aquaculture	5
ENVS 176	Vulnerability, Complex Systems, and Disasters	5
METX 100	Introduction to Microbiology	5
METX 102	Cell and Molecular Toxicology	5
METX 115	Environmental Health Science	5
METX 133	Medical Microbiology	5
PSYC 109	Psychobiology of Stress and Well-being across the Lifespan	5

Area II: Social, cultural and historical contexts

ANTH 110M	Cultures of Mental Health	5
ANTH 110T	Motherhood in American Culture	5
ANTH 110Y	Feeding California	5
ANTH 129	Beyond Borders: Other Globalizations and Histories of Interconnection	5
ANTH 130Y	Health, Illness, & Medicines in Muslim Worlds	5
ANTH 134	Medical Anthropology: An Introduction	5
ANTH 146	Anthropology and the Environment	5
ANTH 161	The Anthropology of Food	5
ANTH 161S	Anthropology of Food, Abroad	6
CMMU 156	Politics of Food and Health	5
CMMU 160	Public Health	5
CMMU 161	Gender Health and Justice	5
CMMU 163	Health Care Inequalities	5
CMMU 164	Health Justice in Conflict	5
ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 120	Development Economics	5
FMST 124	Technology, Science, and Race Across the Americas	5
FMST 125	Race, Sex, and Technology	5
FMST 133	Science and the Body	5
GCH 123	Migration as a Social Determinant of Health	5
HIS 101D	World History of Science	5
HIS 101F	Global Environmental History	5
HIS 151	Keywords in the History of Science and Medicine	5
HIS 151A	Medicine and the Body in the Colonial World	5
LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 112	Immigration and Assimilation	5
LALS 143	Race and Ethnicity	5
LALS 151	Race & Mobility	5
LALS 152	Consumer Cultures Between the Americas	5
LALS 155	Latin American and Latino Youth Movements	5
LALS 175	Migration, Gender, and Health	5
LALS 177	Migrant Health and Social Justice	5
PSYC 140G	Women's Lives in Context	5
LALS 178	Gender, Transnationalism, and Globalization	5
PSYC 140L	Women's Bodies and Psychological Well-Being	5
PSYC 144	Latinx Psychology	5
PSYC 172	Health Psychology	5
PSYC 178	Nutritional Psychology	5
SOCY 121	Sociology of Health and Medicine	5

HAVC 141N	Data Cultures: Art, Technology, and the Politics of Visual Representation	5
JRLC 136	Methodologies of Critical Praxis	5
LALS 126	Digit@l Americ@s/Digit@l Latin@s	5
LALS 186	Field Research Methods	5
LALS 187F	Human Rights Investigations Lab	2
LIT 121O	Body Theories and Embodied Poetics in Contemporary American Poetry	5
LIT 160C	Cruelty: Enjoying the Pain of Others	5
LIT 167I	The Enviromental Humanities	5
LIT 167G	Reading the Weather: Literature and Global Climate Change	5
SOCY 123	Global and Transnational Perspectives in Science and Technology Studies	5

UCEAP study abroad courses focused on public and global health can be substituted for the upper-division electives listed in Area IV "Methods, skills humanities-informed analysis" of the GCH B.A.

A number of courses offered by UC Online are relevant to the GCH B.A. and have been approved for substitution of major requirements. Please see the GCH B.A. advisor for a current list of these courses.

Electives

Comprehensive Requirement

The comprehensive requirement for the GCH B.A. is satisfied by completing the same courses as those required for the Disciplinary Communication requirements.

Disciplinary Communication (DC) Requirement

Students of every major at UC Santa Cruz must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The 7-credit DC requirement for the GCH B.A. is satisfied by completing one of the following course combination options:

Option 1

Both of the following courses:

GCH 190	Global and Community Health Task Force	5
GCH 195	Global and Community Health Communication	2

Option 2

Both of the following courses:

GCH 195	Global and Community Health Communication	2
GCH 199A	Global and Community Health Senior Thesis	5

Option 3

All three of the following courses:

GCH 195	Global and Community Health Communication	2
GCH 199A	Global and Community Health Senior Thesis	5
GCH 199B	Global and Community Health Senior Thesis B	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Plan One for Incoming Frosh

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)

1st(frosh)	GCH 1	Lower-Div Competency 1	Lower-Div Competency 3
	College 1	Lower-Div Competency 2	Lower-Div Competency 4**
		WRIT 1/1E (if needed)	
2nd(soph)	WRIT 2*	Upper-Div GCH Area 1 Elective	Upper-Div GCH Area 2 Elective
		Upper-Div GCH Area 3 Elective	Upper-Div GCH Area 4 Elective
3rd(junior)	Upper-Div GCH Area Elective	Common Core: Requirement 1	Common Core: Requirement 2
	Upper-Div GCH Area Elective		
4th(senior)	GCH 190	GCH 195	

* WRIT 2 should be taken in or before spring quarter of the second year.

**Some or all of this language competency requirement may be satisfied upon entry with a language placement assessment. The maximum possible number of courses required to satisfy the language competency is three courses.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd(junior)	GCH 1	Common Core: Requirement 1	Common Core: Requirement 2	
	Lower-Div Competency 1	Lower-Div Competency 3	Upper-Div GCH Area 1 Elective	
	Lower-Div Competency 2	Lower-Div Competency 4**	Upper-Div GCH Area 2 Elective	
4th(senior)	Upper-Div GCH Area 3 Elective	Upper-Div GCH Area Elective		
	Upper-Div GCH Area 4 Elective	Upper-Div GCH Area Elective		
	GCH 190	GCH 195		

**Some or all of this language competency requirement may be satisfied upon entry with a language placement assessment. The maximum possible number of courses required to satisfy the language competency is three courses.

Latin American and Latino Studies

32 Merrill Academic Building
(831) 459-4284

PROGRAMS OFFERED

Latin American and Latino Studies B.A. (p. 795)

Latin American and Latino Studies/Politics Combined Major (p. 803)

Latin American and Latino Studies/Sociology Combined Major (p. 807)

Latin American and Latino Studies/Education, Democracy, and Justice B.A. (p. 800)

Latin American and Latino Studies Minor (p. 810)

Latin American and Latino Studies Ph.D. (p. 811)

Latin American and Latino Studies Designated Emphasis (p. 813)

The Department of Latin American and Latino Studies (LALS) at UC Santa Cruz centers the interconnected experiences and perspectives of Latin American and Latinx communities as a foundation for intellectual analysis and engaged research. As an interdisciplinary department within a Hispanic-Serving Institution, our mission and vision emerge from the diverse communities that the university serves.

LALS is committed to transformative research, teaching, advising, and mentoring that advance our understanding of how these communities' dreams and realities are shaped by migration and mobilities; inequalities, identities, and intersectionality; race and ethnicity; social and political transitions; and culture, power, and knowledge. LALS is a space for dialogues that link the histories, societies, cultures, ideas, and experiences of Latinxs and Latin American peoples in California, the United States, hemispherically, and globally.

OTHER PROGRAMS OF INTEREST

Latin American and Latino Studies (LALS) and Education Department 4+1 Contiguous Bachelor's/Master's Pathway (p. 815)

UNDERGRADUATE PROGRAM

The Latin American and Latino Studies (LALS) Department integrates the study of Chicanx and Latinx communities in the United States with analysis of the histories, politics, cultures, and societies of Latin America and the Caribbean.

LALS courses address changing political, social, economic, and cultural realities, including migration and transnational communities; gender, racial, sexual, and ethnic relations and identities; social movements; diverse forms of cultural expression; political and economic restructuring in Latin America; and the challenges of political and economic inequities and empowerment for Latinx communities in the United States.

Students in LALS learn to develop thoughtful analysis and clear arguments on complex topics. Through internship and field study experiences, students can acquire useful, pre-professional skills in any of the following key areas: community development/advocacy, public policy, education, journalism, media, performance, and research/writing, among others.

Graduates of the LALS major have forged careers in a wide variety of fields, including environmental activism, community organizing, teaching, health care, legal services, politics and government service, and journalism. Many have gone on to pursue advanced degrees in the U.S. or abroad in fields such as law, anthropology, bilingual education, media, communications, cultural studies, ecology, economics, geography, history, literature, educational counseling, public health, and sociology. LALS majors graduate with knowledge, skills, and understandings that propel them forward into exciting careers grounded in justice, rights, and creating social change.

GRADUATE PROGRAM

The first doctoral program to link Latin American and Latinx studies, the Ph.D. program in Latin American and Latino studies at UC Santa Cruz offers an innovative transnational and interdisciplinary approach to the study of the peoples, cultures, societies, and institutions of the Américas. Drawing from theories, methods, and sources in the humanities and social sciences, the program introduces students to this new field of study and trains them to develop the conceptual and analytical skills necessary for understanding the dynamics of hemispheric change. As part of our rigorous approach to studying the Américas, the department offers four thematic clusters in the emerging field of Latin American and Latino studies: 1) transnational migrations within the Américas; 2) social inequalities; 3) cultural politics and cultural flows; and 4) collective action and social movements. Doctoral students specialize in one of these four substantive themes, as well as a focus area of their own design.

1. **Transnationalisms, Migrations, and Displacement.** While transnational migrations are the subject of research in multiple disciplines, this program analyzes these transformative processes through an interdisciplinary lens. A transnational approach examines links between regions in the Américas, analyzing the social and historical foundations of economic dynamics such as remittances from the United States or the dollarization of Latin American countries. A transnational approach to the study of migratory processes explores the dynamics of bi-national communities, bilingualism and multilingualism, immigrant integration into host societies, and North-South exchanges of ideas and cultures.
2. **Intersectionality, Identities, and Inequalities.** This program's research foregrounds the study of transnational social inequalities formed by power relations based on race, ethnicity, nationality, citizenship, class, territory, gender and/or sexuality in the Américas. These social hierarchies are analyzed as institutions, historical processes, discourses, or signifiers with multiple meanings, and are examined in terms of how they have been mobilized to build, transform, or challenge identities, communities, and

social movements in local, national, and global contexts over time.

3. **Culture, Power, and Knowledge.** Another distinctive area of inquiry in the Américas is the study of cultural politics and cultural flows that shape everyday life, institutions, social identities, discourses, meanings, and cultural forms and practices, in global, regional, and local contexts in the Américas and in an increasingly interconnected and integrated world. The transnational analysis of culture focuses on the ways in which cultural forces and cross-cultural communication and media are contributing to the formation of new transnational imaginaries, as well as how these cultural processes are transforming and redefining national and local cultures.

4. **Collective Action, Social Movements, and Social Change.** This area of research addresses collective action and social movements at local, national and international levels viewed through transnational lenses. As migrants engage in public life, both in their communities of residence and in their communities of origin, they construct diverse practices of political participation, including "civic bi-nationality." These processes are crucial for understanding the largest wave of immigration in a century, including how migrants relate to U.S. society.

While our doctoral program prepares students for research and teaching at the university level, we also support students who opt to seek employment outside academia (e.g., in the corporate or non-profit sectors).

LATIN AMERICAN AND LATINO STUDIES B.A.

Information and Policies

Introduction

A degree in Latin American and Latino studies (LALS) trains students to be critical and analytical thinkers, to be active, engaged global citizens, and to be skilled strategic activists in making the world a more just place for all. An LALS bachelor of arts (B.A.) prepares students to learn from and work with people from a variety of cultures and perspectives, to understand the complexity of our current political, social, and cultural moment, and to use skills from many disciplines and fields.

Program Learning Outcomes

1. **Critical Thinking**. Ability to analyze from a transnational/transborder/translocal perspective—to see the interconnections between Latin American and Latino issues, people, ideas, problems, and solutions. This includes key skills, such as understanding sources, comparing arguments, analysis, and historical perspective.

2. **Research Methods**. Working knowledge of social scientific and/or humanistic approaches to LALS relevant topics. This includes acquiring qualitative and quantitative skills, gathering or obtaining research data, finding/using primary sources, and other research methods.

3. **Communication**. Key communication skills, including written, oral presentation, and digital, including an understanding of media sources and ability to apply media literacy to cross-cultural analysis.

4. **Community Engagement Skills**. Acquisition of hands-on skills in collaborative engagement, cross-cultural fluency, and understanding of Latin America and Latino experiences for practical application and engagement with community and civic organizations.

Academic Advising for the Program

Make an appointment with an advisor or peer advisor through Navigate Slug Success or contact us at any time at lalsadvising@ucsc.edu. We look forward to hearing from you.

LALS Undergraduate Program
32 Merrill Academic Building
(831) 459-2119
lalsadvising@ucsc.edu

Getting Started in the Major: Frosh

Students interested in the LALS major are encouraged to enroll in the required LALS introductory course, chosen from LALS 1 or LALS 5 or LALS 10, and/or the required lower-division elective course as soon as possible, to confirm their interest in the major and to qualify to declare the major.

Transfer Information and Policy

LALS welcomes transfer students. Students planning to apply in this major are not required to complete specific major preparation courses for consideration of admission to the University of California, Santa Cruz.

Transfer Admission Screening Policy

Students interested in transferring to UC Santa Cruz as LALS majors are encouraged to enroll in courses that satisfy the lower-division requirements prior to transfer, when possible. Visit Assist.org to review transfer articulations and contact the LALS undergraduate advisor with any questions.

Getting Started in the Major: Transfer Students

Transfer students must complete one LALS course taught at UC Santa Cruz to qualify to declare the LALS major. Students should contact the LALS undergraduate advisor if they have questions about transfer credit and to make an academic plan.

Major Qualification Policy and Declaration Process

LALS Major

Students who complete any one LALS course with a grade of C or better or Pass will qualify to declare the major.

LALS Major with Language Intensive Concentration

In addition to completing any one LALS course with a grade of C or better or Pass to declare the major, students pursuing the Language Intensive Concentration must have a viable plan for establishing proficiency in Spanish, Portuguese, or another approved language in sufficient time to take the required two courses taught in the second language by the expected graduation term.

Appeal Process

Students who did not satisfy the major declaration requirement but believe there are extenuating circumstances may file a written appeal. Appeals should be submitted to undergraduate advising by sending an email to lalsadvising@ucsc.edu. Students must file the appeal within 15 days of denial of major declaration. The department will notify the student and college of the decision within 15 days of the receipt of the appeal.

How to Declare a Major

Students may declare the major through the MyUCSC portal. Any questions should be directed to the LALS undergraduate advisor.

Letter Grade Policy

Major and minor requirements will be met with grades of C or better or Pass, within the parameters of the UC Santa Cruz Pass/No Pass grading policy.

Course Substitution Policy

Students may use up to two courses taken outside the LALS Department at UC Santa Cruz toward major requirements. This includes courses taken at UC Santa Cruz and all courses taken at other institutions, including through study abroad programs. Students may review a list of pre-approved substitutions that satisfy the lower- and upper-division elective requirements. Students may contact the undergraduate advisor to inquire about additional courses that may be approved to count as electives or if they plan to study abroad. Transfer students who have completed LALS-related work prior to transfer should contact the undergraduate advisor to ask about transfer credit.

Double Majors and Major/Minor Combinations Policy

LALS students are encouraged to consider double major and major/minor plans. Contact the undergraduate advisor for more information.

Study Abroad

The LALS Department encourages students to participate in Global Learning programs whenever possible. We offer a summer Global Internship program in Buenos Aires, Argentina, that satisfies an elective requirement in LALS. There are also many other learning programs offered throughout the academic year in California, Washington, D.C., Latin America, and elsewhere across the globe. Find out more on the Global Learning website or visit their offices on campus.

Honors

LALS awards honors in the major based on overall student academic performance in courses that count toward the major. To receive the strongest consideration for honors in the major, the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7.

Latin American and Latino Studies Major

Course Requirements

The LALS major requires 10 courses with two labs. Some requirements may be satisfied via exam credit.

Lower-Division Requirements

One LALS Introductory Course

LALS 1	Introduction to Latin American and Latino Studies	5
LALS 5	Introduction to Human Rights and Social Justice	5
LALS 10	Introduction to Chicanx & Latinx Studies	5

One Lower-Division LALS Elective

One 5-credit course from from LALS courses numbered 1-99, including additional LALS introductory courses (LALS 1, 5, or 10). May also be satisfied with a score of 4+ on the AP Spanish Literature and Culture exam. Students may also review the list of pre-approved outside electives found in the Course Substitution Policy. A maximum of two courses taken outside of the LALS Department at UC Santa Cruz may be used toward major requirements.

Upper-Division Requirements

LALS Core Courses

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1

Five Upper-Division LALS Electives

Students take five additional 5-credit electives chosen from LALS 101-194. Students may substitute up to two courses outside the LALS Department at UC Santa Cruz toward major requirements. See the Course Substitution Policy in the Information and Policies section for more details. Students

may review the list of pre-approved outside electives, which count toward this two-course limit. Students who wish to use an independent study course to satisfy an elective requirement should contact the undergraduate advisor.

Senior Seminar

All students complete one senior seminar (LALS 194 A-Z, excluding L) and seminar lab (LALS 194L). This requirement satisfies the Comprehensive Requirement.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement for the Latin American and Latino Studies B.A. is met by completing:

LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1

Comprehensive Requirement

The Comprehensive Requirement is fulfilled by completing one senior seminar (LALS 194 A-Z, excluding L) and seminar lab (LALS 194L).

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Four-Year Sample Planner for Frosh Students (can be completed in three years)

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	LALS Intro Course* WRIT 1/WRIT 1E (if needed)	LALS lower-division elective		
2nd (soph)	WRIT 2**	LALS 100	LALS 100A + 100L	
3rd (jr)	LALS upper-division elective LALS upper-division elective	LALS upper-division elective LALS upper-division elective	LALS 194 + LALS 194L LALS upper-division elective	
4th (sr)	Possible study abroad, research, or additional major or minor			

*Take LALS 1 or LALS 5 or LALS 10, when offered.

**WRIT 2 should be taken in or before spring quarter of the second year.

Two-Year Sample Planner for Transfer Students

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)

1st (jr)	LALS Intro Course *	LALS 100	LALS 100A + 100L
	LALS lower-division elective *	LALS upper-division elective	LALS upper-division elective
2nd (sr)	LALS upper-division elective	LALS 194 + 194L	
	LALS upper-division elective	LALS upper-division elective	

*If not already satisfied by transfer credit.

Latin American and Latino Studies Language Intensive Concentration

The LALS B.A. with Language Intensive Concentration requires 13 courses and two labs: three lower-division courses, two upper-division core courses and one core lab, seven upper-division electives--two or more must be taken in second language(s)--and the senior seminar and lab.

Lower-Division Requirements

One LALS Introductory Course

LALS 1	Introduction to Latin American and Latino Studies	5
LALS 5	Introduction to Human Rights and Social Justice	5
LALS 10	Introduction to Chicanx & Latinx Studies	5

Two Lower-Division LALS Electives

Two 5-credit courses chosen from LALS courses numbered 1-99 including additional LALS introductory courses (LALS 1, 5, or 10). One elective may be satisfied with a score of 4+ on the AP Spanish Literature and Culture exam. Students may also choose courses from the pre-approved outside electives list. A maximum of two courses taken outside of the LALS Department at UC Santa Cruz may be used toward major requirements.

Upper-Division Requirements

LALS Core Courses

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1

Seven Upper-Division LALS Electives

Students take seven additional elective courses, with two or more taught primarily in a second language. Students may choose these electives from LALS 101-194 or the list of courses taught primarily in Spanish below. Students may also choose courses from the pre-approved outside electives list. Note that courses on the pre-approved outside electives list, as well as non-LALS courses on the list of courses taught primarily in Spanish, count toward the limit of two outside courses described in the Course Substitution Policy.

Courses taught primarily in Spanish

At least two elective courses must be taught in a second language(s) of Spanish, Portuguese, or another approved language. Courses taken in a language other than Spanish may require study abroad/study at another university.

Students can self-place into LALS courses taught in Spanish; other departments may have prerequisites for their approved electives. See the undergraduate advisor for more information.

LALS 127	Genero, Nacion Y Modernidad En El Cine	5
LALS 129S	Memoria en Las Americas	5
LALS 135	El Salvador: Expresiones Culturales	5
LALS 147	Violencia Cotidiana en las Americas	5
LIT 188R	Humanidades Ambientales	5
LIT 189A	De la conquista a Sor Juana	5
LIT 189B	El Siglo XIX en América Latina: cultura, política y sociedad	5

SPAN 156F	El Humor en Espanol	5

SPAN 156J	Contemporary Central America	5
SPAN 156M	Mexico and the Southwest	5
SPHS 115	El ensayo lectura, análisis y redacción	5

Senior Seminar

The Comprehensive Requirement is fulfilled by completing one senior seminar (LALS 194 A-Z, excluding L) and seminar lab (LALS 194L).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement for the Latin American and Latino Studies Language Intensive Concentration is met by completing:

LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1

Comprehensive Requirement

All students complete one senior seminar (LALS 194 A-Z, excluding L) and seminar lab (LALS 194L).

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Four-Year Sample Planner for Frosh Students

		LALS upper-division elective		

*If not already satisfied by transfer credit.

LATIN AMERICAN AND LATINO STUDIES/EDUCATION, DEMOCRACY, AND JUSTICE B.A.

Information and Policies

Introduction

A combined major in Latin American and Latino studies (LALS, pronounced el-ay-el-es) and education, democracy, and justice (EDJ, pronounced "edge") builds on both departments' interdisciplinary social justice orientations to bridge theory and practice, with core required courses and elective field experiences that incorporate history and insights from participatory forms of research and community organizing to highlight the relationships between educational justice, Latina/o/x studies, democratic politics, race studies, and social change.

LALS courses train students to be critical and analytical thinkers; to be active, engaged global citizens; and to be skilled strategic activists in making the world a more just place for all. Study in LALS prepares students to learn from and work with people from a variety of cultures and perspectives, to understand the complexity of our current political, social, and cultural moment, and to use skills from many disciplines and fields. LALS investigates the historical, economic, social, and cultural processes that are shaping and transforming the Americas region, including California. By viewing societies as interrelated—specifically U.S. Latino/a communities and Latin American/Caribbean communities—LALS analyzes how local, regional, global, and transnational dimensions affect histories, politics, ethnicities, races, and cultures.

EDJ courses provide opportunities to examine critical questions, theories, practices, and research in the field of education, considered broadly and not only in relation to formal schooling. Courses in the major provide the conceptual knowledge for students to engage in critical thinking about social and policy contexts as well as everyday practices affecting inequitable structures in schooling, society, and culture that have enduring impacts on the quality of our democracy and communities.

Students choosing a combined major in LALS and EDJ will find themselves prepared for a wide variety of careers and/or graduate study, including teaching credential programs and/or masters degrees in education, Ph.D. programs, public policy, educational administration, and inclusive student outreach programming. Students may also choose to complete a second major or minor program alongside the combined major, to focus in a specific area of instruction in preparation for a single subject teaching credential.

Program Learning Outcomes

1. **Critical Thinking.** Ability to analyze from a transnational/transborder/translocal perspective—to see the interconnections between Latin American and Latino issues, people, ideas, problems, and solutions. This includes key skills, such as understanding sources, comparing arguments, analysis, and historical perspective. Students will demonstrate an understanding of the key theoretical perspectives and existing research on innovative teaching and learning approaches that value and promote historically disadvantaged and underserved communities and their cultural and linguistic resources. Students will demonstrate knowledge of broad historical, social, and political contexts that impact equal opportunity to learn and contribute to society, and the role that education and schooling can play in expanding opportunity.
2. **Research Methods.** Working knowledge of social scientific and/or humanistic approaches to LALS relevant topics. This includes acquiring qualitative and quantitative skills, gathering or obtaining research data, finding/using primary sources, and other research methods. Students will apply critical perspectives in reflecting on and/or conducting research and/or

fieldwork, and present their findings in multi-modal forms.

3. **Communication.** Key communication skills, including written, oral presentation, and digital, including an understanding of media sources and ability to apply media literacy to cross-cultural analysis. Students will demonstrate oral and written communication skills through individual and group presentations and assignments in their courses.
4. **Language.** Proficiency in Spanish.
5. **Community Engagement Skills.** Acquisition of hands-on skills in collaborative engagement, cross-cultural fluency, and understanding of Latin America and Latino experiences for practical application and engagement with community and civic organizations. Students will demonstrate basic knowledge of transformative teaching and learning principles that can be applied in a wide range of learning environments and youth serving educational organizations.

Academic Advising for the Program

The combined major in LALS and EDJ is housed in the LALS Department, and the LALS undergraduate advisor should be the first point of contact for majors and prospective majors. Students are also welcome to meet with an EDJ advisor or peer advisor to discuss elective options and course planning as needed.

LALS Undergraduate Advising
32 Merrill Academic Building
(831) 459-2119
lalsadvising@ucsc.edu

EDJ Undergraduate Advising
educationadvising@ucsc.edu

Getting Started in the Major

Students interested in the combined major in LALS and EDJ should complete one LALS lower-division course, chosen from LALS 1 or LALS 5 or LALS 10, and EDUC 60 in their first year, which will qualify them to declare the major. Students will also need proficiency in the Spanish language sufficient to take an elective course taught in Spanish by the senior year. Students are encouraged to meet with the LALS undergraduate advisor to create an academic plan.

Transfer Information and Policy

Students planning to declare in this major are not required to complete specific major preparation courses for consideration of admission.

Transfer Admission Screening Policy

Students interested in transferring to UC Santa Cruz as a combined LALS and EDJ major are encouraged to enroll in courses that satisfy the lower-division requirements prior to transfer. Visit Assist.org to review transfer articulations and contact advisors for LALS and EDJ with any questions.

Getting Started at UCSC as a Transfer Student

Transfer students must complete the lower-division course requirements to declare the combined major in LALS and EDJ, and should focus on completing these classes as soon as they start at UCSC (if they have not completed these courses prior to transfer). Students should contact advisors for LALS and EDJ with questions regarding transferable coursework.

Major Qualification Policy and Declaration Process

Major Qualification

Students must complete the required lower-division courses with grades of C or better or Pass before the major can be declared.

One EDJ course:

EDUC 60	Schooling, Democracy, and Justice	5

One course chosen from:

LALS 1	Introduction to Latin American and Latino Studies	5
LALS 5	Introduction to Human Rights and Social Justice	5
LALS 10	Introduction to Chicanx & Latinx Studies	5

Appeal Process

Students who did not satisfy the major declaration requirement but believe there are extenuating circumstances may file a written appeal. Appeals should be submitted to undergraduate advising by sending an email to lalsadvising@ucsc.edu. Students must file the appeal within 15 days of denial of major declaration. The department will notify the student and college of the decision within 15 days of the receipt of the appeal.

How to Declare a Major

Students may declare the major through the MyUCSC portal. Any questions should be directed to the LALS undergraduate advisor.

Letter Grade Policy

The program does not have a letter grade policy. Major requirements will be met with grades of C or better or Pass, within the parameters of the UC Santa Cruz Pass/No Pass grading policy.

[Optional Catchall]

Course Substitution Policy

Double Majors and Major/Minor Combinations Policy

Education Abroad Program (EAP)

The LALS Department encourages students to participate in Global Learning programs whenever possible. We offer a summer Global Internship program in Buenos Aires,

Argentina, that satisfies an elective requirement in LALS. And there are many other learning programs offered throughout the academic year in: California, Washington, D.C., Latin America, and elsewhere across the globe. Find out more on the Global Learning website or visit their offices on campus.

Honors

For combined majors, academic performance must meet the criteria in both departments to be awarded honors. Honors can only be conferred if both departments agree.

LALS awards honors in the major based on overall student academic performance in courses that count toward the major. To receive the strongest consideration for honors in the major, the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7.

A student with a major GPA of 3.75 or better qualifies for honors in the EDJ major. A student with a major GPA of 3.90 or better qualifies for highest honors in the major. Courses and credits taken at UC Santa Cruz to satisfy the major requirements are used to calculate the major GPA. Courses transferred from other institutions (with the exception of study abroad programs through UCSC) are not calculated into the major GPA.

[Optional Catchall]

Requirements and Planners

Course Requirements

Combined LALS and EDJ majors are required to take 11 5-credit courses and two writing labs. One of the courses must be taught in Spanish.

Lower-Division Requirements

Take this course:

EDUC 60	Schooling, Democracy, and Justice	5

Plus one course chosen from:

LALS 1	Introduction to Latin American and Latino Studies	5
LALS 5	Introduction to Human Rights and Social Justice	5
LALS 10	Introduction to Chicanx & Latinx Studies	5

Upper-Division Requirements

Take the following courses:

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1

Plus one course chosen from:

EDUC 110	Popular Education, Democracy, and Social Movements	5
EDUC 180	Introduction to Teaching	5

Upper-Division Elective Courses

Up to three elective substitutions are allowed (with department approval) if the student completes an education abroad program. Students must work with the undergraduate advisors on course substitution petitions. One elective course must be taught in Spanish.

Three EDUC Courses

Three 5-credit EDUC courses from 102-187.

Two LALS Courses

Two 5-credit LALS electives numbered 101-190.

Spanish language LALS courses

At least one elective must be taught in Spanish. The following LALS courses are taught primarily in Spanish. Pre-approved outside electives and study abroad courses taught in Spanish may be approved to satisfy the Spanish-language elective requirement. Contact the LALS advisor for more information.

LALS 129S	Memoria en Las Americas	5
LALS 135	El Salvador: Expresiones Culturales	5
LALS 157	Revoluciones Sociales	5
LALS 183	Ecologías Hemisféricas	5

Comprehensive Requirement

The Comprehensive Requirement is fulfilled by completing one senior seminar (LALS 194 A-Z, excluding L) and a Writing Lab (LALS 194L).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement for the combined LALS and EDJ B.A. is met by completing:

LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Sample Four-Year Planner for Frosh

	Fall	Winter	Spring	Summer
Entering				College 1A
				Summe

				r Edge (optional)
1st (frosh)	EDUC 60*	LALS Intro Course*		
	Spanish instruction if needed	Spanish instruction if needed	Spanish instruction if needed	
2nd (soph)		LALS 100	LALS 100A + LALS 100L	
	Spanish instruction if needed	Spanish instruction if needed	Spanish instruction if needed	
3rd (junior)	LALS elective (taught in Spanish)	EDUC 110 or EDUC 180	EDUC elective	
	EDUC elective	LALS elective		
4th (senior)	LALS 194_ + LALS 194L			
	EDUC elective			

*Complete lower-division requirements when possible during the first year (LALS 1, 5, or 10 satisfies LALS lower-division requirement).

Sample Two-Year Planner for Transfer Students

To graduate in two years, students must enter at the level of SPAN 2 or above to complete the required elective taught in Spanish by the sixth quarter of enrollment. Plan assumes entry at SPAN 4 or SPHS (Spanish for Heritage Speakers) 4. Spanish instruction is not a requirement of the major if the student is already proficient in Spanish.

	Fall	**Winter**	**Spring**	**Summer**
Entering				KRSG 1T
				Summer Edge (optional)
1st (junior)	LALS Intro Course*	LALS 100	LALS 100A + LALS 100L

	Spanish instruction if needed**	Spanish instruction if needed	Spanish instruction if needed	
2nd (senior)	possible study abroad	EDUC elective	EDUC elective	
	LALS elective (taught in Spanish)	LALS elective	LALS 194_ + LALS 194L	

*If not already completed with transfer credit.

**If lower-division requirements and Spanish language proficiency are complete prior to transfer, contact the LALS undergraduate advisor to discuss enrollment options and create an academic plan for the first quarter.

LATIN AMERICAN AND LATINO STUDIES/POLITICS COMBINED B.A.

Information and Policies

Introduction

A degree in Latin American and Latino studies (LALS) and politics trains students to be critical and analytical thinkers, to be active, engaged global citizens, and to be skilled scholar-activists making the world a more just place for all. A combined LALS and politics B.A. prepares students to collaborate across cultural differences, to understand and interpret complex political moments and social movements, and to integrate interdisciplinary tools and skills, to understand the complexity of current and past political moments, to discover how social, economic, and cultural aspects inform the political, and to use skills from many disciplines and fields.

Since political issues and practices are embedded in and reflective of the whole experience of a community, the study of politics can constitute the center of a broad-based course of study drawing on many areas including history, sociology, anthropology, philosophy, political science, economics, literature, science, and law. The combined B.A. in LALS and politics allows students to focus their study of political issues and social movements within Latinx and Latin American communities.

Program Learning Outcomes

Latin American and Latino Studies Program Learning Outcomes:

1. Critical Thinking. Ability to analyze from a transnational/transborder/translocal perspective—to see the interconnections between Latin American and Latino issues, people, ideas, problems and solutions. This includes key skills, such as understanding sources, comparing arguments, analysis, and historical perspective.
2. Research Methods. Working knowledge of social scientific and/or humanistic approaches to LALS relevant topics. This includes acquiring qualitative and quantitative skills, gathering or obtaining research data, finding/using primary sources, and other research methods.
3. Communication. Key communication skills, including written, oral presentation, and digital, including an understanding of media sources and ability to apply media literacy to cross-cultural analysis.
4. Community Engagement Skills: Acquisition of hands-on skills in collaborative engagement, cross-cultural fluency, and understanding of Latin America and Latino experiences for practical application and engagement with community and civic organizations.

Politics Program Learning Outcomes:

1. Understand the origins, development, and nature of political institutions, practices, and ideas;
2. Place particular political phenomena in broader context (national, historical, cross-cultural, and theoretical, etc);
3. Demonstrate familiarity with various theoretical approaches to the study of politics, and their application in different geographic and substantive areas;
4. Critically evaluate arguments about political institutions, practices, and ideas based on logic and evidence;
5. Develop and sustain coherent written and oral arguments regarding political phenomena, theories, and values based on appropriate empirical and/or textual evidence and logic.

Academic Advising for the Program

LALS Undergraduate Advising
32 Merrill Academic Building
(831) 459-2119
lalsadvising@ucsc.edu

Politics Undergraduate Advising
25 Merrill Academic Building
(831) 459-2505
polimajor@ucsc.edu

Advising for the combined major in LALS and politics is available from both advising offices, though the major is housed in the LALS Department.

Getting Started in the Major: Frosh

Students interested in the combined major in LALS and politics are encouraged to enroll in the one required LALS lower-division course, chosen from LALS 1 or LALS 5 or LALS 10, and one lower-division politics course, chosen from courses numbered 1-70, at their earliest opportunity.

Transfer Information and Policy

Students planning to apply in this major are not required to complete specific major preparation courses for consideration of admission to UC Santa Cruz.

Transfer Admission Screening Policy

Students interested in transferring in to UC Santa Cruz as a combined LALS and politics major are encouraged to enroll in courses that satisfy the lower-division requirements prior to transfer. Visit Assist.org to review transfer articulations and contact advisors for LALS and politics with any questions.

Getting Started in the Major: Transfer Students

Transfer students must complete the lower-division course requirements to declare the combined major in LALS and politics, and should focus on completing these classes as soon as they start at UCSC (if they have not completed these courses prior to transfer). Students may contact advisors for LALS and politics if they have questions about transferable coursework.

Major Qualification Policy and Declaration Process

Major Qualification

Students qualify for the major by completing two courses. One course is taken from POLI courses numbered 1-70. The second course is chosen from LALS 1, LALS 5, or LALS 10. Both courses may be taken for a letter grade or Pass/No Pass, and must be completed with a grade of C or better or Pass.

Appeal Process

Students who did not satisfy the major declaration requirement but believe there are extenuating circumstances may file a written appeal. Appeals should be submitted to undergraduate advising by sending an email to lalsadvising@ucsc.edu. Students must file the appeal within 15 days of denial of major declaration. The department will notify the student and college of the decision within 15 days of the receipt of the appeal.

How to Declare a Major

Students may declare the major through the MyUCSC portal. Any questions should be directed to the LALS undergraduate advisor.

Letter Grade Policy

This program does not have a letter grade policy. Major and minor requirements will be met with grades of C or better or Pass, within the parameters of the UC Santa Cruz Pass/No Pass grading policy.

[Optional Catchall]

Course Substitution Policy

Double Majors and Major/Minor Combinations Policy

Study Abroad

The LALS Department encourages students to participate in Global Learning programs whenever possible. We offer a summer Global Internship program in Buenos Aires, Argentina, that satisfies an elective requirement in LALS. And there are many other learning programs offered throughout the academic year in: California, Washington, D.C., Latin America, and elsewhere across the globe. LALS and politics combined majors are often interested in the learning and internship opportunities offered through the UCDC and UC Sacramento programs. Find out more on the Global Learning website or visit their offices on campus.

Honors

For combined majors, academic performance must meet the criteria in both departments to be awarded honors. Honors can only be conferred if both departments agree.

LALS awards honors based on overall student academic performance in courses that count toward the major. To receive the strongest consideration for honors in the major, the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7.

For politics, honors are awarded to graduating seniors whose academic performance is judged to be consistently excellent by a committee of politics faculty, based primarily on a review of grades. Highest honors in the major are reserved for students with consistently outstanding academic performance.

[Optional Catchall]

Requirements and Planners

Course Requirements

A minimum of 12 courses and one lab are required for the Latin American and Latino Studies (LALS) and Politics Combined B.A. Students considering a double major or major/minor plan with the combined major in LALS and politics should contact the LALS undergraduate advisor to discuss their options.

Lower-Division Requirements

Students complete a lower-division politics course, chosen from politics courses numbered 1-70, and one LALS introductory course, chosen from LALS 1 or LALS 5 or LALS 10.

One LALS introductory course

LALS 1	Introduction to Latin American and Latino Studies	5
LALS 10	Introduction to Chicanx & Latinx Studies	5
LALS 5	Introduction to Human Rights and Social Justice	5

One lower-division POLI course

Students take one 5-credit course chosen from POLI 1-70. See the courses section of the UCSC General Catalog for a list of options.

Upper-Division Requirements

Take the following courses:

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1
POLI 140C	Latin American Politics	5

Three politics core courses chosen from:

POLI 105A	Ancient Political Thought	5
POLI 105B	Early Modern Political Thought	5
POLI 105C	Modern Political Thought	5
POLI 105D	Contemporary Political Theory: Modernity and its Discontents	5
POLI 120A	Congress, President, and the Court in American Politics	5

POLI 120B	Society and Democracy in American Political Development	5
POLI 120C	State and Capitalism in American Political Development	5
POLI 140A	European Politics	5
POLI 140D	Politics of East Asia	5
POLI 140E	Middle East Politics	5
POLI 160A	Theories of International and World Politics	5
POLI 160B	International Law	5
POLI 160C	Security, Conflict, Violence, War	5
POLI 160D	The Politics of Global Capitalism	5

Three upper-division electives

Students choose two additional 5-credit upper-division electives from LALS courses numbered 101-190, and one additional 5-credit upper-division elective from politics courses numbered 100-189.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy a disciplinary communication (DC) requirement. The DC requirement for the LALS and politics combined B.A. is met by completing:

LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1

Comprehensive Requirement

Students satisfy the Comprehensive Requirement by completing either an LALS senior seminar (LALS 194 A-Z, excluding L) and seminar lab (LALS 194L), or a politics senior seminar (POLI 190 A-Z).

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Four-Year Sample Course Planner for Frosh Students

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)

LATIN AMERICAN AND LATINO STUDIES/SOCIOLOGY COMBINED B.A.

Information and Policies

Introduction

A degree in Latin American and Latino studies (LALS) and sociology trains students to be critical and analytical thinkers, to be active, engaged global citizens, and to be skilled strategic activists in making the world a more just place for all. A combined LALS and sociology B.A. prepares students to learn from and work with people from a variety of cultures and perspectives, to understand the complexity of current and past societies and social moments, to discover how political, economic, and cultural aspects inform the social, and to use skills from many disciplines and fields.

Sociology is the study of social interactions among individuals and social groups. More specifically, sociologists examine cultural, ideological, economic, and political structures and the processes whereby social institutions are created, maintained, and transformed. The combined B.A. in LALS and sociology allows students to focus their study of sociological contexts and processes within Latinx and Latin American communities.

Program Learning Outcomes

LALS Program Learning Outcomes:

1. Critical Thinking. Ability to analyze from a transnational/transborder/translocal perspective—to see the interconnections between Latin American and Latino issues, people, ideas, problems and solutions. This includes key skills, such as understanding sources, comparing arguments, analysis, and historical perspective.
2. Research Methods. Working knowledge of social scientific and/or humanistic approaches to LALS relevant topics. This includes acquiring qualitative and quantitative skills, gathering or obtaining research data, finding/using primary sources, and other research methods.
3. Communication. Key communication skills, including written, oral presentation, and digital, including an understanding of media sources and ability to apply media literacy to cross-cultural analysis.
4. Community Engagement Skills: Acquisition of hands-on skills in collaborative engagement, cross-cultural fluency, and understanding of Latin America and Latino experiences for practical application and engagement with community and civic organizations.

Sociology Program Learning Outcomes:

1. Critical Thinking: Demonstrate critical thinking skills by analyzing and evaluating social, political, and/or cultural arguments, across a variety of areas such as inequality; social problems; and race, class, and gender.
2. Sociological Understanding: Demonstrate sociological understandings of phenomena, for example, how individual biographies are shaped by social structures, social institutions, cultural practices, and multiple axes of difference and/or inequality.
3. Written and Oral Communication: Formulate effective and convincing written and/or oral arguments.
4. Social Theory: Demonstrate the ability to use several of the major classical or contemporary perspectives in social theory.
5. Research Methodology: Demonstrate the ability to use several of the major social science research methodologies.

Academic Advising for the Program

LALS Undergraduate Advising
32 Merrill Academic Building
(831) 459-2119
lalsadvising@ucsc.edu

Sociology Undergraduate Advising
Rachel Carson College Rm 226
831-459-2888
socyadvising@ucsc.edu

Advising for the combined major in LALS and sociology is available from both advising offices, though the major is housed in the LALS Department.

Getting Started in the Major

Students interested in the combined major in LALS and sociology are encouraged to enroll in the one required LALS lower-division course, chosen from LALS 1 or LALS 5 or LALS 10, and the two required lower-division sociology courses, chosen from SOCY 1, SOCY 10, or SOCY 15, at their earliest opportunity.

Transfer Information and Policy

Students planning to apply in this major are not required to complete specific major preparation courses for consideration of admission to the University of California, Santa Cruz.

Transfer Admission Screening Policy

Students interested in transferring in to UC Santa Cruz as a combined LALS and sociology major are encouraged to enroll in courses that satisfy the lower-division requirements prior to transfer. Visit Assist.org to review transfer articulations and contact advisors for LALS and sociology with any questions.

Getting Started in the Major: Transfer Students

Transfer students must complete the lower-division course requirements to declare the combined major in LALS and sociology, and should focus on completing these classes as soon as they start at UCSC (if they have not completed these courses prior to transfer). Students should contact advisors for LALS and sociology regarding transferable coursework.

Major Qualification Policy and Declaration Process

Major Qualification

Students must complete the lower-division sociology courses (two chosen from SOCY 1, SOCY 10, or SOCY 15) and one LALS course (LALS 1 or LALS 5 or LALS 10) with grades of C or better or Pass before the major can be declared.

One course chosen from:

LALS 1	Introduction to Latin American and Latino Studies	5
LALS 5	Introduction to Human Rights and Social Justice	5
LALS 10	Introduction to Chicanx & Latinx Studies	5

Two courses chosen from:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Appeal Process

Students who did not satisfy the major declaration requirement but believe there are extenuating circumstances may file a written appeal. Appeals should be submitted to undergraduate advising by sending an email to lalsadvising@ucsc.edu. Students must file the appeal within 15 days of denial of major declaration. The department will notify the student and college of the decision within 15 days of the receipt of the appeal.

How to Declare a Major

Students may declare the major through the MyUCSC portal. Any questions should be directed to the LALS undergraduate advisor.

Letter Grade Policy

This program does not have a letter grade policy. Major requirements will be met with grades of C or better or Pass, within the parameters of the UC Santa Cruz Pass/No Pass grading policy.

[Optional Catchall]

Course Substitution Policy

Double Major and Major/Minor Combinations Policy

Study Abroad

The LALS Department encourages students to participate in Global Learning programs whenever possible. LALS offers a summer Global Internship program in Buenos Aires, Argentina, that satisfies an elective requirement in LALS, and sociology offers a Global Internship program in Santiago Chile. There are many other learning programs offered throughout the academic year in: California, Washington, D.C., Latin America, and elsewhere across the globe. Find out more on the Global Learning website or visit their offices on campus.

Honors

For combined majors, academic performance must meet the criteria in both departments to be awarded honors. Honors can only be conferred if both departments agree.

LALS awards honors in the major based on overall student academic performance in courses that count toward the major. To receive the strongest consideration for honors in the major, the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7.

For sociology, honors are awarded based on the student's cumulative GPA for all courses taken at UC Santa Cruz to satisfy the program's major requirements. Students with a GPA of 3.75 or above will be considered for honors in the

major. Students with a GPA of 3.9 or above will be considered for highest honors in the major.

[Optional Catchall]

Requirements and Planners

Course Requirements

A minimum of 12 courses and one lab are required for the Latin American and Latino studies (LALS) and sociology combined B.A. Students considering a double major or major/minor plan with the combined major in LALS and sociology should contact the LALS undergraduate advisor to discuss their options.

Lower-Division Requirements

One LALS Introductory course

LALS 1	Introduction to Latin American and Latino Studies	5
LALS 5	Introduction to Human Rights and Social Justice	5
LALS 10	Introduction to Chicanx & Latinx Studies	5

Two courses chosen from:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Requirements

LALS and sociology combined majors take four upper-division core courses and one writing lab, four 5-credit upper-division electives (two in LALS and two in sociology), and one senior seminar exit requirement in LALS or sociology.

Upper-Division Core Courses

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1
SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Four Upper-Division Elective Courses

Choose two 5-credit upper-division LALS electives (numbered 101-190) and two 5-credit upper-division sociology electives (numbered 110-189).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy a disciplinary communication (DC) requirement. The DC requirement for the LALS and sociology combined B.A. is met by completing:

LALS 100A	Research in LALS	5
LALS 100L	Research in LALS Lab	1

Comprehensive Requirement

Students satisfy the Comprehensive Requirement by completing either an LALS Senior Seminar (LALS 194 A-Z, excluding L) and LALS 194L, or complete SOCY 196S. Topics in SOCY 196S vary. Students interested in the SOCY 196S option will need to apply in advance.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information. Contact the LALS undergraduate advisor to make an academic plan based on your completed coursework and educational goals.

Sample Four-Year Planner for Frosh (can be completed in three years - ask undergraduate advisor)

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	LALS Intro Course College 1	SOCY 1, SOCY 10, or SOCY 15 WRIT 1/WRIT 1E (if needed)	SOCY 1, SOCY 10, or SOCY 15	
2nd (soph)	WRIT 2**	LALS 100	LALS 100A + LALS 100L	
3rd (junior)	SOCY 105A	SOCY 105B	SOCY electiv	

			e
	LALS elective	LALS elective	SOCY elective
4th (senior)	LALS 194 + LALS 194L or SOCY 196S in senior year		

*LALS 1 or LALS 5 or LALS 10 when offered.

**WRIT 2 should be taken in or before spring quarter of the second year.

Sample Two-Year Planner for Transfer Students

Recommended academic plan for students starting as juniors, who have completed their lower-division SOCY courses prior to transfer (ask undergraduate advisor if you need a plan that incorporates lower-division sociology requirements).

	Fall	**Winter**	**Spring**	**Summer**
Entering				KRSG 1T Summer Edge (optional)
1st (junior)	LALS Intro Course *	LALS 100	LALS 100A + LALS 100L	
	SOCY 105A	SOCY 105B	SOCY elective	
2nd (senior)	SOCY elective	LALS elective	LALS 194 + LALS 194L or SOCY 196S	
	LALS elective			

*If not already satisfied by transfer credit.

LATIN AMERICAN AND LATINO STUDIES MINOR

The minor in Latin American and Latino studies requires seven LALS courses: two lower-division courses and five upper-division courses. Students are eligible to declare the minor as soon as they've completed any one course in LALS.

Course Requirements

Lower-Division Courses

Complete the following requirements. Courses may be taken for a letter grade or Pass/No Pass.

One LALS introductory course

LALS 1	Introduction to Latin American and Latino Studies	5
LALS 10	Introduction to Chicanx & Latinx Studies	5
LALS 5	Introduction to Human Rights and Social Justice	5

Plus one lower-division elective

One 5-credit course chosen from LALS 1-99 including additional LALS introductory courses (LALS 1, LALS 5, or LALS 10). May also be satisfied with a score of 4+ on the AP Spanish Literature and Culture exam. Students may also review the list of pre-approved outside electives found in the Course Substitution Policy. A maximum of two courses taken outside of the LALS Department at UC Santa Cruz may be used toward minor requirements.

Upper-Division Courses

Students choose one of the core courses, LALS 100 or LALS 100A (which is taken concurrently with LALS 100L, the writing lab) and four upper-division electives.

Upper-Division Core Course

	Either this course	
LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
	or these courses	
LALS 100A	Research in LALS	5

LALS 100L	Research in LALS Lab	1

Four Upper-Division Electives

Four additional 5-credit upper-division electives chosen from LALS 100-194. This can include an additional core course (LALS 100 or 100A/LALS 100L, whichever was not used above), or one or more senior seminars (LALS 194A-Z), space permitting. Students may also review the list of pre-approved outside electives found in the Course Substitution Policy. A maximum of two courses taken outside of the LALS Department at UC Santa Cruz may be used toward minor requirements.

Global Learning

The LALS Department encourages students to participate in Global Learning programs whenever possible. We offer a summer Global Internship program in Buenos Aires, Argentina, that satisfies an elective requirement in LALS. And there are many other learning programs offered throughout the academic year in: California, Washington, D.C., Latin America, and elsewhere across the globe. Find out more on the Global Learning website or visit their offices on campus.

Course Substitution Policy

Students may use up to two courses taken outside the LALS department at UC Santa Cruz toward minor requirements. This includes courses taken at UC Santa Cruz in non-LALS departments and all courses taken at other institutions, including through study abroad programs. Students may review a list of pre-approved substitutions that satisfy the lower- and upper-division elective requirements. Students may contact the undergraduate advisor to inquire about additional courses that may be approved to count as electives or if they plan to study abroad. Transfer students who have completed LALS-related work prior to transfer should contact the undergraduate advisor to ask about transfer credit.

LATIN AMERICAN AND LATINO STUDIES PH.D.

Introduction

The Ph.D. program in Latin American and Latino Studies at UCSC offers an innovative transnational and interdisciplinary approach to the study of the peoples, cultures, societies and institutions of the Americas. The program is designed to educate students in this field of study and train them to develop the conceptual and analytical skills necessary for understanding the dynamics of hemispheric change. This is the first doctoral program in Latin American and Latino Studies.

In preparing students for research and teaching at the university level, the department offers four thematic clusters in the field of Latin American and Latino Studies: 1) transnational migrations within the Americas; 2) social inequalities; 3) cultural politics and cultural flows; and 4) collective action and social movements. Doctoral students specialize in one of these four substantive themes, as well as a focus area of their own design.

- **Transnationalisms , Migrations, and Displacement.** While transnational migrations are the subject of research in multiple disciplines, this program analyzes these transformative processes through an interdisciplinary lens. A transnational approach examines links between regions in the Americas, analyzing the social and historical foundations of economic dynamics such as remittances from the United States or the dollarization of Latin American countries. A transnational approach to the study of migratory processes explores the dynamics of bi-national communities, bilingualism and multilingualism, immigrant integration into host societies, and North-South exchanges of ideas and cultures.
- **Intersectionality , Identities, and Inequalities.** This program's research foregrounds the study of transnational social inequalities formed by power relations based on race, ethnicity, nationality, citizenship, class, territory, gender and/or sexuality in the Américas. These social hierarchies are analyzed as institutions, historical processes, discourses, or signifiers with multiple meanings, and are examined in terms of how they have been mobilized to build, transform, or challenge identities, communities, and social movements in local, national, and global contexts over time.
- **Culture, Power, and Knowledge.** Another distinctive area of inquiry is the study of cultural politics and cultural flows that shape everyday life, institutions, social identities, discourses, meanings, and cultural forms and practices, in global, regional, and local contexts in the Américas and in an increasingly interconnected world. The transnational analysis of culture focuses on the ways cultural forces and cross-cultural communication and media are contributing to the formation of new transnational imaginaries, as well as how these cultural processes are transforming and redefining national and local cultures.
- **Collective Action, Social Movements, and Social Change.** This area of research addresses collective action and social movements at local, national and international levels viewed through transnational lenses. As migrants engage in public life, both in their communities of residence and in their communities of origin, they construct diverse practices of political participation, including "civic bi-nationality." These processes are crucial for understanding the largest wave of immigration in a century, including how migrants relate to US society.

The doctoral program provides rigorous training in both disciplinary and interdisciplinary approaches to the study of transnational processes that link the Americas. The program educates doctoral students in the theories and research methods based in disciplines of the social sciences and the humanities.

The deadline for applications to the doctoral program is mid-December in the preceding year. The program only accepts students for admission in fall quarter.

Advancement to Candidacy

Course Requirements

Twelve Courses

The program requires a total of 12 courses with LALS Graduate Program affiliated faculty. Of the required courses, up to two may be independent studies with LALS faculty and up to four may be taken in other departments. The graduate advisor will determine whether these courses count for the LALS program requirements.

Before advancement to candidacy, a full-time course load is two or three courses at the graduate level.

The following are the course requirements:

These four core courses are required for all students.

LALS 200	Bridging Latin American and Latina/o Studies	5
LALS 200A	Power and Structure in the Américas	5
LALS 200B	Cultures and Subjectivities in the Américas	5
LALS 201	Research in Practice	5

Foreign Language Requirement

The language of instruction in most seminars is English, and students are expected to develop their reading, writing, and speaking/presentation abilities as they complete the program requirements. In addition, they are expected to develop their research abilities and proficiency in Spanish, Portuguese, an Indigenous language of the Americas, or another language that is central to their research, according to their research goals and in order to engage with the scholarship being produced across the Americas.

As per Graduate Division requirements, the secondary language requirement must be satisfied by the end of the third year, prior to Advancing to Candidacy. The secondary language requirement may be fulfilled by:

1. UC Santa Cruz graduate courses in Spanish, Portuguese, or another language central to the research project:
   Passing a 5-credit graduate seminar in LALS or other UCSC department offered in the language during the academic year, or passing a UCSC Literature Summer Research Language course
2. Accredited summer immersion program, e.g. Berkeley, Cornell, or abroad – the program must have a scholarly and rigorous focus, the student must receive advance approval from their faculty advisor, and the student must submit to the graduate advisor a letter from the program attesting to their completion of the program and their satisfactory performance in the language.
3. Graduated from a university with primary instruction in Spanish, Portuguese, or another language central to the research project.
4. Pass LALS Department language exam in Spanish or Portuguese.

Students will be required to include information regarding their plans for satisfying the secondary language requirement in their end-of-year statements in the first and second years.

Students are required to demonstrate, by one of the methods listed above, their proficiency in a language other than English before the completion of the qualifying examination.

Qualifying Examination

Doctoral students will be required to submit two qualifying essays (field statements), two original course syllabi, a dissertation prospectus, and an oral Qualifying Examination (QE), as described below.

A Qualifying Exam Committee, composed of four faculty members, will approve both the scope of the field statements and the final written products, including the dissertation prospectus, and will conduct the oral examination. The committee also provides students with guidance and feedback throughout the QE process. Of the four members, this committee must include at least two LALS faculty members—at least one of whom is an LALS core faculty member, while the other may be LALS core or affiliate. One of these two must chair the committee. The committee also must include one tenured faculty from outside the LALS department (this person might or might not be an affiliate faculty member). Emeriti faculty are not permitted to chair the committee, and only one emeritus faculty member is permitted on each committee. Both the outside member of the QE committee and the QE chair must be tenured. The qualifying examination committee must be approved in advance by the Graduate Division.

Students should take their oral examinations by spring quarter of the third year. The Qualifying Exam process is discussed in detail in a mandatory colloquium session with the graduate program coordinator and graduate director each academic year.

1. **Qualifying Essays.**

Students are required to complete two qualifying essays. The qualifying essay topics should address broad non-overlapping fields and review the literatures related to the proposed dissertation questions. Students should consult with their qualifying examination committee early in the process, regarding the appropriate scope and content of their essays. One of the qualifying essays must focus on one of the department's four themes: transnational migrations and social displacement; intersectionality, identities and inequalities; collective action, social movements and social change; and culture, power, and knowledge. The qualifying essay should demonstrate command of the methodology relevant to the student's specialized research interests (e.g., ethnographic field methods, textual analysis, archival research methods, statistics, media analysis, and/or comparative methods) and include

relevant texts in the second language. The committee chair must approve these essays at least one month prior to the oral examination.
In addition, the essays must be accompanied by two proposed course syllabi for potential undergraduate courses.

2. **Prospectus.** The prospectus is a carefully conceived, coherent research proposal for the doctoral dissertation. It should clearly present and justify the student's research interests and the questions that will guide the dissertation. It should demonstrate command of the methodology relevant to the student's specialized interests (e.g., ethnographic field methods, textual analysis, archival research methods, statistics, media/content analysis and/or comparative methods, etc.). The prospectus will often need to be revised even after the student passes the Qualifying Exam and advances to candidacy.

3. **Qualifying Examination**. An oral examination will follow the approval of the qualifying essays.

After successfully completing the Qualifying Examination, students are expected to assemble a Dissertation Committee that includes a minimum of three faculty members, one of whom must be designated as the dissertation chair/advisor. The Dissertation Committee chair may be the same faculty member who served as the QE committee chair. The Dissertation Committee must be chaired by a LALS core ladder-rank faculty member and include two additional members, one of whom must be a faculty member from LALS—including core ladder-rank, emeriti, and affiliate faculty. Only one faculty emeritus/a is permitted on each Dissertation Committee. Students may have one member from another campus. Normally the Dissertation Committee is selected from the QE Committee, but this is not required.

Coursework and the qualifying process should be completed by the end of the third year. Students may petition for a non-terminal master's degree after advancing to candidacy.

Dissertation

Dissertation

Students will be expected to complete the dissertation prospectus and secure approval from the dissertation committee by the last day of the quarter after the qualifying examination. In the prospectus, students should clearly articulate the logic of an interdisciplinary, transnational approach, as well as the methodologies to be used for addressing the research questions.

The dissertation must demonstrate in-depth research, make a significant and original scholarly contribution, and include material worthy of publication.

LATIN AMERICAN AND LATINO STUDIES DESIGNATED EMPHASIS

Introduction

The Designated Emphasis (DE) in Latin American Latino Studies (LALS) provides graduate students from other graduate programs at the University of California, Santa Cruz, with opportunities for interdisciplinary study with faculty from across the campus. Completion of the program will be listed on the graduate degree as a designated emphasis.

Students wishing to pursue the Designated Emphasis in LALS should consult with their respective graduate program coordinators and with their faculty advisors before submitting the Petition to Enroll. Students should declare their intent to undertake the DE prior to the execution of their Qualifying Examinations (QE). Graduate students are strongly encouraged to submit the application no later than the end of the third year.

The application and an annually updated list of regularly offered, approved graduate courses are available on the LALS website.

Requirements

The following are required for the designated emphasis:

Committee Composition and Departmental Approvals

The student must have a designated LALS advisor (DE advisor) from among the Latin American and Latino studies core or affiliated faculty. This advisor will be in addition to the faculty advisor from the student's home department. The Latin American and Latino Studies advisor must serve on the student's QE and/or dissertation committee.

Course Requirements

Students must submit a course plan to the LALS Graduate Committee for approval to enroll in the DE. The student must take five graduate courses in Latin American and Latino Studies: the required LALS 200, one LALS course taught by a core LALS faculty member, and three courses with LALS content in any UC Santa Cruz department taught by core, participating, or affiliated LALS faculty.

PREAPPROVED LALS B.A. ELECTIVES COURSE LIST

Pre-Approved LALS B.A. Electives

Lower-Division Courses

The following courses may be used as pre-approved substitutions for the lower-division elective of the Latin and Latin American studies B.A. and minor.

History

HIS 11A	Latin America: Colonial Period	5
HIS 11B	Latin America: National Period	5
HIS 12	Introduction to Latino American History	5

HIS 82	California Gold Rush in Global History	5

Literature

LIT 61Z	Introduccion a generos literarios de Espana y America Latina	5
LIT 80N	Latino Expressions in the U.S	5
LIT 80Q	Jane the Virgin: Latinx Readers and (Latin) American Literature	5
LIT 90X	Introduccion a la Escritura Creativa/Introduction to Creative Writing	5

Music

MUSC 12	Mariachi Ensemble	2
MUSC 12B	Mexican Folklorico Music and Dance	2
MUSC 80F	Music in Latin American Culture: Regional Traditions	5

MUSC 12 and MUSC 12B must be taken three times in order to count as one elective.

Politics

POLI 61	Politics of Social Policy	5

Sociology

SOCY 15	World Society	5
SOCY 30A	Introduction to Digital Justice Studies	5

Spanish

SPAN 5M	Medical Spanish	5

Theater Arts

THEA 80M	Chicano/a Teatro	5

Upper-Division Courses

The following courses may be used as pre-approved substitutions for the upper-division elective of the Latin and Latin American studies B.A. and minor.

Anthropology

ANTH 110H	Brazilian Amazon Cultures and Environments	5
ANTH 110I	Cultures of Sustainability and Social Justice	5
ANTH 130B	Brazil	5
ANTH 130F	Blackness In Motion: Anthropology of the African Diasporas	5
ANTH 130J	Politics and Statemaking in Latin America	5
ANTH 130L	Ethnographies of Latin America	5
ANTH 130M	Inside Mexico	5
ANTH 130P	Ethnography of Southern Cone Chile and Argentina	5
ANTH 130U	Central America	5
ANTH 133	Narratives of the Popular	5
ANTH 176B	Meso-American Archaeology	5
ANTH 145X	Special Topics in Socio-Cultural Anthropology	5
ANTH 164	The Anthropology of Dance	5

Critical Race and Ethnic Studies

CRES 160	Latina/o/x Geographies	5

Education

EDUC 128	Immigrants and Education	5
EDUC 141	Bilingualism and Schooling	5
EDUC 181	Race, Class, and Culture in Education	5

Environmental Studies

ENVS 122	Tropical Ecology and Conservation	5
ENVS 143	The Future of Sustainable Development	5
ENVS 145	Green Cities	5
ENVS 154	Amazonian Cultures and Conservation	5

Feminist Studies

FMST 115	Gender, Sexuality, and Transnational Migration Across the Americas	5
FMST 124	Technology, Science, and Race Across the Americas	5
FMST 175	Gender and Sexualities in Latina/o America	5
FMST 194F	Chicana/Latina Cultural Production	5

Film and Digital Media

FILM 165E	Chicana/o Cinema, Video	5

History

HIS 124A	Panama Canal and U.S. Empire	5
HIS 128	Chicana/Chicano History	5
HIS 130	History of Modern Cuba	5
HIS 131	Women in Colonial Latin America	5
HIS 134A	Colonial Mexico	5
HIS 134B	History of Mexico, 1850 to Present	5
HIS 185I	Latin American Jewish History in the Modern Period	5
HIS 190A	Slavery and Race in Latin America	5
HIS 190B	Race and the Nation in Latin America	5
HIS 190D	Asian and Latino Immigration Since 1875	5
HIS 190T	Latin America in the Cold War	5

History of Art and Visual Culture

HAVC 140D	Chicano/Chicana Art: 1970-Present	5
HAVC 144A	Latin American Art and Visual Culture	5

HAVC 160A	Indigenous American Visual Culture Before 1550: Mexico	5
HAVC 160B	Indigenous American Visual Culture Before 1550: The Andes	5
HAVC 162A	Special Studies in Early Indigenous American Visual Culture: The Ancient Maya	5
HAVC 162B	Special Studies in Early Indigenous American Visual Culture: The Inka	5

History of Consciousness

HISC 136	Latin American Thought	5

Literature

LIT 124B	The Contemporary Latin American Short Story	5
LIT 165A	Chicanx/Mexican American Literature	5
LIT 165B	Latino Fictions of the Americas	5
LIT 188R	Humanidades Ambientales	5
LIT 189A	De la conquista a Sor Juana	5

LATIN AMERICAN AND LATINO STUDIES (LALS) AND EDUCATION DEPARTMENT 4+1 CONTIGUOUS BACHELOR'S/MASTER'S PATHWAY

The 4+1 pathway into the MA/Credential Master's program is an option that allows undergraduates in the Latin American and Latino Studies (LALS) major at UC Santa Cruz to:

- Finish the master's degree in just one additional year (five quarters, July to July)
- Apply to the Education Master's program through a streamlined application process

Undergraduate students currently enrolled in the LALS major have the opportunity, any time after the start of their junior year until Dec. 1 of their senior year, to apply to be admitted to the 4+1 contiguous pathway leading to the Education Master's degree.

The requirements for admission into the 4+1 pathway are:

- Undergraduate major in LALS
- A GPA in the major of 3.0 or greater
- Overall GPA of 3.0 or higher

- Junior or senior standing
- Completion of two upper-division courses selected from the following with a grade of B or higher:
    - EDUC 104, EDUC 115, EDUC 125, EDUC 126, EDUC 135, EDUC 141, EDUC 160, EDUC 162, EDUC 164, EDUC 174, EDUC 177

Interested students should schedule a meeting with the LALS undergraduate advisor to discuss their curriculum plan and complete the application forms. The deadline for application to the pathway is Dec. 1 of the senior year, although students are encouraged to apply earlier.

While students in the pathway are not guaranteed admission to the MA/Credential Program, the Education Department expects to admit students who: (a) have met the requirements listed above for admission to the 4+1; (b) have 30 or more hours of experience with youth (classroom experience, tutoring, or coaching sports teams are just a few ways to satisfy this requirement; reach out to edma@ucsc.edu about whether your existing experience qualifies); and (c) have a commitment to teaching in communities serving traditionally underserved populations, barring any extenuating circumstances, or if the applicant does not obtain clearance from the State of California. Additionally, students will be eligible for a streamlined admission process if, at the time of application, they have met the state Basic Skills and Subject Matter requirements, typically by providing passing scores on California State tests: the CBEST and the CSET (applicants must pass the required subtests for a secondary Single Subject Social Science credential or the Multiple Subjects credential).

After entering into the Master's/Credential Program, students from the pathway will follow the same requirements as any other students in the MA/C program with expected graduation in July of the year after their graduation from the UCSC LALS program.

Students who have completed one of these identified undergraduate education courses will have the course EDUC 205 waived from their MA/Credential requirements: EDUC 102, Education, Media and Society; EDUC 128, Immigrants and Education; EDUC 140, Language, Diversity and Learning; EDUC 173, Critical Pedagogy; or EDUC 181, Race, Class, and Culture in Education. Students intending to apply for the MA/Credential Program may also choose to complete these courses in Summer Session II between their junior and senior years, instead of during the MA/Credential Program: EDUC 210, Health, Safety and Community, 2 credits; EDUC 213, Child and Adolescent Development for Educators, 2 credits.

The following State of California requirements for a California teaching credential, which have to be completed before the end of the final quarter of the MA/Credential Program, can also be completed at the undergraduate stage if a student chooses:

- The U.S. Constitution Examination, when offered by the Education Department. (Completion of any of the courses POLI 20, POLI 111A, POLI 120A or HIST 10A also satisfies this requirement.)
- The UCSC Extension online course EDUC.XSC209 can be completed any time it is offered to satisfy the Preliminary Technology Requirement.
- A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed before the end of the final quarter of the MA/Credential Program and be valid at the time of application for the preliminary credential in the final summer session of the MA/Credential Program.

(A CPR course that will remain valid through the preliminary credential application may be taken during the undergraduate program; 12-month certifications will not be sufficient. Students must check with course provider.)

Legal Studies Minor (p. 829)

OTHER PROGRAMS OF INTEREST

Latin American and Latino Studies/Politics Combined Major (p. 803)

The study of politics is the exploration of the ways human communities shape and share a common life through their institutional practices, ideas, interests, and expectations. It looks at the way collective decisions are made, and at the obstacles citizens meet as they try to forge a shared and just life. Courses address issues central to public life, such as democracy, power, freedom, political economy, social movements, international law and conflict, institutional reforms, and how public life, as distinct from private life, is

constituted. In describing the department and major at UC Santa Cruz, we use the term 'politics' (rather than 'political science' or 'government') because the study of political life requires a more inclusive approach than that associated solely with the discipline of political science, and because politics happens in places other than governments.

The programs offered by the UCSC Politics Department are designed to acquaint students with a broad range of issues studied by those in the field. The department offers an undergraduate major, a minor, a combined Latin American and Latino studies/politics major, and a doctoral degree.

The Politics Department also encourages students to pursue additional academic opportunities while at UCSC. Possible programs include: the UCDC Program, a one-quarter program at the UC campus in Washington, D.C. that includes coursework and an internship; UCSAC, a one-quarter program at the center in Sacramento; and the Education Abroad Program (UCEAP).

The Politics Department also administers the Legal Studies Program.

POLITICS B.A.

Information and Policies

Introduction

The study of politics is a critical part of a liberal arts education. Since political issues and practices are embedded in and reflective of the whole experience of a community, the study of politics can constitute the center of a broad-based course of study drawing on history, sociology, anthropology, philosophy, political science, economics, literature, science, and law.

Politics students at the University of California, Santa Cruz have many opportunities for field work and for internship placements. Students are encouraged to develop their own extensive independent research projects. The Politics Department also encourages students to pursue additional academic opportunities while at UC Santa Cruz. Possible programs include: the UCDC program, a one-quarter program at the UC campus in Washington, D.C. that includes coursework and an internship, UC Sacramento, a one-quarter program at the UC Center in Sacramento, and the UC Education Abroad Program.

Politics faculty members give students individual attention to help them in their studies. Faculty members are firmly committed to the value of a liberal arts education, but they are also actively engaged in programs of research and writing. The research interests of the faculty range from questions of justice to the problem of war, from campaign strategy to relations between the rich and the poor countries of the world.

No specific courses at the high school level are required for admission to the major in politics at UCSC. Courses in history, literature, philosophy, and the social sciences, whether taken at the high school or college level, are appropriate background and preparation for the politics major.

A major in politics is appropriate for students interested in careers in law, journalism, or teaching; in political and governmental work from local to international settings; in non-governmental organizations; and in corporations dealing with regulatory or global issues. Many UCSC politics graduates have also gone on to do advanced work in distinguished graduate and professional schools. Others have found active and challenging careers in business and community organizing. Still others have turned to scholarship and writing. But regardless of career direction, the most significant purpose of the politics major is to help educate a reflective and activist citizenry capable of sharing power and responsibility in a contemporary democracy.

Program Learning Outcomes

Upon completion of the major, students will have met the following objectives:

1. understand the origins, development, and nature of political institutions, practices, and ideas;
2. place particular political phenomena in broader context (national, historical, cross-cultural, and theoretical, etc);
3. demonstrate familiarity with various theoretical approaches to the study of politics, and their application in different geographic and substantive areas;
4. critically evaluate arguments about political institutions, practices, and ideas based on logic and evidence;
5. develop and sustain coherent written and oral arguments regarding political phenomena, theories, and values based on appropriate empirical and/or textual evidence and logic.

Academic Advising for the Program

Undergraduate Advisor

The undergraduate advisor offers specific information about navigating through the program and the curriculum and assists students with prerequisites, requirements, policies, procedures, learning support, guidance on internships, scholarships, and opportunities for undergraduate research. Politics advising is located in Merrill 27 and can be reached at polimajor@ucsc.edu.

Transfer students should also consult the Transfer Information and Policy section.

Peer Advisors

Peer advising assists with academic planning, guidance on major and minor requirements, and preparation of declaration paperwork. Peer advising can be reached at lgstpoli@ucsc.edu.

Advising Hours

Politics Advising

Getting Started in the Major: Frosh

This major is not highly sequential or course intensive. Although it is advisable to begin taking courses toward the major in the first year, it is not required. To ensure timely completion of the major, prospective politics majors are encouraged to meet with a major advisor to develop an academic plan during their first year.

Transfer Information and Policy

Transfer Admission Screening Policy

No major preparation courses are required prior to transfer; however, one or two of the following courses or their equivalents are recommended to ensure timely graduation.

POLI 1	Politics: Power, Principle, Process, and Policy	5
POLI 3	Keywords: Concepts in Politics	5
POLI 4	Citizenship and Action	5
POLI 17	U.S. and the World Economy	5
POLI 20	American Politics	5
POLI 21	Governing the Golden State	5
POLI 60	Comparative Politics	5
POLI 61	Politics of Social Policy	5
POLI 70	Global Politics	5

Getting Started in the Major: Transfer Students

To ensure a smooth transition into UC Santa Cruz and timely completion of the major, transfer students should meet with the politics undergraduate advisor as early as possible to discuss a two-year major planner and course enrollment. Completion of a lower-division politics course in the first quarter will allow timely declaration of the major (required in the second quarter of enrollment).

Major Qualification Policy and Declaration Process

Major Qualification

Students may declare the major after completing two lower-division politics courses numbered POLI 1–POLI 70 with grades of C/P or better. These courses are normally taken during the first year for frosh.

Appeal Process

Students who are approaching the campus declaration deadline and who have not completed two lower-division courses POLI 1-POLI 70, or their transfer equivalents, with grades of C or better, may petition to declare the major: the petition will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) to be resolved within at most one more enrolled quarter.

How to Declare a Major

Petition to declare your major as soon as you have met qualification requirements and/or reach your declaration deadline quarter, whichever comes first. Before submitting the petition, students are required to meet with Politics Advising to create an academic plan. A template planner can be found here. For students needing guidance on the declaration of major process, signing up for a declaration of major workshop is highly recommended.

Letter Grade Policy

This program does not have a letter grade policy.

Optional Catchall

Course Substitution Policy

Double Majors and Major/Minor Combinations Policy

The department accepts proposals for double majors. A student pursuing a double major meets the full requirements of the politics major as well as the full requirements of the other major.

The Politics Department offers a combined major with the Latin American and Latino Studies Department. Requirements may be found in the Latin American and Latino studies section of the catalog.

Honors

Students receiving "Honors" and "Highest Honors" in the politics major upon graduation will typically have taken at least 10 major courses for a letter grade and will have achieved in those courses GPAs of 3.7 and 3.85 respectively. Final determinations about honors are made by a faculty committee that judges the rigor, breadth, depth, improvement, and overall achievement evident in the student's academic record in the major.

Independent and Field Studies

Students may petition the department to substitute only one upper-division independent study or field study toward the elective requirement in the politics major. UCDC and UCSAC internships are exempt from this limit.

Requirements and Planners

Course Requirements

Lower-Division Courses

Two lower-division politics courses

Students complete two courses numbered POLI 1 through POLI 70, as a foundation for continued success in the politics major and as a requirement to declare the major. These courses are normally taken during the student's first year.

Upper-Division Courses

Four upper-division politics core courses.

The following four groups of courses constitute the core of the politics major. Four courses are required: two courses from one group, one course from a second group, and one course from a third group. In general, upper-division courses

are not recommended for frosh. This requirement also satisfies the disciplinary communication requirement.

Theory

POLI 105A	Ancient Political Thought	5
POLI 105B	Early Modern Political Thought	5
POLI 105C	Modern Political Thought	5
POLI 105D	Contemporary Political Theory: Modernity and its Discontents	5

U.S. Politics

POLI 120A	Congress, President, and the Court in American Politics	5
POLI 120B	Society and Democracy in American Political Development	5
POLI 120C	State and Capitalism in American Political Development	5

Comparative

POLI 140A	European Politics	5
POLI 140C	Latin American Politics	5
POLI 140D	Politics of East Asia	5
POLI 140E	Middle East Politics	5

Global Politics/International Relations

POLI 160A	Theories of International and World Politics	5
POLI 160B	International Law	5
POLI 160C	Security, Conflict, Violence, War	5
POLI 160D	The Politics of Global Capitalism	5

Four upper-division politics electives

Four additional courses selected from POLI 100-POLI 189.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for politics majors is satisfied by completing any three of the four required core courses. The politics core course list is detailed above in the major requirements.

Comprehensive Requirement

The comprehensive requirement in the Politics Department can be satisfied in any of the following methods:

- **Senior Seminar:** Successful completion of a politics senior seminar (POLI 190 series) that includes the writing of an extensive paper (no less than 15 pages) with substantial research content. To enroll in a specific POLI 190 seminar, students must have successfully completed the prerequisite courses listed in the seminar's catalog course description.
- **Additional (Fifth and Sixth) Electives:** Successful completion of two additional politics upper-division electives numbered POLI 100-189, one of which includes a substantial writing component comparable to a paper for a senior seminar, either as part of the existing course requirements or added with the approval of the instructor. The student must receive prior approval from the instructor of the course with the substantial writing component, and must enroll in a two-credit independent study, POLI 199F, as part of this option. Generally, instructors with the title of lecturer are not available to supervise POLI 199F.
- **Graduate Seminar:** Successful completion of a politics graduate seminar (enrollment is contingent on the written recommendation of two politics faculty) that includes the writing of an extensive paper (no less than 15 pages) with substantial research content.
- **Thesis (2-3 quarters):** Successful completion of a senior thesis (POLI 195A, POLI 195B, POLI 195C) of a minimum of 50 pages. This option is for students interested in working on original research and writing under the supervision of a politics faculty member.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

A four-year course plan for frosh majoring in politics and a two-year course plan for transfer students are provided below.

Four-Year Sample Course Planner for Frosh Students

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	POLI (Lower-division) College 1	POLI (Lower-division) WRIT 1/WRIT 1E (if needed)		
2nd (soph)	POLI (Upper-division	POLI (Upper-	POLI (Upper-	

	elective)	division elective)	division core)
	WRIT 2*		
3rd (junior)	POLI (Upper-division core)	POLI (Upper-division elective)	POLI (Upper-division core)
	POLI (Upper-division elective)	POLI (Upper-division core)	
4th (senior)	POLI 190 (Senior Seminar)		

* WRIT 2 should be taken in or before spring quarter of the second year.

In addition to the specific courses shown in this four-year planner, a student must complete courses satisfying the general education requirements. While many politics courses that fulfill major requirements also fulfill a GE requirement, which GE requirements are fulfilled by completion of the major depends on which specific courses a student takes to fulfill the major requirements.

Two-Year Sample Course Planner for Transfer Students

Year	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
1st (junior)	POLI (Lower-division)*	POLI (Upper-division elective)	POLI (Upper-division elective)
	POLI (Lower-division)	POLI (Upper-division core)	POLI (Upper-division core)
	POLI (Upper-division elective)		
2nd (senior)	POLI (Upper-division core)	POLI 190 (Senior Seminar)	
	POLI (Upper-division elective)	POLI (Upper-division core)	

* WRIT 2 should be taken in or before spring quarter of the second year.

This planner assumes that a student has completed all general education requirements–beyond major preparation requirements before coming to UC Santa Cruz.

*Articulated equivalent courses may be taken prior to transfer.

POLITICS MINOR

Students in our minor gain a solid grounding in ideas, concepts, and real-world problems and possibilities of politics through a selection of at least six courses.

Course Requirements

The minor requires one lower-division politics course and five upper-division politics courses. Of these, four are to be selected from core classes in our subfields: political theory (105 series), American politics (120 series), comparative politics (140 series) and global/international politics (160 series).

Students select two subfields' core series and are required to complete two core classes in each.

The sixth course can be any politics upper-division elective numbered 100-189.

This program does not have a letter grade policy.

Lower-Division Courses

One 5-credit lower-division politics course from POLI 1-POLI 70.

Upper-Division Courses

Five upper-division politics courses are required. Of these, four are to be selected from the core courses listed below: two from one concentration and two from another concentration (concentrations are: Theory, U.S., Comparative, and Global/IR). A fifth course is to be selected from POLI 100-POLI 189.

Theory

POLI 105A	Ancient Political Thought	5
POLI 105B	Early Modern Political Thought	5
POLI 105C	Modern Political Thought	5
POLI 105D	Contemporary Political Theory: Modernity and its Discontents	5

U.S. Politics

POLI 120A	Congress, President, and the Court in American Politics	5
POLI 120B	Society and Democracy in American Political Development	5
POLI 120C	State and Capitalism in American Political Development	5

Comparative

POLI 140A	European Politics	5
POLI 140C	Latin American Politics	5
POLI 140D	Politics of East Asia	5
POLI 140E	Middle East Politics	5

Global Politics/International Relations

POLI 160A	Theories of International and World Politics	5
POLI 160B	International Law	5
POLI 160C	Security, Conflict, Violence, War	5
POLI 160D	The Politics of Global Capitalism	5

POLITICS PH.D.

Introduction

The Faculty

The work of the UCSC Politics Department's faculty has led the field toward interdisciplinary and engaged research, and represents the diverse cutting edge of U.S. and international political research. A group of affiliated graduate faculty extends the program's intellectual breadth and the range of the course offerings.

The department enjoys several areas of special strength, including American political development, the social foundations of democratic politics and democratization; political economy; politics of the developing world; the politics of language; sub-national politics; post-colonial theory and nationalist discourse; early modern political thought; and informal and translocal political organization.

The Curriculum

The Politics Department is impressed by the fact that many of the best studies of politics today disregard the conventional boundaries of the political science's disciplinary subfields. Therefore, the core graduate curriculum and qualifying examination process are structured around four interrelated themes central to political inquiry. Each of these areas of emphasis focuses, in a different way, on the relations among material life, institutional authority, collective mobilization, and political vision at all levels of politics.

Political and Social Thought. Brings together the history of political thought; contemporary social and critical theory; and the contributions of legal and institutional analysis of various kinds. This area of inquiry emphasizes the critical study of political practices that are experienced or understood as in some way limiting, oppressive, or wrong. The work of political and social theory as we see it is to transform our understanding of these practices; to see their contingent conditions; and to articulate the possibilities of governing ourselves differently.

Political and Social Forces. Concerns the interaction of social forces and political forces, drawing upon the work of scholars focused on social mobilizations and histories. Accordingly, this area of inquiry focuses on the articulation and organization of political interest and identities. This area studies the mutual interaction of these interests and identities with structure (states, discourses, public policy, and the law) uniting substantive and theoretical concerns across regional, national, and global politics.

States and Political Institutions. Emphasizes the international study of political institutions as instruments of collective decision-making and action. This area of inquiry focuses on the state and on transnational, subnational, and regional political institutions. In this area, we emphasize historical patterns of institutional development in relation to domestic political conflict and the changing contours of international political economy and patterns of conflict and cooperation among states.

Political Economy. Focuses on the relationship between states, markets, and societies. This area of inquiry explores the various understandings of political economy that have emerged within a number of different theoretical perspectives, including Marxism, realism, and liberalism. At subnational, national, and supranational levels, this area seeks to understand political economy outcomes as the result of the mutual interactions between political institutions, societal interests, and ideas and norms.

The politics graduate curriculum works critically upon and within conventional social science research and also ranges beyond its methods, drawing upon cultural studies, historical sociology, and history as they inform the study of politics.

Students in the politics graduate program also work with faculty in other distinguished departments at UCSC, including literature, history of consciousness, history, Latin American and Latino studies, environmental studies, sociology, philosophy, international economics, and feminist studies.

Scholars and students in the program emphasize the articulation of important questions prior to the development of methods for grappling with them, while recognizing the importance of appropriate methodological tools for doing meaningful political research.

To support the growth of students as scholars, the department also offers a series of professional development sessions to introduce and help develop the skills of successful academic work. All graduate students are also expected to attend department events with notable visitors brought to campus for public lectures, presentation, and/or graduate colloquia.

Advancement to Candidacy

Course Requirements

All curricular requirements are aimed at preparing students for timely and successful completion of a doctoral dissertation. The graduate curriculum in politics includes seven stages: 1) three core seminars plus POLI 201, Logics of Inquiry seminar; 2) five other graduate-level Politics Department courses; 3) three additional graduate-level courses that may be from Politics or other departments, along with further training as appropriate in language and methodology; 4) teaching assistant seminar training; 5) a qualifying examination consisting of written and oral parts; 6) the research and writing of the dissertation; and 7) its oral defense.

Core Seminars and Methods Training

Required Core Seminars:

During the first two years in residence, students are required to take three of the four core seminars that correspond to the areas of emphasis:

POLI 200A	Political and Social Thought Core Seminar	5
POLI 200B	Social Forces and Political Change Core Seminar	5
POLI 200C	States and Political Institutions Core Seminar	5
POLI 200D	Political Economy Core Seminar	5

Logics of Inquiry:

The department also recognizes the importance of informed and critically engaged methodology. Logics of Inquiry, POLI 201, is a required course that investigates approaches to the study of politics and to the enterprise of social science in general. We also regularly offer POLI 202, Political Research, a seminar providing a foundation in qualitative methods, and occasionally offer other methods courses as well. Students sometimes pursue further coursework in other UC Santa Cruz departments, and the department has sent many students to summer training programs such as the Institute for Qualitative and Multi-Method Research (IQMR).

POLI 201	Logics of Inquiry	5
POLI 202	Fundamentals of Political Research	5

Additional Courses

Prior to the qualifying examination, a minimum of five additional politics graduate courses taught by Politics Department faculty or affiliated graduate faculty must be completed. Three additional graduate-level courses are also required, which may be taken from any UCSC department (including Politics).

Each candidate shall develop with his or her advisor language and method requirements appropriate to the student's project, graduate education, and career goals.

Foreign Language Requirements

Teaching Requirement

Throughout its history, the department has been strongly committed to undergraduate teaching. The graduate program offers graduate students the opportunity to work closely with faculty and undergraduates as teaching assistants. The Politics Department’s faculty is committed to “the teaching of teaching”: its training of college educators emphasizes the importance of civic education in undergraduate instruction. All students who are teaching assistants will be required to attend a TA training program in which pedagogic and substantive issues will be considered.

See our website for details about the policies for admission to graduate standing as well as the application, and information about financial-support opportunities. For more information, refer to the Graduate Division website.

Pre-Qualifying Requirements

Qualifying Examination

The Qualifying Examination (QE) process intends to demonstrate a student’s mastery of and engagement with a range of literatures, including a) core literatures in two of the program’s four areas of emphasis, and b) specialized literatures relevant to the research trajectory. It provides a forum to specify and develop research questions and plans for the dissertation.

Preparation begins with the first core seminar and continues throughout the required coursework. The QE is completed during the third year and has three components: 1) two written examinations; 2) the dissertation prospectus; and 3) an oral examination. All components are evaluated by a committee of four faculty members, one of whom is not a member of the Politics Department.

Students must complete the QE process by the end of their third year. A student who fails any component of the QE process twice will not be permitted to continue in the program.

Post-Qualifying Requirements

Dissertation

Dissertation

Upon advancing to candidacy students begin formal work on the dissertation, with the assistance and oversight of the dissertation committee.

Dissertation Committee

The dissertation committee must be composed of at least three professors, two of whom (including the chair) are members of the Politics faculty. The dissertation committee is selected by the student and approved by the Graduate Division. The dissertation committee need not be the same as the QE committee. The chair of the two committees can be the same professor.

Dissertation Defense

Upon completion, the student will be asked to defend her/his dissertation before the dissertation committee.

Academic Progress

Normative time to completion of the Ph.D. is six years. Upon advancement to candidacy, students are expected to complete the dissertation within three years.

At the end of each academic year, whether the student is in residence at UC Santa Cruz or not, s/he will file a statement of progress with the dissertation committee.

If the Ph.D degree is not awarded within seven years from the date of advancement to candidacy, the student's candidacy shall lapse and the the student will be required to pass a new qualifying exam prior to submitting the dissertation or undergo such other formal review as the department directs.

Applying for Graduation

At the end of the dissertation writing process, the student must file a petition for the degree, format the dissertation according to Graduate Division guidelines, complete an oral defense, and obtain signatures of the committee members on the official title page. One these items are complete, the student may file the dissertation to complete the Ph.D.

Students must either be registered or on Filing Fee the quarter in which the degree is to be conferred. In order to be eligible for Filing Fee, a student must have been registered or on an approved leave of absence the previous quarter.

[Optional Catchall]

POLITICS DESIGNATED EMPHASIS

Introduction

Graduate students in politics may obtain a designated emphasis on the politics Ph.D. diploma indicating they have completed an additional specialized course of study in another department that offers a designated emphasis. Please consult the department of interest for more information.

Requirements

To receive a designated emphasis in politics, graduate students from other departments must complete the following requirements **in addition to degree requirements for the doctorate in their home (or coordinating) department.**

Committee Composition and Departmental Approvals

The student must have a designated faculty advisor from among the politics core faculty. This advisor will be in addition to the faculty advisor from the student's home department. The politics advisor must serve on the student's qualifying examination committee and on the student's dissertation committee.

Course Requirements

The student must take four (4) graduate courses offered by the Politics Department. Two of these courses must be core courses (Political and Social Thought, Political Institutions, Political Economy, or Social Forces) and two courses may be electives appropriate to the student's thesis research. No more than one of these two elective courses may be an independent study.

POLI 200A	Political and Social Thought Core Seminar	5
POLI 200B	Social Forces and Political Change Core Seminar	5
POLI 200C	States and Political Institutions Core Seminar	5
POLI 200D	Political Economy Core Seminar	5

Writing, Research and/or Teaching Requirements

The student must prepare a significant piece of writing in the area of politics. This writing may take the form of a doctoral dissertation chapter or a paper to be submitted for publication.

Academic Progress

[Optional Catchall]

LEGAL STUDIES B.A.

Information and Policies

Introduction

Legal Studies (LGST) is an interdisciplinary, liberal arts major focused on legal ideas, institutions, and issues in and beyond the U.S. Our courses introduce students to the integral roles of law in social life, including its complex relation to values and shifting views of justice, rights, liberty, equality, citizenship, and authority; to culture and social practices; and to historical, political, and economic forces and institutions.

Our program is housed under the auspices of the Politics Department, but operates independently and is designed to provide different disciplinary lenses on intersections between law and other realms. These include the relation of law to human rights, civil rights, voting rights, and property rights; to immigration, citizenship, borders, and sovereignty; to racial, gender, and economic inequalities; to environmental and health justice; to the scope and limits of governmental power; to the law of democracy and relation between citizens and the state; to relations between nation-states; and to concerns regarding access to justice, justice gaps, and historical and systemic injustices.

Students who join this major have the opportunity to take courses with faculty from a range of backgrounds in the social sciences, humanities, arts, and law. Our curriculum includes course offerings spanning from anthropology, art, economics, environmental studies, feminist studies, history, Latin American and Latino studies, literature, music, philosophy, politics, psychology, and sociology. This allows our students to engage their interests through different approaches and analytical frameworks, and to consider many dimensions of law and its operation. For example, legal studies students might learn how to use approaches from psychology or philosophy to think about crime and punishment; they might use approaches from political theory or economics to think about property rights or social welfare policies; they might consider civil rights or privacy issues through approaches from critical race theory or feminist studies; they might use approaches from history or sociology to consider law in different eras or in relation to different groups; they might use approaches from politics to consider human rights and legal systems outside the U.S.

The legal studies major provides a broad academic platform from which students can pursue many different career paths and/or advanced studies. Alumni from our program work in many areas: law and the legal profession, government, non-profits, education, health, and community services, technology and software engineering, business, consulting and accounting, the entertainment industry, media, journalism, and communications. Our alums are also successful in pursuing graduate degrees in many fields. Although legal studies is often of interest to students considering law school or law-related careers, the major is not designed as “pre-law” or preparation for law school. (Students who are considering law school should visit the Career Center's website and pre-law coach.

Our program strongly encourages students to enrich their studies with additional learning and opportunities. Legal Studies sponsors a speakers series and co-sponsors other talks and events, including career and alumni panels. We also encourage students to pursue internships or field experiences, such as through our legal studies internship seminar (LGST 185); Legal Aid & Advocacy (LGST 188A and OAKS 188B/LGST 188B) through the UCDC program, a one-quarter study and internship program in Washington, D.C.; or through the UC Center Sacramento, which offers a one-quarter study and internship program at the state capitol. Students may also want to study abroad through Global Learning at UC Santa Cruz, and some may want to consider developing independent research projects on topics of special interest to them.

Program Learning Outcomes

Upon completion of the major, undergraduates with a B.A. in Legal Studies will have met the following objectives:

1. describe, explain, and compare the sources and functions of law in the U.S. and other national or international contexts, including drawing on theoretical perspectives, institutional perspectives, and social/cultural perspectives;
2. analyze the role of laws, courts, and other legal institutions in broader society, including the historical, social, political, and economic contexts in which it operates;
3. evaluate the operation and function of legal norms, practices, and systems/institutions from a variety of disciplinary and social perspectives;
4. apply and critically evaluate arguments about legal principles and norms, practices, and institutions based on logic and evidence, and from a variety of disciplinary perspectives; and
5. develop and communicate well-organized, persuasive, and well-supported written and oral arguments and analyses regarding law and legal issues based on appropriate empirical and/or theoretical evidence and logic.

Academic Advising for the Program

Undergraduate Advisor

The undergraduate advisor offers specific information about navigating through the program and the curriculum and and assists students with prerequisites, requirements, policies, procedures, learning support, guidance on internships, scholarships, and opportunities for undergraduate research. Please contact the LGST undergraduate advisor at legalstudies@ucsc.edu.

Peer Advisors

Peer advising can assist in academic planning in regards to major and minor requirements and help prepare declaration of major and minor paperwork. Please contact the LGST peer advising team at lgstpoli@ucsc.edu.

Advising Hours

Legal Studies Advising

Getting Started in the Major: Frosh

This major is not highly sequential or course intensive. Although it is advisable to begin taking courses toward the major in the first year, it is not required.

Transfer Information and Policy

Transfer Admission Screening Policy

No major preparation courses are required prior to transfer; however, one of the following courses or their equivalents are recommended to ensure timely graduation.

PHIL 7	Elementary Logic	5
PHIL 9	Introductory Symbolic Logic	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 27	Business Ethics	5

Getting Started in the Major: Transfer Students

To ensure a smooth transition into UC Santa Cruz and timely completion of the major, transfer students should meet with the undergraduate advisor as early as possible to discuss a two-year major planner and course enrollment. Completion of LGST 10 in the first quarter will allow timely declaration of the major (required in the second quarter of enrollment).

Major Qualification Policy and Declaration Process

Major Qualification

Students may declare the legal studies major after completing LGST 10, Introduction to the Legal Process, with a grade of C/P or better.

Students will ideally have completed the remaining lower-division requirements before declaring the major.

Transfer students should also consult the Transfer Information and Policy section.

LGST 10	Introduction to Legal Process	5

Appeal Process

Students who are not eligible to declare the major due to more than one non-passing grade in the major qualification course may submit an appeal. In the appeal form, students will be asked to provide:

- A detailed rationale for the appeal, explaining the circumstances around the non-passing grades and what has changed since then. Students are encouraged to be specific in how they plan to succeed moving forward.
- Unofficial transcript(s) of all college courses, including grades.

Within 15 business days of receipt of the appeal, the department advisor will email the student and their college advisors, to notify them of the department's decision.

To discuss the major qualification process, feel free to email ymonterh@ucsc.edu or schedule an appointment via Slug Success.

How to Declare a Major

Petition to declare your major as soon as you have met qualification requirements and/or reach your declaration deadline quarter, whichever comes first. Before submitting the petition, students are required to meet with Legal Studies Advising to create an academic plan.

Letter Grade Policy

Students are permitted to take up to three LGST courses on a P/NP basis that will count toward the major. If a student wishes to qualify for honors, the number of P/NP courses should be no more than two.

Course Substitution Policy

Students may petition the department to substitute only one upper-division independent study or field study toward the elective requirement in the legal studies major. UCDC and UCSAC internships are exempt from this limit.

Double Major and Major/Minor Combinations Policy

Honors

To be considered for honors or highest honors at graduation, a student must have taken a minimum of nine (9) graded courses in the major. P/NP grades are not included when calculating GPA in the major. “Honors” and “Highest Honors” classifications will be awarded to graduating students who achieve GPAs of 3.67 and 3.8 respectively, based on classes taken within the legal studies major. Per General Catalog policy, generally no more than 15 percent of the graduating class earns honors or highest honors in the major.

Optional Catchall

Requirements and Planners

Course Requirements

In addition to completing LGST 10, legal studies majors are required to take a course in philosophical logic or ethics, a course on constitutional law, and a course on international or comparative law. They must also take courses in each of three broadly defined thematic areas: theory, public law and institutions, and law and society. Within the theory theme, students may take courses such as legal theory, jurisprudence, ethics, logic, and social and political thought; within the law and society theme, courses topics range from gender to race to psychology to economics; within the public law and institutions theme, courses range from environmental law to human rights law to criminal justice to public policy. To fulfill the senior exit requirement, students can take a senior capstone seminar, or they may opt to write a senior thesis.

Lower-Division Courses

All students are required to complete and pass LGST 10 prior to declaring the major. This course is normally taken the first year.

LGST 10	Introduction to Legal Process	5

Choose one of the following courses:

All legal studies majors are required to take one of these philosophy courses (transfer students are strongly encouraged to take a similar course prior to enrolling at UC Santa Cruz).

PHIL 7	Elementary Logic	5
PHIL 9	Introductory Symbolic Logic	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 27	Business Ethics	5

Upper-Division Courses

Complete one of the following "Constitutional Law" courses:

POLI 111A	Constitutional Law	5
LGST 111B	Civil Liberties	5
LGST 111C	The First Amendment	5

Plus one of the following "Global Law" courses:

LGST 116	Comparative Law	5
POLI 160B	International Law	5
POLI 175	Human Rights	5

Thematic Core Course Requirement — 6 courses

Legal studies majors are required to take six thematic core courses, with a minimum of one in each of the three thematic areas:

A. Theory

B. Public Law and Institutions

C. Law and Society

A. Theory Theme Courses

Take any of the following courses:

POLI 103	Feminist Interventions	5
POLI 105A	Ancient Political Thought	5
POLI 105C	Modern Political Thought	5
POLI 105B	Early Modern Political Thought	5
POLI 105D	Contemporary Political Theory: Modernity and its Discontents	5
LGST 107	Toleration, Speech, and Hate	5
LGST 109	Legal Theory	5
LGST 146	Philosophy of Law	5
LGST 155	Topics in American Legal History: Making of American Constitutionalism	5
LGST 157	Political Jurisprudence	5
POLI 184	Shariah and Political Thinking: Law and Politics in Modern Islamic Thought	5
ANTH 148	Gender and Global Development	5
ANTH 187	Cultural Heritage in Colonial Contexts	5
ART 172	Public Art: Memory, Landscape, and Artist as Activist	5
ART 181	Art, Power & Politics	5
ENVS 147	Global Environmental Justice	5
FMST 194O	The Politics of Gender and Human Rights	5
LIT 168A	The Culture of Islamic Law	5
PHIL 126	Philosophy of Social Sciences	5
PHIL 140	History of Ethics	5
PHIL 143	Applied Ethics: Ethics Bowl	5
PHIL 144	Topics in Social and Political Philosophy	5
PHIL 153	Philosophy of Race	5
SOCY 128C	Social History of Democracy, Anarchism, and Indigenism	5
SOCY 128J	The World Jury on Trial	5
PSYC 114	Human Development as a Cultural Process	5
PSYC 140M	Legitimizing (In)Equality: Attitudes, Beliefs, and Social Policy	5

B. Public Law and Institutions Theme Courses

Take any of the following courses:

POLI 111A	Constitutional Law	5
LGST 111C	The First Amendment	5
LGST 115	Law and the Holocaust	5
LGST 116	Comparative Law	5
POLI 120A	Congress, President, and the Court in American Politics	5
POLI 120C	State and Capitalism in American Political Development	5
LGST 124	Government Secrecy	5
LGST 125	History of the U.S. Penal Culture	5
LGST 131	Wildlife, Wilderness, and the Law	5
LGST 133	Law of Democracy	5
LGST 137	International Environmental Law and Policy	5
LGST 139	War Crimes	5
LGST 148	Cites, Urban Planning, and the Law	5
LGST 152	Courts and Litigation	5
LGST 153	Immigration, Citizenship, and Law	5
LGST 155	Topics in American Legal History: Making of American Constitutionalism	5
LGST 156	Administrative Law and Challenges of Regulation	5
LGST 159	Property and the Law	5
LGST 173	Disability, Law, & Politics	5
LGST 188A	Introduction to the Legal Profession and Legal Aid Work	2
OAKS 188B	Legal Field Practice: Professional Skills and Ethics	3

POLI 132	California Water Law and Policy	5
POLI 134	Congress: Representation and Legislation	5
POLI 165	Global Organization	5
POLI 167	Politics of International Trade	5
POLI 175	Human Rights	5
ECON 128	Poverty and Public Policy	5
ENVS 140	National Environmental Policy	5
ENVS 144	Global Climate Change Politics	5
ENVS 149	Environmental Law and Policy	5
ENVS 151	Environmental Assessment	5
ENVS 150	Coastal and Marine Policy	5
ENVS 152	International Environmental Politics	5
ENVS 165	Sustainable Water Systems	5
GCH 186	Global Health Politics	5
SOCY 117E	Migrant Europe	5
SOCY 128J	The World Jury on Trial	5
SOCY 128M	International Law and Global Justice	5

LGST 188A/OAKS 188A and OAKS 188B/LGST 188B must both be taken to count as one course.

C. Law and Society Theme Courses

Take any of the following courses:

LGST 108	Gender, Sexuality, and Law	5
LGST 111B	Civil Liberties	5
LGST 113	Gay Rights and the Law	5
LGST 114	Jews, Anti-Semitism, and the American Legal System	5
LGST 117	Sports, Law, and Politics	5
LGST 118	Law and Literature	5
LGST 130	Inequality and Law	5
LGST 150	Children and the Law	5
LGST 153	Immigration, Citizenship, and Law	5
LGST 154	The Legal Profession	5
LGST 158	Law and Politics of Memory	5
LGST 161	Intellectual Property	5
LGST 173	Disability, Law, & Politics	5
LGST 185	Internship/Field Seminar: Experiences in Law, Politics, and Policy	5
POLI 110	Law and Social Issues	5
POLI 120B	Society and Democracy in American Political Development	5
POLI 120C	State and Capitalism in American Political Development	5
POLI 121	Racism & Justice in America	5
POLI 151	Politics of Law	5
POLI 182	The Power to Punish	5
ANTH 110C	California Pasts	5
ANTH 126	Contraband: Shadow Economies and the Law	5
ANTH 130C	Politics and Culture in China	5
ANTH 138	Political Anthropology	5
ANTH 142	Anthropology of Law	5
ANTH 187	Cultural Heritage in Colonial Contexts	5
ENVS 144	Global Climate Change Politics	5
ANTH 187B	Cultural Resource Management	5
ART 175	Taking Art to the Streets	5
ART 186	Art and Globalization	6
ECON 160A	Industrial Organization	5
ECON 162	Legal Environment of Business	5
ECON 169	Economic Analysis of the Law	5
ECON 183	Women in the Economy	5
ENVS 130B	Justice and Sustainability in Agriculture	5
FMST 112	Women and the Law	5
FMST 194O	The Politics of Gender and Human Rights	5
HIS 110B	Revolutionary America, 1740-1815	5
HIS 110D	The Civil War Era	5
LIT 168A	The Culture of Islamic Law	5
LIT 168B	Islamic Law and Society	5
LIT 189A	De la conquista a Sor Juana	5
PSYC 147A	Psychology and Law	5
PSYC 147B	Psychology and Law	5
SOCY 117E	Migrant Europe	5
SOCY 122	The Sociology of Law	5
SOCY 127	Drugs in Society	5
SOCY 128	Law and Politics in Contemporary Japan and East Asian Societies	5
SOCY 128I	Race and Law	5

Electives

Disciplinary Communication (DC) Requirement

Students in every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement in legal studies is satisfied by completing one of the following two options:

Senior Seminar

LGST 196	Senior Capstone	5

Senior Thesis (two or three quarters)

LGST 195A	Senior Thesis	5
LGST 195B	Senior Thesis	5
LGST 195C	Senior Thesis	5

Comprehensive Requirement

Students can satisfy the senior comprehensive requirement in the legal studies major by successfully completing one of the following two options:

Senior Capstone

The capstone is designed to provide an interdisciplinary integration of themes related to the study of law and includes a substantial writing requirement.

LGST 196	Senior Capstone	5

Senior Thesis (2-3 quarters).

Completion of a senior thesis of a minimum of 50 pages with substantial research content, supervised by a legal studies faculty member or affiliate. A cumulative UC GPA of 3.6 is strongly recommended, though not required. In rare circumstances, exceptions can be made pending approval of the proposed professor.

LGST 195A	Senior Thesis	5
LGST 195B	Senior Thesis	5
LGST 195C	Senior Thesis	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Sample four-year and two-year course plans for students majoring in legal studies are provided below.

Four-Year Sample Course Planner for Frosh Students

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)		LGST 10 WRIT 1/WRIT 1E (if needed)	Phil 9 or 22	
2nd (soph)	LGST Core - Law Society (LS) WRIT 2*	LGST Core - Theory (T)	LGST Core - Public Law Institution (PLI) POLI 160B/LGST 160B (Required)	
3rd (junior)	LGST Core (LS, PLI or T) LGST Core (LS, PLI or T)	POLI 111A/LGST 111A (Required) LGST Core (LS, PLI or T)		
4th (senior)	LGST 196 (Capstone)			

* WRIT 2 should be taken in or before spring quarter of the second year.

In addition to the specific courses shown in this four-year planner, a student must complete courses satisfying the general education requirements. See the UC Santa Cruz Legal Studies website to view courses and designations for which courses fulfill the majors' three-core thematic requirements: Theory, Public Law and Institutions, and Law Society.

Two-Year Sample Course Planner for Transfer Students

Year	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
1st (junior)	LGST 10 LGST Core - Public Law Institut	PHIL 9* LGST Core - Theory (T)	POLI 160B/LGST-160B (required) LGST Core - Law Society (LS)	

	ion (PLI)		
2nd (senior)	LGST Core (LS, PLI or T)	LGST 196 (Senior Capstone)	LGST Core (LS, PLI or T)
	LGST Core (LS, PLI or T)	POLI 111A/L GST 111A (Required)	

*Articulated equivalent courses may be taken prior to transfer.

This planner assumes that a student has completed all general education requirements, beyond major preparation requirements before coming to UC Santa Cruz. See the UCSC Legal Studies website to view courses and designations for which courses fulfill the majors' three-core thematic requirements: Theory, Public Law and Institutions, and Law Society.

LEGAL STUDIES MINOR

Course Requirements

The legal studies minor comprises six courses: LGST 10 plus any five upper-division LGST courses.

Students in the legal studies minor are not required to follow major requirements such as taking courses in each thematic area, the philosophy (ethics) requirement, or a senior seminar course. This program does not have a letter grade policy.

Lower-Division Courses

Take this course

LGST 10	Introduction to Legal Process	5

Upper-Division Courses

Take any five 5-credit courses from LGST 100-187 or from the list below. 5-credit courses crosslisted as LGST courses will also count toward this requirement. Students should contact the department if they wish to count independent study toward this requirement.

ANTH 110C	California Pasts	5
ANTH 130C	Politics and Culture in China	5
ANTH 138	Political Anthropology	5
ANTH 142	Anthropology of Law	5
ANTH 148	Gender and Global Development	5
ANTH 187	Cultural Heritage in Colonial Contexts	5
ANTH 187B	Cultural Resource Management	5
ART 172	Public Art: Memory, Landscape, and Artist as Activist	5
ART 181	Art, Power & Politics	5
ECON 128	Poverty and Public Policy	5
ECON 160A	Industrial Organization	5
ECON 162	Legal Environment of Business	5
ECON 169	Economic Analysis of the Law	5
ECON 183	Women in the Economy	5
ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 140	National Environmental Policy	5
ENVS 144	Global Climate Change Politics	5
ENVS 147	Global Environmental Justice	5
ENVS 149	Environmental Law and Policy	5
ENVS 150	Coastal and Marine Policy	5
ENVS 151	Environmental Assessment	5
ENVS 152	International Environmental Politics	5
ENVS 165	Sustainable Water Systems	5
ENVS 179	Environmental Interpretation	5
FMST 194O	The Politics of Gender and Human Rights	5
GCH 186	Global Health Politics	5
HIS 110B	Revolutionary America, 1740-1815	5
HIS 110D	The Civil War Era	5
HIS 121B	African American History, 1877 to the Present	5
LALS 194X	Extractivism and Socio-Environmental Conflicts in the Americas	5
LIT 168A	The Culture of Islamic Law	5
LIT 168B	Islamic Law and Society	5
LGST 107	Toleration, Speech, and Hate	5
LGST 108	Gender, Sexuality, and Law	5
LGST 111B	Civil Liberties	5
LGST 111C	The First Amendment	5
LGST 114	Jews, Anti-Semitism, and the American Legal System	5
LGST 115	Law and the Holocaust	5
LGST 116	Comparative Law	5
LGST 117	Sports, Law, and Politics	5
LGST 124	Government Secrecy	5
LGST 125	History of the U.S. Penal Culture	5
LGST 131	Wildlife, Wilderness, and the Law	5
LGST 133	Law of Democracy	5
LGST 137	International Environmental Law and Policy	5
LGST 139	War Crimes	5
LGST 146	Philosophy of Law	5
LGST 148	Cites, Urban Planning, and the Law	5
LGST 152	Courts and Litigation	5

LGST 153	Immigration, Citizenship, and Law	5
LGST 154	The Legal Profession	5
LGST 155	Topics in American Legal History: Making of American Constitutionalism	5

POLI 121	Racism & Justice in America	5
POLI 132	California Water Law and Policy	5
POLI 134	Congress: Representation and Legislation	5
POLI 151	Politics of Law	5
POLI 160B	International Law	5
POLI 165	Global Organization	5
POLI 167	Politics of International Trade	5
POLI 175	Human Rights	5
PSYC 114	Human Development as a Cultural Process	5
PSYC 140M	Legitimizing (In)Equality: Attitudes, Beliefs, and Social Policy	5
PSYC 147A	Psychology and Law	5
PSYC 147B	Psychology and Law	5
PSYC 153	The Psychology of Poverty and Social Class	5
SOCY 117E	Migrant Europe	5
SOCY 122	The Sociology of Law	5
SOCY 127	Drugs in Society	5
SOCY 128C	Social History of Democracy, Anarchism, and Indigenism	5
SOCY 128J	The World Jury on Trial	5
SOCY 128M	International Law and Global Justice	5
SOCY 185	Environmental Inequality	5

LGST 188A/OAKS188A and OAKS 188B/LGST 188B must both be taken to count as one course.

Psychology

150 Social Sciences 2 Building
https://psychology.ucsc.edu/

PROGRAMS OFFERED

Psychology B.A. (p. 832)

Cognitive Sciences B.S. (p. 843)

Psychology Ph.D. (p. 850)

UNDERGRADUATE PROGRAMS

The Psychology Department offers undergraduate programs in psychology (B.A.) and cognitive science (B.S.)

Psychology B.A.

Psychology majors at UC Santa Cruz are introduced to theory and scientific research in the field. Students begin with lower-division courses (course numbers 1-99) that include introductory psychology, precalculus, statistics, introduction to developmental psychology, and cognition: fundamental theories/introduction to cognitive psychology. In addition, majors take upper-division courses (course numbers 100-199) in research methods and several areas of psychology.

The department offers coursework in developmental, cognitive, social, and clinical-personality psychology.

The developmental psychology program studies processes that integrate individual, interpersonal, and cultural aspects of human development. Our faculty uses qualitative and quantitative mixed methodologies to study children and youth's lived experiences from a strengths-based perspective in diverse communities and contexts including families, friends, peers, neighborhoods, schools, children's museums, and other institutions.

The cognitive psychology program investigates human perception, memory, and language using a combination of behavioral, neuroscience, and computational modeling approaches. Our faculty consider basic scientific questions in these areas as well as real-world implications (e.g. techniques

for learning better in the classroom), cross-disciplinary connections (e.g. with biologists, computer scientists), and clinical applications (e.g. misophonia and other perceptual and cognitive disorders).

The social psychology program involves the study of persons embedded within social contexts and communities. Social psychology courses at UC Santa Cruz are organized around themes of social justice and focus on a wide range of social issues. Our faculty, therefore, focus on issues of race, class, sexuality, ethnicity, citizenship, gender, and ability, and are steeped in critical theoretical and applied perspectives.

Clinical-personality psychology focuses on issues of individual traits, psychological distress, well-being, and adjustment.

The Psychology Department offers a general psychology major and an intensive major. The intensive psychology major requires additional coursework in research methods as well as additional thesis, research, or field study credits. See program descriptions below for details.

The B.A. programs in psychology provide a foundation for a career in psychological research, clinical practice, industry, or non-profits. Some careers in psychology require master's or doctoral degrees, for instance focused on research or clinical practice. Students primarily interested in clinical and counseling psychology should understand that training in these areas does not occur at the undergraduate level but requires professional training through an advanced degree. UC Santa Cruz does not offer advanced degrees in clinical or counseling psychology.

Cognitive Science B.S.

Cognitive science focuses on achieving a scientific understanding of how human cognition works. Its subject matter encompasses cognitive functions (such as memory and perception), the structure and use of human language, the evolution of the mind, artificial intelligence, and more.

The cognitive science degree provides a strong grounding in the principles of cognition through courses in cognitive psychology, and, in addition, provides breadth in the interdisciplinary aspects of cognitive science such as anthropology, linguistics, biology, philosophy, and computer science. Graduates will be well prepared for advanced training in research fields of cognitive psychology and cognitive neuroscience, technology industries such as human-computer interaction, and health fields, such as the treatment of brain disorders.

The cognitive science major is intended for students seeking jobs in industry fields such as human-computer interaction or user-experience research, or students wishing to enter graduate programs in cognitive fields or health science fields

GRADUATE PROGRAM

The psychology program offers three areas of specialization leading to the doctoral degree: cognitive, developmental, and social psychology. The program prepares students for research, teaching, and administrative positions in colleges and universities as well as for positions in schools, government, and other public and private institutions. Each student is primarily associated with one of the three research areas and participates in the courses and research forums sponsored by the faculty in that area. The program requires full-time enrollment as a graduate student. Although applicants for a master's degree are not accepted, students in the doctor of philosophy (Ph.D.) program may obtain a master of science (M.S.) degree by fulfilling requirements listed in the department's Graduate Student Handbook. Note that the program does not offer courses, training, or supervision in clinical psychology.

The cognitive psychology graduate program focuses on foundational cognitive processes and how they function in the real world. We investigate three interconnected areas that form the core of cognitive psychology: perception and performance, learning and memory, and language and interaction. Using a combination of human behavior, neuroscience, and computational modeling to characterize human cognitive processes, we are exploring topics such as reading, speaking, and discourse processing; language production and comprehension; bilingualism and multilingualism; remembering and forgetting; metacognition in learning and memory; creative cognition; cognitive offloading and transactive memory; socially distributed remembering and collective memory; human performance, information processing, and computational cognitive modeling; working memory and executive control; visual psychophysics; face perception; sensory integration; music perception; perception in virtual reality; cognitive and computational neuroscience; perceptual decision-making, attention, and awareness. Beyond addressing basic scientific questions in these areas, our faculty also consider real-world implications (e.g., techniques for learning better in the classroom), cross-disciplinary connections (e.g., with biologists, computer scientists, and linguists), and clinical applications (e.g., misophonia, schizophrenia, and other cognitive disorders). Our Ph.D. graduates go on to successful careers in both academia — as postdoctoral fellows and tenure-track faculty at teaching and research institutions across the country — and industry — with some of our recent graduates leading user experience (UX) and data science teams.

The developmental psychology graduate program focuses on research that integrates cultural, interpersonal, and individual aspects of human development. We emphasize understanding the lived experience of children, youth, and young adults in their cultural communities and social-structural contexts. We focus especially on issues of diversity in relation to culture, ethnicity, race, gender, sexuality, and social-economic opportunity as people engage across contexts of family, peers, schools, museums, community, technology, and media. Our programs of research include language and cognitive development; social development; personal and social identities; gender development; political development; neurodiversity; learning through observation and social interaction; children and playable media; communication technologies; stress and well-being; prejudice and discrimination; STEM learning; school climate, belonging,

and motivation; the transition to adulthood; and diversity issues in university outreach programs. Several of our faculty carry out research in cultural communities outside the U.S. and collaborate with faculty in the U.S. and other countries. At UC Santa Cruz, our interdisciplinary collaborations with other programs (such as education, computer engineering, computational media, biology, Latin American and Latino studies, linguistics, and philosophy) help nurture students' research and prepare them for a wide variety of careers. Graduates of our program hold positions in academia, research institutes, and community and non-profit organizations.

The social psychology graduate program at UC Santa Cruz has a unique mission and focus. We use Kurt Lewin's model of "full-cycle" social psychology (theory-application-action) to study a broad range of topics related to social justice. In this way, knowledge gained in action-oriented research, in turn, leads to the development of new theory. Accordingly, our students learn to apply psychological theories and data to the analysis and solution of a wide range of social problems. Our students are trained to use a variety of research methods (e.g., survey, participatory action research, ethnography, lab or field experiments) and to examine justice-related issues in different cultural, political, and policy contexts. They are also encouraged to attend to issues of race, class, sexuality, ethnicity, gender, and ableness; and, in addition to traditional social psychological approaches, are steeped in critical theoretical perspectives such as feminist theory, critical race theory, and intersectionality. Our graduates go on to successful careers in academia as well as in community, government, and non-profit settings. Our approach to research and training, combined with the quality and competencies of our faculty, make our program among the nation's best for the psychological study of social justice issues. Current faculty research interests include: aggression and trauma; educational equity, access, and servingness; feminisms; institutional analysis; intersectionality; narrative and identity; race as a social process; social identities and stigmatization of immigrant-origin students; poverty and economic justice; power and oppression; critical carceral studies; psychology and law; political psychology; sexual and gender diversity; sexuality; social identity; social policy analysis; and structural inequality.

Graduate students in psychology may obtain a designated emphasis on the psychology Ph.D. diploma indicating that they have obtained additional training in another discipline such as critical race and ethnic studies, data science, feminist studies, Latin American and Latino studies, or sociology. For the full list of programs that offer a designated emphasis, see the Academic Programs section of the catalog. For specific requirements for a designated emphasis in a program, please refer to the program statement for that department.

Details on the policies for admission to graduate standing and requirements for the Ph.D. degree, as well as the online application can be found on the Division of Graduate Studies website. The department's graduate program brochure, and faculty research are available on the department website.

PSYCHOLOGY B.A.

Information and Policies

Introduction

Program Learning Outcomes

Students who complete the psychology major should demonstrate competency in:

- **Application of knowledge with critical thinking skills**. Students should be able to use critical thinking to evaluate and interpret evidence, and to apply psychological concepts, theories, and research findings to individual, social, and cultural issues.
- **Application of research methods with values and integrity**. Students should be able to apply basic research methods in psychology, with sensitivity to ethical principles.
- **Communication skills**. Students should be able to demonstrate effective communication skills following professional conventions in psychology appropriate to purpose and context.
- **Awareness of sociocultural diversity and societal inequality**. Students should be able to understand the complexity of sociocultural diversity and societal inequality in the inquiry and analysis of psychological issues.

Academic Advising for the Program

The Psychology Department has an advising office located at 150 Social Sciences 2 and can be reached at psyadv@ucsc.edu. The advisors assist students in obtaining information regarding major requirements and petitions, course planning, substitution of transfer courses for advance enrollment, careers, and graduate schools. Students are encouraged to take advantage of the advising office throughout their college career. Transfer students are encouraged to consult the Transfer Information and Policy Section.

Acceptance to the Psychology Major

Students are admitted to the University of California, Santa Cruz with a "proposed major" in most cases, and later petition to officially declare the major. Admission to UC Santa Cruz does not guarantee acceptance into a particular major. Students must declare a major by the major declaration deadline during their sixth quarter at UCSC. Junior transfer students must declare a major no later than the deadline during their second quarter at UCSC. Learning about and preparing for the major should be primary goals for students.

Getting Started in the Major: Frosh

Students who enter UC Santa Cruz as frosh/first-year students are required to formally declare a major **before enrolling** in their **7th quarter/third year at UCSC**. It is strongly recommended that students interested in pursuing the

psychology major (general or intensive) complete major requirements by the start of their sixth quarter or have no more than one requirement in progress during the sixth quarter. Students should complete PSYC 1, the mathematics requirement, and the statistics requirement (see below for courses that can be used to satisfy these requirements). PSYC 1 and the statistics requirement must be taken for a letter grade. If the minimum grade (B-) is not met for PSYC 1, PSYC 10 or PSYC 20 must be taken for a letter grade with the minimum grade earned (B-).

After completing these three lower-division requirements, students may petition to declare the psychology major subject to the grade requirements described in the Qualification to the Major section below. Students are recommended to fulfill major qualifications as early as possible to avoid delays in the major declaration and enrollment processes. Refer to the Requirements and Planners section below, and consult with a department advisor early to begin the process toward the completion of major qualifications and major declaration.

High school students considering psychology as their university major find that the best preparation is a solid general education in English writing and mathematics (including precalculus), and social sciences.

Transfer Information and Policy

Transfer Admission Screening Policy

Transfer students who want to pursue the psychology major (general or intensive), must have applied and been admitted to UC Santa Cruz as a proposed psychology major. The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall. Some courses may be satisfied via exam credit.

Introduction to Psychology

PSYC 1	Introduction to Psychology	5

Minimum grade of B- (2.7) is required. If a grade of C (2.0) or C+ (2.3) is earned in an equivalent course, a student must earn a minimum grade of B- (2.7) in a course articulated to UC Santa Cruz's PSYC 10 or PSYC 20.

Statistics

One of the following:

	Either this course	
PSYC 2	Introduction to Psychological Statistics	5
	or this course	
STAT 5	Statistics	5
	or these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Minimum grade of B- (2.7) is required.

Mathematics

One of the following:

MATH 3	Precalculus	5

Minimum grade of C (2.0) is required. A course in calculus may also be used for this requirement, such as MATH 11A or MATH 19A.

Recommended Prior to Transfer

Though not required, students are recommended to complete the following prior to transfer:

PSYC 10	Introduction to Developmental Psychology	5
PSYC 20	Cognition: Fundamental Theories	5

Getting Started in the Major: Transfer Students

Students are admitted to UC Santa Cruz with a "proposed major" and later petition to officially declare the major. Transfer students who want to pursue the psychology major (general or intensive), must have applied and been admitted to UC Santa Cruz as a proposed psychology major. Admission does not guarantee acceptance into a particular major, although transfer students' records are screened for preparation for psychology at the time of admission. In order to successfully transition to UCSC, transfer students must be formally declared by the deadline in their second quarter of enrollment. Students are advised to set up and check their UCSC email regularly, make contact with their major advisors, submit course descriptions for articulation purposes, and consider taking summer session courses prior to their first fall quarter.

Admitted transfer students who satisfy the requirements of the screening policy can declare the major at any time after matriculation at UC Santa Cruz. See the How to Declare the Major Section.

Major Qualification Policy and Declaration Process

Major Qualification

Students may petition to declare the psychology major once they have demonstrated foundational skills by completing each of the following three requirements. Some courses may be satisfied via exam credit.

One of the following courses

Mathematics requirement

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
AM 11A	Mathematical Methods for Economists I	5
MATH 3	Precalculus	5
MATH 4	Mathematics of Choice and Argument	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5

MATH 19A	Calculus for Science, Engineering, and Mathematics	5

May also be satisfied with a score of 300 or higher on the ALEKS Mathematics Placement.

Plus take the following course and obtain a B- or better

PSYC 1	Introduction to Psychology	5

PSYC 1 must be taken in order to declare. If a B- or better grade is not achieved in PSYC 1, achieving a B- or better in PSYC 10 or PSYC 20 will fulfill declaration requirements.

Plus one of the following options and obtain a grade of B- or better

	Either this course	
PSYC 2	Introduction to Psychological Statistics	5
	or this course	
STAT 5	Statistics	5
	or these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Appeal Process

Students who did not satisfy the major admission requirements but believe there are extenuating circumstances concerning their performance in the foundational courses may file a written appeal describing these circumstances for review. For more information on the appeals process, please make an appointment with a staff advisor or email psyadv@ucsc.edu. The department will notify the student of the decision within 7-10 days of the receipt of the appeal.

How to Declare a Major

Students should submit a petition to declare as soon as they complete the major qualification (MQ) courses or reach their declaration deadline quarter, whichever comes first. Transfer students can petition to declare their major as early as the first day of instruction during their first quarter at UCSC.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh, in the second quarter of enrollment for transfers), will either be approved or denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed MQ courses.

To petition to declare the major, students should follow the instructions on the department's website.

Letter Grade Policy

PSYC 1 and the statistics (major qualification) requirement must be taken for a letter grade. If alternative courses are taken to meet the major qualification requirements, they must also be taken for a letter grade (e.g., PSYC 10 or PSYC 20). A grade of B- or higher is required, or its equivalent exam credit score.

[Optional Catchall]

Course Substitution Policy

Students who want to fulfill requirements with courses taken at other colleges (excluding articulated courses from California community colleges) must petition for the substitution of their transfer courses via email to psyadv@ucsc.edu. PSYC 100, Research Methods in Psychology, and the senior seminar must be taken at UC Santa Cruz. Students planning to transfer to UC Santa Cruz should check with the advising office of their present college or refer to assist.org.

Double Majors and Major/Minor Combinations Policy

Upper-division courses from other departments taken to fulfill the psychology elective requirement may not count toward another major or minor (See “Course Requirements” in the “Upper-Division Courses” section). Students wishing to pursue double majors or a major/minor combination are encouraged to meet with an advisor to create an academic plan to do so.

Students who are interested in adding a double major in psychology must do so by their original major declaration deadline (i.e., in their sixth quarter for students admitted as frosh). **Transfer students who were not originally screened for and admitted as a psychology major may not add psychology as a second major**

Global Learning

Up to three Global Learning courses may be approved for the major and prior course approval is recommended. Global Learning courses equivalent to less than 5 quarter credits (i.e. 4 or 4.5 quarter credits) should be discussed with a psychology undergraduate advisor to ensure major requirements are still met. Please review the department's study abroad webpage if you are considering studying abroad and want to try to obtain approval for such courses to count toward the major.

Honors

Honors in the psychology major are awarded to graduating seniors whose UC Santa Cruz coursework (1-189) averages a 3.6 GPA or higher.

Highest honors in the major are reserved for students who meet the honors criteria as well as successful completion of a senior thesis, or whose UC Santa Cruz coursework (1-189) averages a 3.9 GPA or higher.

Research, Field Study, and Other Educational Opportunities

The Psychology Department offers a range of educational opportunities, including opportunities for undergraduate research and field study. For more information, see the department's educational opportunities website.

Optional Catchall

General Psychology Major

Course Requirements

Thirteen courses are required for the general major. Some courses may be satisfied via exam credit. Here is a brief overview of these courses:

- Five lower-division courses are required before completing most upper-division courses. These should be completed as soon as possible, ideally by the end of the sophomore year. They include:
  - three lower-division courses required for declaration (PSYC 1, mathematics requirement, and statistics requirement), and
  - two additional lower-division courses (PSYC 10, PSYC 20)
- PSYC 100, Research Methods in Psychology, which is a prerequisite for many other upper-division courses and fulfills half of the Disciplinary Communication requirement. This course **MUST** be taken at UC Santa Cruz.
- Six additional upper-division courses in psychology, including a senior seminar (see below for details)
- One non-psychology upper-division course (see below for details)

Lower-Division Courses

Take this course:

PSYC 1	Introduction to Psychology	5

Plus one of the following options:

	Either this course	
PSYC 2	Introduction to Psychological Statistics	5
	or this course	
STAT 5	Statistics	5
	or these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus:

PSYC 10	Introduction to Developmental Psychology	5

Plus:

PSYC 20	Cognition: Fundamental Theories	5

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
AM 11A	Mathematical Methods for Economists I	5
MATH 3	Precalculus	5
MATH 4	Mathematics of Choice and Argument	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

May also be satisfied with a score of 300 or higher on the ALEKS Mathematics Placement.

Upper-Division Courses

Eight upper-division courses are required for the general major. At least four must be PSYC courses taken at UC Santa Cruz: PSYC 100, and one from each of the Developmental, Cognitive, and Social subfields, including a senior seminar.

Research Methods:

PSYC 100	Research Methods in Psychology	7

One course in each of the following subfields (three courses):

- Developmental (courses numbered PSYC 101-PSYC 119A-Z)
- Cognitive (courses numbered PSYC 120-PSYC 139A-Z)
- Social (courses numbered PSYC 140-PSYC 159A-Z)

One additional 5-credit upper-division course from THREE of the subfields listed below (i.e., a total of three courses, each from a separate subfield):

- Developmental (PSYC 101-PSYC 119A-Z)
- Cognitive (PSYC 120-PSYC 139A-Z)
- Social (PSYC 140-PSYC 159A-Z)
- Clinical-Personality (PSYC 160-PSYC 179A-Z)
- Methods (PSYC 180-PSYC 189)
- Independent Study (PSYC 193-PSYC 199)

One upper-division course outside of psychology:

One upper-division course, numbered 100-189 from one of the following related areas outside of psychology. The course must be 5 credits, and neither cross-listed with psychology nor taught by psychology faculty. Please check with an advisor if you are a double major or minor in one of the below subjects:

- Anthropology
- Community Studies
- Critical Race and Ethnic Studies
- Ecology and Evolutionary Biology
- Economics
- Education
- Environmental Studies
- Feminist Studies
- History of Consciousness
- Latin American and Latino Studies
- Legal Studies
- Linguistics
- Philosophy
- Politics
- Sociology
- Or a specific course from the list below:

APLX 102	Bilingualism	5
APLX 116	Discourse Analysis: Language Use and Context	5
CMPM 146	Game AI	5
CMPM 148	Interactive Storytelling	5
CSE 104	Computability and Computational Complexity	5
CSE 140	Artificial Intelligence	5
HAVC 141F	The Camera and the Body	5
HAVC 141K	Activist Art Since 1960: Art, Technology, Activism	
HAVC 141O	Sex, Lies, and Surveillance: Contemporary Documentary Arts	5
HAVC 185	Community Engagement Through the Arts	5
HAVC 186	Horror and Gender in Art and Visual Culture	5
METX 108	Introduction to Research Methods in Global and Community Health	5
METX 135	Functional Anatomy	5
STAT 131	Introduction to Probability Theory	5
STAT 132	Classical and Bayesian Inference	5

METX 108 will **NOT** be accepted as a substitution for PSYC 100.

Upper-Division Seminar:

One of the upper-division courses must be an upper-division seminar; these courses are psychology courses identified within the General Catalog by their course descriptions containing the phrase “satisfies seminar requirement.” These are any course in the PSYC 119, 139, 159, or 179 series.

Students can access a full list of courses on the department’s website. Upper-division courses and their catalog descriptions are grouped within each of the subfields.

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in Psychology is satisfied by completing PSYC 100 and a seminar. Seminar courses are Psychology courses identified within the General Catalog by their course descriptions containing the phrase “satisfies seminar requirement,” and are numbered PSYC 119A-Z, PSYC 139A-Z, PSYC 159A-Z, and PSYC 179A-Z.

Comprehensive Requirement

UC Santa Cruz requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Psychology students will satisfy this requirement by receiving a passing grade in a Psychology seminar which is also part of the DC requirement (see above). These are any course in the PSYC 119, 139, 159, or 179 series. To ensure that all students can meet the seminar requirement, students will enroll in only one senior seminar. Students are only allowed to enroll in additional seminars after all other students who still need to fulfill their seminar requirement have enrolled.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Following are two recommended academic plans for frosh, a three-year plan for frosh, and one additional plan for transfer students. Plan One is a suggested guideline for frosh who are committed to the major early in their academic career. Plan Two is for frosh who are considering the major or who need more preparation. Students should note that precalculus (AM 3, or see Lower Division Courses section for other qualifying courses or test scores) is a requirement for the major and is a prerequisite for PSYC 2 and PSYC 100. The three-year plan

for frosh is most appropriate for students who plan on a single major, who have satisfied the Entry Level Writing and Composition requirements before their first quarter, and who are committed to enrolling in Summer Session courses after their first and second years. The fourth planner is a suggested two-year guideline for transfer students.

Frosh Plan One

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)		PSYC 1 WRIT 1/WRIT 1E (if needed)	AM 3	
2nd (soph)	WRIT 2*	PSYC 2	PSYC 20	
3rd (junior)	PSYC 10 out of dept. course	PSYC 100	upper-division social	
4th (senior)	upper-division cognitive	upper-division PSYC elective (seminar) upper-division developmental	upper-division PSYC elective upper-division PSYC elective	

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses listed above will satisfy the PE, SR, and DC general education requirements. All other GE requirements have to be satisfied.

Frosh Plan Two

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 2	AM 3 WRIT 1/WRIT 1E (if needed)	PSYC 1	
2nd (soph)	PSYC 20 WRIT 2*	PSYC 2	PSYC 10	
3rd (junior)	out of dept. course	PSYC 100 upper-division cognitive	upper-division developmental	

4th (senior)	upper-division social	upper-division PSYC elective (seminar)	upper-division PSYC elective	
	upper-division cognitive	upper-division PSYC elective		

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses listed above will satisfy the PE, SR, and DC general education requirements. All other GE requirements have to be satisfied.

Frosh Three-Year Plan

	Fall	**Winter**	**Spring**	**Summer**
1st (frosh)	MATH 2 (if needed) or any 5-credit class	PSYC 1 (PE GE)	PSYC 2 (SR GE)	PSYC 100 (7 credits, 1/2 DC GE)**
	College Core Course	AM 3 (MF GE)*	CC Gen Ed	Any 5-credit class
	SI Gen Ed	Any 5-credit class	Writing 2 (C GE)	
		STEV 26		
	Total credits for quarter: 17	**Total credits for quarter: 17**	**Total credits for quarter: 15**	**Total credits for quarter: 12**
2nd (soph)	PSYC 20	PSYC 10	Upper-division Social	Upper-division PSYC elective
	Upper-division Outside PSYC	ER General Education Class	IM General Education Class	Any 5 credit class
	TA General Education Class	Any 5 credit class	Any 5 credit class	Any 5 credit class
	PR General Education Class (2 credits)	Any 2 credit class	Any 2 credit class	
	Total credits for quarter: 17	**Total credits for quarter: 17**	**Total credits for quarter: 17**	**Total credits for quarter: 15**
3rd (junior)	Upper-division Developmental	Upper-division Cognitive	Upper-division PSYC Seminar (1/2 DC GE)	Any 5 credit class
	Any 5 credit class	Upper-division PSYC elective	Any 5 credit class	Any 5 credit class
	Any 5 credit class	Any 5 credit class	Any 5 credit class	
	Total credits for quarter: 15	**Total credits for quarter: 15**	**Total credits for quarter: 15**	**Total credits for quarter: 10**
				Total credits in plan: 183* **

* Students who place higher than MATH 3, Precalculus, may substitute another course that satisfies the MF GE requirement.

** To successfully complete the three-year pathway, students must take PSYC 100 during Summer Session of Year 1. Prerequisites to this course are Precalculus, PSYC 2, and completion of the C general education requirement. Therefore it is crucial these classes be completed in the first year.

***Total credit count includes the 1-unit Orientation Course taken the summer before the start of year 1

The following General Education requirements will be satisfied through required courses in the Psychology major: PE, SR, DC.

Transfer Plan

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	PSYC 100 PSYC 10	PSYC 20 upper-division Social	upper-division Developmental	
4th (senior)	upper-division Cognitive upper-division PSYC elective	out of dept. course upper-division PSYC elective	upper-division PSYC elective (seminar)	

Intensive Psychology Major

Course Requirements

The Intensive Psychology major involves additional upper-division coursework, including a requirement of an advanced methods class and independent study. Students intending to pursue the Intensive concentration should declare this on their proposed study plan during the junior year to ensure there is enough time to complete the additional requirements.

Note: The intensive major designation appears on the transcript, but it does not formally appear on students' diplomas.

Sixteen courses are required for the Intensive concentration. Some courses may be satisfied via exam credit. Here is a brief overview of these courses:

- Five lower-division courses (course numbers 1-99) are required before completing most upper-division courses. These should be completed as soon as possible, ideally by the end of the sophomore year. They include:
  - three lower-division courses required for declaration (PSYC 1, mathematics requirement, and statistics requirement), and
  - two additional lower-division courses (PSYC 10, PSYC 20)
- PSYC 100, Research Methods in Psychology, which is a prerequisite for many other upper-division courses and fulfills half of the Disciplinary Communication requirement. This course **MUST** be taken at UC Santa Cruz.
- Seven additional upper-division courses in Psychology, including an advanced research course and a senior seminar (see below for details)
- Two quarters of independent study (research, field study, or senior thesis- see below for details)
- One non-psychology upper-division course (see below for details)

Lower-Division Courses

Take this course:

PSYC 1	Introduction to Psychology	5

Plus one of the following options:

	Either this course	
PSYC 2	Introduction to Psychological Statistics	5
	or this course	
STAT 5	Statistics	5
	or these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental,	2

	and Health Sciences Laboratory	

Plus:

PSYC 10	Introduction to Developmental Psychology	5

Plus

PSYC 20	Cognition: Fundamental Theories	5

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
AM 11A	Mathematical Methods for Economists I	5
MATH 3	Precalculus	5
MATH 4	Mathematics of Choice and Argument	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

May also be satisfied with a score of 300 or higher on the ALEKS Mathematics Placement.

Upper-Division Courses

Eleven upper-division courses are required for the intensive major:

Research Methods:

PSYC 100	Research Methods in Psychology	7

One course in each of the following subfields (three courses):

- Developmental (courses numbered PSYC 101-PSYC 119A-Z)
- Cognitive (courses numbered PSYC 120-PSYC 139A-Z)
- Social (courses numbered PSYC 140-PSYC 159A-Z)

One additional 5-credit upper-division course from THREE of the subfields listed below (i.e., a total of three courses, each from a separate subfield):

- Developmental (PSYC 101-PSYC 119A-Z)
- Cognitive (PSYC 120-PSYC 139A-Z)
- Social (PSYC 140-PSYC 159A-Z)
- Clinical-Personality (PSYC 160-PSYC 179A-Z)
- Methods (PSYC 180-PSYC 189)
- Independent Study (PSYC 193-PSYC 199)

One of the following:

PSYC 181	Psychological Data Analysis	5
PSYC 182	Qualitative Research Methods	5

Two quarters of study from one of the following:

PSYC 193	Field Study	5
PSYC 193I	International Field Study	10
PSYC 194A	Research Internship in Developmental Psychology	5
PSYC 194B	Research Internship in Cognitive Psychology	5
PSYC 194C	Research Internship in Social Psychology	5
PSYC 194D	Research Internship Clinical Psychology	5
PSYC 195A	Senior Thesis	5
PSYC 195B	Senior Thesis	5
PSYC 195C	Senior Thesis	5

PSYC 193I is equivalent to two quarters of field study and will satisfy the Advanced Requirement in its entirety.

One upper-division course outside of psychology:

One upper-division course, numbered 100-189, from one of the following related areas outside of Psychology. The course must be 5 credits, and neither cross-listed with Psychology nor taught by Psychology faculty. Please check with an advisor if you are a double major or minor in one of the following subjects:

- Anthropology
- Community Studies
- Critical Race and Ethnic Studies
- Ecology and Evolutionary Biology
- Economics
- Education
- Environmental Studies
- Feminist Studies
- History of Consciousness
- Latin American and Latino Studies
- Legal Studies
- Linguistics
- Philosophy
- Politics
- Sociology
- Or a specific course from the list below:

APLX 102	Bilingualism	5
APLX 116	Discourse Analysis: Language Use and Context	5

CMPM 146	Game AI	5
CMPM 148	Interactive Storytelling	5
CSE 104	Computability and Computational Complexity	5
CSE 140	Artificial Intelligence	5
HAVC 141F	The Camera and the Body	5
HAVC 141K	Activist Art Since 1960: Art, Technology, Activism	
HAVC 141O	Sex, Lies, and Surveillance: Contemporary Documentary Arts	5
HAVC 185	Community Engagement Through the Arts	5
HAVC 186	Horror and Gender in Art and Visual Culture	5
METX 108	Introduction to Research Methods in Global and Community Health	5
METX 135	Functional Anatomy	5
STAT 131	Introduction to Probability Theory	5
STAT 132	Classical and Bayesian Inference	5

METX 108 will **NOT** be accepted as a substitution for PSYC 100.

Upper-Division Seminar:

One of the upper-division courses must be an upper-division seminar; these courses are Psychology courses identified within the General Catalog by their course descriptions containing the phrase “satisfies seminar requirement.” These are any course in the PSYC 119, 139, 159, or 179 series.

Students can access a full list of courses on the department’s website. Upper-division courses and their catalog descriptions are grouped within each of the subfields.

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in Psychology is satisfied by completing PSYC 100 and a seminar. Seminar courses are Psychology courses identified within the General Catalog by their course descriptions containing the phrase “satisfies seminar requirement” and are numbered PSYC 119A-Z, PSYC 139A-Z, PSYC 159A-Z, and PSYC 179A-Z.

Comprehensive Requirement

UC Santa Cruz requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Psychology students will satisfy this requirement by receiving a passing grade in a Psychology seminar, which is also part of the DC requirement (see above). Passing a seminar course is also required for the major. Courses that meet this requirement are designated as seminars in the campus catalog as “satisfies seminar requirement.” These are any course in the PSYC 119, 139, 159, or 179 series.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Following are two recommended academic plans for frosh and one additional plan for transfer students. Plan One is a suggested guideline for frosh who are committed to the major early in their academic career. Plan Two is for frosh who are considering the major or who need more preparation. Students should note that precalculus (AM 3, or see Lower Division Courses section for other qualifying courses or test scores) is a requirement for the major and is a prerequisite for PSYC 2 and PSYC 100. The third planner is a suggested two-year guideline for transfer students.

Frosh Plan One

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	College 1	PSYC 1 WRIT 1/WRIT 1E (if needed) AM 3	PSYC 2	
2nd (soph)	PSYC 20 WRIT 2*	PSYC 10	PSYC 100	
3rd (junior)	Upper-division Cognitive	Upper-division Developmental Out of department course	Upper-division Social	
4th	PSYC	PSYC 193/	Upper-	

(senior)	193/ PSYC 194/ PSYC 195	PSYC 194/ PSYC 195	division PSYC elective
	Upper-division PSYC elective	PSYC 181/ PSYC 182	Upper-division PSYC elective (seminar)

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses listed above will satisfy the PE, SR, and DC general education requirements. All other GE requirements have to be satisfied.

Frosh Plan Two

	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 2	PSYC 1 WRIT 1/WRIT 1E (if needed)	PSYC 20	
2nd (soph)	AM 3 WRIT 2*	PSYC 2	PSYC 10	
3rd (junior)	PSYC 100	Upper-division Cognitive Out of department course	Upper-division Developmental	
4th (senior)	PSYC 193/ PSYC 194/ PSYC 195	PSYC 193/ PSYC 194/ PSYC 195	Upper-division PSYC elective	
	Upper-division PSYC elective	PSYC 181/ PSYC 182	Upper-division PSYC elective (seminar)	
	Upper-division Social			

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses listed above will satisfy the PE, SR, and DC general education requirements. All other GE requirements have to be satisfied.

Transfer Plan

	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
3rd (junior)	PSYC 100	Upper-division Developmental	Upper-division Social	
	PSYC 10	Out of department course	PSYC 20	
4th (senior)	PSYC 193/ PSYC 194/	PSYC 193/ PSYC 194/ PSYC 195	Upper-division PSYC	

PSYC 195		elective (seminar)
Upper-division PSYC elective	PSYC 181/ PSYC 182	Upper-division PSYC elective
Upper-division Cognitive		

COGNITIVE SCIENCE B.S.

Information and Policies

Introduction

Program Learning Outcomes

Students who complete the cognitive science major should demonstrate competency in:

- **Application of knowledge with critical thinking skills.** Students should be able to use critical thinking to evaluate and interpret evidence, and to apply cognitive science concepts, theories, and research findings to individual, social, and cultural issues.
- **Application of research methods with values and integrity.** Students should be able to apply basic research methods in cognitive science, with sensitivity to ethical principles.
- **Communication skills.** Students should be able to demonstrate effective communication skills following professional conventions in cognitive science appropriate to purpose and context.
- **Awareness of methodological and theoretical diversity.** Students should be able to understand the complexities of cognition using neural, embodied, social, and/or technological approaches.

Academic Advising for the Program

The Psychology Department has an advising office located at 150 Social Sciences 2 and can also be reached at psyadv@ucsc.edu. The advisors assist students in obtaining information regarding major requirements and petitions, course planning, substitution of transfer courses for advance enrollment, careers, and graduate schools. Students are encouraged to take advantage of the advising office throughout their college career. Transfer students are encouraged to consult the Transfer Information and Policy Section.

Acceptance to the Cognitive Science Major

Students are admitted to the University of California, Santa Cruz with a "proposed major" in most cases, and later petition to officially declare the major. Admission to UC Santa Cruz does not guarantee acceptance into a particular major. Students must declare a major by the major declaration deadline during their sixth quarter at UCSC. Junior transfer students must declare a major no later than the deadline during their second quarter at UCSC. Learning about and preparing for the major should be primary goals for students.

Getting Started in the Major: Frosh

Students who enter UC Santa Cruz as frosh/first-year students are required to formally declare a major before enrolling in their 7th quarter/third year at UCSC. It is strongly recommended that students interested in pursuing the cognitive science major complete major requirements by the start of their 6th quarter or have no more than one requirement in progress during the 6th quarter. Students should complete PSYC 20, the statistics requirement, the calculus requirement, and the computer programming requirement. These classes should be taken for a letter grade. After completing these four lower-division required courses, students may petition to declare the cognitive science major subject to the grade requirements described in the Major Qualification section below. Students are recommended to fulfill major qualifications as early as possible to avoid delays in the major declaration and enrollment processes. Refer to the Requirements and Planners section below and consult with a department advisor early to begin the process toward the completion of major qualifications and major declaration. High school students considering cognitive science as their university major find that the best preparation is a solid general education in English writing, mathematics at least through precalculus, biological and physical sciences, and social sciences.

Transfer Information and Policy

Transfer Admission Screening Policy

Transfer students who want to pursue the cognitive science major, must have applied and been admitted to UC Santa Cruz as a proposed cognitive science major. The following calculus, statistics, and programming courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall. Some courses may be satisfied via exam credit.
All courses must be passed with a grade of C (2.0) or better and a cumulative GPA of 2.8 must be obtained across the required courses. Students with exam credit for any of the courses need only receive a 2.8 GPA in the remaining coursework.

Calculus

One of the following:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5

MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

Statistics

One of the following

	Either this course	
PSYC 2	Introduction to Psychological Statistics	5
	or this course	
STAT 5	Statistics	5
	or these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Programming

One of the following:

CSE 13S	Computer Systems and C Programming	7
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
ECE 13	Computer Systems and C Programming	7

Recommended Prior to Transfer

Though not required, students are recommended to complete the following prior to transfer:

PSYC 20	Cognition: Fundamental Theories	5

Getting Started in the Major: Transfer Students

Students are admitted to UC Santa Cruz with a "proposed major", and later petition to officially declare the major. Transfer students who want to pursue the cognitive science major, must have applied and been admitted to UC Santa Cruz as a proposed cognitive science major. Transfer students' records are screened for preparation for the cognitive science major at the time of admission. In order to successfully transition to UCSC, transfer students must be formally declared by the deadline in their second quarter of enrollment. Students are advised to set up and check their UCSC email regularly, make contact with their major advisors, submit course descriptions for articulation purposes, and consider taking summer session courses prior to their first fall quarter.

Admitted transfer students who satisfy the requirements of the screening policy can declare the major at any time after matriculation at UC Santa Cruz and by their second quarter declaration deadline. See the How to Declare the Major Section.

Major Qualification Policy and Declaration Process

Major Qualification

Students may petition to declare the cognitive science major once they have completed the lower-division requirements by the start of their 6th quarter or have no more than one requirement in progress during the 6th quarter (for students who enter as frosh) or their second quarter of enrollment (for transfer students).

All courses must be passed with a grade of C (2.0) or better and a cumulative GPA of 2.8 must be obtained across the required courses. Some courses may be satisfied via exam credit. Students with exam credit for any of the courses need only receive a 2.8 GPA in the remaining coursework.

Transfer students might be able to petition to substitute equivalent courses they have taken from other institutions. Some courses taken at community colleges may already qualify to satisfy some of our lower-division requirements. Students not meeting the grade requirements in the lower-division courses may take any of the listed alternatives as substitutions; the department will use the highest grade to compute GPA.

Introduction to Cognition

Take the following course:

PSYC 20	Cognition: Fundamental Theories	5

Statistics

Choose one of the following courses:

	Either this course	
PSYC 2	Introduction to Psychological Statistics	5
	or this course	
STAT 5	Statistics	5
	or these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Lecture and lab combinations count as a single course

Calculus

Choose one of the following courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

Computer Programming

Choose one of the following courses:

CSE 13S	Computer Systems and C Programming	7
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
ECE 13	Computer Systems and C Programming	7

CSE 20 may be satisfied by successfully completing the CSE 20 Test Out Exam.

Appeal Process

Students who did not satisfy the major admission requirements by their declaration deadline, but believe there are extenuating circumstances concerning their performance in the foundational courses may file an appeal for department review.;. For more information on the appeals process, please make an appointment with a staff advisor or email psyadv@ucsc.edu. The department will notify the student of the decision within 7-10 days of the receipt of the appeal.

How to Declare a Major

Students should submit a petition to declare as soon as they complete the major qualification (MQ) courses or reach their declaration deadline quarter, whichever comes first. Transfer students can petition to declare their major as early as the first day of instruction during their first quarter at UCSC.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh, in the second quarter of enrollment for transfers), will either be approved or denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed MQ courses.

To petition to declare the major, students should follow the instructions on the department's website.

Letter Grade Policy

All lower-division courses required for major declaration have to be taken for a letter grade. In the instance that they are taken for Pass/No Pass, a Pass grade will be accepted, but will be considered as equivalent to a C in the 2.8 GPA calculation requirement.

[Optional Catchall]

Course Substitution Policy

Students who want to fulfill requirements with courses taken at other colleges (excluding articulated courses from California Community Colleges) must petition for the substitution of their transfer courses via email to psyadv@ucsc.edu. PSYC 100, Research Methods in Psychology, and the senior seminar must be taken at UC Santa Cruz. Students planning to transfer to UC Santa Cruz should check with the advising office of their present college, or refer to assist.org.

Double Majors and Major/Minor Combinations Policy

Students wishing to pursue double majors or a major/minor combination are encouraged to meet with an advisor to create an academic plan to do so.

Students who are interested in adding a double major in cognitive science must do so by their original major declaration deadline (i.e. in their sixth quarter for students admitted as frosh). **Transfer students who were not originally screened for and admitted as a cognitive science major may not add cognitive science as a second major.**

Global Learning

Up to three Global Learning courses may be approved for the major and prior course approval is recommended. Global Learning courses equivalent to less than 5 quarter credits (i.e. 4 or 4.5 quarter credits) should be discussed with a psychology undergraduate advisor to ensure major requirements are still met. Please review this webpage if you are considering studying abroad and want to try to obtain approval for such courses to count toward the major.

Honors

Honors in the cognitive science major are awarded to graduating seniors whose UC Santa Cruz grade point average is a 3.6 or higher in psychology courses (1-189).

Highest honors in the major are reserved for students who meet the honors criteria as well as successful completion of a senior thesis, or whose UC Santa Cruz grade point average is a 3.9 or higher in psychology courses (1-189).

Research, Field Study, and Other Educational Opportunities

The Psychology Department offers a range of educational opportunities, including opportunities for undergraduate research and field study. For more information, see the department's educational opportunities website.

Requirements and Planners

Course Requirements

The undergraduate degree program in cognitive science is a program offering a course of study leading to the bachelor of science (B.S.) degree. Fifteen courses (77 credits) are required. Because some courses have additional prerequisites, students should read the descriptions of courses carefully, noting the prerequisites for courses of interest to them. Some courses may be satisfied via exam credit.

Lower-Division Courses

Introduction to Cognition

Take the following course:

PSYC 20	Cognition: Fundamental Theories	5

Statistics

Choose one of the following courses:

	Either this course	
PSYC 2	Introduction to Psychological Statistics	5
	or this course	
STAT 5	Statistics	5
	or these courses	
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Lecture and lab combinations count as a single course.

Calculus

Choose one of the following courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 16A	Mathematics for Life Sciences	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

Computer Programming

Choose one of the following courses:

CSE 13S	Computer Systems and C Programming	7
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
ECE 13	Computer Systems and C Programming	7

Some of these courses have prerequisites. CSE 20 may be satisfied by successfully completing the CSE 20 Test Out Exam.

Upper-Division Courses

Take the following course:

PSYC 100	Research Methods in Psychology	7

Core Courses

Students must complete a course from three of the four following areas:

Perception

PSYC 121	Perception	5

Neuroscience

PSYC 123	Cognitive Neuroscience	5

Language

PSYC 125	Psychology of Language	5

Memory

PSYC 129	Human Learning and Memory	5

Electives

Cognitive Psychology Electives

Students must complete three additional upper-division psychology courses as follows:

One Senior Seminar:

Seminar courses are psychology courses identified within the General Catalog by their course descriptions containing the phrase “satisfies seminar requirement.” These are any courses from the PSYC 119, PSYC 139, PSYC 159, or PSYC 179 series.

Students can access a full list of courses on the department’s website. Upper-division courses and their catalog descriptions are grouped within each of the subfields

Plus two additional courses from the following list:

PSYC 103	Adult Development and Aging	5
PSYC 104	Development in Infancy	5
PSYC 105	Children's Thinking	5
PSYC 109	Psychobiology of Stress and Well-being across the Lifespan	5
PSYC 112	Moral Development	5
PSYC 116	Communication Technologies, Culture, and Human Development	5
PSYC 120	Visual and Spatial Cognition	5
PSYC 120D	Deafness and Sign Language	5
PSYC 121	Perception	5
PSYC 122	The Science of Learning	5
PSYC 123	Cognitive Neuroscience	5
PSYC 124	Psychology of Reading	5
PSYC 125	Psychology of Language	5
PSYC 126	Conversations	5
PSYC 129	Human Learning and Memory	5
PSYC 130	Deception, Brain, and Behavior	5
PSYC 133	Bilingualism from a Cognitive Perspective	5

PSYC 138	Computer Programming for the Cognitive Sciences	5
PSYC 138M	Introduction to Matlab Programming for the Cognitive Sciences	5
PSYC 140F	Mind, Society, and Culture	5
PSYC 147A	Psychology and Law	5
PSYC 181	Psychological Data Analysis	5
PSYC 182	Qualitative Research Methods	5
PSYC 193	Field Study	5
PSYC 193I	International Field Study	10
PSYC 194A	Research Internship in Developmental Psychology	5
PSYC 194B	Research Internship in Cognitive Psychology	5
PSYC 195A	Senior Thesis	5

PSYC 193, PSYC 193I, PSYC 194A, PSYC 194B, and PSYC 195A may satisfy only one elective requirement.

One of these electives may be replaced by a core course that was not used to satisfy the core courses requirement. PSYC 204-PSYC 252, graduate cognitive courses, may be substituted by petition.

Interdisciplinary Electives

Students must complete four interdisciplinary electives from lists of courses pre-approved by the Psychology Department, at least one of which must be upper-division. Students are responsible for planning their course of study to complete any necessary prerequisites for electives they wish to take. A list of possible interdisciplinary elective courses, including prerequisites, are given below.

Lecture and lab combinations count as a single course. For courses with a required concurrently enrolled lab, only successful completion of the lecture is required for the major. Successful completion of the lab may count toward total degree credits.

The upper-division School of Engineering courses in this section have additional prerequisites that are not listed here.

LING 111 formerly LING 55

LING 112 formerly LING 52

PHIL 190 satisfies this requirement by petition only.

ANTH 1	Introduction to Biological Anthropology	5
ANTH 100	History and Theory of Biological Anthropology	5
ANTH 101	Human Evolution	5
ANTH 104	Human Variation and Adaptation	5
ANTH 105	Human Paleopathology	5
ANTH 106	Primate Behavior and Ecology	5
ANTH 112	Life Cycles	5
ANTH 139	Language and Culture	5
ANTH 173	Origins of Farming	5
ANTH 174	Origins of Complex Societies	5

PHIL 190	Senior Seminar	5

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in cognitive science is satisfied by completing PSYC 100, Research Methods in Psychology, and one of the seminar courses offered by the department (listed above)

Comprehensive Requirement

UC Santa Cruz requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Cognitive science students will satisfy this requirement by receiving a passing grade in a senior seminar which is also part of the DC requirement (see above). To ensure that all students can meet the seminar requirement, students are encouraged to enroll in only one senior seminar. Students are only allowed to enroll in additional seminars after all other students who still need to fulfill their seminar requirement have enrolled.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Following are two recommended academic plans for frosh, and one for transfer students to complete the cognitive science major. Plan 1 (for frosh) assumes typical curriculum selections. Plan 2 (for frosh) includes two additional interdisciplinary prerequisites, which some students find they need in order to take the upper-division courses they desire. Students who place out of MATH 2 and MATH 3 do not need these courses, which are otherwise prerequisites to calculus, PSYC 2 and PSYC 100.

Frosh Plan One

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	MATH 2 College 1	MATH 3 Programming	Calculus WRIT 2*	

		WRIT 1/WRIT 1E (if needed)	
2nd (soph)	PSYC 20	PSYC 2	
	Interdisciplinary prerequisite	Interdisciplinary prerequisite	
3rd (junior)	PSYC 100	Cognitive core	Cognitive core
	Interdisciplinary elective	Interdisciplinary elective (UD)	Interdisciplinary elective
4th (senior)	Interdisciplinary elective	Senior Seminar	Cognitive elective
	Cognitive core	Cognitive elective	

* WRIT 2 should be taken in or before spring quarter of the second year.

The courses listed above will satisfy the SR, MF, and DC general education requirements. All other GE requirements have to be satisfied.

Frosh Plan Two

Year	**Fall**	**Winter**	**Spring**	**Summer**
Entering				College 1A
				Summer Edge (optional)
1st (frosh)	MATH 2	MATH 3	Calculus	
	College 1	Programming	WRIT 2*	
		WRIT 1/WRIT 1E (if needed)		
2nd (soph)	PSYC 20	PSYC 2

PSYCHOLOGY PH.D.

Introduction

The psychology program offers three areas of specialization leading to the doctoral degree: cognitive, developmental, and social psychology. The program prepares students for research, teaching, and administrative positions in colleges and universities as well as for positions in schools, government, and other public and private institutions. Each student is primarily associated with one of the three research areas and participates in the courses and research forums sponsored by the faculty in that area. The program requires full-time enrollment as a graduate student. Although applicants for a master's degree are not accepted, students in the doctor of philosophy (Ph.D.) program may obtain a master of science (M.S.) degree by fulfilling requirements listed in the department's Graduate Student Handbook. Note that the program does not offer courses, training, or supervision in clinical psychology.

The cognitive psychology graduate program focuses on foundational cognitive processes and how they function in the real world. We investigate three interconnected areas that form the core of cognitive psychology: perception and performance, learning and memory, and language and interaction. Using a combination of human behavior, neuroscience, and computational modeling to characterize human cognitive processes, we are exploring topics such as reading, speaking, and discourse processing; language production and comprehension; bilingualism and multilingualism; remembering and forgetting; metacognition in learning and memory; creative cognition; cognitive offloading and transactive memory; socially distributed remembering and collective memory; human performance, information processing, and computational cognitive modeling; working memory and executive control; visual psychophysics; face perception; sensory integration; music perception; perception in virtual reality; cognitive and computational neuroscience; perceptual decision-making, attention, and awareness. Beyond addressing basic scientific questions in these areas, our faculty also consider real-world implications (e.g., techniques for learning better in the classroom), cross-disciplinary connections (e.g., with biologists, computer scientists, and linguists), and clinical applications (e.g., misophonia, schizophrenia, and other cognitive disorders). Our Ph.D. graduates go on to successful careers in both academia — as postdoctoral fellows and tenure-track faculty at teaching and research institutions across the country — and industry — with some of our recent graduates leading user experience (UX) and data science teams.

The developmental psychology graduate program focuses on research that integrates cultural, interpersonal, and individual aspects of human development. We emphasize understanding the lived experience of children, youth, and young adults in their cultural communities and social-structural contexts. We focus especially on issues of diversity in relation to culture, ethnicity, race, gender, sexuality, and social-economic opportunity as people engage across contexts of family, peers, schools, museums, community, technology, and media. Our programs of research include language and cognitive development; social development; personal and social identities; gender development; political development; neurodiversity; learning through observation and social interaction; children and playable media; communication technologies; stress and well-being; prejudice and discrimination; STEM learning; school climate, belonging, and motivation; the transition to adulthood; and diversity issues in university outreach programs. Several of our faculty carry out research in cultural communities outside the U.S. and collaborate with faculty in the U.S. and other countries. At UC Santa Cruz, our interdisciplinary collaborations—spanning fields such as education, computer engineering, computational media, epigenetics, Latin American and Latino studies, linguistics, and philosophy—nurture students' research and prepare them for a wide variety of careers. Graduates of our program hold positions in academia, research institutes, and community and non-profit organizations.

The social psychology graduate program at UC Santa Cruz has a unique mission and focus. We use Kurt Lewin's model of "full-cycle" social psychology (theory-application-action) to study a broad range of topics related to social justice. In

this way, knowledge gained in action-oriented research, in turn, leads to the development of new theory. Accordingly, our students learn to apply psychological theories and data to the analysis and solution of a wide range of social problems. Our students are trained to use a variety of qualitative, quantitative, and mixed research methods (e.g., survey, participatory action research, ethnography, lab or field experiments) and to examine justice-related issues in different cultural, political, and policy contexts. They are also encouraged to attend to issues of race, class, sexuality, ethnicity, gender, and ableness; and, in addition to traditional social psychological approaches, they learn about critical theoretical perspectives such as feminist and queer theory, critical race theory, decolonial theory, social constructivism, and intersectionality. Our graduates go on to successful careers in academia as well as in community, government, and non-profit settings. Our approach to research and training, combined with the breadth of scholarship among our faculty, make our program among the nation's most distinctive for the psychological study of social justice issues. Current faculty research interests include: aggression and trauma; educational equity, access, and servingness; feminisms; institutional analysis; intersectionality; narrative and identity; race as a social process; social identities and stigmatization of immigrant-origin students; poverty and economic justice; power and oppression; emotions; critical carceral studies; psychology and law; collective action and social movements; political psychology; sexual and gender diversity; sexuality; social identity; social policy analysis; and structural inequality.

Graduate students in psychology may obtain a designated emphasis on the psychology Ph.D. diploma indicating that they have obtained additional training in another discipline such as critical race and ethnic studies, data science, feminist studies, Latin American and Latino studies, or sociology. For the full list of programs that offer a designated emphasis, see the Academic Programs section of the catalog. For specific requirements for a designated emphasis in a program, please refer to the program statement for that department.

Details on the policies for admission to graduate standing and requirements for the Ph.D. degree, as well as the online application can be found on the Division of Graduate Studies website. The department's graduate program brochure, and faculty research are available on the department website.

Advancement to Candidacy

Course Requirements

First-Year and Second-Year Project:

Students enrolled in the psychology graduate program will complete a first-year and second-year research project. All students must enroll and participate in the colloquium series in their graduate program each quarter that they are in residence.

PSYC 230	Research in Cognitive Psychology Seminar	5
PSYC 231	Research in Social Psychology Seminar	5
PSYC 242	Research in Developmental Psychology Seminar	5

Statistics

First-year students must take two courses in statistics:

PSYC 204	Quantitative Data Analysis	5
PSYC 214A	Multivariate Techniques for Psychology	5

Plus a Two-Quarter Proseminar Sequence During Fall and Winter Quarters

For Cognitive

PSYC 224A	Proseminar: Cognitive I	5
PSYC 224B	Proseminar: Cognitive II	5
PSYC 224C	Proseminar: Cognitive III	5

For Developmental

PSYC 244A	Proseminar I: Cognitive and Language Development	5
PSYC 244B	Proseminar II: Social and Personality Development	5

Additional Requirements for the Developmental Area

PSYC 225A	Introduction to Developmental Research I	3
PSYC 225B	Introduction to Developmental Research II	3
PSYC 225C	Introduction to Developmental Research III	5
PSYC 246	Cultural Diversity in Human Development	5

For Social

PSYC 211A	Proseminar: Social Justice and the Individual	5
PSYC 211B	Social Justice, Society, and Policy	5
PSYC 211C	Communicating in Social Psychology	3

Additional Requirements for the Social Area

Both of these courses

PSYC 210	The Experimental Method in Social Psychology	5
PSYC 248	Survey Methods	5

Plus four additional courses

One other advanced social graduate seminar; a graduate course in cognitive psychology; a graduate course in developmental psychology; and a substantive advanced course in a discipline other than psychology.

Plus one of the following

PSYC 249	Field Methodologies and Social Ethnography	5
PSYC 255	Qualitative Inquiry in Psychology	5
PSYC 261	Participatory Action Research	5

Letter Grade

Students are required to take their graduate courses as satisfactory/unsatisfactory.

Foreign Language Requirements

Teaching Requirements

Students are required to serve as a teaching assistant for at least two courses during their graduate career, one of which must be PSYC 10 for developmental and any social psychology course (numbered PSYC 40 or PSYC 140 - PSYC 158) for social.

Pre-Qualifying Requirements

Qualifying Examination

After satisfying the formal course and research requirements, psychology graduate students must take an oral examination to qualify as a candidate for the Ph.D., ideally by the end of their third year. The qualifying examination is intended to assess a student's knowledge of psychology and competence to conduct the dissertation research. For the qualifying examination, students prepare a list of readings representative of their expertise in three areas of psychology, write a major paper that reflects a conceptual analysis of their main research area, and satisfactorily complete an oral qualifying examination.

Post-Qualifying Requirements

[Optional Catchall]

Dissertation

Dissertation

Within a year of advancing to candidacy, students will prepare a written dissertation proposal that should demonstrate the student's in-depth knowledge of some research topic, along with a detailed outline of the empirical research to be conducted for the dissertation. The student's dissertation committee reviews the proposal, and the student will orally defend the proposal for approval by the committee.

Dissertation Defense

After the final draft of the dissertation has been completed and submitted to the faculty committee members, students defend their thesis in an oral exam. In exceptional circumstances students may request a waiver of this requirement.

The Ph.D. degree is awarded upon successful completion and submission of the dissertation.

PROGRAMS OFFERED

Sociology B.A. (p. 854)

Digital Justice Studies (DJS) Minor (p. 863)

Sociology Ph.D. (p. 863)

Sociology Designated Emphasis (p. 865)

OTHER PROGRAMS OF INTEREST

Latin American and Latino Studies/Sociology Combined B.A. (p. 807)

Sociology is the study of social interactions among individuals and social groups. More specifically, sociologists examine the cultural, ideological, economic and political contexts of human action including the processes whereby social institutions are created, maintained, and transformed.

Sociology was born as an intellectual response to the democratic and industrial revolutions that ushered in the modern era. As such, it considers how society is organized in relationship to a vision of a just, free, and equal society—a vision that may require fundamental social change. Developing an understanding of both social change and social justice as part of the sociological tradition is one of the teaching goals of sociologists at UCSC. In the process, we expect to develop in students an appreciation for the craft of social science: disciplined inquiry, observation, and research as part of informed global citizenship.

Our faculty have expertise in topics that include, but are not limited to:

- Children, youth, and families
- Civic engagement, voting, and citizenship
- Community-engaged research
- Critical Race and Ethnic Studies
- Cultural politics and the politicization of culture
- Cultural politics of sex work
- Critical ethnography
- Digital media

- Drugs, botanicals, and pharmaceuticals in society
- Education (K-12 and higher education)
- Environmental sociology
- Feminist studies
- Global and community health
- Globalization and international development
- Health, medicine, and wellness
- Human rights and health justice
- Identities and identity changes
- Immigration and migration
- International law
- Intersection of race, class, gender and sexualities
- Labor studies
- Latinx communities
- Law and society
- Mass media and digital technology
- Medicine and technology
- Mortality studies
- Political economy
- Popular culture and cultural studies
- Public policy
- Queer studies
- Science and technology studies
- Social movements
- Sociology of emotion and affect
- Survey design and quantitative data analysis
- Sustainability
- Technology and social change
- Traditional and holistic medicine
- Urban studies

Sociology faculty use a number of approaches and methods, including field research, critical ethnography, cultural analysis, comparative historical analysis, and quantitative techniques.

UNDERGRADUATE PROGRAM

The sociology major at UC Santa Cruz is a rigorous program of study that retains enough flexibility to accommodate students with diverse career goals and plans. It ensures that all students are trained in the main theoretical and methodological traditions of sociology, yet permits considerable variation in students' own areas of specialization. The major provides the necessary intellectual foundation for students who are considering graduate studies in sociology and related social sciences. It also can be used as preparation for careers in fields as diverse as law, social work, management, environmental planning, public service, education, health services, journalism, and counseling. Finally, the sociology major can provide a general liberal arts education for undergraduates interested in the study of contemporary society and social problems.

Because of the interdisciplinary emphasis among sociology faculty, undergraduates find the department amenable for double majors and minors, and non-majors find many sociology courses of interest. In recent years, students have conducted independent studies and written senior theses on a variety of subjects including undocumented immigrants, cultural diversity and inclusion in education, low-wage workers in Santa Cruz County, housing shortage, race and musical theater, homelessness, critical environmental education, food sovereignty, Hispanic-Serving Institution (HSI) Initiatives at UCSC, using technology for social good, incarceration and health care, weight stigmas and eating disorders, and belonging and exclusion.

The Sociology Department offers two undergraduate majors: 1) a general sociology major; 2) a sociology major with an intensive concentration in Digital Justice Studies (DJS). Students also have the option of a combined major in Latin American and Latino studies (LALS) and sociology, which can be found through the LALS Department. Additionally, there is a minor in DJS that is open to students in any major.

Digital Justice Studies

Digital Justice Studies (DJS) is sponsored by the Sociology Department at UC Santa Cruz. It is a rigorous and innovative program, developed in collaboration with the Everett Program for Technology and Social Change, that focuses on the equitable and fair access to, participation in, and governance of digital technologies and digital ecosystems. It aspires to create a new generation of well-trained advocates for social justice and sustainable development, who use the tools of information technology and social enterprise to solve global problems. Practically, students develop projects in solidarity with local and global organizations to democratize globalization, deepen social justice, reduce poverty, support digital education, and advance the transition to a sustainable world. The Everett Program combines social entrepreneurship with peer-to-peer and near-to-peer trainings in information technologies with the aim that students learn how to be innovative and creative problem-solvers in order to increase the informational, communication and organizational capacity of community and non-governmental organizations (NGOs). The DJS program provides an excellent foundation for students pursuing careers in non-profit management, social advocacy, sustainable businesses, and technology. Depending on a student's major, there are two ways to enter the DJS program. If a student is a sociology major and wishes to

participate in DJS, they should declare the sociology major with intensive concentration in DJS. A student who majors in any field other than sociology should declare DJS as a minor.

GRADUATE PROGRAM

The Sociology Department at UC Santa Cruz is intellectually innovative, both in its interdisciplinary emphasis and in its commitment to inquiry that is engaged with the world beyond the university. The Ph.D. program is designed to educate students in sociological theory and methods and in the discipline's major substantive areas while simultaneously exposing students to other arenas of intellectual inquiry that will aid them as they pursue their research questions and interests. After completing a group of required courses, students work closely with individual faculty members in designing their course of study. The program leads to a doctor of philosophy (Ph.D.) degree in sociology and prepares students for both academic and non-academic careers. The department does not offer a terminal master of arts (M.A.) program. However, students have the option of applying for a non-terminal master's degree en route to the Ph.D.

SOCIOLOGY B.A.

Information and Policies

Introduction

Program Learning Outcomes

The sociology curriculum prepares students graduating with a bachelor of arts degree to demonstrate the following program learning outcomes:

1. Critical Thinking: Demonstrate critical thinking skills by analyzing and evaluating social, political, and/or cultural arguments, across a variety of areas such as inequality; social problems; and race, class, and gender.

2. Sociological Understanding: Demonstrate sociological understandings of phenomena, for example, how individual biographies are shaped by social structures, social institutions, cultural practices, and multiple axes of difference and/or inequality.

3. Written and Oral Communication: Formulate effective and convincing written and/or oral arguments.

4. Social Theory: Demonstrate the ability to use several of the major classical or contemporary perspectives in social theory.

5. Research Methodology: Demonstrate the ability to use several of the major social science research methodologies.

Academic Advising for the Program

For sociology-related advising inquiries contact:

socyadvising@ucsc.edu
831-459-4888

Visit the sociology website for additional advising information, including advising hours, appointments, and peer advising.

Sociology advising is located in Rachel Carson College Academic Building, Rm 226.

Transfer students must also review the Transfer Information and Policy section below.

Getting Started in the Major: Frosh

This major is not highly sequential or course intensive. Although it is advisable to begin taking courses toward the major in the first year, it is not required. This major does not require a math placement nor a language placement exam.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5

A minimum grade of C or better must be obtained in each of the courses listed above.

Getting Started in the Major: Transfer Students

Transfer students who meet the selection criteria and are offered admission are admitted as proposed sociology majors and are eligible to declare the Sociology B.A. upon matriculation. They must work with the sociology department advising office when they arrive on campus to begin the process to declare the major and prepare for enrollment. Declaration of the major for transfer students must be completed by the campus declaration deadline, in the second term of residency.

If a student enters in the winter quarter, it is highly recommended to have taken SOCY 3A or its articulated equivalent at their previous institution. If possible, having taken SOCY 3B or its equivalent is recommended to ensure timely graduation.

If a student enters in the fall quarter as a proposed sociology major, they must take SOCY 3A at UC Santa Cruz that quarter if they have not satisfied the articulated equivalent at their previous institution.

If a student transfers in either fall or winter quarter and they have already taken SOCY 3A or its articulated equivalent at their previous institution, they are recommended to take SOCY 105A in their quarter of entry.

In addition, transfer students who are pursuing the DJS intensive concentration are required to take SOCY 30A in order to qualify for the concentration and to begin the yearlong DJS course series.

Transfer students who are proposed in a different major when they come to UC Santa Cruz require permission from the department to change into the sociology major. Students must work with the sociology department advising office to discuss the change of major process.

Major Qualification Policy and Declaration Process

Major Qualification

General Sociology Major

Students must take two of the following courses, and pass each with C+ or better, to qualify:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Sociology Major with an Intensive Concentration in DJS

Students must take three courses, for a letter grade, to qualify for Sociology with a Concentration in Digital Justice Studies (DJS). The following course is required:

SOCY 30A	Introduction to Digital Justice Studies	5

Plus two of the following courses

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Students are required to pass each of the courses with a B- or better, and obtain approval from the faculty director, to qualify for the DJS concentration. Students transferring in the articulated equivalents to SOCY 1 and SOCY 10 will only be required to meet the B- or better requirement in SOCY 30A. SOCY 1 and SOCY 10 taken outside of UC Santa Cruz will be accepted with grades of C or better. Students will begin the approval process while enrolled in SOCY 30A. Prior to enrollment into the second course in the series, SOCY 107A, the faculty director works with students to ensure there is an appropriate match between student interests and project partners.

How to Declare a Major

Students should submit a petition to declare their major through the MyUCSC Undergraduate Student eForms as soon as they have met the major qualification requirements and/or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed courses.

Students pursuing a double major or major/minor must also work with the department advising office to create an academic plan for the major. For information about the declaration process please review the Sociology Department website.

Appeal Process

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the Sociology Department Undergraduate Education chair within 15 days from the date of notification. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. Letters of appeal should describe any extenuating circumstances that might have affected the student's record. Students should submit the appeal letter via email to socyadvising@ucsc.edu. Students may contact the sociology department advising office for any questions.

Letter Grade Policy

All major qualification courses must be taken for letter grades. All other major requirements may be taken as a letter grade or Pass/No Pass. No more than 25 percent of credits earned at UC Santa Cruz may be graded on a Pass/No Pass basis. Students must be in good academic standing to choose the Pass/No Pass option.

[Optional Catchall]

Course Substitution Policy

Sociology B.A. students may substitute two of the upper-division advanced coursework requirements with upper-division electives from other UC Santa Cruz departments, individual study courses, Global Learning electives, or other four-year institution electives. Students pursuing the DJS concentration or minor have no course substitution limits of the upper-division advanced coursework requirement. Course substitutions must be pre-approved through the department for both the Sociology B.A. (p. 870) and the DJS concentration or minor, or students may submit a petition for approval of the course prior to applying it to the major. Review the sociology webpage for information about the petition process.

Double Majors and Major/Minor Combinations Policy

Global Learning

Students seeking to participate in a Global Learning program must be declared in their major prior to their departure.

It is recommended that the students have the courses intended to be taken abroad reviewed and approved by the Sociology Department prior to departure, if possible. Up to two relevant courses taken through Global Learning programs from which credits are transferable to UC Santa Cruz may be used toward satisfaction of the sociology B.A. elective requirements when the content is deemed appropriate and approved by the Sociology Department. Up to five relevant courses taken through Global Learning programs from which credits are transferable to UCSC may be used toward satisfaction of the sociology B.A. with an intensive concentration in DJS

elective requirements when the content is deemed appropriate and approved by the Everett/DJS program faculty director.

Visit the sociology webpage for additional information and planners for Global Learning.

Honors

The Sociology Department awards honors in the major based on the student's cumulative GPA for all courses taken though UC Santa Cruz to satisfy the program's major requirements. Students with a GPA of 3.75 or above will be considered for honors in the major. Students with a GPA of 3.9 or above will be considered for highest honors in the major. No more than approximately 15 percent of the graduating class will be considered for honors or highest honors in the major. Comprehensive honors is awarded to students who complete the senior thesis option, and their faculty thesis sponsor and one additional reader evaluate the thesis to be of honors quality.

[Optional Catchall]

General Sociology Major

Course Requirements

Sociology majors are required to take a total of 11 courses (two lower-division courses in preparation for the major, two prescribed lower-division core courses, two prescribed upper-division core courses, and five upper-division electives). In addition, they must successfully complete the comprehensive requirement prior to graduation.

Lower-Division Courses

Lower-division preparation:

All sociology majors are required to take two lower-division preparation courses, or their articulated equivalents.

Select two from the following three courses:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Lower-division core courses:

The following two sociology courses, or their articulated equivalents, are required as the foundation of statistical and research methods in the discipline.

SOCY 3A	The Evaluation of Evidence	5
SOCY 3B	Statistical Methods	5

Sociology majors who are pursuing a double major or minor in Latin American and Latino Studies (LALS) may substitute SOCY 3A with LALS 100A. Sociology majors who are double majoring in psychology or cognitive science, may substitute SOCY 3A with PSYC 100. The opposite substitution does not apply; neither LALS 100A nor PSYC 100 can be substituted with SOCY 3A.

STAT 5, STAT 7, PSYC 2, or their articulated equivalents, as well as an AP Statistics score of 4 or more, may substitute for SOCY 3B.

Upper-Division Courses

Upper-division core courses:

The following two sociology courses are required as the foundation of theoretical training in the discipline.

SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Upper-division advanced coursework:

Five sociology electives of 5 credits or more, numbered 110-189 are required. The Sociology Department offers electives that reflect a wide range of ideas within the discipline and the diversified research interests of the faculty. Up to two pre-approved outside courses can count toward the upper-division advanced coursework. See the Course Substitution Policy section for more details.

The annual course offerings can be viewed on the sociology webpage.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The goal of the Sociology Department's Disciplinary Communication requirement is to ensure that students acquire and develop the skills in writing and other forms of communication that will best serve them in their study of sociology, and as future learners. The following courses satisfy the Disciplinary Communication requirement for students in programs administered by the Sociology Department.

SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Comprehensive Requirement

Prior to graduation, all sociology majors are required to complete one of the following comprehensive requirements.

Senior Seminar

SOCY 196S	Senior Seminar	5

Sociology Graduate Course

Students may satisfy the comprehensive requirement by successfully completing a 5-credit graduate-level sociology course, numbered SOCY 201-SOCY 294. Enrollment into a graduate-level sociology course is by invitation or approval of the course instructor.

Senior thesis

SOCY 195A	Senior Thesis	5
SOCY 195B	Senior Thesis	5
SOCY 195C	Senior Thesis	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Sociology Four-Year Major Planner

The following is a recommended academic plan for students in the sociology major.

Option One

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	SOCY 1	SOCY 10 WRIT 1/WRIT 1E (if needed)		
2nd (soph)	SOCY 3A WRIT 2*	SOCY 3B		
3rd (junior)	SOCY 105A SOCY upper-division elective	SOCY 105B SOCY upper-division elective	SOCY upper-division elective	
4th (senior)	SOCY upper-division elective	SOCY upper-division elective	SOCY 196S or SOCY graduate course (or in fall or winter) (or thesis fall-winter-spring)	

* WRIT 2 should be taken in or before spring quarter of the second year.

Option Two

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)		WRIT 1/WRIT 1E (if needed)	SOCY 1	
2nd (soph)	SOCY 15 WRIT 2*			
3rd (junior)	SOCY 3A	SOCY 3B	SOCY upper-division electiv	

			e
	SOCY upper-division elective	SOCY 105A	SOCY 105B
4th (senior)	SOCY upper-division elective	SOCY upper-division elective	SOCY 196S or SOCY graduate course (or in fall or winter) (or thesis fall-winter-spring)
	SOCY upper-division elective		

* WRIT 2 should be taken in or before spring quarter of the second year.

All sociology majors are required to take SOCY 3B which also satisfies the SR general education (GE) requirement. SOCY 15, which satisfies the CC GE, may be selected as one of the major qualification course options. In addition, students may satisfy the CC, ER, IM, SI, TA, PE, and PR GE requirements by selecting certain upper-division sociology electives. Visit the Office of the Registrar's website for an up-to-date list of the sociology upper-division electives that satisfy GE requirements. The MF and composition GE requirements are not offered through the sociology department.

Sociology Three-Year Major Planner

Three-year pathways are most appropriate for students who plan a single major, who have satisfied the Entry-Level Writing Requirement before their first quarter, and who are committed to enrolling in Summer Session after their first and second years. Courses listed as “Any X credit course” may be decreased based on AP or other transfer credit.

This is a sample plan. Work with your major/program advisor to devise a plan that takes into account your transfer credit, interests, and career goals.

Year	Fall	Winte	Sprin	Summ
Entering			r	g	er
					College 1A
					Summer Edge (optional)
1st (frosh)	College Core Course	WRIT 2	MF Gen Ed	Any 5-credit course
	SOCY 1	SOCY 10	CC Gen Ed	Any 5-credit course
	SI Gen Ed	Any 5-credit course	Any 5-credit course	Any 5-credit course
		STEV 26		
2nd (soph)	SOCY 3A	SOCY 3B	ER Gen Ed	SOCY 105A
	SOCY upper-division elective	SOCY upper-division elective	IM Gen Ed	SOCY 105B
	Any 5-credit course	Any 5-credit course	Any 5-credit course	
	PR Gen Ed		Any 5-credit course	
	WRIT 2*			
3rd (junior)	SOCY 196S	SOCY upper-division elective	SOCY upper-division elective	Any 5-credit course
	TA Gen	PE Gen	SOCY	Any 5-credit

	Ed	Ed	upper-division elective	course
	Any 5-credit course	Any 5-credit course	Any 5-credit course	Any 5-credit course

* WRIT 2 should be taken in or before spring quarter of the second year.

Sociology lower-division, upper-division core, and several upper-division electives may be available in the summer in the event you are not able to enroll in the regular academic year.

The following general education requirements will be satisfied through required courses in the sociology major: SR, DC.

Sociology Two-Year Major Planner

The following is a recommended academic plan for transfer students entering the sociology major. It is assumed that SOCY 1 and SOCY 10 equivalencies were completed at the previous college.

Option One

Year	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
1st (junior)	SOCY 3A* SOCY upper-division elective	SOCY 3B* SOCY 105A	SOCY 105B SOCY upper-division elective	
2nd (senior)	SOCY upper-division elective SOCY upper-division elective	SOCY upper-division elective SOCY upper-division elective	SOCY 196S or SOCY graduate course (or in fall or winter) (or thesis fall-winter-spring)	

*Articulated equivalent courses may be taken prior to transfer.

Option Two

Year	Fall	Winter	Spring	Summer
Entering				KRSG 1T Summer Edge (optional)
1st (junior)	SOCY 3A* SOCY 105A	SOCY 3B* SOCY 105B	SOCY upper-division elective SOCY upper-division elective	
2nd (senior)	SOCY upper-division elective SOCY	SOCY upper-division elective	SOCY 196S (or in fall or winter) (or thesis fall-winter-spring)	

	upper-division elective	

*Articulated equivalent courses may be taken prior to transfer.

Sociology Major with Intensive Concentration in DJS

The DJS intensive concentration is an option for students wishing to major in sociology and focus in the area of Digital Justice Studies (DJS). The major is sponsored and administered by the Department of Sociology. This major is designed for highly motivated, self-directed and enterprising students who have demonstrated the capacity to design and complete an honors-quality project in partnership with a civil society group. Students are required to take a total of 15 courses (three prescribed lower-division courses in preparation for the major, two prescribed lower-division core courses, two prescribed upper-division DJS courses, two prescribed upper-division core courses, five upper-division electives, and a project practicum course). In addition, they must successfully complete the comprehensive requirement prior to graduation.

Course Requirements

Lower-Division Courses

Lower-division preparation:

Students must take the following three courses or their articulated equivalents.

SOCY 30A	Introduction to Digital Justice Studies	5

And select two from the following three options:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Lower-division core courses:

The following two sociology courses, or their articulated equivalents, are required as the foundation of statistical and research methods in the discipline.

SOCY 3A	The Evaluation of Evidence	5
SOCY 3B	Statistical Methods	5

Sociology students who are pursuing a double major or minor in Latin American and Latino Studies (LALS) may substitute SOCY 3A with LALS 100A. Sociology students who are double majoring in psychology or cognitive science, may substitute SOCY 3A with PSYC 100. The opposite substitution does not apply, LALS 100A nor PSYC 100 can be substituted with SOCY 3A.

STAT 5, STAT 7, PSYC 2, or their articulated equivalents, as well as an AP Statistics score of 4 or more, may substitute for SOCY 3B.

Upper-Division Courses

Upper-division DJS core courses

The following two courses are required for the design and implementation of the DJS project.

SOCY 107A	Designing Digital Justice Projects	5
SOCY 107B	Project Implementation for Digital Justice	5

Upper-division core courses

The following two sociology courses are required as the foundation of theoretical training in the discipline.

SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Upper-division advanced coursework

Five upper-division electives of 5 credits or more are required, selected from Sociology 110-189, or from the list of pre-approved courses. Students are strongly recommended to consult with the director of DJS before choosing their electives to ensure their choices contribute to their selected project and/or their growth as a technology activist or technology linked social change advocate. Courses outside the list of approved courses may also be approved by the director of DJS. For more information on the process students must follow to have their courses approved, please visit the Sociology Department webpage.

Project Practicum

Students must enroll in SOCY 196G, Project Practicum, and complete their DJS capstone project. SOCY 196G is offered every fall quarter. Students may review the DJS webpage, or contact the program director of DJS (everettprogram@ucsc.edu) for more detailed guidelines regarding the DJS capstone project. Prior to enrolling in SOCY 196G, students must have completed SOCY 107A and SOCY 107B, which prepares and supports students in completing a project that makes a contribution to advancing a solution to a problem associated with global social justice and/or sustainable development. To complete the final requirements for DJS, the integrated project practicum—narrative and digital deliverable—must be mounted on the appropriate web-enabled database managed by the Everett Program.

SOCY 196G	Project Practicum: Digital Justice Studies	5

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The goal of the Sociology Department’s Disciplinary Communication requirement is to ensure that students acquire and develop the skills in writing and other forms of communication that will best serve them in their study of

sociology, and as future learners. The following courses satisfy the Disciplinary Communication requirement for students in programs administered by the Sociology Department.

SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Comprehensive Requirement

Prior to graduation, students are required to complete one of the following comprehensive requirements.

Senior Seminar

SOCY 196S	Senior Seminar	5

Sociology Graduate Course

Students may satisfy the comprehensive requirement by successfully completing a 5-credit graduate-level sociology course, numbered SOCY 201-SOCY 294. Enrollment into a graduate-level sociology course is by invitation or approval of the course instructor.

Senior thesis

SOCY 195A	Senior Thesis	5
SOCY 195B	Senior Thesis	5
SOCY 195C	Senior Thesis	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements for more information.

Sociology Major with Intensive Concentration in DJS Planner One

The following is a recommended academic plan for students in the sociology major with intensive concentration in DJS.

Option One

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)
1st (frosh)	SOCY 1 College 1	SOCY 10 WRIT 1/WRIT 1E		
2nd (soph)	SOCY 3A SOCY 30A WRIT 2*	SOCY 3B SOCY 107A	SOCY 107B	
3rd (junior)	SOCY 105A SOCY 196G	SOCY 105B Upper-division elective	Upper-division elective Upper-division elective	
4th (senior)	Upper-division elective	Upper-division elective	SOCY 196S or SOCY Graduate Course (or in fall or winter) (or thesis fall-winter-spring) (if needed)	

* WRIT 2 should be taken in or before spring quarter of the second year.

Option Two

Year	Fall	Winter	Spring	Summer
Entering				College 1A Summer Edge (optional)

1st (frosh)		WRIT 1/WRIT 1E (if needed)	SOCY 1
2nd (soph)	SOCY 15	SOCY 3B	
	SOCY 3A		
	WRIT 2*		
3rd (junior)	SOCY 30A	SOCY 107A	SOCY 107B
	Upper-division elective	SOCY 105A	SOCY 105B
4th (senior)	SOCY 196G	Upper-division elective	SOCY 196S or SOCY Graduate Course (or in fall or winter) (or thesis fall-winter-spring)
	Upper-division elective	Upper-division elective	Upper-division elective

* WRIT 2 should be taken in or before spring quarter of the second year.

All students majoring in sociology with concentration in DJS are required to take SOCY 3B which also satisfies the SR general education (GE) requirement, as well as SOCY 30A which satisfies the PE-H GE. SOCY 15, which satisfies the CC GE, may be selected as one of the major qualification course options. In addition, students may satisfy the CC, ER, IM, SI, TA, PE, and PR GE requirements by selecting certain upper-division sociology electives. Visit the Office of the Registrar's website for an up-to-date list of the sociology upper-division electives that satisfy GE requirements. The MF and composition GE requirements are not offered through the Sociology Department.

Sociology Major with Intensive Concentration in DJS Planner Two

The following is a recommended academic plan for transfer students entering the sociology major with intensive concentration in DJS. It is assumed that SOCY 1 and SOCY 10 equivalencies were completed at the previous college.

Year	Fall	Winter	Spring	Summer
Entering				KRSG 1T
				Summer Edge (optional)
1st (junior)	SOCY 3A*	SOCY 3B*	SOCY 107B	
	SOCY 30A	SOCY 107A	SOCY 105B	
		SOCY 105A		
2nd (senior)	Upper-division elective	Upper-division elective	SOCY 196S or SOCY Graduate Course (or in fall or winter) (or thesis fall-winter-spring)	
	Upper-division elective	Upper-division elective	Upper-division elective	
	SOCY			

196G

*Articulated equivalent courses may be taken prior to transfer

This planner also assumes that a student has completed most of the general education requirements, beyond major preparation requirements, before transferring to UC Santa Cruz.

DIGITAL JUSTICE STUDIES MINOR (FORMERLY GISES)

Digital Justice Studies (DJS) is sponsored by the Sociology Department at UC Santa Cruz. It is a rigorous and innovative program, developed in collaboration with the Everett Program for Technology and Social Change, that focuses on the equitable and fair access to, participation in, and governance of digital technologies and digital ecosystems. It aspires to create a new generation of well-trained advocates for social justice and sustainable development who use the tools of information technology and social enterprise to solve global problems. Practically, students develop projects in solidarity with local and global organizations to democratize globalization, deepen social justice, reduce poverty, support digital education, and advance the transition to a sustainable world. The Everett Program combines social entrepreneurship with peer-to-peer and near-to-peer trainings in information technologies with the aim that students learn how to be innovative and creative problem-solvers in order to increase the informational, communication, and organizational capacity of community and non-governmental organizations (NGOs).

The DJS program provides an excellent foundation for students pursuing careers in non-profit management, social advocacy, sustainable businesses, and technology. Depending on a student's major, there are two ways to enter the DJS program. If a student is a sociology major and wishes to participate in DJS, they should declare the sociology major with intensive concentration in DJS. A student who majors in any field other than sociology should declare DJS as a minor.

Students must take one course prior to petitioning for entry to the DJS minor: SOCY 30A, Introduction to Digital Justice Studies. In order to declare the DJS minor, students must first have declared a major and must also connect with the sociology advising office to review and complete the declaration process. For details, please review the Sociology Department webpage.

Course Requirements

Students minoring in DJS are required to complete the following courses and requirements. Courses may be taken for a letter grade or Pass/No Pass.

Lower-Division Courses

Lower-division preparation:

SOCY 30A	Introduction to Digital Justice Studies	5

Upper-Division Courses

Upper-division DJS core courses:

SOCY 107A	Designing Digital Justice Projects	5
SOCY 107B	Project Implementation for Digital Justice	5

Upper-division advanced coursework:

Three additional upper-division electives of 5 credits or more are required, selected from the Sociology Department elective courses (Sociology 110-189), or from the list of pre-approved courses. Students are strongly recommended to consult with the director of DJS before choosing their electives to ensure that their choices contribute to their selected project and/or their growth as a technology activist or technology linked social change advocate. Courses outside the list of approved courses may also be approved by the director of DJS. For more information on the process students must follow to have their courses approved, please visit the Sociology Department page.

Project practicum:

Students must enroll in SOCY 196G, Project Practicum, and complete their DJS capstone project. SOCY 196G is offered every fall quarter. Students may review the DJS webpage, or contact the program director of DJS (everettprogram@ucsc.edu) for more detailed guidelines regarding the DJS capstone project. Prior to enrolling in SOCY 196G, students must have completed SOCY 107A and SOCY 107B, which prepares and supports students in completing a project that makes a contribution to advancing a solution to a problem associated with global social justice and/or sustainable development. To complete the final requirements for DJS, the integrated project practicum—narrative and digital deliverable—must be mounted on the appropriate web-enabled database managed by the Everett Program.

SOCIOLOGY PH.D.

Introduction

Features of the Program

The core curriculum is divided into two parts, 1) basic grounding in sociological theory and methods, and 2) exposure to research in five areas of concentration: a) political economies and political ecologies; b) space, place, and mobility; c) culture, knowledge, and power; d) publics, policy, and law; and e) world building, political imaginaries, and alternative futures. To prepare students to conduct their own research projects, the department trains students in multiple methods—field research, critical ethnography, cultural analysis, comparative historical analysis, and quantitative data analysis.

Graduate students are supported through teaching assistantships, teaching fellowships, research fellowships and other grant/fellowship opportunities. A number of faculty

receive research grants that support graduate student research assistantships.

When asked what they most appreciate about the sociology graduate program, most students cite the students' and faculty's commitment to social change in combination with their dedication to teaching, scholarly research, and understanding of the social forces of our society. The Sociology Department's colloquium series enhances scholarship, practice, and collegial networks. The diversity in age, ethnicity, and work experience of the student body creates a vibrant atmosphere for learning.

Many of the faculty in the Sociology Department have affiliations with other departments and programs on campus, and the graduate program consequently encourages interdisciplinary work. Seminars in the anthropology, environmental studies, history, history of consciousness, politics, psychology, and feminist studies programs are open to sociology students. Graduate students in sociology may obtain a designated emphasis on the sociology Ph.D. diploma which indicates that in addition to sociology, they have also specialized in another field , such as feminist studies, Latin American and Latino studies, critical race and ethnic studies, environmental studies, philosophy, or education. Students must meet requirements for the designated emphasis as spelled out by the relevant department. For a complete list of programs that offer a designated emphasis, refer to the fields of study in the General Catalog. Students also participate in research projects under the auspices of a number of interdisciplinary social science research centers including but not limited to: the Science and Justice Research Center; the Center for Agroecology and Sustainable Food Systems; the Center for Labor and Community; the Dolores Huerta Research Center for the Americas; and the Affect Studies Working Group. Research opportunities also are available in the areas of environmental studies, feminist studies, and lesbian/gay/queer studies.

Many of our graduate students present papers at professional conferences and publish articles during the course of their graduate studies. The sociology master's paper is designed to prepare students to write for professional journals. Advanced graduate students also participate in faculty seminars organized around specific research topics.

The sociology program provides graduate students with a diverse range of teaching opportunities so they can practice the skills required for good teaching—the ability to articulate ideas, to organize and present materials in logical sequence, and to listen attentively and discern someone else's comprehension. Graduate students typically serve as teaching assistants for at least three quarters, if not more, in the department's core classes of the undergraduate curriculum.

Details of the policies for admission to the graduate program, the requirements for the Ph.D. degree, and information on financial support opportunities are available from the Department of Sociology. For more information, please refer to the Graduate Studies section of the catalog.

Advancement to Candidacy

Course Requirements

Students are required to take at least 10 courses as follows.

A four-course core group:

SOCY 203	Sociological Methods	5
SOCY 200A	Social Theory 1	5
SOCY 200B	Social Theory 2	5
SOCY 200C	Social Theory 3	5

Two methods courses:

This course

SOCY 204	Methods of Quantitative Analysis	5

And one of the following eight courses:

SOCY 205	Field Research Methods	5
SOCY 206	Comparative Historical Methods	5
SOCY 209	The Analysis of Cultural Forms	5
SOCY 241	Cross-National and Cross-Cultural Research	5
SOCY 242	Feminist Research Seminar	5
SOCY 268A	Science and Justice: Experiments in Collaboration	5
SOCY 282	Social Policy Research	5
PSYC 248	Survey Methods	5

Elective Courses

A minimum of four elective graduate seminars, one of which may be from outside sociology (excluding SOCY 250 and SOCY 293). The elective course offerings change yearly. This courses listed are offerings from the recent past.

SOCY 208	Writing Practicum	5
SOCY 209	The Analysis of Cultural Forms	5
SOCY 220	Global Transformation: Macrosociological Perspectives	5
SOCY 223	Sociology of the Environment	5
SOCY 225	Political Economy for Sociologists	5
SOCY 229	Work and Labor Markets in the New Economy	5
SOCY 240	Inequality and Identity	5
SOCY 242	Feminist Research Seminar	5
SOCY 244	Race and Ethnicity	5
SOCY 246	Class, Culture, and Movement	5
SOCY 249	Feminisms and Cultural Politics	5
SOCY 255	Engaging Cultural Studies	5
SOCY 256	Urban Sociology	5
SOCY 257	Colonialism, International Law, and Global Justice	5
SOCY 259	Space and the Politics of Difference	5
SOCY 260	Culture, Knowledge, Power	5
SOCY 263	Cultural Politics of Difference	5
SOCY 268A	Science and Justice: Experiments in Collaboration	5

SOCY 268B	Science and Justice Research Seminar	5
SOCY 290	Advanced Topics in Sociological Analysis	5

Any course listed as a methods course and elective course may be used to fulfill either the methods requirement or be counted as an elective course, but no course can be used for both.

Foreign Language Requirements

Teaching Requirement

Pre-Qualifying Requirements

Graduate students initiate work on their master's paper by the end of the first year.

Completion of the master's paper and required coursework is expected by the end of the second year.

Graduate students prepare field statements in two distinct areas of sociology as a written pre-qualifying stage to the oral qualifying examination.

Qualifying Examination

The qualifying examination is an oral defense of the student's dissertation proposal and occurs one quarter after the pre-qualifying field statement stage has been passed.

Students are expected to take their oral qualifying examination by the end of the third year, and no later than the end of the fourth year.

Post-Qualifying Requirements

[Optional Catchall]

Dissertation

Dissertation

After passing the qualifying examination, a student advances to candidacy and begins work on the dissertation under the guidance of a three-person dissertation committee.

Dissertation Defense

After the complete dissertation has been submitted to and accepted by the dissertation committee, students must pass an oral dissertation defense.

Academic Progress

Applying for Graduation

[Optional Catchall]

SOCIOLOGY DESIGNATED EMPHASIS

Introduction

Graduate students interested in pursuing the Designated Emphasis in Sociology should contact the Sociology graduate program coordinator.

Requirements

To receive the Designated Emphasis (DE) in Sociology, a graduate student from another department must complete the following requirements in addition to the degree requirements for the doctorate in their degree-granting department. Students must initiate the request for the DE through their home departments. Then the student must meet with the Sociology graduate director who will: a) decide whether to approve the application; b) help find a Sociology faculty advisor; and c) oversee progress in the Designated Emphasis.

Committee Composition and Departmental Approvals

Advisor: In addition to the student's advisor(s) in their home department, the student must have a faculty advisor from among the core faculty of the Sociology Department who commits to serve on the qualifying examination (QE) committee. Outside members of a QE committee must be tenured.

Course Requirements

The student must take five (5) Sociology graduate seminar courses:

Three (3) core courses:

SOCY 200A	Social Theory 1	5
SOCY 200B	Social Theory 2	5
SOCY 200C	Social Theory 3	5

One (1) methods course from the following:

SOCY 203	Sociological Methods	5
SOCY 204	Methods of Quantitative Analysis	5
SOCY 205	Field Research Methods	5
SOCY 206	Comparative Historical Methods	5
SOCY 209	The Analysis of Cultural Forms	5
SOCY 241	Cross-National and Cross-Cultural Research	5
SOCY 242	Feminist Research Seminar	5
SOCY 268A	Science and Justice: Experiments in Collaboration	5
SOCY 282	Social Policy Research	5

One (1) other graduate seminar elective offered by the Sociology Department

*SOCY 208, SOCY 250, SOCY 293, SOCY 297, SOCY 299 cannot be counted toward the requirements for the Designated Emphasis.

All courses must be offered by the Sociology Department. Courses offered by other departments do not count towards the requirements for the Designated Emphasis in Sociology.

Writing, Research and/or Teaching Requirements

The student must prepare a significant piece of scholarly writing in the area of sociology. This may take the form of a substantial seminar paper, a master's essay, a paper submitted for publication, or a chapter of the doctoral dissertation. The student's Sociology faculty advisor will determine whether a particular piece of writing meets the requirement.

THE COLLEGES

UC Santa Cruz combines the resources of a world-class public research university with a distinctive undergraduate experience characterized by our college system. Each college is a vibrant living/learning community supported by enrichment courses, advising and academic support, and faculty and staff who organize student activities and sponsor events to enhance the intellectual and social life of the campus. The colleges are committed to fostering a nurturing and academically thriving environment for students of all backgrounds. Each college strives to promote the attributes of a diverse and multicultural community in its own unique way.

In order of founding, the colleges are Cowell, Stevenson, Crown, Merrill, Porter, Kresge, Oakes, Rachel Carson College, College Nine, and John R. Lewis College. Self-contained and architecturally distinct, each college is a relatively small community of 30 to 110 faculty members and between 1,500 and 1,800 students, about half of whom live on campus. Each college has its own housing, as well as academic, social, and educational programming, and each is an integral part of the larger campus. The colleges have their own academic emphases and cultural traditions, although each seeks faculty and students from a variety of disciplines to foster broad intellectual interests. The colleges play a primary role in academic advising and are the center of student life. Students graduate from their college. At the same time, all university academic programs, resources, and student services are open to students of every college.

College Nine

College Office
217 Social Sciences 1

https://collegenine.ucsc.edu

ACADEMIC EMPHASIS

College Nine's theme of International and Global Perspectives emphasizes the causes and consequences of our increasingly interconnected world. We challenge students to grapple with complex, controversial, and multi-scalar issues, for which there exist vastly differing opinions about the nature of problems and how to solve them. Becoming a global citizen requires critical thinking, cultural awareness, and effective communication, all skills our training provides to our students. Our academic and co-curricular programs analyze economic and cultural globalization, immigration, environmental crises, ethnic conflicts, genocide, and human rights, among other issues. Students interested in these issues either as their major focus or as part of their general education are invited to join the College Nine community.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in CLNI 1A, College Nine 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. CLNI 1A and KRSG 1T integrate introductions to academic skills with the online Slug

Orientation process, and begin student preparation for their studies at College Nine and throughout UC Santa Cruz.

CLNI 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

CORE COURSE

CLNI 1: Academic Literacy and Ethos: International and Global Perspectives

First-year students examine current issues pertinent to the college's intellectual theme. This course challenges students to address what it means to be a global citizen, in recognition of our growing interconnections and interdependencies, and the fact that certain intractable problems cannot be addressed without large-scale collective action. Topics address issues such as globalization, inequities in wealth and poverty across the world, human rights, climate change, and social movements. The seminar teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. The instructors work closely with each student throughout the quarter.

All students admitted as frosh are required to complete the core course. Students admitted as transfer students with sophomore standing or above (45 or more credits in transfer) are exempt from the core course requirement.

COLLEGE ADVISING

Contact information:

nineadvising@ucsc.edu
Phone: 831-459-5034
217 Social Sciences 1

Located on the second floor of Social Sciences 1, our team of dedicated, knowledgeable and caring advisors are here to guide students throughout their journey at UC Santa Cruz, from being admitted to the university through graduation. Our approach is collaborative and student-centered, assisting undergraduates with identifying and exploring their academic interests and capacities, and providing advice as to how to make the most of their time at UCSC. Our advisors answer questions about navigating the policies and life at UC Santa Cruz, course scheduling and selection, degree and general education requirements, qualifying for a major, educational support and opportunities, and much more. Close partnerships with units across campus mean that if we do not know the answer to a question, we usually know someone who does.

Students who wish to connect with advising should visit the College Nine Academic Advising website for open hours, drop-ins, and appointments.

OTHER ACADEMIC PROGRAMS

Optional programs are available to involve College Nine students in academic and co-curricular activities beyond the first-quarter course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences.

Global Action

Global Action, CLNI 85, is a peer facilitated course where students learn about current international and global issues through interactive exercises, small group discussions, and faculty presentations. Students will develop an "action plan" to raise awareness about one or more of these concerns and take practical steps to create positive change in the world. Projects in past years have partnered with organizations doing outstanding work in countries like Ecuador, India and Nepal. Students who have taken and excelled in CLNI 85 are eligible to teach the course in a future year, enrolling in CLNI 191: Teaching Global Action, where they gain the skills, techniques and tools to facilitate their own section. Mentoring by our experienced staff is vital to realizing the potential of such peer-to-peer learning.

Apprenticeship in Community Engaged Research

The Apprenticeship in Community Engaged Research (or (H)ACER) is a new program at College Nine and John R. Lewis College designed to teach students qualitative research methods with a focus on community-engaged and participatory methodologies. The objectives of our work encompass student enrichment, uplifting the work of our community partners, and conducting relevant, critical research to solve real-life challenges at the intersections of education, health, economics, immigration, nutrition, labor and the environment. The benefits for students of experiential learning in the community are multiple: abstract academic concepts become more tangible, students expand their web of social connection, and skills such as teamwork and problem solving are heightened. Students reach outside of their comfort zone, have their assumptions challenged, and meet remarkable local heroes.

(H)ACER offers a scaffolded progression of opportunities for students: students can begin by getting involved with Praxis, participating in Alternative Spring Break, or signing up for internships with community partners such as an after-school, garden-based educational program at Calabasas Elementary School in Watsonville. Praxis is a student club for community service in which College Nine and John R. Lewis College students undertake monthly volunteer opportunities throughout Santa Cruz County and neighboring communities. During campus meetings, Praxis participants engage in discussion, reading, and reflection to increase their awareness and knowledge about key issues.

Alternative Spring Break (ASB) in Watsonville centers on issues of food security, sovereignty, and justice. After getting to know each other at a retreat, discussing readings, and

hearing from a panel of Watsonville leaders, ASB participants undertake five days of experiential learning with a variety of community partners (e.g., schools, artists, non-profits). After Spring Break, a final gathering is held for students to share their final projects.

These community learning opportunities for students then transition in our (H)ACER class series. The classes train students in research methodologies, support data collection and analysis with our community and university partners, and provide cutting-edge and methodologically rich research experiences for UCSC undergraduate students. These classes set students up to develop their own research projects that can then extend into senior theses and pathways to distinction in Colleges Nine and Ten.

Practical Activism: Tools for Local and Global Change

The annual Practical Activism Conference is a day-long, student-led event featuring keynote speakers, multiple workshops, tabling by on- and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit Practical Activism for more information.

Community Garden Class

In cooperation with the work of the Community Garden Club, this course explores such topics as collaborative garden design, community gardening best practices, building regenerative social and ecological systems, sustainability, and food justice, while also offering hands-on experience in the College Nine and John R. Lewis College community garden.

Education Abroad

The UC Education Abroad Program places students at a university in another country for one or more quarters. Studying abroad can be a valuable way to expand one’s understanding of the world. Given the international focus at College Nine, students are encouraged (but not required) to develop a second language or to study abroad.

College Nine Pathways to Distinction

Another feature of College Nine is that qualified students may graduate with College Nine Distinction. This recognition is intended to serve as an incentive for students to pursue activities (research, course work, service, leadership, internships, etc.) that are especially apt to help them succeed in college and beyond related to the theme of international and global perspectives.

Cowell College

Cowell 118
831-459-2253
https://cowell.ucsc.edu

ACADEMIC EMPHASIS

The academic theme of the college encourages students to pursue their general and disciplinary study with attention to the values of a liberal arts education: understanding one’s individual perspectives by the exploration of one's historical background and world context. Students affiliated with Cowell college pursue majors from all departments on campus.

In satisfying their general education requirements, first-year Cowell students are required to take the Cowell core course in the fall term. The core course is taught in small seminar sections and seeks to develop critical reading and seminar discussion skills through engagement with a selection of classic and contemporary texts focused on the theme of justice.

Elective courses are offered every term at the college. Students from any college are invited to take an elective course at Cowell College. Some courses emphasize the development of skills such as public speaking or financial literacy. Some courses take a broader perspective, examining the theory and practice of oral history. We also offer a series of courses connected to the Gary D. Licker Chair that expose students to cutting-edge research across multiple disciplines. Many of the elective courses at Cowell College carry a general education requirement and are offered in-person, synchronously online, or asynchronously online. A full listing of the elective courses offered can be found here.

The college also enriches the intellectual and cultural life of the campus by sponsoring events of various kinds: lectures and presentations by affiliated faculty and visiting scholars, theatrical and musical performances, and forums and debates on topics of current interest.

Students who develop ideas for research, creative projects, community service, or internship experiences may apply to the college provost for financial support. The college also awards several annual scholarships and sponsors prizes for outstanding academic work and service to the college or to the greater community. Submissions for all awards, prizes and scholarships are due in spring quarter. More information regarding the guidelines and how to send in submissions can be found here.

The faculty fellows affiliated with the college represent all academic divisions (arts, engineering, humanities, physical and biological sciences, and social sciences). The faculty fellows guide the college academic programs and help the college and its students form connections with faculty in the other divisions, thus adding to the richness of academic dialogue within a college.

The college academic buildings house humanities faculty, with notable concentrations in philosophy, classics (study of ancient Greek and Latin language and civilization), and modern foreign languages, especially Chinese, French, Italian, Russian, German, and Japanese.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in COWL 1A, Cowell 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. Cowell 1A and Kresge 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Cowell College and throughout UC Santa Cruz.

COWL 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

CORE COURSE

COWL 1, Academic Literacy and Ethos: Imagining Justice

Cowell College One, Imagining Justice, is a first-year analytical reading and critical thinking seminar required of all first-year students, offered only in the fall quarter. It provides intensive practice in critical thinking and analysis, while also giving students opportunities to increase their speaking and presentation skills, and to engage in creative expression. More broadly, it introduces students to university-level discourse including key skills and common practices, and UC Santa Cruz's academic expectations. It works to build an intellectual community here at Cowell College not only within the incoming class, but across all students at Cowell, since some texts are held over from year to year, so that students from frosh to seniors have reading and ideas in common.

All students admitted as frosh are required to complete the core course. Students admitted as transfer students with sophomore standing or above (45 or more credits in transfer) are exempt from the core course requirement.

COLLEGE ADVISING

Contact information:

cowell@ucsc.edu
831-459-2253
Cowell College Administration Building, Room 118

Cowell College advisors help students interpret academic policies and procedures and clarify educational goals. They provide support to students to ensure their academic success and progress toward their degree throughout their time at UC Santa Cruz. Advisors help students make informed decisions, develop resiliency, and develop the ability to take ownership of their academic choices. Advisors also connect students to resources that will enrich their academic experiences.

Cowell College hosts several campuswide programs including the Chancellor's Undergraduate Internship Program (CUIP), the Smith Society, the Center for Public Philosophy, and the Eloise Pickard Smith Gallery.

Crown College

Crown College Administration Building
831-459-2412
https://crown.ucsc.edu

Crown College seeks to provide students with a living and learning environment in which they can positively develop intellectually and socially. Crown is traditionally viewed as the "science college," and it does have a strong presence of engineering, biology and other STEM (Science, Technology, Engineering, and Math) students but a large number of students majoring in the social sciences and some arts and humanities students call Crown home as well.

Crown is located on a hilltop surrounded by a redwood forest. The award-winning architecture with its white walls and high-pitched tiled roofs suggests a hillside Mediterranean village. The college's residential facilities house approximately 800 students. The facilities at Crown College were built through a partnership of public funds and a gift from the Crown Zellerbach Foundation.

We enjoy the strong support of generations of Crownies and they continue to be a part of the community they formed as students. Alumni participate in an advisory capacity in the college's governance and their generous contributions have allowed Crown to renovate Crown's Library and its Fireside Lounge, enrich our student's Core experience, and develop our extensive curriculum of elective classes.

For more information on the Crown's academic and social environment please visit Crown's website and also see this feature article: Crown College: Science Minded, Socially Mindful.

ACADEMIC EMPHASES

From the time of its founding in 1967, issues pertaining to the role of science and technology in society have been a focus of special interest at Crown College. We approach these issues from an interdisciplinary perspective that recognizes the influence of social and cultural factors on the scientific enterprise, as well as the ways in which science and technology influence our society.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh enroll in CRWN 1A, Crown 1A: Introduction to University Life and Learning. Transfer students enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. Crown 1A and Kresge 1T integrate introductions to academic skills with the online Slug

Orientation process, and begin student preparation for their studies at UC Santa Cruz.

CRWN 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

CORE COURSE

CRWN 1, Academic Literacy and Ethos: Ethical and Societal Implications of Emerging Technologies

Crown College's entering frosh enroll in our core course, CRWN 1, which explores Crown's theme, Ethical and Societal Implications of Emerging Technologies. Students work individually, in small groups of four to five students, and in sections of 25 to 30 students, thereby modeling and embracing the diversity found across campus. CRWN 1 looks at technological revolutions and at their implications both locally and globally. CRWN 1 also explores issues of inequality and the ethical dilemmas involved and what we can do as responsible citizens to address the challenges facing our society. Deeper goals of this course include fostering a sense of belonging, and ensuring that our students develop the analytical reading, critical thinking, and effective communication skills that they need to succeed in their studies.

A central component of the course is a group research project, in which students study the impact of a technology of their choice, while learning strategies for effective group work. Crown's core course is enhanced through our plenary series, which gives students opportunities to hear intellectual leaders speak and to interact with them, while getting to know our team of Core faculty.

All students admitted as frosh are required to complete the core course. Students admitted as transfer students with sophomore standing or above (45 or more credits in transfer) are exempt from the core course requirement.

OTHER ACADEMIC PROGRAMS

Complementing its focus on science and technology, Crown provides experiential learning opportunities and supports the development of transferable skills. This includes providing funding for materials needed for class projects (Crown Student Project Funds) and an extensive curriculum of elective classes. These classes are open to all majors and can be grouped into three areas: entrepreneurship, digital literacy, and communication skills.

Crown offers three entrepreneurship classes: Start-up Entrepreneurship Academy (CRWN 90), Social and Creative Entrepreneurship (CRWN 92), and Fundamentals of Starting and Scaling an Organization (CRWN 100). Crown also offers two exciting opportunities for experiential learning in the area of entrepreneurship: GetVirtual Business Assistance (CRWN 95), and Marketing for Good (CRWN 91), and facilitates access to incubator space and to funding opportunities for student ventures through its partnership with the Center for Innovation and Entrepreneurial Development. Opportunities to explore the ethical implications of emerging technologies and to develop tools for ethical assessment are available through Crown's Center for Applied Ethics and Values of Emerging Technologies.

Crown supports digital literacy through two classes: Computational Futurology: Use of Data Analysis for Predicting Human Behavior and Activity (CRWN 88), and Workshop in Computational Biology (CRWN 89). CRWN 88 covers statistical and computational approaches available to predict human activity, both at the individual and at the collective level, and culminates in a group project that integrates the concepts learned in the course. CRWN 89 engages students in genomics research by forming teams of complementary expertise in coding, advanced statistics and biology and guiding them through the process of academic inquiry.

Crown also offers a variety of classes supporting multimodal communication and artistic expression. This includes two classes offered by the KZSC FM radio station: Introduction to Broadcast Media: Radio (CRWN 70) and Broadcast Production: Radio (CRWN 70L) and also a Sci-Fi class, Science Fictions (CRWN 80F) and a Sci-Fi drama class tied to Core, Digital Theater Workshop (CRWN 96), a videography class, Storytelling in a Digital Age (CRWN 86), a podcasting class, Podcasting: Digital Storytelling (CRWN 98).

Finally, Crown has also established a collaboration with the departments of Mathematics and Statistics to develop a data science track. The first class in this track is Mathematical Problems in Data Science (CRWN 85).

STUDENT WELL-BEING

Crown a class to promote student resiliency (CRWN 81). In a workshop series, students explore their identity while managing and letting go of stress, anxiety, and depression. This program focuses on understanding: 1) how we process our thoughts and feelings; 2) how society (family and friends) and culture impacts us; and 3) ways to experience and create meaning and value in life.

SUMMER CLASSES

Crown College will offer a great curriculum in Summer 2024! These classes are open to all UCSC students from any and all colleges and majors, as well as students from other universities or high schools.

Summer Classes

CRWN 80F Science Fictions
CRWN 90 Start Up Entrepreneurship Academy (SEA)
CRWN 95 GetVirtual Business Assistance
CRWN 98 Podcasting: Digital Storytelling

CRWN 100 Fundamentals of starting and scaling an organization

Enrollment opens May 1, all students are welcome.

Global Seminars

Netherlands: CRWN 94, Ecoentrepreneurship; CRWN 92G, Social and Creative Entrepreneurship

Ireland: CRWN 98B, Podcasting: Digital Storytelling; in conjunction with WRIT 2, Research and Travel Writing

By application only—see website for details, info sessions, and deadlines.

Through Summer Session Summer UCSC, Crown offers a large part of its curriculum in the summer.

These classes are open not only to all UCSC students but also to students from other higher education institutions and are delivered in 5-week, 8-week or 10-week periods.

COLLEGE ADVISING

Crown Advising is located in the Crown Administration Building and is staffed by the college assistant, professional academic advisors, and a team of peer advisors. Crown Advising offers appointment advising (phone, in-person, or remotely via Zoom) every weekday in fall, winter, spring, and summer. To schedule an appointment, students should use Slug Success. For quick questions or completion of most forms, students are encouraged to email crownadvising@ucsc.edu. Please visit our website for the most up to date information about advisor availability.

Crown Staff Directory

Crown College Core Faculty Core Faculty

Crown College Fellows Fellows

John R Lewis College

College Office
217 Social Sciences 1
(831) 459-5034
https://johnrlewis.ucsc.edu/

Formerly known as College Ten, the college was dedicated as John R Lewis College on May 6, 2022, a naming that was made possible by the generosity of anonymous donors who are inspired by the life and legacy of the Civil Rights Leader and member of Congress. All of us at John R. Lewis College are humbled by this honor, and committed to continuing, deepening, and strengthening our efforts toward our theme of social justice and community.

ACADEMIC EMPHASIS

John R Lewis College's theme of Social Justice and Community addresses a range of social problems and their impacts on society. Understanding the contemporary United States, for instance, requires social and historical frameworks that address concepts like racialized and gendered social hierarchies, the construction of marginalization and difference, the impacts of class differences, and many manifestations of unequal power relationships. A flourishing society that progresses toward social and environmental justice depends on informed, critical, and empathetic people willing to make the efforts necessary to create social change. At John R Lewis College, we strive toward the goals of analyzing, embodying, and implementing ideas that help our students become knowledgeable and critical social actors who recognize and practice the principle that all people possess equal intrinsic worth. Our academic and co-curricular programs consider the injustices that many people confront in their lives, and possible policies for overcoming social, political, and economic inequalities. In addition, the college provides students with opportunities to make their own positive contributions to social change through community involvement and/or scholarly research.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in JRLC 1A, John R. Lewis College 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. JRLC 1A and KRSG 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at John R Lewis College and throughout UC Santa Cruz.

JRLC 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

CORE COURSE

JRLC 1: Academic Literacy and Ethos: Social Justice and Community

First-year students examine current issues pertinent to the college's intellectual theme. The core curriculum explores the causes and consequences of social injustice in several ways. Students examine the roots of prejudice, discrimination, and violence directed toward groups based on their ethnicity, skin color, gender, sexual orientation, religious practices, or political views. They also consider the causes and consequences of economic inequality both within the United States and around the world. In addition to articulation with

the college theme, the core seminar teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. The instructors work closely with each student throughout the quarter.

All students admitted as frosh are required to complete the core course. Students admitted as transfer students with sophomore standing or above (45 or more credits in transfer) are exempt from the core course requirement

COLLEGE ADVISING

Contact information:
jrlcadvising@ucsc.edu
Phone: 831-459-5034
Social Sciences 1, Room 217

Located on the second floor of Social Sciences 1, our team of dedicated, knowledgeable and caring advisors is here to guide students throughout their journey at UC Santa Cruz, from admission to the university through graduation. Our approach is collaborative and student-centered, assisting undergraduates with identifying and exploring their academic interests and capacities, and providing advice as to how to make the most of their time at UCSC. Our advisors answer questions about navigating the policies and life at UC Santa Cruz, course scheduling and selection, degree and general education requirements, qualifying for a major, educational support and opportunities, and much more. Close partnerships with units across campus mean that if we do not know the answer to a question, we usually know someone who does.

Students who wish to connect with Advising should visit the John R Lewis College Academic Advising website for open hours, drop-ins, and appointments.

OTHER ACADEMIC PROGRAMS

Optional programs are available to involve John R Lewis College students in academic and co-curricular activities beyond the first-quarter core course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences and experiential learning opportunities.

Social Justice Issues Workshop

Social Justice Issues Workshop is a two-credit course, taught by student facilitators that meets once per week and can be taken in addition to a regular 15-credit academic load. The workshop offers a small, dynamic learning community in which members explore important issues of personal and cultural identity; social, political, and environmental concerns; and community-mindedness. The class emphasizes small-group experiential learning through structured exercises and group activities, and also includes discussions, film presentations, and guest speakers. Mentoring by our experienced staff is vital to realizing the potential of such peer-to-peer learning.

Apprenticeship in Community Engaged Research

The Apprenticeship in Community Engaged Research (or (H)ACER) is a new program at College Nine and John R Lewis College designed to teach students qualitative research methods with a focus on community-engaged and participatory methodologies. The objectives of our work encompass student enrichment, uplifting the work of our community partners, and conducting relevant, critical research to solve real-life challenges at the intersections of education, health, economics, immigration, nutrition, labor and the environment. The benefits for students of experiential learning in the community are multiple: abstract academic concepts become more tangible, students expand their web of social connection, and skills such as teamwork and problem solving are heightened. Students reach outside of their comfort zone, have their assumptions challenged, and meet remarkable local heroes.

(H)ACER offers a scaffolded progression of opportunities for students: students can begin by getting involved with Praxis, participating in Alternative Spring Break, or signing up for internships with community partners such as an after-school, garden-based educational program at Calabasas Elementary School in Watsonville. Praxis is a student club for community service in which College Nine and John R Lewis College students undertake monthly volunteer opportunities throughout Santa Cruz County and neighboring communities. During campus meetings, Praxis participants engage in discussion, reading, and reflection to increase their awareness and knowledge about key issues.

Alternative Spring Break (ASB) in Watsonville centers on issues of food security, sovereignty, and justice. After getting to know each other at a retreat, discussing readings, and hearing from a panel of Watsonville leaders, ASB participants undertake five days of experiential learning with a variety of community partners (e.g., schools, artists, non-profits). After Spring Break, a final gathering is held for students to share their final projects.

Practical Activism: Tools for Local and Global Change

The annual Practical Activism Conference is a day-long, student-led event featuring keynote speakers, multiple workshops, tabling by on-and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit Practical Activism for more information.

Community Garden Class

In cooperation with the work of the Community Garden Club, this course explores such topics as collaborative garden design, community gardening best practices, building regenerative social and ecological systems, sustainability, and

food justice, while also offering hands-on experience in the College Nine and John R. Lewis College community garden.

Radical Joy Class

This course focuses on *radical joy,* the feelings and practices of freedom in social justice movements. This course explores social and psychological effects of joy on social movement participants in terms of the growth of movements, well-being and creativity of participants, and evolution of ideas. The course takes a structural perspective looking at radical joy in movements against white supremacy, patriarchy, ableism, queer/trans-phobia and other intersections of liberation movements. Theories of art, esthetics, and artivism are centered, while also building students' art praxis through zines, music, podcasting, and crafting. This is achieved with activities and assignments that teach the practice of art for social and personal change.

John R Lewis College Pathways to Distinction

Students are recognized with John R Lewis College Distinction upon successful completion of three quarters (approximately 15 credits) of research experiences, coursework, service and leadership and/or writing intensive courses focused on social justice and community themes. Applicable John R Lewis College courses, service opportunities and research opportunities with faculty can fulfill the criteria for distinction. This recognition is intended to serve as an incentive for students to pursue activities that help them succeed in college and beyond related to the theme of social justice and community.

Kresge College

Kresge College Academic Center - Suite 2202
831-459-2071
https://kresge.ucsc.edu

ACADEMIC EMPHASIS

Kresge was the sixth college to be built on the UC Santa Cruz campus. The college was founded on principles of participatory democracy and experiential education, with a set of core values that remain integral to its academic and co-curricular activities and student organizations: creativity, sustainability, collaboration.

Kresge College is a living-learning community with a distinctive legacy of experimental and interdisciplinary education that emphasizes participatory learning, hands-on experience, and collaborative academic inquiry that transcends the walls of traditional classrooms. Kresge's curriculum is designed to enable students to live and learn with intention and purpose, to attend to the natural world around them, and to work creatively to solve pressing social, political, and ecological problems and facilitate stewardship of a just and sustainable society. Kresge's courses allow students to fulfill general education requirements while participating in practicums and small seminars taught by dedicated and imaginative faculty.

All entering first-year students enroll in KRSG 1: Academic Literacy and Ethos, a fall-quarter seminar that teaches foundational concepts for intellectual and personal development in an academic community.

The rest of Kresge's curriculum consists of 2- and 3-credit practice-oriented courses, including small, experiential-learning seminars like Power of Filmmaking (KRSG 2), Natural History Practicum (KRSG 3), Creative Writing (KRSG 65), and Theater Arts for Public Speaking (KRSG 30), as well as courses that help students design their college experience to take full advantage of being at UCSC, like Learning With Intention and Purpose (KRSG 100). KRSG 51 and 52 are practicums for City on a Hill Press, the campus newspaper.

Kresge also offers a number of courses designed specifically for transfer students, including Successful Transfer to the Research University (KRSG 25) and STARRS Internship (KRSG 102), a practicum course that guides students through a project-oriented internship with Services for Transfer, Re-entry, and Resilient Scholars.

Finally, Kresge has begun a new experimental seminar series called Learn to Love Reading Again, anchored by three principles: we read for the sake of reading, not for a test; we engage in discussion with peers to deepen our insight; and we read on paper. Reading Marx (KRSG 10) is the first seminar in the series.

As part of Kresge's commitment to participatory democracy, Kresge's provost and Kresge Parliament work together to further develop this curriculum.

ORIENTATION

All new frosh and transfer students who start in fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in KRSG 1A, Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Introduction to Research Universities and the Liberal Arts. KRSG 1A and KRSG 1T integrate introductions to academic skills with the online Slug Orientation process and begin to prepare students for their studies at UC Santa Cruz.

KRSG 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research

CORE COURSE

KRSG 1 Academic Literacy and Ethos

Offered in fall quarter

Offered to entering frosh, Kresge's "Core" course, KRSG 1, Academic Literacy and Ethos, teaches foundational practices for intellectual and personal development in an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy—through a thematic focus on the power of attention to

transform the way we live and learn. The course is framed by three overarching questions: *Why do I learn? How do I learn?* And *From whom can I learn?* Through a variety of texts and assignments, students reflect on the purpose of their education at UCSC; how to approach learning intentionally, with curiosity and presence; and how to learn with and from others. Midway through the quarter, each student interviews an elder (a family member, teacher, or mentor) about a key learning experience in that person's life and creates an oral history from that interview. Then, for the Capstone Creative Project, the student transforms that oral history into a creative genre—a short documentary, graphic novel, storybook, poem, etc.—to tell their elder's story in a new way. Throughout, students continually reflect on the course's three overarching questions. In addition to their regular seminar, students also attend evening plenaries a few times over the quarter, coming together in larger groups for events related to the themes of the course.

All students admitted as frosh are required to complete the Core Course. Students admitted as transfer students with sophomore standing or above (45 or more credits in transfer) are exempt from the Core Course requirement.

Visit Kresge Core Course for additional information.

COLLEGE ADVISING

kresgeadvising@ucsc.edu
Phone: 831-459-2071

Kresge has a team of three academic advisors who work collaboratively with students to support them as they explore majors, navigate university policy, clarify academic goals, and develop strategies for success. Kresge's advisors serve as advocates for students who are experiencing institutional barriers to their success, while also upholding university policy when necessary.

Kresge's advising staff stays up-to-date on new research and best practices in the wider academic advising community. They celebrate and reflect the diversity of the Kresge student body and seek to model the goal of being lifelong learners.

College advisors work with students from the period of Summer Orientation and Welcome Week through graduation, although much of the interaction is concentrated in the student's first year or two on campus, before they've declared a major. Students come to the College Office with all of their questions, and college advisors and front desk staff frequently facilitate connections with other campus resources as appropriate.

In addition to one-on-one in-person and virtual advising, Kresge's advisors collaborate with the provost, Residence Life office, and campuswide academic and student support services to offer holistic programming. Past workshops have covered topics such as options for summer enrollment, how to choose a major, and finding family away from home.

OTHER ACADEMIC PROGRAMS

Kresge is a rich and multidimensional community, uniquely oriented toward creative communication, participatory democracy, and ecological ethics and sustainability.

Kresge is home to a number of co-curricular programs and activities that complement and enhance academic education by enabling learning outside a classroom setting. Kresge's Media & Society series presents lectures and public conversations on the role of media and popular culture in contemporary society, and partners with City on a Hill Press to host events with print, digital, TV, and radio journalists. Writers House is a themed housing floor and accompanying speaker series that brings poets, novelists, journalists, and other writers to Kresge.

The Kresge Garden Co-Op provides a community space where students empower themselves to learn how to grow their own food from seed, dig beds, and create a functional compost system. City on a Hill Press, which covers issues affecting the student population and the Santa Cruz community, is produced by and for UCSC students. TWANAS Communities of Color and Native American Students Press is one of the oldest student-run magazines at UCSC and is dedicated to providing a media outlet for students of color to write about issues affecting students of color. And Kresge Parliament offers opportunities for student government, community service, and activism in a setting that emphasizes participatory democracy.

Merrill College

Merrill College Administration Building
831-459-2144
https://merrill.ucsc.edu

ACADEMIC EMPHASIS

Merrill College was founded in 1968 with a generous gift from Charles E. Merrill, Jr. Since our inception, Merrill College has focused on the challenges posed by global inequality and on solutions that can be imagined when students transform themselves into producers of knowledge in their own right, through engagement with the world beyond the university campus.

The college theme is "Cultural Identities and Global Consciousness." This pairing signals the college's commitment to drawing on the funds of knowledge brought by individual college members to our community of scholars and a corresponding commitment to understanding questions of identity within a larger global context.

ORIENTATION

All new first-year and transfer students who start fall quarter are required to enroll in one of two online orientation courses designed to prepare students for their studies at Merrill College and throughout their time at UC Santa Cruz. First-year students will enroll in MERR 1A, Merrill 1A:

Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. MERR 1A and KRSG 1T integrate introductions to academic skills with the online Slug Orientation process.

MERR 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

CORE COURSE

MERR 1, Academic Literacy and Ethos: Reading Ourselves, Reading the World

MERR 1, also known as "Core," empowers students to develop university-level critical thinking skills with a focus on reading. Students learn strategies for building relationships with professors and other instructors, staff people, and fellow students who are essential for success at our university and beyond. Readings illuminate the rich history of community and activism at Merrill College and raise urgent questions that matter to all students, regardless of major. Topics we will address include the purpose of higher education, global inequality, and climate change. Through active learning, students cultivate skills that enable us to analyze different forms of evidence, formulate arguments, work in collaboration with others, and enter into constructive dialogue with members of our university community and the wider world.

All students admitted as frosh are required to complete the core course. Students admitted as transfer students with sophomore standing (45 or more credits in transfer) are exempt from the core course requirement.

COLLEGE ADVISING

Contact Information:
merrilladvising@ucsc.edu
Phone: 831-459-2144

Merrill College Administration Building

Merrill College advisors help students interpret academic policies and procedures and clarify educational goals. They provide support to students to ensure their academic success and progress toward their degree throughout their time at UC Santa Cruz. Advisors help students make informed decisions, develop resiliency, and develop the ability to take ownership of their academic choices. Advisors also connect students to resources that will enrich their academic experiences.

OTHER ACADEMIC PROGRAMS

A key characteristic of Merrill's academic program from its founding has been the importance of experiencing the world, not just studying it. Merrill offers a field study practicum that teaches methods of responsible participant observation and helps students arrange internships in local agencies and organizations.

Pathways to Graduate School supports junior and senior Latinx and/or Educational Opportunity Program (EOP) students on their journeys to graduate school, including support for creating successful applications and negotiating potential barriers to success. A series of leadership courses, open to students involved in any of UC Santa Cruz's registered student organizations, teaches of principles of critical engagement, collaboration, and organizational leadership for social change.

Merrill College offers several funding opportunities for experiential education. These include the Merrill Undergraduate Research Mentorships, which provide students with paid research internships. These internships provide invaluable research experience, personal and professional development, and prepare advanced undergraduates to pursue graduate studies. The Sandra Frausto Education Abroad Scholarship provides a scholarship to one qualified undergraduate annually to study in Latin America. Students may also apply for Merrill Special Project Funds and campus-backed research funds.

Oakes College

Oakes College Office, Oakes Administration Building
(831) 459-2558
https://oakes.ucsc.edu/

ACADEMIC PROGRAMS

Community-based Advocacy and Research (CARA) Certificate Program (p. 893)

ACADEMIC EMPHASIS

Oakes College is a multicultural community committed to social justice, freedom from oppression, and to providing the highest quality education to students from diverse backgrounds. Oakes is at the leading edge of scholarship, community-building, integrated co-curricular experiences, and community-engaged learning. Oakes students strive to understand the self, community, and systemic oppression, and take action for change in the world.

The Oakes College faculty represents a wealth of expertise from the natural sciences to the humanities, and we are proud to have some of the top scholars in the world among our faculty fellows. Our students major in every discipline at the University of California, Santa Cruz—from economics and computer science, to theater arts and Latin American and Latino studies—and they are well supported by the depth and breadth of the Oakes College faculty and the extensive knowledge of our advising team. Oakes graduates have gone on to successful careers in fields such as medicine, law, education, medical research, and community service.

The Oakes Core Course, Communicating Diversity for a Just Society, helps first-quarter, first year students build deeper critical connections by engaging with some of the most challenging and relevant issues that face us in the world. We do this by examining the intersections between reading, personal identity, and social justice. In our readings, discussions, and assignments, we seek to answer questions about how materials we read connect with our cultural, religious, sexual, ethnic, class, racial, and gender identities. Those who are admitted as transfer students are exempt from the Core Course requirement, but may take the course at their option pending available space.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in OAKS 1A, Oakes 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. OAKS 1A and KRSG 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Oakes College and throughout UC Santa Cruz.

OAKS 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

CORE COURSE

OAKS 1, Academic Literacy and Ethos: Communicating Diversity for a Just Society (5 credits)

This course examines the intersections between reading as a college student practice, personal and social identities, and social justice. In our readings, discussions, and assignments, we seek to answer questions about how materials we read connect with our cultural, religious, sexual, ethnic, class, racial, and gender identities. How have our own ways of identifying—of naming or defining ourselves—shaped our individual experiences? Where do we position our own stories within our shared family histories? How do our own autobiographies and essays, as written accounts of our process of identification, bring our search for ourselves and our relationship with reading and writing into the same conversation?

COLLEGE ADVISING

https://oakes.ucsc.edu/advising

Mailing address:
The Office of Advising and Records
Oakes College
University of California, Santa Cruz
1156 High Street
Santa Cruz, CA 95064

Contact information:

oakesadvising@ucsc.edu
(831) 459-4531

At Oakes College, our role as college advisors is to serve as the first point of contact for our undergraduate students. We believe that effective advising mandates that we collaborate with students to identify and clarify their goals, develop a sense of self-authorship, and learn to make meaningful decisions about their lives. We ensure our students know that their educational trajectory extends beyond coursework, and includes opportunities and experiences that will enhance their education.

Investing in an advising model where a student's lived experience is an educational asset, we advance our practices and become more engaged and proactive in our work. Our Oakes college advisors advocate for necessary policy and procedural changes. We address institutional barriers by engaging with justice rather than simply adopting it as a value. In turn, we aspire for students to see the greater meaning of their educational experience and how it can transform their lives beyond their undergraduate career.

The purview of colleges advising includes navigating campuswide requirements such as general education, academic progress, time to degree, and major selection and qualification.

OTHER ACADEMIC PROGRAMS

At Oakes College, we foster student engagement and leadership within and beyond the classroom. To this end, we encourage students to develop the knowledge, skills, and cross-cultural understanding necessary to become actively engaged people and future leaders in their own communities, workplaces, and academic disciplines as well as in the larger U.S. society and the world as a whole. We also provide a range of resources and programs that enable all students to succeed in their academic endeavors. Such resources include:

The Learning Center and the Westside Writing Center at Oakes College provide space for study groups as well as tutoring. Special assistance in academic reading and writing in a variety of subjects is offered to Oakes students.

The Oakes Computer Lab provides access to 20 PCs for Oakes students.

Co-curricular programs like the residential Science Community at Oakes College (Biko House) offer living-learning opportunities to enhance student success and to provide students with unique opportunities for interacting with faculty in small group contexts. Oakes College appoints a Scientist in Residence every year who facilitates programs to support STEM diversity in the college.

THE CARA PROGRAM

The Oakes College CARA Program (Community-based Action Research and Advocacy) works to create opportunities for experiential education, leadership, research, and career development; we center the strengths and needs of first-generation college students and projects for transformative social justice. Courses emphasize community-building along with research and communication techniques within the critical frameworks that build confidence and support justice initiatives. The program includes a development and outreach strategy with campus and community groups—including schools, youth sites, direct-service provider networks, and grassroots organizations, both on-campus and off. Upper-division courses are commonly accepted as major requirement substitutions in multiple departments. Oakes students and students in other colleges can earn a CARA certificate by completing a sequence of community-engaged coursework focused on social justice.

Porter College

Porter College Office, D-Building
831-459-2273
https://porter.ucsc.edu

ACADEMIC EMPHASIS

Porter College was founded in 1969 as the fifth of UC Santa Cruz's residential colleges and was later renamed in honor of a generous grant from the Porter-Sesnon family. Its mission is to foster achievement in all areas of study. Porter is especially dedicated to achievement in the arts and humanities, believing that creative and humanistic inquiry are essential parts of a rigorous and broad-minded education, a flourishing society, and a happy life.

Porter College fellows hail from every academic division on campus and from many non-academic professions, but all of them share the philosophy of education that the college's curriculum embodies: first, discover how to learn; then, learn by doing; and finally, let your learning make a difference in the world.

The Porter College curriculum encourages students to explore unusual topics and provocative ideas, to test and revise hypotheses about the meaning of their experiences, to learn from the failures that are an inevitable part of new learning and discovery, and to assume responsibility for the decisions they make in their studies. In addition to the core course for first-year students, which provides rigorous training in critical reading and study skills, Porter offers a variety of smaller interdisciplinary seminars that combine historical and theoretical approaches to the arts, humanities, and sciences with practical experience conducting scholarly research and making creative work.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in PRTR 1A, Porter 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. Porter 1A and Kresge 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Porter College and throughout UC Santa Cruz.

PRTR 1A Introduction to University Life and Learning (1 credit)
Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)
Offered online in summer quarter

CORE COURSE

PRTR 1, Academic Literacy and Ethos: Arts of Reading

PRTR 1 teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Engages Porter's intellectual tradition of investigating the contribution the arts and humanities make to a good life, a just society, and a flourishing world.

All students admitted as frosh are required to complete the core course. Students admitted as transfer students with sophomore standing or above (45 or more credits in transfer) are exempt from the core course requirement

COLLEGE ADVISING

Porter D-Building, Room 104

Porter College advisors help students interpret academic policies and procedures and clarify educational goals. They provide support to students to ensure their academic success and progress toward their degree throughout their time at UC Santa Cruz. Advisors help students make informed decisions, develop resiliency, and develop the ability to take ownership of their academic choices. Advisors also connect students to resources that will enrich their academic experiences.

OTHER ACADEMIC PROGRAMS

Porter College offers fellowships and grants to students and faculty in support of scholarly and creative projects. Among the grants offered annually are the Porter College Undergraduate Fellowship (PCUF), the Porter College Research Assistantship (PCRA) and the Nathan Foley Mendelssohn Memorial Travel Scholarship (NFM).

Rachel Carson College

Rachel Carson College Administration Building, Room 114
831-459-2361
https://rachelcarson.ucsc.edu

ACADEMIC PROGRAMS

Sustainability Studies Minor (p. 887)

ACADEMIC EMPHASIS

Rachel Carson College's academic classes focus on the theme of environment and society. The college sponsors a number of educational initiatives and courses aimed at furthering its theme and mission, as well as programs offering experiential learning for students. CRSN 1 is the required first-year college core course that introduces students to critical and analytical reading at the university level. The core course is mandatory for all incoming frosh.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in CRSN 1A, Rachel Carson 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. CRSN 1A and KRSG 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Rachel Carson College and throughout the University of California, Santa Cruz.

CRSN 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

CORE COURSE

CRSN 1, Academic Literacy and Ethos: Environment and Society

The Rachel Carson College core course focuses on the theme "Environment and Society." Throughout the quarter, we explore, through multiple perspectives, the complex relationships between people and the places they live. This is a course that focuses on big-picture questions like: What is nature? What does it mean to be "natural?" How do we understand our politics and ourselves at a time when the climate is changing so rapidly? This course is an interdisciplinary course by design—it simultaneously pulls from history, novels, journalism, art, sociology, and science to take on current issues in environmental studies like water rights, food systems, indigenous knowledge, environmental history, and labor. In pursuing these topics, students also delve into some of the environmental and ecological science that underpins them. The course consists of a weekly plenary (large lecture) and a bi- or tri-weekly seminar (discussion section).

COLLEGE ADVISING

carsonadvising@ucsc.edu
Phone: 831-459-2361
Rachel Carson College Administration Building, room 114

Rachel Carson College advisers help students interpret academic policies and procedures and clarify educational goals. They provide support to students to ensure their academic success and progress toward their degree throughout their time at UC Santa Cruz. Advisers help students make informed decisions, develop resiliency, and develop the ability to take ownership of their academic choices. Advisers also connect students to resources that will enrich their academic experiences.

OTHER ACADEMIC PROGRAMS

In addition to the core course, practicum internships, research projects, and a minor in sustainability studies all enable students to acquire skills that they can apply to their career at UC Santa Cruz, including service-learning work with campus and community-based agencies and organizations. Additional college courses include garden internships, academic and STEM preparation classes, student-facilitated classes in sustainability. For more information about academics, see Rachel Carson College.

Sustainability Studies

Rachel Carson College Office
(831) 459-2361
https://rachelcarson.ucsc.edu/

Sustainability Studies Minor (p. 887)

SUSTAINABILITY STUDIES MINOR

The rapidly growing and linked ecological and social crises arising from stresses on supplies of energy, water, food, land use and other natural resources are among the most critical societal challenges of the next 50 years. These crises are not simply about the adequacy of supply relative to demand; they are also the result of the complex social relations within and among societies, in the past, present, and future. Sustainability is not a fixed state that can be achieved once and maintained. Creative solutions for socio-ecological problems require ever-evolving adaptive approaches and robust interdisciplinary collaborations among engineers, social scientists, economists, policy makers, artists and natural scientists. College graduates will need to be flexible and responsive, able to learn new knowledge and skills rapidly, and cognizant of the complex organization of society and technology. The minor in sustainability studies administered by Rachel Carson College takes a "learning by doing" approach to prepare students as

change-makers equipped with professional conduct, analytic abilities, a global perspective and practical know-how.

The pedagogical underpinnings of this minor are anchored in design as a creative process and premised on relationships between classroom learning, character development, non-violent communication, community engagement, and technical innovation through research and application. Broad interdisciplinarity and individual grounding in STEM, social sciences and the arts are critical elements at the center of the minor's core courses. The curriculum is therefore structured to 1) facilitate interdisciplinary academic and research collaborations among faculty and students across multiple UC Santa Cruz divisions (drawing on but **outside** of the divisional structure) and in the off-campus community; 2) teach and train students in **ecology and sustainability** for regenerative design thinking, entrepreneurship and impact assessment in the **built and natural environment**; 3) integrate the use of science, technology, engineering, art and mathematics (STEAM) skills and social science knowledge to these ends; and 4) meet undergraduate demand for a sustainability curriculum with focuses distinct from those offered in existing UCSC departments.

The program is designed to graduate students who can think past mere technology-based solutions to design and implement disruptive innovations that challenge the existing paradigm and invite regenerative systems that support our demands for energy, food, water, mobility and shelter by cultivating mutually beneficial relationships. Students are introduced to concepts and topics such as living-system and cradle-to-cradle design, life-cycle analysis, waste management, coastal and marine conservation, and natural resource management. During the program, students will design and participate in service-learning projects in collaboration with on- and off-campus units, agencies, and organizations; and apply the knowledge and skills acquired through the minor.

No specific prior preparation or prerequisites are required for entry to the minor.

Program learning objectives are as follows:

- Demonstrate whole system awareness with the ability to identify and understand interconnectedness (intersecting, related and/or connected systems; synergies and rebound effects) and how all human-made designs rely upon and are embedded within nested ecological systems.
- Demonstrate awareness that a design is a system, that users interact with designs and that designs and users are embedded in higher level systems that include environmental ecosystems and the life they sustain.
- Demonstrate knowledge and understanding of whole life-cycle and closed-loop systems thinking as related to the impact of mitigation work (e.g., understanding of life-cycle burdens of design alternatives).
- Comprehend and apply understanding of the causes, features, data, complexities, policies, and practices giving rise to and needed to address a perceived crisis in the contemporary global socioecological context including the role of production, consumption, politics, policies, markets and human behavior in this crisis.
- Show proficiency in applying basic STEM skills needed for evaluation and design practices in real-world applications including quantitative and qualitative metrics for impact and risk assessments and a selection of software and hardware-specific skills (e.g.. computer animated design, 3D printing, Arduino programming etc.) Use cognizance of appropriate social science knowledge/methods and entrepreneurial practices to design and implement social enterprise and service learning projects in sustainability and ecological design and practice.
- Demonstrate the ability to forecast the near- and long-term costs and value of their work to the environment and society through the efficient use of resources (e.g., efficient for whom?) and socially/culturally responsible engagement with stakeholders.
- Show awareness of risks and opportunities related to changing environments and stakeholder interests on their work (e.g., extended costs, value, trade-offs, partnerships, regulations, policies, etc.).
- Demonstrate the ability to identify relevant cultural implications and influences in the context of their work (e.g., cultural expressions and sensitivities, services and goods procurement, heritage site appreciation) as well as equity awareness (e.g., gender, race, ethnicity, class, etc.).
- Feel familiar with ways to create robust, dynamic, and resilient systems and ways to develop transdisciplinary stakeholder networks.
- Understand ethical implications relative to social impact of their work.

Course Requirements

A minimum of 25 upper-division credits are required to complete the minor. Substitutes for any of the required courses must be approved by the program director. Courses may be taken for a letter grade or Pass/No Pass.

Introductory Courses

Take this course twice:

CRSN 55	Rachel Carson College: Service Learning Practicum	2

Upper-Division Core Courses

Take all of the following courses:

CRSN 151A	Sustainability Praxis in the Natural and Built Environment	5
CRSN 151B	Innovation and Professionalization for Sustainability Designers, Engineers, and Entrepreneurs	5
CRSN 151C	Sustainability Laboratory Tools, Techniques, and Applications	3

Topics taught in CRSN 151C vary by quarter. It may be repeated for additional upper-division credit or as a capstone option if the repeated course is on a different topic.

Upper-Division Elective

All students must take one 5-credit course from the CRSN or Breadth Electives lists below. The upper-division elective does not count toward the Breadth Capstone requirement. While not required, students are encouraged to take a CRSN course to fulfill this elective.

Capstone

Students choose from one of the following options:

Option 1: IDEASS Capstone

Take the following course three times (9 credits total):

CRSN 152	IDEASS Laboratory Practicum	3

Option 2: Breadth Capstone

Students fulfill the Breadth Capstone by taking one upper-division Breadth Elective and either an upper-division CRSN or additional upper-division Breadth Elective course from the lists below.

Upper-Division Breadth and CRSN Courses

The following courses fulfill the upper-division Elective requirement and Breadth Capstone requirement.

CRSN Electives

CRSN 151C	Sustainability Laboratory Tools, Techniques, and Applications	3
CRSN 155S	Innovation & Sustainability for Global Impact Practicum	3
CRSN 161	Education for Sustainable Living Program	5

Breadth Electives

The following courses are offered outside of Rachel Carson College and are subject to department availability. Check course descriptions for prerequisite or concurrent enrollment requirements. Lecture/lab combos count as one course. Labs are required only when required by the lecture.

ANTH 110E	Anthropology of Global Environmental Change	5
ANTH 110K	Culture Through Food	5
ANTH 110W	Land and Waterscapes Entropology	5
ANTH 111	Human Ecology	5
ANTH 135A	Cities	5
ANTH 137	Consuming Culture	5
ANTH 146	Anthropology and the Environment	5
ANTH 147	Anthropology and the Anthropocene	5
ANTH 160	Reproductive and Population Politics	5
ANTH 161	The Anthropology of Food	5
ART 125	Environmental Art Studio	5
BIOE 107	Ecology	5
BIOE 108	Marine Ecology	5
BIOE 145	Plant Ecology	5
BIOE 147	Community Ecology	5
BIOE 155	Freshwater Ecology	5
CMMU 133	Making California: Landscapes, People, Politics, Economy	5
CMMU 149	Political Economy of Food and Agriculture	5
CMMU 156	Politics of Food and Health	5
CMMU 162	Community Gardens and Social Change	5
CMMU 186	Food and Agriculture Social Movements	5
EART 107	Remote Sensing of the Environment	5
EART 116	Hydrology	5
EART 121	The Atmosphere	5
EART 142	Engineering Geology for Environmental Scientists	5
EART 146	Groundwater	5
EART 191	Earth Sciences Capstone Seminar	5
ECE 175	Energy Generation and Control	5
ECE 175L	Energy Generation and Control Laboratory	2
ECE 176	Energy Conservation and Control	5
ECE 176L	Energy Conversion and Control Laboratory	2
ECE 177	Power Electronics	5
ECE 177L	Power Electronics Laboratory	2
ECE 180J	Advanced Renewable Energy Sources, Storage, and Smart Grids	5
ECON 170	Environmental Economics	5
ECON 171	Natural Resource Economics	5
ECON 175	Energy Economics	5
ENVS 110	Institutions, the Environment, and Economic Systems	5
ENVS 120	Conservation Biology	5

ENVS 130A	Agroecology and Sustainable Agriculture	5
ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 135	Sustainable Aquaculture	5
ENVS 140	National Environmental Policy	5
ENVS 142	Sustainable Energy	5
ENVS 143	The Future of Sustainable Development	5
ENVS 144	Global Climate Change Politics	5
ENVS 145	Green Cities	5
ENVS 149	Environmental Law and Policy	5
ENVS 151	Environmental Assessment	5
ENVS 152	International Environmental Politics	5
ENVS 165	Sustainable Water Systems	5
ENVS 166	Agroecosystem Analysis and Watershed Management	5
FMST 124	Technology, Science, and Race Across the Americas	5
FMST 131	The Politics of Matter and the Matter of Politics	5
FMST 133	Science and the Body	5
HAVC 48	Climate Justice Now! Art, Activism, Environment Today	5
HAVC 141K	Activist Art Since 1960: Art, Technology, Activism	
HAVC 143B	History of Urban Design	5
HIS 101C	Oceans in World History	5
HIS 101F	Global Environmental History	5
HIS 151	Keywords in the History of Science and Medicine	5
HIS 196F	Topics in European Environmental History	5
LALS 80P	Environment and Society in Latin America	5
LALS 152	Consumer Cultures Between the Americas	5
LALS 163	The Amazon: Cultures and Perspectives	5
LGST 137	International Environmental Law and Policy	5
LGST 159	Property and the Law	5
METX 101	Sources and Fates of Pollutants	5
OCEA 101	The Marine Environment	5
OCEA 102	Oceans and Climate: Past, Present, and Future	5
POLI 132	California Water Law and Policy	5
POLI 174	Global Political Ecology	5
PSYC 159E	Peace Psychology	5
SOCY 30A	Introduction to Digital Justice Studies	5
SOCY 119	Sociology of Knowledge	5
SOCY 125	Society and Nature	5
SOCY 130	Sociology of Food	5
SOCY 132	Sociology of Science and Technology	5
SOCY 167	Development and Underdevelopment	5
SOCY 173	Water	5
SOCY 177E	Eco-Metropolis: Research Seminar in Urban and Environmental Studies	5
SOCY 177G	Global Cities	5
SOCY 179	Nature, Poverty, and Progress: Dilemmas of Development and Environment	5
ANTH 110IG	Cultures Of Sustainability And Social Justice Abroad	5
ANTH 110I	Cultures of Sustainability and Social Justice	5

The list of breadth elective courses applies to all of the upper-division options above. This list is updated regularly, but course offerings change. Please consult course lists prior to each quarter to see what is being offered. Some of these courses require permission of the instructor to enroll). You can find the most updated listing of breadth electives here.

Stevenson College

(831) 459-2020
stcollege@ucsc.edu
https://stevenson.ucsc.edu

ACADEMIC EMPHASIS

Stevenson distinguishes itself as the only college with a required two-quarter core course intended to provide all first-year students with a common academic experience. The core course allows for more rigorous development of students' critical reading and analytical skills. It provides a unique learning environment and a supportive intellectual community for all Stevenson first-year students. Those admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space.

The Stevenson core course, Self and Society, helps students examine the nature of the self and the relationship of the individual to society. It teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. In addition, the course fosters an intellectual commitment to the general philosophy that has helped to define Stevenson College since its inception: preservation of human dignity, the social cultivation of individual creativity and citizenship, and a belief in ethical responsibility. The core course reflects the college's long-standing commitment to interdisciplinary and culturally diverse readings, while at the same time affording students an opportunity to develop research interests, to acquire greater understanding of the role of research universities in contemporary societies, and to

acquire the requisite skills to engage in increasingly more sophisticated intellectual work while at UCSC.

Stevenson's second quarter of the core course satisfies a further general education requirement, the TA, or textual analysis designation.

Students in majors that have a large number of course requirements should consider how they plan to fit both the two-quarter college core course and their intended major's first-year requirements into their first year at UC Santa Cruz.

Students are encouraged to consult with both their college and major advisors. Stevenson College advisors can be found on the Stevenson advising website.

Students who are placed in the Multilingual Curriculum when they enter UC Santa Cruz will be required to take only the first quarter of the core course requirement.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in STEV 1A, Stevenson 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. STEV 1A and KRSG 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Stevenson College and throughout UC Santa Cruz.

STEV 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Core Courses

STEV 1: Academic Literacy: Self and Society

Introduction to University Discourse: Self and Society. College 1 helps students develop academic and civic proficiency in reading, critical thinking, and "academic ethos," and habits of mind and practice tied to a sense of belonging and academic success. This course prepares students for success in other UC Santa Cruz courses requiring critical thinking, listening, discussion, and effective communication. It explores rhetorical principles and conventions of university discourse and considers the roots of modern society using foundational religious texts and major classical and modern philosophical works. Enrollment is restricted to first-year college members.

STEV 2: Academic Literacy: Self and Society 2

The winter quarter class that follows College 1 continues the development of critical reading, analysis, and effective speaking exploring conflicts inherent in modern society. The course fulfills the TA GE and investigates themes of colonization, race, gender, class, as well as cultural conflict. Enrollment is restricted to first-year and sophomore college members.

All students admitted as frosh are required to complete the core courses. Students admitted as transfer students with sophomore standing or above (45 or more credits in transfer) are exempt from the core course requirement.

OTHER ACADEMIC PROGRAMS

Junior Fellow Program

The Stevenson College Junior Fellows Program offers juniors and seniors an opportunity to serve as instructors in Self and Society. Junior fellows, who must have completed outstanding work in Self and Society during their first year, undergo a rigorous application and selection process. Junior fellows (enrolled in Stevenson 120, Teaching Practicum) earn five course credits.

Scholarships

Students have the opportunity to apply for funding for special research projects each quarter. Stevenson also provides several annual scholarships and service awards, including the Josh Alper Marines Memorial Award, the Michele Guard Memorial Scholarship, the Matthew Graviano Memorial Scholarship, the John Halverson Scholarship, and the Robert Dodge Service Award.

Stevenson Professional and Academic Network

The Stevenson Professional and Academic Network (SPAN) helps students make connections with alumni, local professionals and nonprofits, academic researchers, and fellow Stevensonians. SPAN helps students develop cross-generational relationships on campus and beyond, through a speaker series, networking and professional development opportunities, and internships.

Writing Assistance

Stevenson provides writing assistance for all of its students. Stevenson Writing Assistantships are paid student positions open to juniors and seniors with excellent academic records. Additional information about Stevenson College academic events is available here.

College Advising

Located in the Stevenson College Office in the Stevenson Administration Building, Rooms 118-119 across from the Stevenson Coffee House patio.

To schedule an appointment, log onto Slug Success or call 831-459-4930.

The Stevenson advising staff assists students in their academic endeavors by providing them with guidance, support, and information. They advise students on many issues, ranging from helping them select their first UCSC classes to making sure that they've fulfilled all graduation requirements. Advisors provide students with tools and

resources so that they feel confident and empowered to navigate the university.

Advisors encourage students to enter into an active partnership with staff and faculty to ensure that they will learn about existing programs, deadlines, procedures, and opportunities. Advisors also encourage students to become involved in the many extra-curricular activities available at the college. Stevenson students pride themselves on being the most politically active on campus. With this involvement comes the responsibility of maintaining academic goals as a priority. Advisors help students maximize their potential and balance their commitments inside and outside of the classroom so that they can get the most out of their education during and after their time at Stevenson.

College Scholars Program

PROGRAM OVERVIEW

The UC Santa Cruz College Scholars Program (CSP) offers a congenial and stimulating academic home for a select group of well-prepared first-year students at UC Santa Cruz. Through this honors program, students can expect to challenge themselves academically, find other students who are similarly motivated, and explore undergraduate research. This enriched program of study includes special courses, seminars, colloquia, and other events during each quarter of the student's first academic year and fall of the student's second academic year.

CSP provides an opportunity for outstanding students to engage deeply with the best of UCSC. Early in their career, students are able to explore the full potential of the university setting, beyond the coursework that might be required in their respective disciplines.

CSP has close ties to the college system. In 2018-2019, Fall Start scholars (see below for information about Spring Start scholars) will live at Cowell, Crown, Merrill or Porter College. Each college will have a cohort of about 20-25 College Scholars Program students, and students in each cohort will be housed together. Students receive priority enrollment during their time in the program.

COLLEGE SCHOLARS PROGRAM CURRICULUM

The CSP academic program is designed to both challenge participants and give them the opportunity to develop a strong foundation in our research university.

Year 1

Fall Quarter 1—Supplement to College "Core Course": Students will take part in a series of gatherings led by the Faculty Director and the Provosts at the four Fall Start colleges. These meetings are meant to supplement their college “core course” and to build relationships with other CSP students.

Winter Quarter 1—Service Learning Course: All students will take a two-credit service-learning course offered through Cowell College (COWL 168). This course includes three main components: classroom meetings, journal reflections and papers, and placement in a local organization. Guest speakers are a part of the class and in the past have included local alumni and elected public officials, all working to promote positive social change locally, nationally, or internationally. Over the course of the term, students contribute 40 hours of work to an organization in the community. Organizations that have welcomed students in the past include: the Homeless Service Center, Rising International, Santa Cruz Boys and Girls Club, and the Museum of Art and History.

Spring Quarter 1—Faculty Research Colloquium: Students will take a two-credit course (COWL 89) where weekly faculty lectures are followed by dinner at one of the Provosts' houses. Each student is invited to attend one dinner during the term.

Faculty guests will be drawn from a variety of fields within the university, and students will be encouraged to listen to and appreciate scholars and scholarship beyond their own comfortable niche in engineering, biology, linguistics, music, or whatever their area of interest may be. The invited scholars will be speaking not only about the substance of their work, but also about the types of questions that are particular to their fields of study. By the end of the course, students should have a good sense of the modes of inquiry that animate intellectual life in a research university.

Year 2

Fall Quarter 2—Seminar: Students choose from one of several five-unit research seminars. Each of the seminars focuses on developing significant hands-on skills: whether it is a chance to “do real science” through guided research in the field and in a lab, or address important primary sources directly and debate them together in a text-centered seminar room, students will get training in the real intellectual work that scholars do.

College Scholars Programs: Fall Start and Spring Start

Fall Start—Invitation Only: Admission to the Fall Start cohort of College Scholars Program is by invitation only. A select group of UCSC applicants who are offered admission to the university will be invited to join the program, based on their record of academic achievement. Those students who accept the invitation will be housed together at either Cowell, Crown, Merrill, or Porter College.

Spring Start: Students can apply to the College Scholars Program after the Fall quarter of their first year. In this case, students accepted into CSP will join the program in Spring quarter and will participate in the spring research colloquium. Spring Start students will be selected based on applications reviewed through their college. Students may apply to Spring Start from any of UCSC’s colleges.

Certificates

The Community-based Action and Research Advocacy (CARA) Certificate Program (p. 893)

Innovation and Entrepreneurship Certificate (p. 893)

CARA Certificate Program

The Oakes Community-based Action Research and Advocacy (CARA) program builds on the mission of Oakes College to leverage university-based education for social and political change. Our courses support Oakes students to build connections with community-based organizations and to gain tangible skills they can leverage for social justice in various contexts, from grassroots activism to working with nonprofits, public agencies, and beyond. The CARA program also supports first-generation, low-income, students of color, undocumented and other student communities to make meaningful connections that bridge their academic studies to social justice issues that are most pressing for their communities and their own lives.

CARA courses pose rigorous, interdisciplinary academic questions about how to expand justice within and across contexts. Students connect course readings, seminar practice, reflexivity, and writing with their field-based research projects or internships, often in partnership with local organizations. In the process, students develop a variety of skills, from conducting qualitative research to analyzing data, communication, mentorship, advocacy, and more, deepening their own understanding and capacities to contribute to social justice initiatives. In addition, many CARA courses also support students to complete their general education requirements. We offer courses in three program areas: 1) Building Capacities for Community Voice, Advocacy and Organizing; 2) Community Voice, Advocacy and Organizing in Practice; and 3) Community-based Action Research. Students can choose courses in any combination of these program areas to complete the CARA Certificate.

While any student may enroll in our community-engaged research and learning courses, our aim is to support Oakes students to complete the CARA Certificate. The CARA Certificate is awarded to students upon their successful completion of at least 14 credits. Students should notify the CARA program director via email that they've successfully completed the program courses, or of their intent to complete in their last quarter of the CARA program (oakscara@ucsc.edu). The CARA program director will also accept petition requests for other courses that fit the programmatic themes, per written request of the student and submission of the course syllabus.

Students are encouraged to list the CARA Certificate in their resumes, in addition to articulating the skills they've developed through program courses. The CARA Certificate will not appear on students' transcripts.

Oakes CARA Certificate 2023-24

Students who successfully complete a minimum of 14 credits from the following courses qualify for the Oakes CARA Program Certificate. Students can choose any of the classes in order to qualify.

OAKS 26 Navigating The University From A Black Critical Lens, 2 credits
OAKS 46 Multiracial Visibility Project, 5 credits, ER
OAKS 47 Building An Inner Sanctuary, 2 credits, PR-S
OAKS 48 Slugs Speak, 2 credits, PR-S
OAKS 67 The Politics Of Food: Labor and Social Justice, 2 credits
OAKS 70 Diverse Voices In Contemporary American Women's Poetry, 2, PR-C
OAKS 73B Mentoring, 2 credits, PR-S
OAKS 76 Social Geography & Justice in Santa Cruz, 5 credits, PR-S
THEA 56D/OAKS 80H Rainbow Theater, 5 credits
OAKS 130 Writing Resistance: Creative Writing Workshop, 5 credits, PR-S
OAKS 151A and OAKS 151B Corre la Voz: Community Literacies, 5 credits total (2 credits for A, 3 credits for B; 151B may be re-taken for credit), PR-S
OAKS 152 Transformative Literacies, 5 credits, PR-S
OAKS 153 Community Mapping, 5 credits, PR-S
OAKS 155 Research for Social Justice: Special Topics, 5 credits, SI
OAKS 167 Food Systems: Culture, SJ, Sustainability, 5 credits, PR-S
OAKS 185 Tracing Health, 5 credits, PE-H
LGST 188A/OAKS 188A and OAKS 188B Intro to the Legal Profession and Legal Aid, 5 credits total (2 credits for A, 3 credits for B; 188B may be re-taken for credit), PR-S
OAKS 189 Building Websites For Social Justice, 2 credits, PR-S

INNOVATION AND ENTREPRENEURSHIP CERTIFICATE

UC Santa Cruz's Certificate in Innovation and Entrepreneurship (I&E) combines academic training with hands-on experience in developing solutions to real-world problems.

This certificate is offered by Crown College in partnership with UCSC's Center for Innovation and Entrepreneurial Development, Cowell College, and the Departments of Biomolecular Engineering and Economics. The goal is to equip students with practical, transferable skills in collaboration with employers and community organizations.

While the I&E certificate will not appear on students' transcripts, students who earn recognition of completion are encouraged to list the I&E certificate on their resumés. For more information, visit the program's website or contact cied@ucsc.edu.

The I&E certificate is open to students from any major and it is modular, requiring the completion of four elements in any order: (1) introductory classes, foundational courses in ideation, prototyping, finance, and customer discovery; (2) operational classes, which focus on the practical aspects of

launching and managing ventures; (3) experiential learning opportunities—including internships, consulting projects, and roles beyond the founder track; and (4) participation in a public-facing business pitch competition.

Certificate Level Learning Outcomes

As a result of completing the Center for Innovation & Entrepreneurial Development (CIED) I&E certificate program, students will be able to:

- identify and evaluate new business opportunities in any area of economic or social development;
- work collaboratively in teams;
- design a business plan;
- pitch an idea;
- lead and manage a project effectively;
- understand how to set up and grow an organization, including the basics of hiring, management and commercialization; and
- gain practical experience addressing real-world problems.

Academic Advising for the Program

Undergraduate advising for the I&E certificate program is supported by the CIED. CIED staff offer specific information about navigating through the program and curriculum and assist students with academic planning, requirements, and extra-curricular opportunities related to the program. CIED staff also have the discretion to approve courses not listed below that may fulfill the I&E requirements on an individual basis. Please contact CIED staff at CIED@ucsc.edu.

Students are not required to declare their intent to complete the certificate program in advance. They are strongly encouraged to arrange a meeting with CIED staff early in their academic career, however, and must notify the CIED via email (CIED@ucsc.edu) once their requirements are completed in order to verify their milestones and receive the certificate.

Transfer Information and Policy

Students transferring to UC Santa Cruz are strongly encouraged to pursue the I&E certificate. Transfer students may consult with CIED's staff about transferring credits to count toward the completion of the I&E certificate program; requests will be evaluated on a course-by-course basis.

Faculty

The faculty of the I&E program can be found here.

Requirements

The I&E certificate is awarded on completion of 20–25 credits in I&E courses and participation in a public-facing business pitch competition.

The requirements are explained in detail in the table below, which includes, the four categories of requirements and in the case of classes, the class number, title, # of units, whether the class concurrently satisfies a general education requirement, whether it is an elective for a major or minor and additional notes.

Introductory Classes

Two classes: (CRWN 90 or CRWN 92) and COWL 52

Class Number	Class Title	No. of Credits	Gen. Ed. Satisfaction	Elective Major Requirement	Notes
CRWN 90	Start-Up Academy	5	PR-E		
CRWN 92	Social and Creative Entrepreneurship	5	PE-H		
COWL 51	Personal Finance and Investing	5			

Operational Classes

One class: CRWN 100 or BME 175

Class Number	Class Title	No. of Credits	Gen. Ed. Satisfaction	Elective Major Requirement	Notes
CRWN 100	Building and Scaling Ventures	5		Economics	
BME 172	Entrepreneurship in Biotechnology	5		Biomolecular Engineering	For students interested in biotech

Practical Classes

One of the following options: CRWN 152 or (CRWN 91 & CRWN 191) or CRWN 194 or CRWN 195

Class Number	Class Title	No. of Credits	Gen. Ed. Satisfaction	Elective Major Requirement	Notes
CRWN 152	Deal Sourcing and Investing	5			Focu on financ e
CWN 91	AI & Marketing	5			Focus on graphic design
CRWN 191	Marketing for Good	5	PR-S		Focus on marke ting
CRWN 194	Eco Entrepreneurship in the World	5	PE-E	Economics	Focus on sustainability
CRWN 195	Get Virtual Business Assistance	5	PR-S	Economics	Focus on consulting

Business pitch: participation in at least one public-facing business pitch competitions. Options include campus and community events such as the Ideathon (fall), SlugTank, CruzHacks, and Demo Day (winter), and the Santa Cruz Launchpad (spring)

PHYSICAL EDUCATION

East Field House
(831) 459-5076
goslugs.com
recreation.ucsc.edu

Physical Education (P.E.) at UC Santa Cruz provides students with enriching opportunities to develop and refine skills across a diverse range of activities while deepening their understanding of the vital connection between fitness and overall wellness. Our program is designed to empower students with the knowledge and skills needed to make informed, lifelong choices that support a healthy, active lifestyle.

Currently offered as elective, non-credit courses, our P.E. classes cater to students of all skill levels, from beginners looking to build foundational abilities to advanced participants seeking to refine their techniques. Each course blends expert instruction, hands-on practice, and active engagement, ensuring that every student can participate to the best of their ability.

With a variety of scheduling options, most classes meet twice a week for one-hour sessions, while others may feature longer, more immersive formats. Additionally, select courses are designed exclusively for graduate students, providing tailored opportunities for advanced learning and skill development.

Through our diverse and inclusive P.E. offerings, students not only enhance their physical abilities but also cultivate lifelong habits that support their well-being, resilience, and overall quality of life.

COURSES

AM - APPLIED MATHEMATICS

To view planned offerings for the current academic year, please visit this page.

Lower-Division

AM 3 - Precalculus for the Social Sciences (5)

Introduces mathematical functions and their uses for modeling real-life problems in the social sciences. Includes inequalities, linear and quadratic equations, functions (linear, quadratic, polynomial, rational, power, exponential, logarithmic, trigonometric), inverses, and the composition of functions. Students cannot receive credit for both this course and MATH 3. STEM majors who are taking a precalculus to get into MATH 19A need to take MATH 3.

Prerequisite: Prerequisite(s): score of 200 or higher on the mathematics placement examination (MPE), or MATH 2.

AM 6 - Precalculus for Statistics (5)

Reviews and introduces mathematical methods useful in the elementary study of statistics, including logic, real numbers, inequalities, linear and quadratic equations, functions, graphs, exponential and logarithmic functions, and summation notation. (Formerly AMS 6.)

Prerequisite: Prerequisite(s): MATH 2 or mathematics placement examination (MPE) score of 200 or higher or higher.

AM 10 - Linear Algebra for Engineers (5)

Applications-oriented course on complex numbers and linear algebra integrating Matlab as a computational support tool. Introduction to complex algebra. Vectors, bases and transformations, matrix algebra, solutions of linear systems, inverses and determinants, eigenvalues and eigenvectors, and geometric transformations. Students cannot receive credit for this course and MATH 21. (Formerly Mathematical Methods for Engineers I.)

Prerequisite: Prerequisite(s): score of 400 or higher on the mathematics placement examination (MPE) or MATH 3 or AM 11A or MATH 11A or MATH 19A or MATH 20A.

AM 11A - Mathematical Methods for Economists I (5)

Introduction to mathematical tools and reasoning, with applications to economics. Topics are drawn from differential calculus in one variable and include limits, continuity, differentiation, elasticity, Taylor polynomials, and optimization. Students cannot receive credit for both this course and MATH 11A or MATH 19A or AM 15A or ECON 11A. (AM 11A formerly AMS 11A.)

Prerequisite: Students who have already taken MATH 11A or MATH 19A should not take this course. Prerequisite(s): score of 300 or higher on the mathematics placement examination (MPE), AM 3 or AM 6, or MATH 3.

AM 11B - Mathematical Methods for Economists II (5)

Mathematical tools and reasoning, with applications to economics. Topics are drawn from multivariable differential calculus and single variable integral calculus, and include partial derivatives, linear and quadratic approximation, optimization with and without constraints, Lagrange multipliers, definite and indefinite integrals, and elementary differential equations. Students cannot receive credit for both this course and MATH 11B or MATH 19B or ECON 11B (AM 11B formerly AMS 11B.)

Prerequisite: Prerequisite(s): ECON 11A, or AM 11A, or MATH 11A, or MATH 19A, or MATH 20A.

AM 20 - Ordinary Differential Equations for Engineers (5)

Applications-oriented class on ordinary differential equations (ODEs) and systems of ODEs using Matlab as a computational support tool. Covers linear ODEs and systems of linear ODEs; nonlinear ODEs using substitution and Laplace transforms; phase-plane analysis; introduction to numerical methods. Students cannot receive credit for this course and MATH 24. (Formerly Mathematical Methods for Engineers II.)

Prerequisite: Prerequisite(s): MATH 19B or MATH 20B, and AM 10 or MATH 21.

AM 30 - Multivariate Calculus for Engineers (5)

Advanced multivariate calculus for engineering majors. Coordinate systems, parametric curves, and surfaces; partial derivatives, gradient, Taylor expansion, stationary points, constrained optimization; integrals in multiple dimensions; integrals over curves and surfaces. Applications to engineering form an integral part of the course. Students cannot receive credit for this course and for MATH 22 or MATH 23A.

Prerequisite: Prerequisite(s): AM 10 or MATH 21; and MATH 19B or MATH 20B.

Upper-Division

AM 100 - Mathematical Methods for Engineers (5)

Covers important concepts in applied mathematics, including complex analysis, vector calculus, Fourier Series, and integral transforms. Applications of the methods to various problems in science and engineering are discussed.

Prerequisite: Prerequisite(s): AM 20 and AM 30, or by permission of instructor.

AM 107 - Introduction to Fluid Dynamics (5)

Covers fundamental topics in fluid dynamics: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and AM 217. (AM 107 formerly AMS 107.)

Prerequisite: Prerequisite(s): AM 112 or MATH 107 or PHYS 116C or EART 111.

AM 112 - Introduction to Partial Differential Equations (5)

Teaches analytical methods for the solution of first- and second-order PDEs of two variables, including: the method of characteristics for first-order PDEs; separation of variables for the heat, wave, and Laplace's equations in a finite or periodic Cartesian domain; homogeneous vs. forced problem; Sturm-Liouville theory; polar and spherical coordinate systems. Each method is illustrated by solving PDEs originating from real-life applications. Students cannot receive credit for this course and AM 212A.

Prerequisite: Prerequisite(s): AM 100 or by permission of the instructor.

AM 114 - Introduction to Dynamical Systems (5)

Introduces continuous and discrete dynamical systems. Topics include: fixed points; stability; bifurcations; limit cycles; introduction to chaos. Examples are drawn from sciences and engineering. Familiarity with Matlab is preferred. Students cannot receive credit for this course and AM 214. (Formerly AMS 214.)

Prerequisite: Prerequisite(s): AM 20; or MATH 21 and MATH 24; or PHYS 116A. Enrollment is restricted to sophomores, juniors and seniors.

AM 115 - Stochastic Modeling in Biology (5)

Application of differential equations, probability, and stochastic processes to problems in cell, organismal, and population biology. Topics include systems biology, cellular processes, gene-regulation, and population biology. Students may not receive credit for this course and AM 215.

Prerequisite: Prerequisite(s): STAT 131 and AM 20; a university-level course in biology, and operational knowledge of a programming language; or consent of instructor.

AM 129 - Foundations of Scientific Computing for Scientists and Engineers (5)

Covers fundamental aspects of scientific computing for research. Students are introduced to algorithmic development, programming (including the use of compilers, libraries, debugging, optimization, code publication), computational infrastructure, and data analysis tools, gaining hands-on experience through practical assignments. Basic programming experience is assumed.

Prerequisite: Prerequisite(s): AM 10 and MATH 11A; or AM 10 and MATH 19A; or AM 10 and MATH 20A; or MATH 21 and MATH 11A; or MATH 21 and MATH 19A; or MATH 21 and MATH 20A.

AM 147 - Computational Methods and Applications (5)

Applications of computational methods to solving mathematical problems using Matlab. Topics include solution of nonlinear equations, linear systems, differential equations, sparse matrix solver, and eigenvalue problems.

AM 148 - GPU Programming for Scientific Computations (5)

This second course in scientific computing focuses on the use of parallel processing on GPUs with CUDA. Basic topics covered include the idea of parallelism and parallel architectures. The course then presents key parallel algorithms on GPUs such as scan, reduce, histogram and stencil, and compound algorithms. Applications to scientific computing are drawn from problems in linear algebra, curve fitting, FFTs, systems of ODEs and PDEs, and image processing. Finally, the course presents optimization strategies specific to GPUs. Basic knowledge of Unix, and C is assumed. (Formerly AMS 148.)

Prerequisite: Prerequisite(s): AM 147 or MATH 148 or PHYS 115. Enrollment is restricted to juniors and seniors.

AM 160 - Introduction to Scientific Machine Learning (5)

Introduction to scientific machine learning covering dimension reduction techniques for scientific data, modern methods in sparse regression and compressed sensing, deep neural networks for modeling real-life systems, and neural ordinary differential equations.

Prerequisite: Prerequisite(s): AM 20 and AM 30, or MATH 24, or PHYS 116A, and AM 129 or CSE 30; or graduate students in applied mathematics. Enrollment is restricted to junior and senior students, and graduate students in applied mathematics.

AM 170A - Mathematical Modeling 1 (5)

Introduction to mathematical modeling emphasizing model construction, tool selection, methods of solution, critical analysis of the results, and professional-level presentation of the results (written and oral). Focuses on problems that can be solved using only analytical tools, and simple Matlab routines. Applications are drawn from a variety of fields such as physics, biology, engineering, and economics.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. AM 30, and AM 114, and STAT 131 or CSE 107, or by instructor permission. Enrollment is restricted to juniors and seniors majoring in applied mathematics and proposed applied mathematics majors.

AM 170B - Mathematical Modeling 2 (5)

Second course in mathematical modeling emphasizing the general process of scientific inquiry: model construction, tool selection, numerical methods of solution, critical analysis of the results, and professional-level presentation of the results (written and oral). Focuses on problems that must be solved using numerical tools. Applications are drawn from a variety of fields.

Prerequisite: Prerequisites: AM 129, AM 112, and AM 147, and AM 170A. Enrollment is restricted to seniors with a declared or proposed major in Applied Mathematics, or by instructor permission.

AM 178A - Learning Assistant Training for AM 10 (3)

Prepares undergraduate learning assistants (tutors) to become successful learning assistants in AM 10. Topics include roles and responsibilities of tutors; AM 10 learning objectives; effective ways to address particular AM 10 topics that students struggle with; introduction to teaching and learning strategies to utilize in AM10 tutoring sessions; and peer and self observation.

Prerequisite: Prerequisite(s): AM 20; and AM 30; and previous or concurrent enrollment in STEV 96. Enrollment by permission of the instructor and restricted to juniors, seniors, and graduate students.

AM 195 - Senior Thesis Research (5)

Research project arranged individually between student and faculty member. Students submit a petition to the sponsoring agency. The project must involve significant mathematical and/or computational analysis of an application problem. The project should address a clear objective and have some novelty in method or in parameter exploration or in application area. A written thesis is required for completion of the capstone requirement. Prerequisite(s): AM 129 or AM 209, and AM 112, and AM 147, and AM 170A. Enrollment is restricted to seniors and is by permission of the instructor.

AM 198 - Independent Study or Research (5)

Students submit petition to sponsoring agency.

AM 198F - Independent Study or Research (2)

Students submit petition to sponsoring agency.

Graduate

AM 200 - Teaching in Applied Mathematics (2)

Basic teaching techniques for teaching assistants, including responsibilities and rights; resource materials; computer skills; leading discussions or lab sessions; presentation techniques; maintaining class records; and grading. (Formerly Research and Teaching in Applied Mathematics.)

Prerequisite: Enrollment is restricted to graduate students.

AM 211 - Foundations of Applied Mathematics (5)

Accelerated class reviewing fundamental applied mathematical methods for all sciences. Topics include: multivariate calculus, linear algebra, Fourier series and integral transform methods, complex analysis, and ordinary differential equations. (Formerly AMS 211.)

Prerequisite: Enrollment is restricted to graduate students.

AM 212 - Advanced Methods of Applied Mathematics (5)

Overview of advanced methods for the analytical solution of ODEs and PDEs, including asymptotic analysis (method of strained coordinates; method of multiple scales; matched asymptotics; WKB theory), dimensional analysis, self-similar solutions and Green’s function solutions of PDEs. Introduces students to variational calculus for the optimization of functionals. Students cannot receive credit for this course and AM 212B.

Prerequisite: Enrollment is restricted to graduate students or by permission of instructor. Students taking this course need at least one prior undergraduate or M.S.-level course in partial differential equations, similar to AM 112, MATH 107 or PHYS 116C.

AM 212A - Applied Partial Differential Equations (5)

Focuses on analytical methods for partial differential equations (PDEs), including: the method of characteristics for first-order PDEs; canonical forms of linear second-order PDEs; separation of variables; Sturm-Liouville theory; Green's functions. Illustrates each method using applications taken from examples in physics. AM 211 or equivalent is strongly recommended as preparation. Students cannot receive credit for this course and AM 112. (Formerly AMS 211, Applied Mathematical Methods I.)

AM 212B - Applied Mathematical Methods II (5)

Covers perturbation methods: asymptotic series, stationary phase and expansion of integrals, matched asymptotic expansions, multiple scales and the WKB method, Pad approximants and improvements of series. (Formerly AMS 212B.)

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students. Undergraduates may enroll by permission of the instructor.

AM 213A - Numerical Linear Algebra (5)

Focuses on numerical solutions to classic problems of linear algebra. Topics include: LU, Cholesky, and QR factorizations; iterative methods for linear equations; least square, power methods, and QR algorithms for eigenvalue problems; and conditioning and stability of numerical algorithms. Provides hands-on experience in implementing numerical algorithms for solving engineering and scientific problems. Basic knowledge of mathematical linear algebra is assumed. (Formerly AMS 213A.)

Prerequisite: Enrollment is restricted to graduate students. Undergraduate students may enroll with permission of the instructor.

AM 213B - Numerical Methods for the Solution of Differential Equations (5)

Introduces the numerical solutions of ordinary and partial differential equations (ODEs and PDEs). Focuses on the derivation of discrete solution methods for a variety of differential equations, and their stability and convergence. Also provides hands-on experience in implementing such numerical algorithms for the solution of engineering and scientific problems using MATLAB software. The class consists of lectures and hands-on programming sections. Basic mathematical knowledge of ODEs and PDEs is assumed, and a basic working knowledge of programming in MATLAB is expected. (Formerly AMS 213B.)

Prerequisite: Enrollment is restricted to graduate students.

AM 215 - Stochastic Modeling in Biology (5)

Application of differential equations, probability, and stochastic processes to problems in cell, organismal, and population biology. Topics include systems biology, cellular processes, gene-regulation, and population biology. Students may not receive credit for this course and AM 115. (Formerly AMS 215.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 216 - Stochastic Differential Equations (5)

Introduction to stochastic differential equations and diffusion processes with applications to biology, biomolecular engineering, and chemical kinetics. Topics include Brownian motion and white noise, gambler's ruin, backward and forward equations, and the theory of boundary conditions. (Formerly AMS 216.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 217 - Introduction to Fluid Dynamics (5)

Covers fundamental topics in fluid dynamics at the graduate level: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and AM 107. (Formerly AMS 217.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 224 - Applied Dynamical Systems (5)

Graduate-level course in dynamical systems theory, focusing on n-dimensional continuous dynamical systems. Covers fixed points, stability (linear and Lyapunov), normal forms, center manifold theorem, Liouville theorem, reversible and gradient flows, conservative systems, and quantitative characterization of chaos.

Prerequisite: Enrollment is restricted to graduate students or by permission of instructor. An introductory course in dynamical systems theory (e.g. AM 114 or MATH 145 or AM 214), partial differential equations (e.g. AM 112 or MATH 107) as well as experience with programming and scientific computing using Matlab or Python, are strongly recommended.

AM 227 - Waves, Instabilities, and Turbulence in Fluids (5)

Advanced fluid dynamics course introducing various types waves and instabilities that commonly arise in geophysical and astrophysical systems, as well as turbulence. Topics covered include, but are not limited to: pressure waves, gravity waves, convection, shear instabilities, and turbulence. Advanced mathematical methods are used to study each topic. Undergraduates are encouraged to take this course with permission of the instructor. (Formerly Waves and Instabilities in Fluids.)

Prerequisite: Prerequisite(s): AM 212A and AM 217.

AM 229 - Convex Optimization (5)

Focuses on recognizing, formulating, analyzing, and solving convex optimization problems encountered across science and engineering. Topics include: convex sets; convex functions; convex optimization problems; duality; subgradient calculus; algorithms for smooth and non-smooth convex optimization; applications to signal and image processing, machine learning, statistics, control, robotics and economics. Students are required to have knowledge of calculus and linear algebra, and exposure to probability. (Formerly AMS 229.)

Prerequisite: Enrollment is restricted to graduate students.

AM 230 - Numerical Optimization (5)

Introduces numerical optimization tools widely used in engineering, science, and economics. Topics include: line-search and trust-region methods for unconstrained optimization, fundamental theory of constrained optimization, simplex and interior-point methods for linear programming, and computational algorithms for nonlinear programming. (Formerly AMS 230.)

AM 231 - Nonlinear Control Theory (5)

Covers analysis and design of nonlinear control systems using Lyapunov theory and geometric methods. Includes properties of solutions of nonlinear systems, Lyapunov stability analysis, effects of perturbations, controllability, observability, feedback linearization, and nonlinear control design tools for stabilization. (Formerly AMS 231.)

Prerequisite: Prerequisite(s): basic knowledge of mathematical analysis and ordinary differential equations is assumed. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 232 - Applied Optimal Control (5)

Introduces optimal control theory and computational optimal control algorithms. Topics include: calculus of variations, minimum principle, dynamic programming, HJB equation, linear-quadratic regulator, direct and indirect computational methods, and engineering application of optimal control. (Formerly AMS 232.)

Prerequisite: Prerequisite(s): AM 114 or AM 214, or ECE 240 or ECE 241, or MATH 145. Enrollment is restricted to graduate students. Undergraduates may enroll by permission of the instructor.

AM 238 - Fundamentals of Uncertainty Quantification in Computational Science and Engineering (5)

Computing the statistical properties of nonlinear random system is of fundamental importance in many areas of science and engineering. Introduces students to state-of-the-art methods for uncertainty propagation and quantification in model-based computations, focusing on the computational and algorithmic features of these methods most useful in dealing with systems specified in terms of stochastic ordinary and partial differential equations. Topics include: polynomial

chaos methods (gPC and ME-gPC), probabilistic collocation methods (PCM and ME-PCM), Monte-Carlo methods (MC, quasi-MC, multi-level MC), sparse grids (SG), probability density function methods, and techniques for dimensional reduction. Basic knowledge of probability theory and elementary numerical methods for ODEs and PDEs is recommended. (Formerly AMS 238.)

Prerequisite: Prerequisite(s): STAT 203 or equivalent, and AM 213B or equivalent. Enrollment is restricted to graduate students.

AM 250 - An Introduction to High Performance Computing (5)

Designed for STEM students and others. Through hands-on practice, this course introduces high-performance parallel computing, including the concepts of multiprocessor machines and parallel computation, and the hardware and software tools associated with them. Students become familiar with parallel concepts and the use of MPI and OpenMP together with some insight into the use of heterogeneous architectures (CPU, CUDA, OpenCL), and some case-study problems. (Formerly AMS 250.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 260 - Computational Fluid Dynamics (5)

Introduces modern computational approaches to solving the differential equations that arise in fluid dynamics, particularly for problems involving discontinuities and shock waves. Examines the fundamentals of the mathematical foundations and computation methods to obtain solutions. Focuses on writing practical numerical codes and analyzing their results for a full understanding of fluid phenomena. (Formerly AMS 260.)

Prerequisite: Prerequisite(s): Basic knowledge of computer programming languages is assumed. Enrollment is restricted to graduate students.

AM 275 - Magnetohydrodynamics (5)

Studies the interaction of fluid motion and magnetic fields in electrically conducting fluids, with applications in many natural and man-made flows ranging from, for example, planetary physics and astrophysics to industrial metallurgic engineering. (Formerly AMS 275.)

Prerequisite: Prerequisite(s): AM 107 or AM 217. AM 227 suggested. Enrollment is restricted to graduate students.

AM 280A - Seminar in Mathematical and Computational Biology (2)

Weekly seminar on mathematical and computational biology. Participants present research findings in organized and critical fashion, framed in context of current literature. Students present own research on a regular basis. (Formerly AMS 280A.)

Prerequisite: Enrollment is restricted to graduate students.

AM 280B - Seminar in Applied Mathematical Modeling (2)

Weekly seminar series covering topics of current research in applied mathematics and statistics. Permission of instructor required. Enrollment is restricted to graduate students. (Formerly AMS 280B.)

AM 280C - Seminar in Geophysical and Astrophysical Fluid Dynamics (2)

Weekly seminar/discussion group on geophysical and astrophysical fluid dynamics covering both analytical and computational approaches. Participants present research progress and findings in semiformal discussions. Students must present their own research on a regular basis. (Formerly AMS 280C.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 296 - Masters Project (5)

Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 297A - Independent Study or Research (5)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 297B - Independent Study or Research (10)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 297C - Independent Study or Research (15)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 297F - Independent Study (2)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 299A - Thesis Research (5)

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

AM 299B - Thesis Research (10)

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

AM 299C - Thesis Research (15)

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

ANCS-ANCIENT STUDIES

Lower-Division

ANCS 99 - Tutorial (5)

Students submit petition to sponsoring agency.

Upper Division

ANCS 197F - Senior Comprehensive Examination Preparation (2)

Students submit petition to sponsoring agency.

ANCS 199 - Tutorial (5)

Students submit petition to sponsoring agency.

ANCS 199F - Tutorial (2)

Students submit petition to sponsoring agency.

ANTH - ANTHROPOLOGY

To view planned offerings for the current academic year, please visit this page.

Lower-Division

ANTH 1 - Introduction to Biological Anthropology (5)

Study of evolution illustrated by Pleistocene hominid fossils and variation in living human groups. Behavior and evolution of primates examined as they contribute to the understanding of human evolution. Required for all anthropology majors. (Formerly Introduction to Human Evolution.)

ANTH 2 - Introduction to Cultural Anthropology (5)

A number of different peoples are studied and a variety of approaches to the nature of the culture and to the study of specific cultures presented. Required for all anthropology majors.

ANTH 3 - Introduction to Archaeology (5)

Overview of ways of learning about the human past beyond the scope of written history. Reviews development of archaeology, fundamental methods and theories, and archaeology's contribution to understanding human origins, the emergence of farming, and the origins of complex societies.

ANTH 93 - Field Study (5)

Supervised research or organized projects on anthropological topics for lower-division students. Conducted either on or off campus. Students submit petition to sponsoring agency.

ANTH 97 - Laboratory Safety Practicum (2)

Covers laboratory health and safety and standard operating procedures within the anthropology laboratories. Prepares students for future laboratory research activities while providing support of laboratory administration, collections management, and laboratory course demonstration needs. Enrollment by application.

Upper-Division

ANTH 100 - History and Theory of Biological Anthropology (5)

Provides an historical overview from the 18th century to the present of race, ape-human relationships, and human nature. Emergence of an evolutionary framework and of fossil, genetic, and primate information becomes the basis for reformulating ideas about human biology within anthropology.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements.

ANTH 109 - Stable Isotope Ecology in Anthropology and Beyond (5)

Provides students with a comprehensive overview and solid theoretical framework regarding the most common isotope systems used in anthropology and related disciplines, which include carbon, nitrogen, oxygen, strontium, and sulfur.

Prerequisite: Prerequisite(s): ANTH 1, or BIOE 20C, or by instructor permission.

ANTH 101 - Human Evolution (5)

Study of human evolution covering the last five million years. Examines the fossil evidence and emphasizes the reconstruction of behavior from the paleontological and anatomical evidence.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 102A - Human Skeletal Biology (5)

Presents basic human osteology allowing students to identify skeletal material by element. Emphasizes the dynamic nature of bone by integrating anatomy with a discussion of bone physiology within the context of the human life cycle.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 103 - Forensic Anthropology (5)

Covers the basic analysis of human skeletal remains for the medicolegal profession. Assessment of age, sex, ancestry, and general physical characteristics, trauma, and disease are discussed. Addresses the legal responsibilities of the anthropologist. Online lectures with in-class discussion sections, quizzes, and exams. Students cannot receive credit for this course and ANTH 103I.

Prerequisite: Prerequisite(s): ANTH 102A. Enrollment is restricted to juniors and seniors.

ANTH 104 - Human Variation and Adaptation (5)

Explores the major environmental factors (temperature, altitude, diet, and disease); how they are perceived by the human body; the physiological, micro- and macroanatomical

responses; and how behavior and culture can modify the impact of these stresses. ANTH 1 is highly recommended as preparation. (Formerly Human Adaptability.)

ANTH 105 - Human Paleopathology (5)

Examines paleopathology beginning with ancient hominid populations and proceeding to modern populations. Uses both the skeletal evidence and historical documentation when available. Considers evolutionary, cultural, and biological factors. Topics include: osteological diagnosis of infectious disease; trauma; nutritional deficiencies; dental disease; and developmental defects.

Prerequisite: Prerequisite(s): ANTH 1; ANTH 102A recommended.

ANTH 106 - Primate Behavior and Ecology (5)

The nature of primate social systems and social bonds is examined in the light of evolutionary and ecological concepts. We explore the evolution of primate social system behavior and culture, as well as the ecologies of primate populations.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 106A - Chimpanzee Behavior and Culture A (2)

Provides students with an in-depth understanding of the non-invasive study of chimpanzee behavior via video footage. The interactive lab aspect of this class focuses on how to non-invasively monitor the presence and behavioral diversity of wildlife, using camera trap technology. Students are exposed to the primary scientific literature and gain experience handling and maintaining large datasets in excel, and work as a team throughout this class. Prerequisite(s): ANTH 1. Enrollment is by permission of the instructor.

ANTH 106B - Chimpanzee Behavior and Culture (2)

Provides students with an in depth understanding of the non-invasive study of chimpanzee behavior from video footage. The interactive lab aspect of this class focuses on how to non-invasively monitor the presence and behavioral diversity of wildlife using camera trap technology. Students are exposed to the primary scientific literature and gain experience handling and maintaining large datasets in excel, and work as a team throughout this class.

Prerequisite: Prerequisite(s): ANTH 106A.

ANTH 106C - Chimpanzee Behavior and Culture (2)

Provides students with an in depth understanding of the non-invasive study of chimpanzee behavior from video footage. The interactive lab aspect of this class focuses on how to non-invasively monitor the presence and behavioral diversity of wildlife using camera trap technology. Students are exposed to the primary scientific literature and gain experience handling and maintaining large datasets in excel, and work as a team throughout this class.

ANTH 107A - Methods and Research in Biological Anthropology: Genetics (5)

Introduces the molecular analyses of anthropological questions and explores the intersection of genetics and anthropology. Covers the basic principles of molecular and population genetics as they relate to the study of humans. Prerequisite(s): ANTH 1 and ANTH 104. ANTH 102A is recommended. Enrollment by permission of instructor. (Formerly ANTH 107, Methods and Research in Molecular Anthropology.)

ANTH 107B - Methods and Research in Biological Anthropology: Stable Isotopes (5)

This combination of lectures, readings, discussions, and hands-on laboratory experience provides a comprehensive overview of stable isotope research to reconstruct diet and mobility. Discover the wide application of isotopic research in biological anthropology, bioarcheology, primatology and forensics. Prerequisite(s): at least one of ANTH 101, ANTH 104, ANTH 106, ANTH 107, or ANTH 110F and by permission of the instructor. (Formerly Methods and Research in Stable Isotope Ecology.)

Prerequisite: Prerequisite(s): ANTH 101 or ANTH 104 or ANTH 106 or ANTH 107 or ANTH 110F.

ANTH 107C - Methods and Research in Biological Anthropology: Chimpanzee Behavior and Culture (5)

Lab class analyzing trail camera footage from chimpanzees and other wildlife, and installing our own cameras in the UCSC forest. Also includes readings and discussion of papers related to the newest findings on chimpanzee behavioral diversity and culture. Prerequisite(s): ANTH 106. Enrollment is by instructor consent.

ANTH 107D - Methods and Research in Biological Anthropology–Computational Population Genetics (5)

Practical introduction to computational population genetics. Covers the basic principles of population and evolutionary genetics, and explores those with a range of computational methods for the analysis of genetic diversity, population structure, and admixture. Enrollment is by instructor consent.

ANTH 107E - Methods And Research In Biological Anthropology: Lithic Technology (5)

Introduction to lithic and ceramic analysis in archaeology. Includes lab analysis, discussions of classification and typology, and exploration of the concept of style as it relates to ceramics and lithics in archaeology. (Formerly ANTH 182A, Lithic Technology.)

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 108 - Neanderthals (5)

Homo sapiens neanderthalensis (neanderthals), once considered brutish, are increasingly seen as behaviorally modern. This course uses primary academic research to explore the social behaviors, technology, anatomy, and genetics of neanderthals, gaining a holistic understanding of our closest ancestor.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 110A - Public Life and Contemporary Issues (5)

How can cultural anthropology help us to understand current events unfolding locally, nationally, and globally? Students learn how to read newspapers differently--that is, through the lens of cultural analysis. The world of everyday politics and society, as it unfolds in debates happening right now, forms the topical substance of the course.

ANTH 110B - From Indiana Jones to Stonehenge: Archaeology as Popular Culture (5)

Addresses the meaning of archaeology as generated in television, movies, literature, newspapers, and even National Geographic. Students engage with several case-studies illustrating how archaeology is portrayed in popular culture.

ANTH 110C - California Pasts (5)

This course is structured around four critical moments--missionization, Rancho-Era, Gold Rush, and World War II--through the eyes of the ethnic and racial minorities who experienced them. Special attention is given to oral, archival, and archaeological sources which reveal California's multiethnic pasts.

ANTH 110D - Tourism Imaginaries and Encounters (5)

Explores anthropological approaches to the study of tourism, in particular themes of authenticity, othering, visual economies, development, identity politics, alternative tourisms, and material culture with reference to history, power, and location.

ANTH 110E - Anthropology of Global Environmental Change (5)

Introduces anthropological and historical approaches to environmental change and globalization. Key themes include: capitalism and industrialization, environmental politics, global culture, and relations between humans and other species.

ANTH 110F - Evolution of Human Diet (5)

Presents the evolution of human diet and subsistence from a biological anthropological perspective. Covers the key hypothesis and methodologies related to diet, from our early fossil ancestors up to agriculture and animal husbandry. (Formerly Biocultural Approaches to Food.)

ANTH 110G - Westside Stories: Race, Place and the California Imaginary (5)

From South Central to La Misión, this course explores the role of race and culture in creating the California Dream. Draws on films, music, and activism as lenses into the complex flows of power that shape our communities.

ANTH 110H - Brazilian Amazon Cultures and Environments (5)

General introduction to the astonishing diversity of cultures and environments in the Brazilian Amazon. Designed to provide upfront understanding of what underlies perverse (non)development and forest destruction, but also social defense of the forest and sustainable life within it.

ANTH 110I - Cultures of Sustainability and Social Justice (5)

Brings together diverse forms of cultural knowledge and complexities of everyday life to illuminate longstanding concerns of sustainability and justice. Investigates multiple theories of sustainable development as well as tools, techniques, and contexts for ecological integrity, economic security, empowerment, responsibility and social well-being characteristic of sustainable communities. Case studies are drawn from around the world highlighting the work of Right Livelihood Award Laureates in tandem with UC faculty.

ANTH 110IG - Cultures Of Sustainability And Social Justice Abroad (5)

Brings together diverse forms of cultural knowledge and complexities of everyday life to illuminate longstanding concerns of sustainability and justice. Investigates multiple theories of sustainable development as well as tools, techniques, and contexts for ecological integrity, economic security, empowerment, responsibility and social wellbeing characteristic of sustainable communities. Case studies highlight the work of Right Livelihood Award Laureates in tandem with UC faculty. This course is a hybrid course. The in-person component allows for an in-person study abroad experience whereby students visit sites relevant to the curriculum and have lectures and discussions with Right Livelihood Laureates and the instructor. The asynchronous online component facilitates student engagement with custom pre-recorded video interviews with UC faculty and Right Livelihood Laureates from around the world.

ANTH 110J - Emerging Humanity (5)

Using an anthropological and archaeological perspective to learn about human history before AD 1500, course explores fossil remains of human ancestors and traces the more recent history of humanity from forgers/hunters to the emergence of complex societies/civilizations. Topics include human biological evolution, the development of organized human societies, the origins of food production (domestication of plants and animals), the origins of the world's earliest urban centers, and the development of social inequality.

ANTH 110K - Culture Through Food (5)

Examines anthropology of food and politics of eating. Cultural and social uses of food in rituals of solidarity or fasting, identities and meanings of food for individuals, and consumption in the global context are key components of study.

ANTH 110M - Cultures of Mental Health (5)

Examines diversity of mental health across cultures, psychiatric categories, and institutions. Assessment of human experiences via illness narratives, ethnographic research, and historical contexts.

ANTH 110L - The Human Ocean (5)

From coral reefs to Arctic sea ice, this course examines how humans interact with and transform earth's oceans, and how humans are shaped by the sea. Topics include: marine conservation, migration, shipping and logistics, slavery, fisheries management, and climate change.

ANTH 110N - Anthropology of Food (5)

Focuses on social institutions around the world that shape food and its meanings; how people use food to organize their worlds; and production, sharing, or consumption of food as a political or meaningful act.

ANTH 110O - Postcolonial Britain and France (5)

Transdisciplinary examination of the politics and culture of postcolonial Britain and France. Topics include: immigration from South Asia, Africa, and the Caribbean; racism and antiracism; minority difference and citizenship practices; and the emergence of Islam as a major category of identity and difference.

ANTH 110P - India and Indian Diaspora through Film (5)

Students in this course view the complexity and diversity of the Indian Diaspora through themes such as family, caste, food, gender, politics, religion, sexuality, and immigration policies affecting the diaspora. How do the vastly diverse groups of Indian Americans perceive their own ethnic identity? How do they respond to the dual impulses of assimilation and integration? And how might their self-conception influence the composition of their social networks? Course explores these themes through readings and Bollywood films.

ANTH 110Q - Queer Sexuality in Black Popular Culture (5)

From Janet Mock to Young M.A., queerness has become hypervisible in Black popular culture--but at what cost? Using music, television, and social media as central texts, students investigate the intersections of sexuality, gender, and race in public life.

ANTH 110R - Discourses in American Religions and Their Role in Public Life (5)

Introduces dominant discourses about major American religions and their role in public life, with particular attention to intersecting differences, such as race, sex/gender, and disability, and to shifting religious/political boundaries. Visual and textual media, political commentary, and popular ethnographies are analyzed.

ANTH 110S - Evolution of Democracy (5)

Examines the state and its institutions from a historical, social, and cross-cultural perspective, paying attention to the varied discourses and practices that constitute what we call the state.

ANTH 110T - Motherhood in American Culture (5)

Examines the culture wars around motherhood in the United States with a focus on the political mobilization of normative ideas about the correct way to mother, from the moment of conception on. Special attention is given to the historical construction of deviant motherhood among marginalized groups.

ANTH 110U - Histories and Cultures of Piracy (5)

An interdisciplinary yet anthropologically informed approach to studying pirates and piracy across different historical eras and spaces. Explores the role of pirates in world history from ancient to present times, including piracy both at sea and online.

ANTH 110V - American Capitalism (5)

Capitalism shapes our lives in unequal ways, but what is it? Course explores histories and machinations of capitalism in the Americas, focusing on the United States. Investigates what capitalism is, how it operates, its origins, and what might come next.

ANTH 110W - Land and Waterscapes Entropology (5)

Establishes anthropological interconnections of emergent worlds where environmental matters, social justice, and human survival interrelate. Focuses on anti-essential nature and waterscape ethnographies in which different pluricultures revalidate local understandings as ways of contesting increasing forms of land and water privatization.

ANTH 110Y - Feeding California (5)

Online course introducing students to social practices, political processes, and cultural contexts that shape food production and consumption. Considers identity, heritage, choice, power, agency, body practices, belonging, access, safety, and security. Prioritizes California case studies, with comparative examples from around the world.

ANTH 110Z - Introduction to Disability Studies (5)

Provides an introduction to the interdisciplinary field of disability studies, including the key terms and debates of disability studies; representations of disability in print, televisual, and social media; and the legal, political, and justice-oriented frameworks that impact disability in the U.S., with a focus on intersectional disability justice.

ANTH 111 - Human Ecology (5)

Reviews the environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. The effects of human culture on the environment and of the environment on the shape of human culture is emphasized.

ANTH 112 - Life Cycles (5)

Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life-history theory.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 113 - Tutoring Writing in Anthropology (2)

Trains students to tutor writing in undergraduate anthropology courses; supports and guides them during the quarter they are tutoring. Enrollment by interview only. Prerequisite(s): satisfaction of the Composition requirement.

ANTH 119 - Indigenous Visual Culture (5)

Examines the relationship between visual cultures and indigenous peoples. First, class discusses what is visual anthropology. Second, class examines the relationship between museums and indigenous peoples. Third, class examines ethnographic photography and indigenous uses of photography. Fourth, class examines the uses of ethnographic film, and then its relationship to indigenous peoples. Finally, class examines indigenous uses of film.

ANTH 121 - Socialism (5)

Ethnography-based course that examines the social worlds of socialism, with particular focus on state socialism. Topics include: social problems that inspired socialist movements; implementation and experience of socialism in daily life; and significance of class, race, nation, science, technology, rationality.

ANTH 122 - Postsocialism (5)

Examines the demise of socialist systems. Addresses the political, social, cultural, and economic experiences of everyday life that led to that demise, what new social inequalities have arisen since, and how citizens use the socialist past to critique the present.

ANTH 123 - Psychological Anthropology (5)

An introduction to some of the central theoretical issues in psychological anthropology. Psychoanalytic, cognitive, and relativist perspectives on the link between person and society are discussed and compared.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 124 - Anthropology of Religion (5)

Study of the phenomenon of religion as manifested in ethnographic literature, with special attention to traditional and recent modes of analysis of religious behavior. Special topics include myth, religious healing, witchcraft and sorcery, ritual, and millenarian movements.

ANTH 125 - Magic, Science, and Religion (5)

With a theoretical understanding of the concepts of magic, science, and religion, students draw on ethnographies of these practices to critique distinctions between them and critically analyze the understanding of these categories and their relation in the modern world

ANTH 126 - Contraband: Shadow Economies and the Law (5)

Course takes an interdisciplinary approach to studying contraband and smuggling. Focusing on concepts used to describe illegality we examine how "shadow economies" are central to the making of states and sovereignty, the legal and illegal being blurred.

ANTH 127 - Ethnographies of Capitalism (5)

Challenges approaches to capitalism that treat it as socioeconomic relations separable from culture. Readings include ethnographies demonstrating the inextricability of cultural meanings from capitalist practices. Topics include capitalism's relationship to colonialism, nationalism, socialism, gender, and the commodification of aesthetics.

ANTH 128 - Contemporary American Evangelical Cultures (5)

Study of contemporary, American, born-again Protestant discourse using ethnographic materials and interpretive theories. Topics include biblical literalism, Christian conversion and self-fabulation, charismatic gifts, preaching, sacrificial giving, prosperity theology, apocalypticism, creationism, pro-family and pro-life rhetoric, and televangelism. (Formerly *Born-Again Religion and Culture*.)

ANTH 129 - Beyond Borders: Other Globalizations and Histories of Interconnection (5)

The history of social and cultural interconnections at a global scale. Anthropological approaches to the study of cultural encounter are used to investigate topics such as trade, religion, and citizenship and to evaluate shifting concepts of civilization and barbarism. (Formerly Other Globalizations: Cultures and Histories of Interconnection.)

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 130A - Anthropology of Africa. (5)

Survey of sub-Saharan societies. Analysis of principles of social organization and factors of cultural unity of selected western, eastern, central, and southern African peoples. (Formerly Peoples and Cultures of Africa)

ANTH 130B - Brazil (5)

Examines Brazilian culture and its link to interpersonal relationships, religion, politics, and psychological experience.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 130C - Politics and Culture in China (5)

Joins substantive information about Chinese society and culture with debates in social theory and rethinks conventional wisdom about colonialism and modernity. Topics include representations of Chineseness, class revolution, Chinese diaspora, popular culture, family and kinship, nationalism, history/memory, race and gender.

ANTH 130D - The Cultural Aspects of the Israeli-Palestinian Conflict (5)

Course examines the everyday life of the Palestinian citizens of Israel. Palestinians who remained within what became the State of Israel after the 1948 war became a national and ethnic minority overnight. Although granted citizenship, they were excluded from the Jewish majority society and were discriminated against by the state. Course deepens the

understanding of the conflict while focusing on the complex relations between the Palestinian and Jewish citizens in Israel, highlights the Palestinians' social and cultural aspects, and sheds light on how they experience everyday life as a minority. Students learn how to apply sociological and anthropological approaches to understand better the Israeli-Palestinian conflict and minority-majority relations in general.

ANTH 130E - Culture and Politics of Island Southeast Asia (5)

Southeast Asia includes a variety of societies exhibiting many ecological adaptations, religions, marriage systems, and experiences with colonial powers. Case studies of particular societies, chosen to reveal variety, are examined comparatively. Emphasis on religion and social organization.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 130F - Blackness In Motion: Anthropology of the African Diasporas (5)

What connects Black communities in the Caribbean, the U.S., Latin America, and Canada, and what sets them apart? Examines theories of diaspora, gender and sexuality, slavery, colorism, music, U.S. hegemonies, social movements, and comparative racialization and global anti-blackness (Formerly Blackness In Motion: Anthology of the African Diasporas.)

ANTH 130G - Asian Americans in Ethnography and Film (5)

Critically examines category of Asian Americans. Addresses historic representations of Asians and Asian Americans in ethnographic research and film. Explores contemporary issues of race, culture, and politics through ethnographic practice and cultural production.

ANTH 130H - Ethnography of Russia and Eastern Europe (5)

Introduces students to the ethnography of Eurasia, with special attention to the lived experience and legacy of state socialism in this region. Topics include new ideas of personhood, changing economic practices, public health, and international development.

ANTH 130I - Cultures of India (5)

An examination of anthropological studies of tribal, rural, and urban cultures of India and a look at changes taking place in India.

ANTH 130IG - Cultures of India Abroad (5)

An examination of anthropological studies of tribal, rural, and urban cultures of India and a look at changes taking place in India.

ANTH 130J - Politics and Statemaking in Latin America (5)

Introduction to ethnohistory and political anthropology of one or more Latin American countries: Typically Mexico and one other country. Students explore how contested concepts such as indigeneity, nation or state come to gain credibility and are deployed in contemporary politics.

ANTH 130K - Food Cultures in South Asia (5)

Designed to prepare students to adopt food as an analytical lens to explore the relationship between environmental sustainability and social justice in the South Asia. It draws from ethnographic texts, films, and recipe books to provide an overview of contemporary debates, insights, and politics. Examines how everyday food practices shape gender, religion, caste, and class. Students interested in emerging food trends and consumption will connect with diverse grassroots food initiatives, including food justice initiatives from indigenous communities.

ANTH 130L - Ethnographies of Latin America (5)

A broad introduction to issues and areas of cultural production and transformation in the Caribbean, Mexico, and Central and South America. Colonial, neocolonial, class, ethnic, gender, religious, ecological, and political relations intersect as represented in ethnographies and film.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 130M - Inside Mexico (5)

Examines various communities within the Republic of Mexico as represented in ethnographic texts and other forms of cultural production, particularly music and dance. Emphasis on the interplay between the concept of regionalism and national identity. Previous course work in Mexican culture and/or history strongly recommended. Some reading in Spanish is required.

ANTH 130N - Native Peoples of North America (5)

A survey of Native American cultures and experience during the past century, with emphasis on Pueblo cultures of the American Southwest.

ANTH 130O - Native Feminisms, Gender, and Settler Colonialism (5)

Covers Native feminisms, gender, settler colonialism, and ethnography. Students read ethnographies that intervene in Native feminisms and its possibilities. Focuses on ethnographies in the U.S., including Native men and masculinities in Hawaii.

ANTH 130P - Ethnography of Southern Cone Chile and Argentina (5)

Chile and Argentina, although both established within Spanish colonization and physically close, have dissimilar histories and culture. We explore areas of friction and overlap that shaped different peoples, institutions, cultural identities, and histories in countries that share a particular history.

ANTH 130S - Ethnography of Russia and Eastern Europe, Abroad (5)

This study abroad introduces the ethnography of Russia and Eastern Europe, with special attention to lived experience and legacy of state socialism. Topics: effects of socialism, changing economic practices; constructions of new identities;

modernization/development; belief systems; and memory and history.

ANTH 130T - Religion and Politics in the Muslim World (5)

Analyzes post-colonial forms of Islam, with particular attention to Muslim societies and cultures in the Middle East, North Africa, and Europe. Emphasizes the relationship between power, knowledge, and representation in anthropological approaches to Islam and Muslims. (Formerly Anthropological Approaches to Islam.)

ANTH 130U - Central America (5)

Draws on political, economic, and anthropological perspectives to analyze the key role of transnationalism and neoliberalism in contemporary Central America. Key topics include: the aftermath of revolutions; labor and gender; indigenous movements and multiculturalism; and transnational migration and governance.

ANTH 130V - Ethnography of Russia (5)

Examines daily life in Russia and affiliated formerly Soviet Republics through historical and cultural comparison. Topics include: socialist and postsocialist daily life; 20th- and 21st-century Russian empire building; cultural politics; economic systems; state-citizen relations; citizenship regimes; labor and leisure; and religion.

ANTH 130W - Ethnography of Eastern Europe (5)

Examines daily life in Eastern Europe, especially how residents in this region have navigated the transition from state socialism to accession to the European Union. Topics include: the legacies of state socialism; cultural politics; new economies; consumption; the European Union; new forms of governance; and political activism.

ANTH 130X - Special Topics in Ethnography (5)

This course on special topics in ethnography will be taught on a rotating basis by various faculty members. Precise focus of each year's courses will vary according to the instructor and will be announced by the department.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 130Y - Health, Illness, & Medicines in Muslim Worlds (5)

How can one bear witness to pandemics, plagues, crises, and destruction in the Middle East without reproducing tropes and myths of chronic instability and regional under-development? This lecture course is an ethnographic, historical, and textual exploration of the past and present of Muslim Worlds and the Islamic tradition and sciences. Students critically engage the region we now evoke as the Middle East and its accompanying traditions as well as the tools that arise to diagnose and guide prescriptions for securing well-being of individuals, communities, and traditions.

Prerequisite: Prerequisite(s): ANTH 2 or GCH 1; ANTH 2 strongly recommended.

ANTH 131 - Gender in Cross-Cultural Context (5)

Examines the diversity of women's as well as men's roles, experiences, and self-conceptions in a number of societies to explore how women and men shape, and are shaped by, particular forms of social life.

ANTH 131H - Russian-Language Readings Course: Readings in Anthropology of Russia (2)

Contemporary topics and readings in anthropology of Russia and the former Soviet Union. All readings, films, and other materials are in Russian. Discussions are in English. Accompanies ANTH 130H, Ethnography of Russia and Eastern Europe. Prerequisite(s): ANTH 130H and proof of Russian proficiency in reading and writing. Enrollment by permission of instructor.

ANTH 132 - Food, Culture, and Justice in Israel/Palestine (5)

Examines the tensions within Israeli society and its relationships with other countries through food and eating habits, focusing on the relations with the Palestinian people sharing the same land. Given that food is a medium through which one can analyze social and cultural relations (and fights…), this course focuses on how food and eating patterns reflect, shape, and influence modern Israel. By doing so, the course provides a unique angle to major social and cultural issues in Israel, such as the relationship between Jews and Palestinians in Israel, cultural and social tensions between different ethnic groups, the effect of global food trends on Israeli society. (Formerly Food Fights: Food, Culture, and Society in Israel.)

ANTH 133 - Narratives of the Popular (5)

Addresses the increasing importance of popular culture as the terrain upon which to address issues of culture and power. Emphasizes an ethnographic approach to popular culture as sociocultural phenomena. Students learn about a variety of activities including television and film viewing, music, fashion, photography, postcards, comic books, and urban spatial relations and architecture.

ANTH 134 - Medical Anthropology: An Introduction (5)

Cross-cultural study of health, disease, and illness behavior from ecological and ethnomedical perspectives. Implications for biomedical health care policy. Students cannot receive credit for this course and ANTH 254.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 135A - Cities (5)

Examines cities from an anthropological perspective. Reviews pertinent social scientific literature of the 19th and early 20th centuries. Surveys the concepts and methods used by contemporary anthropologists to investigate urban phenomena.

ANTH 136 - The Biology of Everyday Life (5)

Addresses cross-cultural attitudes to the human body and its everyday biological concerns: sleeping, eating, breathing, sex, and defecation.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 137 - Consuming Culture (5)

Explores consumption as a cultural form. Beginning with theories of capitalism and exchange, it then focuses on sites and modes of consumption and display such as department stores, museums and zoos, advertisements and photography, cultural tourism.

ANTH 138 - Political Anthropology (5)

The ideas, in selected non-Western societies, about the nature of power, order, social cohesion, and the political organization of these societies.

ANTH 139 - Language and Culture (5)

Examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Topics include the Sapir-Whorf linguistic relativity hypothesis; linguistic constructions of gender; speech variation in relation to class, ethnicity, and national identity; and the emergence of self in communicative acts.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 140 - The Body in Rain: Environmental and Medical Intersections (5)

Explores medical and environmental anthropologies, including how bodies-human and other-are implicated in processes often figured as environmental. Explores how the body and the environment combine and interact to form nexus of political, cultural, and material forces.

ANTH 142 - Anthropology of Law (5)

An ethnographically informed consideration of law, dispute management, and social control in a range of societies including the contemporary U.S. Topics include conflict management processes, theories of justice, legal discourse, and relations among local, national, and transnational legal systems.

Prerequisite: Enrollment is restricted to anthropology and legal studies majors.

ANTH 143 - Performance and Power (5)

Explores relationships between power and performance forms and media, both traditional and emergent. Links aesthetics with politics, and recent transcultural exchanges with local circumstances and consequences.

Prerequisite: Prerequisite(s): ANTH 2 or any other Anthropology course.

ANTH 144 - Anthropology of Poverty and Welfare (5)

Examines phenomena of poverty and welfare in cross-cultural perspective with an emphasis on critical ethnographies and social analyses of social pathologies, economic systems, and community. Topics include informal economies, labor, household systems, social-support networks, and public policies.

ANTH 145X - Special Topics in Socio-Cultural Anthropology (5)

Taught annually on a rotating basis by faculty members. Each year's topic varies by instructor and is announced by the department.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 146 - Anthropology and the Environment (5)

Examines recent approaches to study of nature and the environment. Considers historical relationship between nature, science, and colonial expansion as well as key issues of contemporary environmental concern: conservation, environmental justice, and social movements. Students cannot receive credit for this course and ANTH 246.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 147 - Anthropology and the Anthropocene (5)

Looks at how humans have lived with their environments in other times and places; the long-distance transfers of humans and other animals, as well as plants and microorganisms; and how we can best live in the Anthropocene.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 148 - Gender and Global Development (5)

Uses the critical tools of feminist theory and cultural anthropology to look at how global development discourses and institutions mobilize, reinforce, and challenge systems of gender-based inequality. Topics include non-governmental organizations (NGOs), development practice, microcredit, and technocrat cultures. (Formerly Gender and Development.)

ANTH 149 - Anthropology of Activism (5)

Examining activism from an anthropological perspective, students look at beliefs, ideals, and practices of social movements and those involved in them. Taking a procedural approach, course focuses on how things happen in unexpected ways, and examines activism as a collective matter.

ANTH 150 - Communicating Anthropology (5)

Encourages anthropology majors to explore different means of communicating anthropology with much attention to individual writing and presentation skills. Intensive work on library research; recognizing, comparing, and making arguments; and analyzing ethnographies, articles, reviews, and films.

Prerequisite: Prerequisite(s): two of the following courses: ANTH 1, ANTH 2, or ANTH 3; satisfaction of the Entry

Level Writing and Composition requirements. Enrollment is restricted to sophomore and junior anthropology majors.

ANTH 151 - Workshop in Ethnography (5)

Through demonstration, practice, and participation, acquire skills in collecting and analyzing cultural data. Work with members of other cultures and with each other to learn to identify significant cultural patterns. Lectures and readings provide added perspective and a theoretical base.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 151S - Workshop in Ethnography Abroad (6)

Prepares students to conduct ethnographic research. Through workshops and fieldwork exercises, students learn how to use immersive, sensory observation and regular writing practice to develop a research question and design a research project, practice ethnographic methods (which may include archival research), write up their findings in a synthetic essay, and present their research findings to an audience. The course covers topics such as ethics, reflexivity, accountability, bias, and positionality. Students create a portfolio of their work across the five weeks.

Prerequisite: Prerequisite(s): Must be taken concurrently with ANTH 161S. Requirements for the FSFS London program include concurrent enrollment in both ANTH 151s and ANTH 161s. Students are only admitted to the program and the two courses through formal application to and acceptance into the FSFS program by Global Engagement.

ANTH 152 - Survey of Cultural Anthropological Theory (5)

Major figures, ideas, and writings in 19th- and 20th-century cultural anthropology surveyed. Students cannot receive credit for this course and ANTH 252.

Prerequisite: Prerequisite(s): ANTH 2 and satisfaction of the Entry Level Writing and Composition requirements; enrollment is restricted to anthropology majors.

ANTH 153 - Medicine and Colonialism (5)

Addresses the overlapping relationship between medicine and colonialism in the 19th century, with attention to post-colonial theory and contemporary studies of post-colonial medical pluralism in the 20th century.

Prerequisite: Prerequisite(s): ANTH 2 and ANTH 134.

ANTH 157 - Modernity and Its Others (5)

Beginning with the conquest of the Americas, considers how Western thinkers have explained seemingly irrational beliefs and practices (e.g. human sacrifice, witchcraft, prophetic dreams, shamanism, spirit worlds), and asks how we might better understand notions of reality very different from our own.

ANTH 158 - Feminist Ethnographies (5)

Considers the relationship between anthropology and feminism. Provides historical perspective on gender inequalities in the discipline as well as the emergence of feminist anthropology. Students read and engage with examples of feminist ethnography form a variety of regions and subfields.

ANTH 159 - Race and Anthropology (5)

Examines concept of race in anthropology. Begins with histories of race in anthropology; turns to contemporary analysis of racism, identity formation, and diaspora; and concludes with current debates on the validity of race as an object of analysis.

ANTH 160 - Reproductive and Population Politics (5)

Examines reproductive and population politics across the globe, with a focus on feminist and ethnographic analyses of the stakes of various actors, from states to religious bodies to non-governmental organizations, in questions of who reproduces and in what circumstances.

ANTH 161 - The Anthropology of Food (5)

Critically examines food as a fundamental aspect of social and cultural life and key concept in the development of anthropological theory and methods. Topics include: power relationships; community building; exchange and reciprocity; symbolism; cultural rules and rituals; globalization; and memory.

ANTH 161S - Anthropology of Food, Abroad (6)

Food as a fundamental aspect of social/cultural life and key concept in development of anthropological theory and methods. Studying abroad, investigations are grounded in local ethnographic context to learn how anthropologists study food, practice methods, and understand food's local importance.

Prerequisite: Prerequisite(s): Concurrent enrollment in ANTH 151S is required. Requirements for the FSFS London program include enrollment in both ANTH 161s and ANTH 151s. Students are only admitted to the program and the two courses through formal application to and acceptance into the FSFS program by Global Engagement.

ANTH 162 - Anthropology of Displaced Persons (5)

Examines the causes, consequences, forms, and experiences of human movement, displacement, and abandonment. Topics include: migration, refugees, forced displacement, environmental displacement, tourism, transnational communities, and other displaced populations.

ANTH 163 - Kinship (5)

Provides a critical survey of debates, old and new, in the study of kinship. Readings range from classical treatments to recent reformulations that use kinship as a lens for exploring intimacy, memory, futurity, embodiment, commodification, and power. Students cannot receive credit for this course and ANTH 263.

ANTH 164 - The Anthropology of Dance (5)

An intense reading seminar which critically reviews anthropological works in dance ethnography and dance theory. Recommended for anthropology majors.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 166 - States, Bureaucracies , and Other Cosmological Propositions (5)

Investigates the cosmologies of states and bureaucracies and the practices through which officials or rulers seek to produce order, knowledge, or stability. Looks at paperwork, nationalist and court rituals, practices of mapping and classification, forms of citizenship.

ANTH 170 - History of Archaeological Theory (5)

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on development of archaeological theory and its relation to evolutionary and anthropological theory. Students cannot receive credit for this course and ANTH 270.

Prerequisite: Prerequisite(s): ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to anthropology and Earth sciences/anthropology combined majors. Recommended for juniors.

ANTH 171 - Materials and Methods in Historical Archaeology (5)

In this intensive, hands-on course, students learn the step-by-step processes involved in conducting laboratory research on historic artifacts. Students study the ins and outs of analyzing, cataloging, and dating historic artifacts.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 172 - Archaeological Research Design (5)

Develops practical skills for connecting archaeological theory and methods to grant writing, final reports and presentations. Examines elements of good research design, including the logic of scientific inquiry, ethics, project conceptualization, measurement, sampling, data analysis, and effective writing.

Prerequisite: Prerequisite(s): ANTH 3. Enrollment is restricted to anthropology majors.

ANTH 173 - Origins of Farming (5)

Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Open to nonmajors. Students cannot receive credit for this course and ANTH 273.

Prerequisite: Enrollment is restricted to juniors and seniors.

ANTH 174 - Origins of Complex Societies (5)

Deals with evidence and theories concerning the origins of complex society; the transition from egalitarian, foraging societies to the hierarchical, economically specialized societies often referred to as civilizations. Focuses on both Old World and New World cultures. Students cannot receive credit for this course and ANTH 174.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 175 - African Archaeology (5)

Introduces the evolution of African kingdoms and states from the emergence of farming communities to initial contact with Europe. Particular attention paid to the origins of social inequality and the evolution of centralized polities. Students cannot receive credit for this course and ANTH 275. (Formerly African Complex Societies.)

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 176A - North American Archaeology (5)

Development of Native cultures in North America. Topics include peopling of the New World, early foragers, spread of agriculture and complex societies in the Southwest and Eastern Woodlands, and review of cultural developments in the West and Far North.

Prerequisite: Prerequisite(s): ANTH 3 or consent of instructor.

ANTH 176B - Meso-American Archaeology (5)

Review of the archaeological and ethnohistorical evidence for the origins and development of pre-Columbian civilizations in Meso-America including the Olmec, Maya, Zapotec, Mixtec Teotihuacan, Toltec, Tarascan, and Aztec. Students cannot receive credit for this course and ANTH 276B.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 176C - Archaeology of the American Southwest (5)

Outlines the development of native cultures in the American Southwest from Paleo-Indian times (Ca. 11,5000 B.C.) through early European contact (ca. A.D. 1600). Topics include the greater environment; early foraging culture; the development of agriculture and village life; the emergence and decline of regional alliances; abandonment and reorganization; and changes in social organization, external relations, and trade.

Prerequisite: Prerequisite(s): ANTH 3 and ANTH 176A.

ANTH 176D - Colonial Encounters in the Americas (5)

Uses archaeological case studies to explore processes of cultural confrontation, resistance, and transformation among Native American groups in the wake of European colonial expansion in the Western Hemisphere during the late 15th through mid-19th centuries.

Prerequisite: Prerequisite(s): ANTH 2 and ANTH 3.

ANTH 176E - Archaeology of the Pacific Northwest (5)

Explores some of the important issues surrounding the anthropological and archaeological study of the Pacific Northwest Coast--a roughly 1,800-kilometer-long shoreline that stretches from Yakutat Bay in Alaska to Cape Mendocino in California.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 176F - California Archaeology (5)

Introduces the Native peoples of California from an archaeological perspective. Covering the past 13,000 years, a variety of geographic and temporal settings are examined as well as current research in California archaeology.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 176G - Andean Archaeology (5)

Review of the archaeology and ethnohistory of the Central Andes, with a particular emphasis on the values and practices of Andean communities. Explores the whole Andean sequence, from the peopling of South America, early Andean societies, the development of states and empires, and the Spanish invasion.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 177 - Environmental Archaeology (5)

Introduces students to methods and theories in the study of past human-environment interactions. Examines the use of archaeological environmental data (geological, botanical, faunal, chemical) and explores topics, such as megafaunal extinctions, domestication, and human impacts on environments.

ANTH 178 - Historical Archaeology: A Global Perspective (5)

Introduces the archaeology of European colonialism and the early-modern world. Topics include historical archaeological methods; the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and ANTH 278.

ANTH 180 - Ceramic Analysis in Archaeology (5)

Focuses on theories and techniques used by archaeologists to bridge the gap between the recovery of ceramic materials and their interpretation within cultural contexts. Topics include the origins of pottery, production methods, classification and typology, seriation, functional analysis, materials analysis and description, organization of production, trade, and the analysis of style. Students cannot receive credit for this course and ANTH 280.

Prerequisite: Prerequisite(s): ANTH 3. Enrollment is restricted to anthropology majors.

ANTH 181X - Special Topics in Archaeology (5)

Taught annually on a rotating basis by various faculty members. Precise focus of each year's course varies according to the instructor and is announced by the department.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 183 - Introduction to Geographic Information Systems for Anthropology (5)

Practical laboratory in geographic information systems with a specific focus on anthropological questions and development. Students learn basic spatial analyses and carry them out on research datasets. This course also emphasizes the incorporation of spatial modeling in research design. To participate, students are required to sign up for an account in ESRI (freely available to all UCSC students).

Prerequisite: Enrollment is restricted to anthropology majors. Enrollment is limited to 20 students.

ANTH 184 - Zooarchaeology (5)

Animals play many different roles in our lives, including as food, pets, tools, and symbols. This class introduces the study of animal remains retrieved from archaeological sites. Students learn about zooarchaeology through readings, lectures, and in-class laboratory sessions. Course explores a wide range of topics, including functional morphology, vertebrate taphonomy, reconstruction of human diet and behavior from faunal remains, data collection and management, and methods of quantitative analysis.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 185 - Osteology of Mammals, Birds, and Fish (5)

Practicum in archaeological faunal analysis. Students learn to identify bones of all larger mammal species of central California plus selected bird and fish species. Students cannot receive credit for this course and ANTH 285. Prerequisite(s): ANTH 184 or ANTH 102 or BIOL 138 BIOL 138L or EART 100 or ENVS 105 ENVS 105L, and permission of instructor.

ANTH 187 - Cultural Heritage in Colonial Contexts (5)

Critical examination of the definitions of cultural heritage, its development as a concept, and the various laws, charters, and conventions that shape our management of the past in the present. The focus is on heritage in comparative colonial contexts.

ANTH 187B - Cultural Resource Management (5)

Explores how the past is managed or cared for in the present, especially in the context of the United States.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 188A - Practicum in Archaeology A (2)

Introduces practical skills in archaeological materials identification of stone, shell, bone, and other materials, curation, and database management. Students receive entry-level training with once-weekly class meetings and five hours

per week of hands-on work. Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and instructor consent. All three courses in sequence (ANTH 188A, ANTH 188B, ANTH 188C) required to count for the anthropology major or minor.

ANTH 188B - Practicum in Archaeology B (2)

Introduces practical skills in archaeological materials identification of stone, shell, bone, and other materials, curation, and database management. Students receive entry-level training with once-weekly class meetings and five hours per week of hands-on work. Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and instructor consent. All three courses in sequence (ANTH 188A, ANTH 188B, ANTH 188C) required to count for the anthropology major or minor.

ANTH 188C - Practicum in Archaeology C (2)

Two-credit course introducing practical skills in archaeological materials identification of stone, shell, bone, and other materials; curation; and database management. Students receive entry-level training with once-weekly class meetings and five hours per week of hands-on work. Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3. All three courses in sequence (ANTH 188A, ANTH 188B, ANTH 188C) required to count for the anthropology major or minor.

ANTH 189 - Archaeology Field Methods (5)

Lecture, laboratory, and fieldwork sessions on archaeological field methods including survey, mapping, excavation, record and database maintenance, artifact accessioning, curation, and analysis on the UCSC campus. Students attend lectures/laboratories two evenings each week and do fieldwork all day on Saturdays. Enrollment by instructor consent. Prerequisite(s): course 3 and application letter. Students who have done no previous fieldwork in archaeology have priority.

ANTH 189A - Archaeological Field Techniques (5)

Focuses on fundamental site identification, recording, and reporting efforts in archaeology—the daily grind in archaeological research and cultural resource management (CRM)—that take place before any ground disturbance happens (usually as part of excavation). Class discussions of relevant readings, independent and group work, and hands-on exercises in the field (on campus) provide students with a working knowledge of everyday archaeological techniques, as well as familiarity with some of the important tools archaeologists use to identify and produce a record of cultural sites. Prerequisite(s): ANTH 3. Enrollment is by permission of the instructor. Enrollment is restricted to anthropology majors.

Prerequisite: Prerequisite(s): ANTH 3. Enrollment is by permission of the instructor. Enrollment is restricted to anthropology majors.

ANTH 190X - Special topics in Biological Anthropology (5)

Taught annually on a rotating basis by various faculty members. Precise focus of each year's course varies according to the instructor and is announced by the department.

(Formerly Special topics in Archaeology-Physical Anthropology.)

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 194A - Anthropology of Dead Persons (5)

Explores the cultural meanings of dead bodies and dead persons, including memorialization; the body in the United States legal system; cadavers in education and research; dead persons in mass disasters and human-rights cases; and repatriation of the dead. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements, and ANTH 1, ANTH 2, and ANTH 3. Enrollment restricted to senior anthropology and Earth sciences/Anthropology combined majors. Enrollment by permission of instructor.

ANTH 194B - Chimpanzees: Biology, Behavior, and Evolution (5)

Explores studies on wild and captive chimpanzees with reference to other apes and humans. Topics include sociality, tool using, locomotion, traditions, and life history; social and physical dimensions of growth and development; language studies, genetics, and applications to human evolution.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors.

ANTH 194C - Feminist Anthropology (5)

Considers feminist perspectives on the human past, archaeologists' perspectives on feminist theory, and the impact of gender, feminist, and critical social theory on archaeology as a profession. Students cannot receive credit for this course and ANTH 279.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology and Earth sciences/Anthropology combined majors.

ANTH 194D - Tribes/Castes/Women (5)

Examines historical constructions and contemporary deployments of the categories that have structured popular and anthropological understandings of social life in South Asia, particularly those of tribe, caste, and women. Students gain familiarity with the mobilization of these categories in contemporary political movements across India.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194E - Belief (5)

Focuses on problems and opportunities raised by the concept of belief. Students work to develop an anthropological understanding of belief as practiced, then put it to use in analyzing episodes from the NPR series This I Believe.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194F - Memory (5)

Intensive and fast-paced seminar focusing on theoretical and ethnographic studies of memory as a means for dealing with the past. Examines how ordinary people and societies have coped with the past through acts of selective remembering and forgetting.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors.

ANTH 194G - Politics and Secularism (5)

Examines secularism as political doctrine and practice of government. Topics include: transformation of religion by secularization; forms of inclusion/exclusion enacted by secularism; relationship between secularism and colonial rule. Case studies drawn from Europe, South Asia, United States, and the Middle East.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements; enrollment is restricted to senior anthropology majors.

ANTH 194H - Paleoanthropology (5)

Detailed overview of the evidence for the origin and evolution of humans with emphasis on reconstructing the paleobiology of extinct hominids. Discussion of individual groups of ancient hominids from the Miocene apes to anatomically modern humans.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors.

ANTH 194I - Consumption and Consumerism (5)

Investigates cultural analysis of consumer society, commodities, and consumer practices. Students develop their own research projects. Themes include: critiques of consumer society; symbolic analysis of goods, consumption as resistance, anthropologies of marketing, culture jamming; consumption and (post) colonialism.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors.

ANTH 194J - Histories of Forests and Other Wild Places (5)

Wild Nature has a history. This class offers tools for understanding the social and natural construction of wild nature. We will learn to read rural landscapes--ethnographically, biologically, historically, creatively, and politically.

Prerequisite: Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194K - Reading Ethnographies (5)

Explores issues in the representation of culture through reading and discussing ethnographies. Recent experimental ethnographies open topics including the relation between fieldwork and writing, textual strategies, and the politics of ethnographic writing and research.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194L - Archaeology of the African Diaspora (5)

Senior seminar on African diaspora archaeology. Draws on archaeological, historical, and anthropological perspectives to examine the cultural, social, economic, and political lives of Africans and their descendants in the New World and West Africa from the 15th through 19th centuries.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, ANTH 3 and an upper-division course in archaeology; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors.

ANTH 194M - Medical Anthropology (5)

Focuses on critical issues in the social sciences of health and healing. Designed for students pursuing graduate work in medical anthropology and/or public health.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, ANTH 3, and ANTH 134; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194N - Comparison of Cultures (5)

Seminar for upper-division students interested in theories and methodology of social and cultural anthropology. Devoted to critical discussion of different methods of comparison practiced in anthropology.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194O - Masculinities (5)

Considers the social construction of men and masculinities in a variety of ethnohistorical contexts as well as the unique contribution enabled by anthropological methods, particularly ethnographic fieldwork, to the study of gender and power.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition

requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194P - Space, Place, and Culture (5)

Examines ways anthropologists have studied relationship between space, place, and culture. Covers early formulations acknowledging people in different cultural contexts ascribe particular meanings to places and to the concept of space and then traces the ways these questions have come to the fore in more recent scholarship.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194Q - Race, Ethnicity, Nation (5)

Provides students with theoretical and methodological approaches to studying the relationships between race, ethnicity, and nation, with a comparative focus on the United States, Latin America, and Europe. Students use ethnographic methods and/or discourse analysis to develop individual research projects.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 194R - Religion, Gender, Sexuality (5)

Examines religion in relation to gender and sexuality. Examines how gender, sexuality, and religion intersect in notions of civilization, progress, and modernity in the contemporary and colonial periods. Particular attention paid to Islam, Christianity, and Hinduism.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 194S - Hearing Culture: The Anthropology of Sound (5)

Explores relationships between culture and acoustic worlds--environmental, verbal, and musical--within which we live. How sound is shaped by human belief and practice and the role sound plays in cultural and social life, both past and present.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194T - Poverty and Inequality (5)

Through ethnographies about homelessness, food deprivation, and unemployment, examines the institutions through which poverty is recognized, the systems of morality shaping debates about need and appropriate behavior, and the effects of community responses to poverty.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 194U - Environmental Anthropology: Nature, Culture, Politics (5)

Presents key readings in environmental anthropology focusing on environmental conflicts. Students guided in developing research paper on a society environment topic of their choice. Class is writing intensive with in-class discussion and final presentations.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194V - Who Owns the Past? Ethical and Political Dimensions of Contemporary Archaeology (5)

Considers the various stakeholders in archaeological practice. Students identify and evaluate the ethical and political issues involved in the study, interpretation, presentation, and conservation of the archaeological past through weekly readings, discussions, and case studies.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors and Earth sciences and anthropology combined majors.

ANTH 194W - The Anthropology of Social Movements (5)

Focuses on the anthropology of social movements, especially the impact that global capital provokes on peripheral Latin American societies and the ways these respond through the organizing of social movements validating alternative worldviews that coalesce around issues pertaining to indigeneity, the environment, gender, and concepts of human dignity.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194X - Women in Politics: A Third World Perspective (5)

Focuses cross-culturally on the status of women in the Third World and their formal and informal participation in politics. Also discussed are organized efforts, through participation in both national and autonomous movements, for women's rights.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194Y - Archaeologies of Space and Landscape (5)

Examines contemporary archaeological perspectives on space and landscape. Focuses on how archaeology can contribute to an appreciation of the economic, cultural, and political factors

that shape human perception, use, and construction of the physical world.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; an upper-division archaeology course; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology and earth sciences/anthropology combined majors.

ANTH 194Z - Emerging Worlds (5)

Addresses encounters and contact zones between cultures that give rise to emerging worlds. Emerging worlds refers to the cultural heterogeneity and diversity created within world-making networks, geographies, innovations, and meanings, moving us beyond ideas about vanishing, autonomous cultures.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements; enrollment is restricted to senior anthropology majors.

ANTH 195A - Biological Anthropology Senior Thesis Series: Research Design (5)

Introduces students to the principles and methods by which research projects in biological anthropology and data-based archaeology are devised and executed. Students design their senior thesis research projects, write research proposals, recapitulate laboratory methods, and engage in the discussion of quantitative and mixed-methods research in anthropology. Students must have already discussed research opportunities for their thesis with principle investigators who have agreed to sponsor a potential research project. Enrollment is restricted to senior anthropology majors and by permission of the instructor. Students cannot receive credit for this course and ANTH 295A. (Formerly Senior Thesis Seminar.)

ANTH 195B - Biological Anthropology Senior Thesis Series: Guided Laboratory Research (2)

Guides students as they conduct the research projects proposed in ANTH 195A and is intended to promote a collaborative laboratory environment where students can share their progress and discuss problems and results with the group of other participating students and the instructor. This course reinforces the continuous exchange of ideas between students, ensuring that students do not work on individual projects in complete isolation. (Formerly Senior Thesis Research.)

Prerequisite: Prerequisite(s): ANTH 195A. Enrollment is restricted to senior anthropology majors.

ANTH 195C - Biological Anthropology Senior Thesis Series: Thesis Writing (5)

Emphasizes structured writing lead by manuscript guidelines with scheduled chapter drafts to be presented at specific times in the quarter. Students meet twice a week for seminars in which they present and discuss their results and writing progress with their peers and the instructor. Students are also introduced to the publishing landscape in the sciences, and trained in other forms of scientific research presentation (e.g. research posters, community meetings). (Formerly Senior Thesis Capstone.)

Prerequisite: Prerequisite(s): ANTH 195B. Enrollment is restricted to senior anthropology majors.

ANTH 195S - Senior Thesis (5)

Produce a quality research paper focusing on an anthropological topic of interest to you and that builds upon your experience in the major. Develop effective writing strategies and research skills to assist in professional development.

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to anthropology majors. Enrollment is by permission of the instructor.

ANTH 196C - Traveling Cultures (5)

Considers why traveling cultures have posed a threat, often met with violence, to regimes of rule, particularly modern nation-states. Also explores the unique problems that conducting research with mobile communities poses for the ethnographer.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196D - Food and Medicine (5)

Examines the intersections of food, medicine, and culture with special focus on nutrition, cultural knowledge, industrial foodways, genetically modified organisms (GMOs), ethnopharmacology, food safety, and biosecurity.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3.

ANTH 196E - Pastoralists Past and Present (5)

Senior seminar treating the history and modern situation of the world's herding peoples. Readings draw on ethnographic, historical, archaeological, and ecological literatures. Students are coached in writing a 25-page research paper on a topic related to this theme.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196F - The Anthropology of Things: Gift, Sign, Commodity, Tool (5)

Examines some approaches used by anthropologists and other thinkers to bring things into focus: as gifts, signs, commodities, and tools. Explores whether, by taking things seriously, anthropologists might learn to be empirical in new ways. Students cannot receive credit for this course and ANTH 225.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196G - Queer Worlds: Sexuality, Intimacy and Power in Contemporary Ethnography (5)

How do we read, write, and recognize the queer body? How is it marked in politics, in intimate spaces, and in the ethnographic text? Drawing on ethnic studies and black queer studies, this seminar engages contemporary anthropological approaches to sexuality.

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196H - Global History and the Longue Duree (5)

Emerging anthropological approaches to global history, with an eye to historical frameworks of 500 years or more. Course requires engagement with advanced theoretical concepts and challenging historical texts. Intensive seminar format. Students cannot receive credit for this course and ANTH 269.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196I - Hard Problems (5)

Explores interrelated, long-standing, difficult problems in human theory. Considers why these problems are so forbidding; what makes them significant; why they are hard; and whether hard problems come in different varieties or strengths.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196J - Imagining America (5)

Explores sites of heritage and the politics of cultural memory in the American context. Focuses on public representation and interpretation at places where multiple views of history come into conflict.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196K - Settler Colonialism (5)

Provides seniors in anthropology a capstone experience. Settler colonialism is an all-encompassing, land-centered project that revolves around the elimination of the Native. This course revolves around a series of ethnographies and histories about settler colonialism.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196L - Archaeology of the American Southwest (5)

Outlines the development of native cultures in the American Southwest from Paleo-Indian times (ca. 11,500 B.C.) through early European Contact (ca. A.D. 1600).

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements. ANTH 178 is strongly recommended. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors.

ANTH 196M - Modernity and its Others (5)

Examines how Western modernity has interpreted various forms of radical difference, beginning with the 15th-century conquest of the New World. Considers historical and contemporary examples of how Western thinkers have explained irrational beliefs and practices (e.g., witchcraft, human sacrifice, devil-worship).

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196N - The Body, Narrative, and Creative Practice (5)

Seminar proposing that arts, such as dance, weaving, and creative writing, and the cultivation of more traditional scholarly works can and should be pursued together. The pursuit of such research-creation is a social justice practice that values many ways of knowing and can lead to emotionally compelling and politically effective communication. Students are introduced to concepts and debates from crip theory, feminist, queer, and critical race studies, performance studies, and narrative theory. They also participate in workshops using body-centered writing, moment work, visual arts, and embodied listening to produce creation-scholarship in a medium of their choice. Taught in conjunction with ANTH 296N; students cannot receive credit for this course and ANTH 296N. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors and by permission of instructor.

ANTH 196O - Gender and Politics (5)

Analyzes how gender defines those who participate in the public sphere and circumscribes their actions, with particular attention to individuals who identify as female and are engaged in political activities.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196P - Disability and Difference (5)

Challenges limiting conceptions of what it means to be human in a range of arenas, from our understandings of culture to our conceptions of built space to our assumptions about citizenship, asking why disability makes people nervous.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior Anthropology majors.

ANTH 196Q - Property (5)

Analyzes and denaturalizes property as a key aspect of social life and power relations. Students develop their own research projects. Themes include: concepts of property; politics of private property, home and rent; racialized dispossession; and cultural appropriation.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196R - Design Anthropology (5)

Senior seminar introduces students to principles, approaches, methods, and professional dimensions of design anthropology. Emphasizes collaborative methods and development of new methods for ethnographic research, analysis, and communication. Through a quarter-long research project, students develop professional skills and portfolio materials. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors and is by permission. Students cannot receive credit for this course and ANTH 208C.

ANTH 196S - Food for Thought (5)

Adopts food as an analytical lens to explore the relationship between environmental sustainability and social justice. Course draws from ethnographic texts, films, and recipe books across the world to provide an overview of contemporary cultures, debates, insights, and politics. Students examine how everyday food practices shape meanings of community, gender, taste, beliefs, taboos, hierarchies, and class. Students taking this course learn how food, consumption, and dietary practices allow us to understand significant economic, social, and political developments. (Formerly Food Cultures in South Asia.)

Prerequisite: Prerequisite(s): ANTH 1, and ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196T - Archaeology of Technology (5)

Examines approaches mobilized by archaeologists to reconstruct ancient technologies and to explore how technological practices are implicated in processes of social formation and change. Approaches that engage technology as embodied technique and situated cultural practice are emphasized.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors.

ANTH 196U - Historical Anthropology (5)

Provides seniors in anthropology a capstone experience. Involves critical engagement with archaeological, ethnohistorical, ethnographic, and oral line of evidence to evaluate the outcomes of indigenous people's interactions with different forms of missionary, settler, and mercantile colonialism.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors.

ANTH 196V - Radical Craft (5)

Examines how making and artisanship can be harnessed to solve challenging social, political, and environmental issues. Examines anthropology's historical role in creating a dichotomy between "art" and "craft," as well as contemporary ethnographic work that examines craft practices from weaving to pottery to the creation of mask trees for mutual aid during a time of global pandemic. Weekly topics include research-creation, "craftivism," speculative design, Indigenous art worlds, and responses to the environmental and social ravages of fast fashion. Students select a pressing social problem and then complete a hands-on, craft-based project of their choice; no prior skills or talents are required.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196W - Anthropology of Weather and Exposure (5)

Students discuss how differing approaches to weather and exposure generate different approaches to culture, science, and politics; identify key moments in cultural anthropology's engagement with environmental and climactic questions; and delineate new areas of research.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior Anthropology majors.

ANTH 196X - Medicines for the Soul (5)

Examines the soul as an act of being, as motion, and as a figure that comes to stand between immaterial and material, psyche and body, memory and imagination, life and death, madness and prophecy—all in order to consider larger anthropological questions of cultural and historical transmission. Course explores descriptions of the soul as

found in early 20th century anthropological and ethnographic texts and its reappearance in psychology and psychological anthropology and, too, its haunting absence in contemporary anthropological texts.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 197 - Laboratory Tutorial (5)

Independent laboratory research on selected topics in archeology and physical anthropology. Interview with appropriate instructor required.

ANTH 198 - Independent Field Study (5)

Off-campus field study. Students submit petition to sponsoring agency.

ANTH 198F - Ind Field Study (2)

Ind Field Study

ANTH 198G - Independent Field Study (3)

Off-campus field study. Students submit petition to sponsoring agency.

ANTH 199 - Tutorial (5)

Students submit petition to sponsoring agency.

ANTH 199F - Tutorial (2)

Tutorial

Graduate

ANTH 200 - Theoretical Foundations of Physical Anthropological Research (5)

Provides historical and theoretical foundation of physical anthropology. Grounds students in the changing frameworks and perspectives during the last 150 years regarding questions in human biology, evolution, nature, and culture, by examining texts and scientific journals.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 200A - Cultural Graduate Core Course (5)

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Two-term course: students must enroll in both quarters.

Prerequisite: Enrollment is restricted to anthropology graduate students.

ANTH 200B - Cultural Graduate Core Course (5)

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Multiple-term course; students must enroll in both quarters to receive academic credit.

Prerequisite: Enrollment is restricted to anthropology graduate students.

ANTH 201 - Human Evolution (5)

Provides an overview of the first five million years of human evolution and a framework for studying evolution and reconstructing the human past. Emphasizes that all lines of evidence must be included: hominid fossils, archaeology, paleoecology, and molecular data.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 202A - Skeletal Biology (5)

Focuses on human skeletal biology, the identification of elements, physiology of hard tissue formation, growth, and maintenance. Students are required to show competence in skeletal identification to pass this class.

Prerequisite: Prerequisite(s): ANTH 102A or permission of instructor. Enrollment is restricted to graduate students.

ANTH 208A - Ethnographic Practice (5)

Introduces graduate students to the practice of fieldwork. Students design and carry out a quarter-long research project exploring a range of methods and producing an analytical case study. Readings and discussion emphasize both methodological critique and successful implementation.

Prerequisite: Enrollment is restricted to anthropology graduate students.

ANTH 208C - Design Anthropology (5)

Introduces the principles, approaches, methods, and professional dimensions of design anthropology. Emphasis is on collaborative methods and development of new methods for ethnographic research, analysis, and communication. Through a quarter-long research project, students develop non-academic professional skills, including portfolio materials. Students cannot receive credit for this course and ANTH 196R.

Prerequisite: Open to second-year graduate students and higher (first-year students are required to take ANTH 208A).

ANTH 210R - Religion in American Politics and Culture (5)

Introduces dominant discourses about major American religions and their role in public life with particular attention to intersecting differences, such as race, sex/gender, and disability and to shifting religious/political boundaries. Visual and textual media, political commentary, and popular ethnographies are analyzed.

Prerequisite: Enrollment restricted to graduate students.

ANTH 211 - Human Ecology (5)

Reviews environmental, physiological, behavioral, and cultural ways that humans interact with their physical

surroundings. Effects of human culture on the environment, and of the environment on the shape of human culture will be emphasized.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 212 - The Human Life Cycle (5)

Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life history theory. These stages include: gestation, infancy, childhood, juvenile and adolescent periods, and senescence. Each stage of the life cycle is compared and contrasted with the developmental life of nonhuman primates and mammals. Other related topics include developmental plasticity and epigenetics.

Prerequisite: Enrollment restricted to graduate students.

ANTH 214 - Culture and Power (5)

Takes the many strands of scholarship on power relations between individuals within the context of institutions and conceptualizes how individuals come to exist through power relations, and how power is fundamental to social being.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 216 - Methods in Biological Anthropology (5)

Deepens students' understanding of methods applied in biological anthropology research. (Formerly Methods in Physical Anthropology.)

Prerequisite: Enrollment is restricted to graduate students.

ANTH 219 - Religions, States, Secularities (5)

Examines theories and case studies at the intersection of religion, states, and secularity. Topics include: secularism as a political doctrine; state and social regulation of religion and religious normativity; secular cultural practices; and lines of secular/religious entanglement and conflict.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 220 - Cartographies of Culture (5)

Examines, theoretically and ethnographically, how societies and their cultures are created and reified through spatializing practices, including border-making, mapping, landscape aesthetics, globalization, time/history/memory, movement, and other locating activities.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 224 - Anthropology of Secularism (5)

Examines secularism as a practice of government with a concomitant set of ethics. Topics include: the notion of religion necessary for secularism; forms of moral and political inclusion/exclusion enacted by secular governance; and the kind of ethical subject secularism engenders. (Formerly course 255.)

Prerequisite: Enrollment is restricted to graduate students.

ANTH 225 - The Anthropology of Things: Sign, Gift, Commodity, Tool (5)

Examines some approaches used by anthropologists and other thinkers to bring things into focus: as gifts, signs, commodities, and tools. Explores whether, by taking things seriously, anthropologists might learn to be empirical in new ways. Students cannot receive credit for this course and ANTH 196F.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 228 - Grant Writing (5)

Devoted entirely to writing grant proposals. Students either work on their graduate education fellowships or their doctoral dissertation grants or both. Reading materials consist of granting agency documents plus examples of successful applications.

Prerequisite: Enrollment is restricted to anthropology graduate students.

ANTH 229 - Constructing Regions (5)

Discusses centrality of the idea of regions in studies of culture, the history of locating social theory, and debates about area studies. Students develop area of transregional bibliographies. Primarily for second- or third-year anthropology graduate students reading area literatures.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 230 - Bodies, Images, Screens (5)

Visuality as epistemology, image-consumption, and the political and representational possibilities stemming from digitization and the World Wide Web are increasingly important issues in the humane sciences. Offers historical and critical background and the possibility of hands-on practice using visual material in current research.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 231 - Intimacy and Affective Labor (5)

Examines recent work on the role of intimacy and affective labor in value production, political mobilization, and transnational capital linkages. Special attention given to how these terms are invoked to answer methodological and narrative concerns in ethnographic writing.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 232 - Bodies, Knowledge, Practice (5)

Contemporary social theory and science both focus on bodies as critical sites of inquiry and the production of knowledge. Explores these theoretical intersections and constructions of the body with new ethnographic works. Questions how race, gender, and culture are inscribed through bodily practice, imagery, and phenomenology.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 233 - Politics of Nature (5)

Advanced graduate seminar in environmental anthropology and science and technology studies, focusing on how nature is produced in the modern world and what political and practical significance this has in different contexts.

Prerequisite: Enrollment restricted to graduate students.

ANTH 234 - Feminist Anthropology (5)

Examines how feminist anthropology creates its objects of knowledge by focusing on questions of method and representation. The class reads across these traditional objects--women and gender, for example--to highlight the epistemological and political stakes of feminist work in anthropology.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 235 - Language and Culture (5)

An examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Also examines the complex role which linguistic inquiry and models have played in broader theories of culture.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 238 - Advanced Topics in Cultural Anthropology (5)

Advanced topics in cultural anthropology. Current topics in anthropological theory and ethnography taught on a rotating basis by various faculty members. Precise focus of each seminar varies and will be announced by the department.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 241 - Social Justice (5)

Explores theoretical and methodological issues in the field of social justice with an emphasis on ethnographic analysis. Topics include: rights, obligations, justice, equality, compensation, and ethics.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 243 - Cultures of Capitalism (5)

Introduction to selected themes in political economy, stressing the work of Marx. Topics include the development of capitalism, colonialism, dependency, world systems, state formation, class consciousness, commodity fetishism, the nature of late capitalism, post-modernism, and the aesthetics of mass culture. Through political economy's interlocutors, raises questions about gender, race and ethnicity, and post-structuralist critiques.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 246 - Advanced Readings in Environmental Anthropology (5)

Survey of history and topics of contemporary interest in environmental anthropology, including political ecology, environmental history, ethnoecology, and multi-species anthropology. Additional advanced readings on contemporary environmental anthropology research. Students cannot receive credit for this course and ANTH 146.

Prerequisite: Enrollment is restricted to Anthropology graduate students or by permission of the instructor.

ANTH 247 - Critical Perspectives on Nutrition (5)

Examines emerging critiques on the science, communication, and practice of nutrition using multidisciplinary approaches. Special attention is given to the effects of modern nutrition.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 248 - Shadowy Dealings: Anthropology of Finance, Money, and Law (5)

Moves from a brief introduction to classic economic anthropology to recent work on histories of money and capitalism and cultures of financial markets, of accounting, and of legal and illegal trading practices

Prerequisite: Enrollment is restricted to graduate students.

ANTH 249 - Ecological Discourses (5)

Explores narratives of nature and their practical consequences in contests over wild places and their resources. Readings focus on the histories of forests and on analytic frameworks—ecology, social history, interpretation, cultural studies—with which to investigate competing constructions of the environment.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 252 - Survey of Cultural Anthropological Theory (5)

Major figures, ideas, and writing in 19th- and 20th-century cultural anthropology surveyed. Students cannot receive credit for this course and ANTH 152.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 253 - Advanced Cultural Theory (5)

Examines cultural anthropology's interdisciplinary practices of knowledge formation at an advanced level. Drawing on various types of theoretical texts, the course elaborates on the relationship between culture and power, taking up different themes each time it is taught.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 254 - Medicine and Culture (5)

Surveys medicine cross-culturally, with particular focus on power, tradition, and theories of embodiment. Students cannot receive credit for this course and ANTH 134.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 255 - Regulating Religion/Sex (5)

First examines the regulation of religion and the normalization of sex/sexuality as parallel modalities of secular rule in the production of modern citizens and subjects. Ultimately inquires into the relationship between proper

religion and proper sexuality in secular state formations. (Formerly course 259.)

Prerequisite: Enrollment is restricted to graduate students.

ANTH 258 - Experimental Cultures (5)

Addresses the use of experiments in anthropological research, theory, and writing.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 259 - Race in Theory and Ethnography (5)

Explores theoretical and methodological approaches to the cross-cultural study of race, with an emphasis on historical and ethnographic analysis. Main approaches considered include Foucauldian, Gramscian, diaspora theory, and the everyday poetics and politics of race. (Formerly course 246.)

Prerequisite: Enrollment is restricted to graduate students.

ANTH 260 - Anthropology of Freedom (5)

Examines conceptualizations and practices of freedom across geographical space and historical time. Readings drawn from Greek philosophy, Islamic, Christian, and Buddhist religious traditions. Enlightenment philosophy, liberal and neo-thought, and contemporary ethnographies.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 261 - Replication, Mimesis, and Fakery (5)

Replicas, copies, and fakes anchored conceptually by the authentic/original enable the marketing of cultural commodities like arts and crafts, especially since the advent of photography. Course explores these commercial and signifying processes in the global art and culture market.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 262 - Documenting Cultures (5)

Follows the history of film and ethnography, media and methodology into the birth of cinema and anthropology in the early 20th century. Students learn theories of representation and media, conduct ethnographic research, and prepare a short film.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 263 - Kinship (5)

Provides a critical survey of debates, old and new, in the study of kinship. Readings range from classical treatments to recent reformulations that use kinship as a lens for exploring intimacy, memory, futurity, embodiment, commodification, and power. Students cannot receive credit for this course and ANTH 163.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 269 - Global History and the Longue Duree (5)

Emerging anthropological approaches to global history. Considers both 500-year and much longer historical frameworks. For the former, the evidence of documents, both European and non-European, is particularly important. For the latter, archaeological and evolutionary approaches are essential. Students cannot receive credit for this course and ANTH 196H.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 270 - History of Archaeology (5)

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on the development of archaeological theory, its relation to evolutionary and anthropological theory, and themes ongoing over time. Students cannot receive credit for this course and ANTH 170.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 270A - Archaeology Graduate Core Course: History of Archaeological Theory (5)

Historical overview of archaeology, concentrating on archaeological practice in the English-speaking world from the late 19th through the 21st Centuries. Emphasis is on development of archaeological theory in its social context; its relation to evolutionary and anthropological theory; and themes ongoing over time. Students cannot receive credit for this course and ANTH 270.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 270B - Current Directions in Archaeological Theory (5)

Provides an in-depth understanding of current trends in archaeological thought, and enables students to place issues of archaeological interpretation into broader historical and theoretical frameworks. This course is a follow-up to ANTH 270, but not a substitute.

Prerequisite: Prerequisite(s): ANTH 270A. Enrollment is restricted to graduate students.

ANTH 272 - Advanced Archaeological Research (5)

Introduces graduate students to archaeological research design. Topics include: middle range theory; multistage research strategies; sampling strategies and appropriate field methodology; and issues specific to particular scales of archaeological analysis (artifact, household, site, region).

Prerequisite: Enrollment is restricted to graduate students.

ANTH 273 - Origins of Farming (5)

Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Students cannot receive credit for this course and ANTH 173.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 274 - Origins of Complex Societies (5)

The origins of complex society: the transition from egalitarian foraging societies to the hierarchical, economically specialized societies often referred to as states or civilizations.

Focuses on both Old World and New World cultures. Students may not receive credit for this course and ANTH 174.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 275 - Tutorial in African Archaeology (5)

Graduate tutorial on the archaeology of precolonial African kingdoms and states. Particular attention paid toward the origins of social inequality and the evolution of centralized politics. Students cannot receive credit for this course and ANTH 175.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 276A - Advanced Topics in North American Archaeology (5)

In-depth examination of development of Native cultures in North America from end of last ice age to time of European contact. Focuses on specific regional trajectories and problems of social change.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 276B - Mesoamerican Archaeology (5)

Examines the pre-Columbian cultures of Mesoamerica and reviews the archaeological and ethnohistorical evidence related to the origins and development of cultures including the Olmec, Maya, Zapotec, Mixtec, and Aztec. Students cannot receive credit for this course and ANTH 176B.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 276G - Archaeology of Colonial Borderlands (5)

This seminar draws from readings in archaeology, history, and Native American/Indigenous studies to assess borderlands throughout colonial-era North America as important arenas of change and continuity for indigenous societies, including indigenous technologies, foodways, gender roles, governance, and much more.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 278 - Tutorial on Historical Archaeology (5)

Tutorial on archaeology of European colonialism and the early-modern world. Focuses on the nature of European colonial expanison in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and ANTH 178.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 279 - Feminism and Gender in Archaeology (5)

Considers feminist perspectives on the human past; archaeologists' perspectives on feminist theory; and the impact of gender, feminist, and critical social theory on the archaeological profession. Students cannot receive credit for this course and ANTH 194C.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 280 - Advanced Ceramic Analysis (5)

Advanced graduate seminar that focuses on techniques and theories used to bridge the gap between the recovery of ceramic remains from archaeological contexts and their interpretation with respect to various anthropological issues and problems. Students cannot receive credit for this course and ANTH 180.

Prerequisite: Enrollment is restricted to graduate students. Concurrent enrollment in ANTh 280L is required.

ANTH 280L - Advanced Ceramic Analysis Laboratory (2)

Emphasizes advanced techniques of ceramic analysis, including materials selection and processing, hand-building, and open-pit firings. Standard techniques for describing and measuring formal and technological attributes of pottery also presented. Students cannot receive credit for this course and ANTH 180L.

Prerequisite: Enrollment is restricted to graduate students. Concurrent enrollment in ANTH 280 is required.

ANTH 281 - Landscape Archaeology (5)

"Landscape" has emerged as a unifying concept for the interpretation of such archaeological features at multiple scales of analysis. This course answers these and other questions by examining how "landscapes" have been tackled archaeologically from multiple perspectives (settlement archaeology, "off-site" archaeology, and approaches building on ideas about culture, ideology and power).

Prerequisite: Enrollment is restricted to graduate students.

ANTH 282 - Household Archaeology (5)

Explores the theoretical and methodological challenges faced by archaeologists excavating ancient households. Students examine the social, economic, and political characteristics of households and investigate how they intersect and support the social and physical aspects of communities.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 283 - Introduction to Geographic Information Systems for Anthropology (5)

Practical laboratory in geographic information systems with a specific focus on anthropological questions and development. Students learn basic spatial analyses and carry them out on research datasets. This course also emphasizes the incorporation of spatial modeling in research design. To participate, students are required to sign up for an account in ESRI (freely available to all UCSC students). Enrollment is restricted to anthropology majors. Enrollment is limited to 20 students.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 284 - Tutorial in Zooarchaeology (5)

Lectures and seminar on archaeological faunal analysis. Topics include: mammalian evolution and osteology; vertebrate taphonomy; reconstruction of human diet from

faunal remains; foraging strategy theory; data collection and management; and methods of quantitative analysis. Students cannot receive credit for this course and ANTH 184.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 285 - Osteology of Mammals, Birds, and Fish (5)

Practicum in vertebrate osteology, covering all larger mammal species of central California, plus selected bird and fish species, and topics in evolution and ecology of selected taxa. Students cannot receive credit for this course and ANTH 185.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 287 - Advanced Topics in Archaeology (5)

A graduate seminar on advanced theoretical or methodological topics pertinent to advanced graduate student and faculty interests.

Prerequisite: Enrollment is restricted to graduate students or by consent of instructor.

ANTH 287A - Advanced Topics: Indigenous Archaeology (5)

Traces the development of indigenous archaeology primarily in North America. Topics include: the Native American Graves Protection and Repatriation Act (NAGPRA) and issues of cultural patrimony; postcolonialism; decolonizing methodologies; community-based research; oral sources and other ways of knowing the past; and future directions.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 287B - Advanced Topics: Archaeology in the Age of Big Data (5)

Explores the impact that the ever-growing digital archaeological toolkit has on the research process. Covers specific and keystone developments such as access to big data, spatial modeling, aerial photography, satellite remote sensing, and the recent developments in virtual reality and artificial intelligence.

Prerequisite: Enrollment is restricted to Graduate Students.

ANTH 290T - Pedagogy of Anthropology (2)

Provides training in scientifically backed educational practices for new Anthropology TAs. Through reading, class discussion and activities, we explore different methods of teaching and ways to conceptualize pedagogy. Includes teaching theories; survey of educational tools and techniques; and lesson planning.

Prerequisite: Enrollment restricted to anthropology graduate students.

ANTH 292 - Graduate Colloquium (2)

Designed to offer an institutionalized mechanism for the presentation of research papers and teaching efforts by faculty and advanced graduate students.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 294N - Comparison of Cultures (5)

Seminar for students interested in theories and methodology of social and cultural anthropology devoted to critical discussion of different methods of comparison practiced in anthropology.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 294R - Advanced Readings in Biological Anthropology (5)

Introduces literature relevant to students' research emphases and allows for discussion of new scientific publications.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 295A - Scientific Method: Biological Anthropology (5)

The first core course of the Biological Anthropology Graduate Program. Students learn the principles and methods by which research projects in biological anthropology are devised and executed. Students cannot receive credit for this course and ANTH 195A.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 296N - The Body, Narrative, and Creative Practice (5)

Seminar proposing that arts, such as dance, weaving, and creative writing, and the cultivation of more traditional scholarly works can and should be pursued together. The pursuit of such research-creation is a social justice practice that values many ways of knowing and can lead to emotionally compelling and politically effective communication. Students are introduced to concepts and debates from crip theory, feminist, queer, and critical race studies, performance studies, and narrative theory. They also participate in workshops using body-centered writing, moment work, visual arts, and embodied listening to produce creation-scholarship in a medium of their choice. Taught in conjunction with ANTH 196N; students cannot receive credit for this course and ANTH 196N.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 297A - Independent Study (5)

Students submit petition to sponsoring agency.

ANTH 297B - Independent Study (10)

Students submit petition to sponsoring agency.

ANTH 297C - Independent Study (15)

Students submit petition to sponsoring agency.

ANTH 297F - Independent Study (2)

Students submit petition to sponsoring agency.

ANTH 298 - Advanced Laboratory Apprenticeship (5)

Supervised tutorial in specialized analytic methods in archaeology or physical anthropology. Students collaborate on laboratory research with a departmental mentor or, with advisor's consent, with researchers on or off campus,

preparing a manuscript for publication or an extensive literature review. Permission of instructor required. Enrollment restricted to graduate students.

ANTH 299A - Thesis Research (5)

Students submit petition to sponsoring agency.

ANTH 299B - Thesis Research (10)

Students submit petition to sponsoring agency.

ANTH 299C - Thesis Research (15)

Students submit petition to sponsoring agency.

ANTH 299W - Anthropology Dissertation Workshop (2)

Designed to help anthropology Ph.D. students make progress on their dissertation writing. It is a three-hour seminar in workshop format. Each week students share their work-in-progress and the class provides constructive feedback. Discussions with the instructor and students on topics relevant to dissertation writing are also held. Course is offered for satisfactory/unsatisfactory grading only.

Prerequisite: Enrollment is restricted to graduate anthropology Ph.D. students.

APLX - APPLIED LINGUISTICS

Lower-Division

APLX 55 - Pardon My French: Politeness, Impoliteness, Swearing, Slang, and Humor (5)

Explores the history and use of "bad;" language, including issues of politeness, impoliteness, swearing, slang, and humor. In readings, lectures and discussions, we examine contexts of language use: who can say what, when, how and under what communicative conditions.

APLX 80 - Introduction to Applied Linguistics (5)

Introduces the field of applied linguistics, learning about language acquisition, use, and teaching in multilingual contexts from multiple disciplinary perspectives. Also, introduces research models that examine psycholinguistic, sociolinguistic, and/or educational aspects of multilingualism..

APLX 99 - Tutorial (5)

Students submit petition to sponsoring agency.

APLX 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division

APLX 101 - Second-Language Acquisition (5)

Introduces the field of second-language acquisition. Topics include contexts of acquisition, the impact of individual differences, and basic methods of data collection and analysis.

Prerequisite: Prerequisite(s): APLX 80 or LING 50.

APLX 102 - Bilingualism (5)

An overview of bilingualism. Focuses on bilingualism as an individual phenomenon (i.e., how two languages develop and are represented in the minds of individual speakers), and as a social one (i.e., how do bilinguals interact in a community and how does this context of language contact shape their linguistic identity).

Prerequisite: Prerequisite(s): APLX 80 or LING 50.

APLX 103 - Second Language Speech (5)

Examines themes related to the acquisition of L2 phonetics and phonology, including theories and models of L2 speech learning; phonetics and phonology in L2 acquisition; as well as the training effects on L2 pronunciation.

Prerequisite: Prerequisite(s): APLX 80 or LING 50.

APLX 105 - Language Loss (5)

The phenomenon of losing your native language is well attested anecdotally by many speakers who are separated from their first language environment. Course provides a broad overview of first language attrition (loss) in different populations including adult native speakers, children, international adoptees, heritage speakers, and bilingual returnees. Examines the linguistic aspects of attrition in order to determine which areas of language are typically impacted by attrition, then focuses on individual differences (e.g., identity) and contextual factors (e.g., input) that may speed up or prevent attrition. Emphasizes considering first language attrition and second language (L2) acquisition as two inseparable sides of bilingualism, both in individual speakers and in bilingual communities.

Prerequisite: Prerequisite(s): APLX 80 or LING 50 or by permission of instructor.

APLX 112 - Language and Gender (5)

Examines the relationship between language and gender. Topics include: gender differences in speech; linguistic gender norms and stereotypes; gender and the construction of identity in discourse; sexuality and language; sexism in language; social, educational, and political implications. (Formerly Languages 112.)

APLX 113 - Inter-Cultural Communication (5)

Examines intercultural communication and miscommunication between individuals and speech communities, both within North American and global contexts. Through discourse and analytic approaches, students explore cultural stereotypes and interactional expectations, among other issues, that influence the outcome of intercultural communication. (Formerly Languages 113, Cross-Cultural Communication and Miscommunication.)

Prerequisite: Enrollment is restricted to juniors and seniors.

APLX 113I - Intercultural Communication—Global Internship

(5)

Examines intercultural (mis)communication among individuals and speech communities, both within U.S. and global contexts. Using discourse and other analytic approaches, students explore cultural values, stereotypes, and interactional expectations, among other issues, that influence the outcome of intercultural communication. Enrollment is restricted to students enrolled in the Global Internship summer program.

APLX 115 - Language and Power (5)

Examines the relationship between language and power. Explores the ways in which national languages, regional and social dialects, and specific phonological morpho-syntactic, or lexical features come to be associated with particular social meanings and contribute to creating social inequality.

Prerequisite: Prerequisite(s): APLX 80. Enrollment is restricted to sophomores, juniors, and seniors.

APLX 116 - Discourse Analysis: Language Use and Context (5)

Familiarizes students with the methods and theoretical assumptions behind discourse analytic approaches to the study of language. Examines language used in specific contexts. Topics include: genres, registers; discourse organization; discourse grammar; interaction; conversation; pragmatics; and social practice.

Prerequisite: Prerequisite(s): LING 50 or by consent of the instructor. Enrollment is restricted to juniors and seniors.

APLX 122 - Linguistic Diversity & Social Justice (5)

Explores the relationship between linguistic diversity and social justice: the celebration of multilingualism on the one hand and the negative experiences of people who speak "minority" languages in "dominant" cultural contexts on the other.

Prerequisite: Prerequisite(s): APLX 80; enrollment restricted to applied linguistics and multiculturalism, language studies, and linguistics majors.

APLX 124 - Second Language Variation and Sociolinguistics (5)

Addresses issues related to the second-language acquisition and use of variable structures and the development of sociolinguistic competence. Topics include: overview of linguistic variation and sociolinguistics; immersion contexts; individual differences and predictors of success; and ultimate attainment.

Prerequisite: Prerequisite(s): APLX 101.

APLX 135 - Second Language Teaching (5)

Introduces the theories of second-language acquisition and their connection to second-language teaching. Students develop cutting-edge teaching and testing materials, and engage with current scholarship on language instruction. Recommend at least one year of college-level study of a foreign language, or its equivalent. Enrollment is restricted to applied linguistics and multiculturalism, linguistics, and language studies majors, or by permission of instructor. Students cannot receive credit for this course and APLX 235.

Prerequisite: Enrollment is restricted to applied linguistics and multiculturalism, linguistics, and language studies majors, or by permission of instructor. Students cannot receive credit for this course and APLX 235.

APLX 136 - Second Language Assessment (5)

Introduces the fundamentals of second-language testing by presenting theories, key concepts, and practical applications in language assessment. Throughout the course, students develop their own assessment portfolios, creating materials they can use in their post-B.A. career.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in APLX 135.

APLX 138 - English Grammar for TESOL (5)

What is it that teachers of English as a second/foreign language should know about the English grammar system—and about pedagogical options for teaching grammar—in order to best facilitate students' language development? Course is designed to be an accessible overview of English grammatical structures and grammar-teaching methods for practical classroom application.

APLX 190 - Research Seminar in Applied Linguistics (5)

Prepares students to conduct research in applied linguistics. Students evaluate published studies that represent both quantitative and qualitative methods.

Prerequisite: Prerequisite(s): APLX 80 and APLX 101; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to seniors.

APLX 199 - Tutorial (5)

Students submit petition to sponsoring agency.

APLX 199F - Tutorial (2)

Students submit petition to sponsoring agency.

Graduate

APLX 235 - Second Language Teaching (5)

Helps novice instructors learn about the theory and practice of language teaching and learning. Focuses on current methods used in communicatively oriented classrooms. Topics include: listening comprehension, grammar, vocabulary, reading, writing, and testing/assessment. Students cannot receive credit for this course and course 135. (Formerly Language Studies 201.)

Prerequisite: Enrollment is restricted to graduate students.

ARBC - ARABIC

Lower-Division

ARBC 1 - First-Year Arabic (5)

Introduction to Arabic language and Arabic-speaking culture with practice in all four language skills: listening, speaking, reading, and writing. Intended for students with no previous study of Arabic as well as heritage speakers.

ARBC 2 - First-Year Arabic (5)

Introduction to Arabic and Arabic-speaking culture with practice in all four language skills: listening, speaking, reading, and writing. Intended for students with no previous study of Arabic as well as heritage speakers.

Prerequisite: ARBC 1 or equivalent proficiency.

ARBC 3 - First-Year Arabic (5)

Introduction to Arabic and Arabic-speaking culture with practice in all four language skills: listening, speaking, reading, and writing. Intended for students with no previous study of Arabic as well as heritage speakers.

Prerequisite: Arabic 2 or equivalent proficiency.

ARBC 4 - Second-Year Arabic (5)

Continuation of Arabic language and Arabic-speaking culture courses with practice in all four language skills: listening, speaking, reading, and writing. Intended for students who have successfully completed Arabic 3 or possess equivalent proficiency.

Prerequisite: Prerequisite(s): ARBC 3 or equivalent proficiency.

ART - ART

To view planned offerings for the current academic year, please visit the Art Department Courses page.

Lower-Division

ART 10D - 2D Foundation (5)

Introduces students to the fundamental principles of two-dimensional art and design. This is a large lecture-based course with smaller art studio-based sections (60% lecture/40% studio). Lectures, discussions and studio sections explore fundamental 2D drawing concepts of line, color shape, value, space, form, unity, balance, scale, proportion and texture. Through lectures, discussion and studio projects students learn to create and understand complex concepts in two dimensions.

Prerequisite: Enrollment is restricted to art majors and proposed art majors during first-pass enrollment; restrictions lifted after first pass.

ART 10E - 3D Foundation (5)

Introduces students to the fundamental principles of three-dimensional art and design. This is a large lecture-based course with smaller art studio-based sections (60% lecture/40% studio). Lecture, discussion, and studio sections explore fundamental 3D concepts, techniques, and technical practices in sculpture, public art, architecture, process, and design. Through lectures, discussion, and studio projects students learn to create and understand complex concepts in 3D.

Prerequisite: Enrollment is restricted to art majors during first-pass enrollment; restrictions lifted after first pass.

ART 10F - 4D Foundation (5)

Introduces students to the fundamental principles of four-dimensional art and design. This is a large lecture-based course with smaller art studio-based sections (60% lecture/40% studio). Lecture, discussion, and studio sections explore fundamental principles of 4D/time-based art and design concepts, techniques, and technical practices. Computers and video, photo, sound, and lighting equipment are used to create short-form, time-based work. Through lectures, discussion, and studio projects students learn complex concepts in 4D.

Prerequisite: Enrollment is restricted to proposed and declared ART majors during first-pass enrollment; restrictions lifted after first pass.

ART 15 - Introduction to Drawing for the Major (5)

Introduction to the methods, materials, and purposes of drawing to develop perceptual and conceptual skills through a series of assignments, providing various approaches to drawing as a tool for creative exploration. Discussions and critiques facilitate the development of critical skills. Designed for students considering the art major.

ART 20G - Introduction to Print Media and Drawing (5)

Introduces the methods, materials, and history of printmaking and drawing as a tool for creative exploration. Understanding and development of concepts and skills are achieved through a series of lectures, studio demonstrations and practice, assignments, and critiques.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20H - Introduction to Sculpture and Public Art (5)

Introduces sculpture and art in public space. The course is composed of lectures, readings, discussions, studio assignments, and demonstrations.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20I - Introduction to Photography (5)

Introduces basic skills and conceptual development in photography and related digital media through image-making in the field, on the web, and in laboratories, through readings, discussions, and critiques.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20J - Introduction to Drawing and Painting (5)

Introduces the practices of drawing and painting in combination with the formal vocabulary of the visual arts. A discussion of values, form, color, and figure/ground relationships enters into each class.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20K - Introduction to New Media and Digital Artmaking (5)

Introduces digital and new media art practice. Explores the use of the computer as tool and medium. Provides a hands-on introduction to the fundamentals of graphics; digital-image acquisition and manipulation; video; web design; and computer programming. Lectures, readings, and discussions examine the history of technology artwork and technology's relationship to contemporary culture.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20L - Introduction to Drawing (5)

Drawing course using traditional media taught online through demonstration videos, digital submissions, and small-group critiques. Introduces the basics of observational drawing in a progression designed to develop and build skills in sighting, measuring, value, and rendering. Familiarity with Canvas, access to a digital camera, and purchase of art supplies are required. Assumes 30 hours per week of coursework.

ART 80D - Fundamentals of Photography (5)

Introductory course for beginners. Various techniques examined and assigned in specific exercises. Work on projects using color film; this is a non-darkroom course. Examples given of photography from 1826 to the present. Balances historical study and practice through assigned homework exercises. Students must provide their own camera, preferably one with a manual setting. No phone cameras allowed.

ART 80E - Environmental Art in the Expanded Field (5)

Examines the ways artists engage, interact, and comment upon ecology and nature in their artworks by examining environmental art from the 1960s through the present. Offers students a foundational introduction to art and artists working in the field of environmental and ecological art/activism.

ART 80F - Introduction to Issues in Digital Media (5)

Digital media was positioned as a radical new social and creative medium in the 1980s and 1990s. The ensuing decades have seen this area become ubiquitous mass media with structural inequalities, centralized ownership, environmental damage, and precarious labor conditions. At the same time, it has become the language of our time and remains a site of creativity and intervention and offers opportunities for social changes. This course provides an introduction to key issues in this area through the lens of race and ethnicity.

ART 80Q - Queer Art (5)

Explores the state’s vital queer art communities as a cultural phenomena, primarily through one-on-one interviews with contemporary queer artists in California. In the face of rising homophobia and transphobia in many parts of the country, this course centers and makes visible the work of BIPOC LGBTQIE+ artists, including those with disabilities, and many others. Develops literacy and comprehension of queer artists and their artworks, utilizes critical thinking while encouraging engagement in and understanding of the art itself. Through a combination of lectures, visual presentations, films, readings, short quizzes and discussion boards, students gain the skills and knowledge to become conversant in queer art.

ART 80T - Digital Tools for Contemporary Art Practice (5)

Introduction to the digital tools and mediums available to contemporary art practices. Tools are explored from a historical and theoretical context and from a technical perspective through hands-on tutorials. A variety of artworks that utilize digital mediums are also examined. Weekly projects centered around these tools are completed and are the focus of peer discussions and reviews. The course covers photo and vector editors, sound and video editing, and basic 3D modeling and animation.

ART 80X - Ars Erotica: Sexual Imagery in Culture and Art (5)

What is sexually explicit imagery all about? Is it art, porn, trash, political hot potato, or hot commodity? This course enables students to critically explore these questions and more in an academic setting.

ART 99 - Tutorial (5)

Students submit petition to sponsoring agency.

Upper-Division

ART 101 - Introduction to Computer Programming for the Arts (5)

Combines an introduction to computer programming for beginners with special topics that are essential for the digital arts. Basic concepts of programming are developed in the JavaScript language and applied to digital arts media, such as algorithmically generated still images and animations in two and three dimensions, sound art, and music composition.

Presentation of digital artwork in the theater and via the web are covered in detail.

ART 104 - Digital Video (5)

An exploration of the video medium including production using the digital video format. Digital video cameras will be used to produce digital source material to be manipulated in a non-linear digital editing system. Image manipulation, effects, and editing will be explored. A variety of video structures, theories, concepts, and forms will be examined through production, discussions, and viewing students' and artists' work.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26 or by permission of instructor. Enrollment is restricted to art majors.

ART 106A - 2D Animation (5)

Introduces animation techniques, practices, history, and theories. Students learn techniques and process in 2D, stop-motion, and digital animation. Projects teach students the workflow of animating including script development, storyboarding, frame-by-frame animation, animatic, digital, and post-production. Students are required to research artists, both historical and contemporary, working in the field of animation and to be able to discuss the work. The course teaches theoretical and historical perspectives on animation and requires students to develop a critical analysis and vocabulary. (Formerly Introduction to 2D Animation).

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 106C - Stop Motion Animation (5)

Introduction to imagining, producing, and creating stop motion animations. Includes hands-on work in storyboarding, drawing and paper-based animation, pixalization, animation of everyday objects, and Claymation with basic characters and sets. Historical and contemporary animations will be viewed in class to inspire animation ideas, aesthetics, and practices. (Formerly Introduction to Stop Motion Animation.)

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 106E - 3D Modeling and Animation (5)

Independent and collaborative creative projects using advanced computer methods. May include networking projects, virtual representations, interactive multimedia, installation, performance, 3D modeling and animation, or robotics. Emphasis on advanced critical and experimental approaches to computers as a unique art medium, and contemporary research issues. Students are required to enroll in scheduled lab section.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 106G - Immersive Nonfiction (5)

Focuses on nonfiction creative storytelling using animation and new immersive media technology: augmented reality (AR), mixed reality (MR), locative media, and other technologies. Studio class teaches artmaking tools, skills, production and practices using immersive technologies. Students learn the process of developing nonfiction creative stories and documentaries through collaboration, personal narrative, community experiences, historical narrative and location-based storytelling.

ART 106O - 2D Animation (5)

This project-centered studio course introduces 2D animation concepts, history, techniques and contemporary practices, production strategies, processes, and tools from a practical approach rooted in a historical/theoretical context. During each project's development, students research artists working within relevant categories and/or topics of animation, presenting findings to assist in their creative process.

ART 108 - Art, Design, and Social Practice (5)

Studio-based course teaching strategies for social change, activism, and organizing using social design tools. Students gain experience developing design pieces and artworks to communicate their position on issues affecting their lived experiences and community struggles. Students develop artworks and content using social design practices, tools, systems, and strategies. The final design piece/artwork can utilize graphic design, digital platforms and publications, maps and spatial representation, exhibition design, 3D models for physical spaces, public interventions, video, and digital media, among other possibilities, including analogical forms of gathering people and manifesting social positions. (Formerly Activate Media! New Media Art Activism and Organizing.)

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 109 - Special Topics in Media Art (5)

Focuses on a wide range of media and time-based artmaking, which can include video art, interactive media, animation, VR/XR/AR, video installation, design and other 4D production and research. Special topics as announced.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, or ART 20L. Enrollment is restricted to art majors.

ART 110 - Intermediate/Advanced Drawing (5)

Work moves toward individual directions in drawing. A variety of media are explored. Each student is expected to do 150 hours of drawing over the quarter.

Prerequisite: Prerequisite(s): One course from ART 15, ART 20G, ART 20J, ART 20L, ART 111, ART 112, ART 119; and two from ART 20H, ART 20I, ART 20K, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 111 - Figure Drawing (5)

Focuses on drawing from the human figure and exploring the figure for the purpose of personal expression and social communication. Intended for the intermediate/advanced drawing student.

Prerequisite: Prerequisite(s): One course from ART 15, ART 20G, ART 20J, ART 20L, ART 110, ART 112, ART 119; and two from ART 20H, ART 20I, ART 20K, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 112 - Mixed Media Works on Paper (5)

This course stresses alternative drawing processes, techniques, and materials. Intended for the intermediate or advanced student.

Prerequisite: Prerequisite(s): One course from ART 15, ART 20G, ART 20J, ART 20L, ART 110, ART 111, 119; and two from ART 20H, ART 20I, ART 20K, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 113 - Illustrating Stories: Fantasy and Documentary Narratives (5)

This drawing/painting class is taught using New Yorker magazine covers as examples of illustration at a level of excellence that is accessible and which are examined for content and formal qualities. Work is done in drawing and painting media; some digital and mixed media may be incorporated. Painting will be water-based. Wit, humor, restraint, and sophistication are discussed, as well as inclusivity, exclusivity, and explicit and implicit social issues.

Prerequisite: Prerequisite(s): ART 15 or ART 20L or ART 20J; and two from ART 20G, ART 20H, ART 20I, ART 20K; or by permission of instructor. Enrollment is restricted to art majors.

ART 114 - Landscape Drawing (5)

Explores the complexities of contemporary drawing, using UC Santa Cruz's diverse landscapes as a point of departure. Beginning with an observational drawing approach, students gain confidence in perceptual drawing practices that lead to more personal, thematic, and conceptual directions. Topics such as linear perspective, notan, and decolonizationare scrutinized while exploring a range of drawing materials from charcoal to ink wash. A lightweight field easel is required to facilitate working at full scale.

Prerequisite: Prerequisite(s): ART 20L or ART 15 or ART 20J and two courses from ART 20G, 20H, 20I, 20K. Enrollment is restricted to proposed and declared art majors.

ART 119 - Special Topics in Drawing (5)

Special topics in drawing as announced.

Prerequisite: Prerequisite(s): One course from ART 15, ART 20G, ART 20J, ART 20L, ART 110, ART ART 111, ART 112; and two from ART 20H, ART 20I, ART 20K, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 125 - Environmental Art Studio (5)

Introduces students to environmental art and design through basic concepts, techniques, and studio practice.

Prerequisite: Enrollment is restricted to juniors and seniors.

ART 130 - Intermediate/Advanced Painting (5)

Continuation of the development of a basic foundation in painting with emphasis on the development of individual, experimental procedures. A foundation in drawing is recommended.

Prerequisite: Prerequisite(s): One from ART 20J, ART 133, ART 137, ART 138, ART 139; and two non-painting lower-division studios from ART 15, ART 20G, ART 20H, ART 20I, ART 20K, ART 20L, ART 26. A foundation in drawing is recommended. Enrollment is restricted to art majors.

ART 132 - Figure Painting (5)

Students learn the classical practice of painting the nude figure from life using traditional oil painting techniques. Students study short poses, limited color, and graduate to long pose, full color.

ART 133 - Abstract Painting (5)

Exploration of abstract painting through studio work, lectures, and critiques with emphasis on progressive abstraction, minimalism, op art, and abstract expressionism as well as other 20th-century and 21st-century forms. A foundation in drawing is recommended.

Prerequisite: Prerequisite(s): One from ART 20J, ART 20L, ART 130, ART 137, ART 138, ART 139; and two non-painting lower-division studios from ART 15, ART 20G, ART 20H, ART 20I, ART 20K, ART 26. Enrollment is restricted to art majors.

ART 135 - Digital Painting (5)

Gives students a comprehensive understanding of the digital painting, from basic techniques, to new media art and industry application, to how these programs operate. Studies and assignments develop and expand skills of digital paint application. Students build a cumulative digital portfolio of all of the studies and assignments completed throughout the course.

ART 137 - Outdoor Painter's Project (5)

Explores contemporary landscape through the practice of plein air painting. Observational plein air painting will provides the foundation for the class. Instruction includes technical instruction in materials and technique as well as conceptual material. Student may work with oils, alkyds, or acrylic on panels, paper, or canvas.

Prerequisite: Prerequisite(s): One from ART 20J, ART 130, ART 133, ART 138, ART 139; and two non-painting lower-division studios from ART 15, ART 20G, ART 20H, ART 20I, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 138 - Facture and Meaning (5)

ART 139 - Special Topics in Painting (5)

Special studies in painting as announced. A foundation in drawing is recommended.

Prerequisite: Prerequisite(s): One from ART 20J, ART 130, ART 133, ART 137, ART 138; and two non-painting lower-division studios from ART 15, ART 20G, ART 20H, ART 20I, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 145 - Vector Art and Illustration (5)

Introduces students to the fundamentals and creation techniques for vector art and illustration using industry standard software. Explores the fundamentals and application of vector art and illustration with the projects, demos, and text-based lectures that walk you step by step though the processes. With feedback through weekly discussions, students build upon their existing knowledge and produce a skilled portfolio of digital work by the end of the quarter. Prerequisites for the summer course are waived. The summer offering is also open to non-art majors. The asynchronous online format allows students to watch video lectures and tutorials at their own pace as they complete the projects for the course and engage in critique with peers in written discussion forums.

ART 150 - Darkroom Practices (5)

Students concentrate on darkroom practices and explore visual ideas, directing their work toward individualized goals. Required work includes making photographic prints, reading historical and theoretical works, and examination of photographs.

Prerequisite: Prerequisite(s): ART 20I and two non-photography lower-division art studios from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 152A - Photographic Book (5)

This studio-based course engages with the traditions and practices of the photographic book to examine and explore both narrative and non-narrative strategies. Students create a coherent photographic photo-book. Course examines the contemporary status of the photobook as well as the rich history of the medium. Editing, sequencing, and the production of photobooks is the centerpiece of this class.

Prerequisite: Prerequisite(s): ART 20I, and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 152C - View Camera Photography (5)

Explores the processes, materials, and techniques of large-format photography. Students learn the concepts and theories related to the view camera. Emphasizes advanced understanding of negative exposure, sheet-film processing, tonal-range manipulation, digital scanning, and large-format output. Contemporary issues and concepts explored.

ART 153 - Still to Moving: Topics in Cinematography for Artists (5)

The natural evolution from still image making to moving image making is at the heart of this course as students look at this evolution from a historical, social, conceptual, and technical perspective. Artists who have been primarily working in still photography will learn to transition to creating with moving images by addressing time, structure, sound, and installation. Advanced discussions on film and digital formats, quality of image, camera support systems, and post-production will be explored through a combination of screenings, assignments, and readings.

Prerequisite: Prerequisite(s): ART 20I, and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 154A - Being Social: Photography and Engagement (5)

Explores historical and contemporary ways in which photography has been used to examine social issues and invites students to produce work that responds to issues that are important to them. Students learn about photograph's historical significance in raising social awareness, analyzing the aesthetic and methodological strategies of modern and contemporary photographers seeking to catalyze economic, political and cultural change through the production of images.

Prerequisite: Prerequisite(s): ART 20I; and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 154B - Photography, Place, Environment (5)

The impact of our industrialized culture on nature is one of the most crucial and urgent issues of our times. Discussions on environmental photography, place, and landscape, set out to investigate environmental change and to explore our relation to nature. Throughout the quarter students develop an environmental photography art project that follows in the photographic tradition of raising awareness and supporting policymakers, politicians, researchers, environmentalists, and activists.

Prerequisite: Prerequisite(s): ART 20I, and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 154C - After Archives: Photographers & Research (5)

The role of archives, photographers, and research in contemporary photographic practice is addressed by examining the special archives at the UCSC library and the Prelinger Library in San Francisco and by curating a group

exhibition. Students make a project in multiple media, such as photography, video, text, installation, and drawing prompted by UCSC Special Collections' vast archives and collections. Through studio projects, readings, discussions, and case studies, students engage the immediate context of the university as source material for their artworks as a means to explore the effect that research and knowledge production might have on contemporary artistic practice.

Prerequisite: Prerequisite(s): ART 20I; and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 155 - Photo Field Research Quarter (PFRQ): California Road Trip (10)

Offers students the unique opportunity to live and learn and photograph outside the classroom, actively engaging locations across the state of California. Students will cover 2400 miles from Northern Mendocino County to the Salton Sea, Eastern Sierra, Death Valley, and Big Sur. Class exposes students to cultural, historical, and environmental issues facing California. Due to the rigor of the course, students must submit an application demonstrating the commitment and photo preparation necessary for successful completion of the class. Students are billed a materials fee of $550.

ART 156 - Project Development in Photography (5)

Concentrates on photographic project development, developing analytical skills designed to help direct students' own photographic ideas. Helps students create a conceptual theoretical framework through image-making in the field and studio, through critique and discussion, through readings, and by studying the work of artists.

Prerequisite: Prerequisite(s): One course from ART 20I; and two non-photography lower-division art studios from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 157 - Immersive Arts Field Research (5)

Students are immersed in site specific field research over the span of a four-day in-the-field trip utilizing the public land of California, via the UC Natural Reserve System. Students are educated about research related to a specific place while exploring concepts of site-specificity and develop their own new inquiries about a place by experiencing it physically and by engaging with contemporary art concepts and art project development. Prerequisite(s): two lower-division studio art courses. Enrollment is restricted to junior and senior art majors. Enrollment is by permission of instructor. Due to the rigor of the course, students must submit an application demonstrating the commitment and photo preparation necessary for successful completion of the class.

ART 158 - Advanced Photography (5)

Students produce a portfolio of photographs, read historical and theoretical works, and study photographs and other art works.

Prerequisite: Prerequisite(s):ART 20I, and two courses from ART 15, ART 20L, ART 20K, ART 20J, 20G, 20H. Enrollment is restricted to art majors.

ART 159 - Special Topics in Photography (5)

Special studies in photography, concentrating on specific subject matter or media. Topics may include documentary photography, landscape, alternative processes, or mixed media.

Prerequisite: Prerequisite(s): ART 20I, and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 161B - Relief/Mixed Media Printmaking (5)

Explores traditional, contemporary, and experimental processes, issues, and concepts of relief and mono/mixed media printmaking. Students gain in-depth information and working knowledge to specialize individual ideas and build artistic development through varieties of class activities.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 161C - Tradition and Innovation: Relief Printmaking in Korea (6)

Explores the history of printing from the world's oldest printed text developed in Korea to the latest cutting-edge technology, including laser cutting. Students study many aspects of both traditional and contemporary relief (woodblock) printmaking, both materials, tools, and techniques and the issues, concepts and history of the field. Through various class activities, field trips and cultural visits (to UNESCO World Heritage Sites) in Korea, students will be exposed to diverse and multi-regional art practices that will broaden their perspectives and increase their understanding not only in the fields of print media but in the larger contemporary visual culture.

Prerequisite: Prerequisite: ART 20G.

ART 161J - Mokuhanga: UCSC Printmaking in Japan (6)

Course taught both at UCSC and at the host university in Tokyo. At UCSC, oil-based woodblock printmaking covers techniques, application of tools, materials, history, issues and concepts. In Japan, the class studies Mokuhanga, resulting in a great understanding and appreciation of this traditional process. Via class activities, field trips, excursions, and cultural visits, students encounter diverse multi-regional art practices, thus broadening perspectives and increasing understanding not only of print media but of contemporary visual culture.

Prerequisite: Prerequisite(s): ART 20G.

ART 162A - Intaglio I (5)

Introduces students to various methods used in making intaglio prints. Encourages individual artistic growth of

imagery and technique through assignments designed to explore the medium. Includes discussion and critique of work with equal emphasis on technique and concept.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 163A - Lithography I (5)

Introduction to drawing, processing, and printing of lithographs from stone. Emphasis on discovery of tonal, textural, and expressive potential from the surface of the stone, while establishing individual directions in imagery. Condensed history of the medium, technical theory, and critique in lecture and demonstrations.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 163C - Magnified Imagination: A Printmaking Approach (5)

Examines the wonders of visual magnification of the natural world by using enlargement lenses, scanner, and microscopes to create photo-based and autographic prints that enhance strange and unperceived realities. Visits to the UCSC Norris Center for Natural History, Thimann's Roof Garden and Greenhouse will provide opportunities to explore natural world specimens for projects.

Prerequisite: Prerequisite(s): ART 20G and two courses from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment restricted to art majors.

ART 164A - Screenprinting (5)

Introduces water-based screen printing. Students are introduced to processes including basic equipment, printing techniques, printing papers, stenciling processes, and photographic and digital techniques. Emphasis is on continued development of content and aesthetic awareness through the possibilities of screen printing.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 165 - Print Media in Visual Communication (5)

Explores a unique approach reviewing the printed images in visual communications. A wide blend of traditional and cutting-edge print media processes with an interdisciplinary focus will be taught for conceptualizing, producing, and presenting the printed image.

Prerequisite: Prerequisite(s): ART 20G, and one course from ART 160B, ART 161B, ART 161C, ART 162A, ART 162B, ART 163A, ART 163B, ART 163C, ART 164A, ART 164S, ART 168, ART 169. Enrollment is restricted to art majors.

ART 166 - Art of Bookmaking (5)

Introduction to production of small edition books and multiples utilizing sequential visual imaging, narrative content, and mixed media in bookmaking. Provides instruction in conceptualizing, producing, and distributing printed artists' multiples. Ideas encouraged within a broad range of possibilities via the format of artists' books.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26 or by permission of instructor. Enrollment is restricted to art majors.

ART 168 - Photo-Based Printmaking (5)

Intermediate/advanced studio course exploring the processes, history, and the recent developments in contemporary photomechanical printmaking. Through experimentation and research students learn how to utilize photographic imagery, blending them in multiple layers and colors, thereby facilitating articulation of their conceptual foundations.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 169 - Special Topics in Printmaking (5)

Special studies in printmaking, as announced.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 170 - Playgrounds: Forms of Gathering and Playing (5)

Confronted with significant global challenges, artists and a diverse array of world-makers have embraced forms of playing to reimagine and confront brutal realities, and engage in struggles for liberation. In this course, art and pedagogy are grounded in the concept and practice of playgrounds. This course invites students to design or assemble objects to transform spatial and sensory perceptions, exploring sociability, forms of gathering, playing and reconnection with the environment. Sculptures, objects, drawings and furniture require human interaction to reach their full potential.

ART 172 - Public Art: Memory, Landscape, and Artist as Activist (5)

In-depth exploration of art in the public sphere. Students build an understanding of public art sparked by practical experience designing and developing projects. Theoretical aspects of contemporary public art, and an introduction to the range of current public art practices will be introduced through readings, lectures, and artist's talks. The combination of practical hands-on technique and theoretical ideology will enable students to fully develop their own project within the class.

Prerequisite: Enrollment is restricted to juniors and seniors.

ART 175 - Taking Art to the Streets (5)

Expands traditional definitions of art making taking art beyond the museum. Students take art making to the streets. We explore art making in the public sphere from murals to graffiti, street art to shop dropping, protests to public commissioned projects and community engaged interventions.

Prerequisite: Prerequisite(s): Three courses from ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26, or by consent of instructor. Enrollment restricted to art majors.

ART 177 - Careers in the Creative Economy (2)

Provides students with information, tools, and strategies to embark on arts career exploration and preparation, including strategies for addressing challenges and opportunities related to diversity, equity, and inclusion. Students explore their career values; network with guest speakers in creative fields (alumni, faculty, graduate students, professional artists); and prepare and create career-related documents (update resumes, cover letters, project proposals) as well as learn about a variety of arts careers through guest speakers, readings, and podcasts. Enrollment is by permission of the instructor and is restricted to juniors, seniors, and graduate students. Please contact the art advisor at artadvisor@ucsc.edu for the application.

ART 180B - Intermediate/Advanced Sculpture (5)

More advanced fabrication techniques in sculpture using wood, metal, industrial, and other materials. Techniques include carpentry and woodshop skills, and an introduction to sculptural forms, processes, and ideas. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills. (Formerly ART 180B, Sculpture II.)

Prerequisite: Prerequisite(s): One course from ART 20H, ART 120, ART 121, ART 122, ART 124, ART 125, ART 129, ART 172, ART 183, ART 188, or ART 189; and two non-sculpture/intermedia/public art lower-division studios from ART 15, ART 20G, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 181 - Art, Power & Politics (5)

Explores strategies artists use to engage political subject matter in the 21st century. Students create their own projects, research and test approaches, techniques and strategies learning from the ways national and international artists encode and convey information in creating political work. Methods range from community collaboration; to tactical culture jamming, participatory collaborative projects, activism and intervention, symbolic and gestural work, artist-led projects, performances and community projects.

Prerequisite: Prerequisite(s): three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 182 - Materiality of Color (5)

A research-based, studio art class in which students experiment with ideas and processes, and pursue projects exploring the materiality of color, including social and cultural effects and environmental implications. Following a sequence of short assignments paired with class critiques, students design and complete their own research-based art projects (in any media) that investigate color as a material phenomenon. Class discussions address physical, perceptual, psychological, geological, biological, cultural, social, political, philosophical and aesthetic aspects of color in concert with readings, guest lectures, field trips, technical demonstrations and visual presentations. Students harvest, make, and use dyes from plant materials grown at the UCSC Farm, and contribute to the ongoing development of a dye garden on campus.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 183 - Metal Fabrication (5)

Focus on teaching intermediate to advanced students the processes and techniques of direct metal fabrication for contemporary sculpture and design. Explores a range of welding, cutting, and forming techniques and processes through demonstrations, slide lectures, field trips, and studio time. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills.

Prerequisite: Prerequisite(s): One course from ART 20H, ART 120, ART 121, ART 122, ART 124, ART 125, ART 129, ART 172, ART 180B, ART 188, ART 189; and two non-sculpture/intermedia/public art lower-division studios from ART 15, ART 20G, ART 20I,ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 184 - 3D Art and Design I (5)

Emphasizes the conceptual aspects of 3D art and design using the laser cutter to prototype and experiment with construction methods and materials to create, represent, respond to, and reflect on 3D forms in space. Students learn about mixed-media fabrication techniques, materials, and processes that include using a woodshop and metal-fabrication shop. The course is structured around assignments that develop individual expressiveness, research skills, creative industry, and class participation. Students are billed a materials fee of $120. (Formerly 3D Art and Design: Laser Cutting and CNC Routing.)

Prerequisite: One course from ART 20H, ART 20K, ART 101, ART 102, ART 103, ART 106E, ART 108, ART120, ART 121, ART 122, ART 124, ART 125, ART 129, ART 146T / THEA 106, ART 172, ART 180B, ART 183,ART 188, ART 189 and two courses from ART 15, ART 20G, ART 20I, ART 20J, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 185 - 3D Art and Design II (5)

Expands 3D art and design principles, methodologies, process, and skills via structured projects using 3D printers and modeling. The metal-fabrication shop and the woodshop allow students to prototype and experiment with construction methods and materials used to develop assignments. The course is structured around assignments that develop critical thinking, individual industry, research skills, creative expressiveness, and class participation. Students are billed a materials fee of $120. (Formerly 3D Art and Design: Printing and Prototyping.)

Prerequisite: One course from ART 20H, ART 20K, ART 101, ART 102, ART 103, ART 106E, ART 108, ART 180B, ART 183, ART 184, ART 188; and two courses from ART 15, ART 20G, ART 20I, ART 20J, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 186 - Art and Globalization (6)

In this immersive studio art class students create site-responsive artworks that explore art in a global context. We visit contemporary art museums, galleries and cultural spaces in London and Brighton England, enriching and deepening our understanding of art in a global context. Students create drawings, zines, graphic works, animation, photographs, installations and performances in response to visits to museums, galleries and exhibitions. Students create studio work in the new media studios at the University of Sussex in Brighton’s School of Media, Arts and Humanities and live on campus during the trip. This class includes artist lectures, docent tours, studio, museum, and gallery visits. Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors. Enrollment is by permission of the instructor.

ART 188 - Bronze Casting: Foundry (5)

Intermediate/advanced course in bronze casting sculpture. This is the only foundry-specific class in the UC system. Create sculptural objects using the lost wax method--the oldest and still most used sculpture technique in monumental and small scale casting. Lectures and demonstrations are combined with work time in class. Students generate sculptural forms in wax then gate, invest, weld, chase, patina, and present at least one finished piece. Students are billed a materials fee of $175. May be repeated for credit. (Formerly Foundry: Metal Casting.)

Prerequisite: Prerequisite(s): One course from ART 20H, ART 120,ART 121, ART 122, ART 124, ART ART 125, ART 129, ART 172, ART 180B, ART 183, ART 189; and two non-sculpture/intermedia/public art lower-division studios from ART 15, ART 20G, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 189 - Special Topics in Sculpture (5)

Special topics in sculpture as announced, concentrating on specific aspects of subject matter and media.

Prerequisite: Prerequisite(s): One course from ART 20H, ART 120, ART 121, ART 122, ART 124, ART 125, ART 129, ART 172, ART 175, ART 180B, ART 183, ART 188; and two non-sculpture/intermedia/public art lower-division studios from ART 15, ART 20G, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 190A - Writing for Artists (5)

Provides practice in using writing as a tool to support creative work--to generate ideas, to critically analyze and interpret artworks, and to communicate clearly with others about one's own work. Lectures, discussions, and visiting artist talks introduce and explore contemporary art contexts, ideas, discourses, artworks, artists, and practices to build students' capacities to place their work in the world. Readings introduce and unfold ideas for discussion, and provide examples of writing formats and purposes as they relate to art practice.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to junior and senior art majors.

ART 190B - Senior Project (5)

Advanced senior art majors create and complete a senior project to fulfill their comprehensive graduation requirement. Focuses on a weekly lecture, studio work, peer critique, and professional practices such as the documentation and exhibition of work.

Prerequisite: Enrollment is restricted to senior art majors.

ART 191 - Teaching Apprenticeship (5)

Designed for art majors at the upper-division level. Each student assists in a lower-division art course under the direct supervision of a faculty member. Students assist in technical instruction, critiques, and class discussions. May not be repeated for credit. Does not count toward upper-division major requirements. Enrollment restricted to art majors.

ART 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students should have upper-division standing with a proposal supported by a faculty member willing to supervise. Students submit petition to sponsoring agency.

ART 193 - Field Study (5)

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. To be used primarily by upper-division students doing part-time off-campus study. Students submit petition to sponsoring agency. Petitions may be obtained in the Art Department Office.

ART 194 - Forms and Ideas (5)

A non-media specific class introducing a range of contemporary visual practices, contexts, issues, forms, and UCSC resources of use to artists, emphasizing relationships

between material, form, meaning and between private expression, public communication, and systems of exchange.

Prerequisite: Enrollment is restricted to junior and senior art majors. Strongly recommended for junior transfer art majors.

ART 196 - Independent Senior Project (5)

Student will concentrate on completing work for comprehensive exhibition under the direction of his or her art adviser, with help from other faculty as needed. Students submit petition to sponsoring agency.

ART 197 - Individual Study (5)

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency.

ART 198 - Independent Field Study (5)

Provides for department-sponsored independent study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students submit petition to sponsoring agency.

ART 199 - Tutorial (5)

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency.

ART 199F - Tutorial (2)

Tutorial

Graduate

ART 210A - Practice-Based Research Group: Sites (5)

The first in the required core course sequence taken by students in the first year of the environmental art and social practice M.F.A. The sequence offers students a graduated learning opportunity to engage in practice-based research in the field. The concept of practice-based research involves "an original investigation undertaken in order to gain new knowledge partly by means of practice and the outcomes of that practice." (Sydney) In this site-specific course, students apply research to site work and art practice.

Prerequisite: Enrollment is restricted to graduate students.

ART 210B - Practice-Based Research Group: Systems (5)

The second in the required core course sequence taken by students in the first year of the environmental art and social practice M.F.A. The sequence offers students a graduated learning opportunity to engage in practice-based research in the field. The concept of practice-based research involves "an original investigation undertaken in order to gain new knowledge partly by means of practice and the outcomes of that practice." (Sydney) Students develop their research through the lens of systems and relationships.

Prerequisite: Prerequisite(s): ART 210A. Enrollment is restricted to graduate students.

ART 210C - Practice-Based Research Group: Contexts (5)

Third in the required core course sequence taken by students in the first year of the environmental art and social practice M.F.A. The sequence offers students a graduated learning opportunity to engage in practice-based research in the field. The concept of practice-based research involves "an original investigation undertaken in order to gain new knowledge partly by means of practice and the outcomes of that practice." (Sydney) Students engage with questions of context and community.

Prerequisite: Prerequisite(s): ART 210A and ART 210B. Enrollment is restricted to graduate students.

ART 220 - Methods and Histories (5)

First-year seminar on methods of the field. Topics include: strategies for artists working in the field, social and environmental art research methods, histories and case studies (artists, projects, and issues).

Prerequisite: Enrollment is restricted to graduate students.

ART 230 - Theory and Practice (5)

First- or second-year graduate seminar focusing on contemporary theory as it relates to social and environmental art practice.

Prerequisite: Prerequisite(s): ART 220. Enrollment is restricted to graduate students.

ART 240 - Art Pedagogies (2)

First-year seminar course introducing and exploring pedagogical methods and approaches in art education and in art practice. The teachings of Paolo Freire and others serve as working models to construct open and respectful learning environments both in and outside the classroom.

Prerequisite: Enrollment is restricted to graduate students.

ART 250 - Writing Matters (5)

First-year seminar course focusing on research and writing skills as a dimension of project-based art practice and as support for planning a thesis. This course can be taken for Satisfactory/Unsatisfactory grading only.

Prerequisite: Enrollment is restricted to graduate students.

ART 257 - Immersive Arts Field Research (5)

Immersive site-specific field research over the span of a four-day (24 hours/overnight) field trip utilizing public lands of California, via the UC Natural Reserve System. Students engage and relate to a specific place while exploring concepts of site-specificity and develop their own new inquiries about a place by experiencing it physically and by learning about contemporary art concepts through topics of land use. Students also reflect upon the multiple factors that constitute a "site" and how they present possibilities for creative engagement, learn research method skills and approaches that are unique to each site historically, politically, culturally, and environmentally. Due to the rigor of the course, students must

submit an application demonstrating the commitment and preparation necessary for successful completion of the class. Enrollment is restricted to graduate students.

ART 260 - Curatorial Collective (2)

Second-year seminar course focusing on exhibition, curatorial questions, and practices as they relate to presenting final thesis work for public reception. Covers practical, theoretical, and historical considerations for artists and researchers in the process of preparing for presenting the outcome of MFA research. Students examine multiple modalities for presentation and exhibition and address issues of diversity and access in exhibition and curatorial practices. This course can be taken for Satisfactory/Unsatisfactory grading only.

Prerequisite: Enrollment is restricted to graduate students.

ART 270A - Project Development and Critique I (5)

First in a sequence of two second-year courses, continuing the focus on students' production and critique. Through peer discussions students continue to deepen their ability to engage in conceptual, scholarly, and interdisciplinary dialogue about their projects and the work of fellow students.

Prerequisite: Prerequisite(s): ART 210A, ART 210B, ART 210C, and ART 220.

ART 270B - Project Development and Critique II (5)

Second in a sequence of two second-year courses, continuing the focus on students' production and critique. Through peer discussions students continue to deepen their ability to engage in conceptual, scholarly and interdisciplinary dialogue about their projects and the work of fellow students.

Prerequisite: Prerequisite(s): ART 270A.

ART 280 - MFA Project Production (5)

Students produce their final project in conjunction with refining and completing their written thesis. Critique, tutorials, and directed study in writing and studio production leads to the presentation of their project.

Prerequisite: Prerequisite(s): ART 270A and ART 270B. Enrollment is restricted to graduate students.

ART 297 - Independent Study (5)

Independent study or research for graduate students. Students submit petition to sponsoring agency.

ART 299F - Thesis Research (2)

Students complete work toward their final thesis project production with the guidance and supervision of a faculty member. Students obtain permission from the faculty member and submit petition to the sponsoring agency. Enrollment is restricted to graduate students in environmental art and social practice.

Prerequisite: Enrollment is restricted to graduate students in environmental art and social practice.

ARTG - ART & DESIGN: GAMES + PLAYABLE MEDIA

Lower-Division

ARTG 10 - Aesthetic Designs (5)

Explores the ways in which aesthetic designs in art and media influence, make, and convey meaning, and presents methods for designing, authoring and implementing aesthetic components into games and interactive artworks. Students investigate these topics from a conceptual starting point that branches into cultural, technological and/or interventionist inquiries, culminating in a series of creative design projects.

ARTG 20 - Games as Art (5)

Games are an ancient art form that many people experience everyday. They can be used to bring audiences into imaginary worlds of play, and invite them to engage with the most critical problems facing the world. This course is a core course in the art and design: games and playable media major, and teaches students about the way we conceive of games, as more than products, as a genre of art, and a form of social engagement. Students are introduced to game studies scholars and game design texts, which allow them to start making analog games and interactive artworks.

ARTG 25 - Games as Art & Activism (5)

Games are art forms that are widely accessed across a multitude of modern social, cultural, political, and media landscapes. Many games—from ancient to contemporary—express compelling sociopolitical perspectives and critiques. This course explores games as art with a focus on works that intentionally invite social action and change through performance, play, or participation. Games are discussed from critical, artistic, and aesthetic frameworks. Creative assignments and projects are used to explore methods and approaches for creating expressive games and other forms of radical play.

ARTG 30 - Games as Activism (5)

How can art make change? How can changing culture contribute to broader movements for social change? How can artists make games that move culture and society? Course approaches games as a site for political expression and social change. Looks at game makers who identify as feminist, queer, disabled, Black, Indigenous, people of color, workers, radicals, artists, scholars, and/or activists who are using games to drive social commentary, critical play, and political action. By the end of this course, students have a strong understanding of games as a political medium as demonstrated by the design of their own cultural intervention using games and play.

ARTG 40 - Designing Experiences (5)

Builds skills in setting experiential goals and in defining and building mechanical and dynamic elements to support those goals. Through an iterative and reflective process, explores how we evaluate success as designers and artists, and the

responsibilities we have to ourselves and to our audience. In this class, students will rapidly prototype interactive experiences in a number of forms and practice the presentation/positioning of their work to an audience.

ARTG 50 - Play as a Radical Endeavor (5)

Foundational course in game design. Re-introduces students to play as an expressive form that extends across many mediums of cultural expression and communication. Students study, experience, and design playful performance and interactive experiments, culminating in a final Playfaire, where, as a collective, they practice community organizing and reciprocity with the needs of individuals to create space for cross-disciplinary play. Course continues the long tradition of play using figures such as the jester and the clown to call into question social norms and power structures. Students also engage in critiques which may involve difficult conversations, but result in more powerful artworks. (Formerly offered as ARTG 80I, Foundations of Play.)

Prerequisite: Enrollment is restricted to art and design: games and playable media majors.

ARTG 80G - Visual Communication and Interaction Design (5)

Survey of the basics of visual communication and interaction design, focusing on communicating designs of interactive systems. Covers techniques from a breadth of visual communication traditions; how to choose, use, and innovate; and how to structure dialogue around them.

ARTG 80H - Critical History of Digital Games (5)

Surveys the history of digital games from open university games through the home console, PC, and contemporary platforms, and on to indie and art games. Throughout, the course locates connections between technology, marketing, and play culture. (Formerly History of Digital Games.)

ARTG 90 - Open Source Contributor Studio (5)

Introduces students to open-source development. Students explore the aesthetic, cultural, and technical goals of a project, identifying areas for improvement and proposing contributions aligned with their skills and interests. Through research, case studies, and hands-on projects, students develop critical thinking, communication, and design skills while learning to navigate collaborative, open-source ecosystems. The course culminates in a professional presentation emphasizing both process and impact. No programming experience required; students from all disciplines welcome.

Prerequisite: Enrollment is restricted to proposed and declared AGPM majors during first-pass enrollment; restrictions lifted after first pass.

ARTG 91 - Introduction to Game Art Production (5)

Project-centered studio-lecture hybrid course that introduces the process of world-building and interaction design from the standpoint of the art director. Each project addresses a milestone in the art direction development pipeline, and demonstrates corresponding entry-level technical and conceptual skills and strategies. Utilizing this split methodology, the big-picture game development process is presented in tandem with related fundamental digital art and design skills at an achievable scale for an introductory course.

ARTG 92 - Digital Presentation and Portfolio Design Across Disciplines (2)

Explores a range of digital methods and approaches for communicating ideas, presenting research, and documenting academic work across a variety of fields and disciplines. Case studies are examined and discussed in relation to design fundamentals critical for effective communication. Focus is on a quarter-long digital portfolio, presentation, or documentation project. This course-long project is supported by shorter design assignments that introduce digital tools, platforms, technical concepts, and other communication design processes.

Upper-Division

ARTG 118 - Character Creation for Video Games (5)

This is a hands-on studio course, intended to give students an understanding of the techniques used to create characters for use in video games. Through this course, students will understand and develop the skills necessary to take a video game character design through all of the stages necessary to have a finished character for use in 2D or 3D video games. You will learn industry tools and techniques to be an effective game artist. (Formerly, Digital Drawing/Painting for Game Design.)

Prerequisite: Enrollment is restricted to junior and senior art and design: games and playable media majors and proposed majors.

ARTG 120 - Game Design Experience (5)

Teaches the concrete skills associated with making a digital game, from start to finish. Activities include establishing a team, concepting, storyboarding, prototyping, producing, and testing a game for release. Students are organized into groups and work together to create and produce a playable game.

Prerequisite: Enrollment is restricted to art and design: games and playable media declared majors.

ARTG 129 - Special Topics in Game Design (5)

Allows students to explore game designs related to their ongoing work within their major in either digital or non-digital formats. Students choose a topic and develop game projects that engage players.

Prerequisite: Enrollment is restricted to art and design: games and playable media declared majors.

ARTG 129A - Special Topics in Game Design (5)

Gives students an opportunity to explore game designs related to their ongoing work within the AGPM major, in either digital or analog formats. Students develop projects that engage players on a topic of their choosing.

Prerequisite: Prerequisite(s): ARTG 80G, ARTG 80H, and ARTG 80I. Enrollment is restricted to art and design: games and playable media and computer science: games and playable media majors.

ARTG 131 - 3D Game Art Production (5)

Studio course in which students learn the highly technical and fundamental skills in the production of 3D art assets for video games. Covers the essential steps in the 3D art pipeline, starting with basic 3D modeling, UV unwrapping, the creation of texture maps, and finally, game engine implementation. Focuses on developing an understanding of the processes and creative thinking necessary to produce industry-level artwork rather than specific software. Students provided with video lectures and demos, and students can expect to produce weekly assignments to practice basic skills and concepts covered.

Prerequisite: Prerequisite(s): ARTG 10 and one of the following courses ARTG 20 or ARTG 25 or ARTG 30.

ARTG 132 - 3D Character Rigging and Animation for Video Games (5)

Gives students an in-depth understanding of the techniques of 3D character rigging and animation for video games. Students understand and develop the skills necessary to be an effective technical artist and animator with a focus on industry standard methods for animating characters to be implemented into a game engine. Course provides students with video and written lectures, video demonstrations, assignments and discussion boards aimed at giving them historical understanding of game animation, the evolution of these techniques, hands-on work to become proficient, as well as the ability to communicate online with other students and the instructor to answer questions and further their knowledge.

Prerequisite: Prerequisite(s): ARTG 10 and one of the following courses ARTG 20 or ARTG 25 or ARTG 30.

ARTG 134 - Spectacular Play: Performance, Ritual, and Making a Scene IRL (5)

What do immersion and interactivity look like outside of virtual worlds? How can we activate social dynamics and public space for the purpose of play? How might we evoke feelings of purpose, or even magic, for players and spectators alike? Students will study and create immersive experiences designed to play out in real life. Drawing inspiration from performance studies, activism, art history, and more, we will transform the everyday into the extraordinary.

Prerequisite: Prerequisite(s): ARTG 80G and ARTG 80I.

ARTG 136 - Digital Sculpting for Video Games (5)

In this studio course, students learn the basics of digital sculpting in ZBrush with a focus on 3D character art. Through a mix of in-class demos and periodic assignments, students learn how to produce high-fidelity digital sculpts and their practical application in the 3D game art pipeline.

ARTG 137 - Experimental Tabletop RPG Design (5)

Explores experimental mechanics, dynamics, themes, and aesthetics within the tabletop RPG form. In groups and individually, students will play, run, design, write, workshop, and print/produce experimental tabletop RPGs, as well as conduct usability tests focused on layout, design cohesion, and accessibility.

Prerequisite: Enrollment is restricted to art and design: games and playable media declared majors.

ARTG 138 - Feminist Games (5)

Feminist games including intersectional feminist games, transfeminist games and queer feminist games, will be created by students in this course. Students will study the existing history and present of these genres of games, including game mods, personal experience games, narrative games, alternate reality, augmented reality and electronic literature. Students will work individually to create games as art and activism building on critical theories of race, gender, sexuality and algorithms.

Prerequisite: Prerequisite(s): Two courses from the following: ARTG 80G, ARTG 80H, or ARTG 80I; or ARTG 20 and ARTG 30.

ARTG 139 - Queer and Trans Art and Games (5)

Students study, and make, queer and trans art and games. Course considers how gender and sexuality are systems of rules often assumed in game design, and how those rules can be subverted to create novel and experimental games. By identifying and resisting cisnormativity and heteronormativity, students create original game concepts, using a critical, intersectional approach that understands that race as a constitutive element of both gender and sexuality. Course also studies with queer and trans ecologies understanding gender and race as inseparable from our idea of nature.

Prerequisite: Enrollment is restricted to art and design: games and playable media, and critical race and ethnic studies majors and proposed majors. Crosslisted as: Enrollment is restricted to art and design: games and playable media, and critical race and ethnic studies majors and proposed majors.

ARTG 140 - Writing for Interactive Narrative (5)

Discusses a variety of aspects of writing found in videogames and other interactive forms of media. Using a mix of creative writing projects and in class discussions, students will practice and critique existing work as well as their own.

Prerequisite: Enrollment is restricted to art and design: games and playable media declared majors.

ARTG 141 - Introduction to Virtual Reality (5)

Introduction to Virtual Reality is an introductory course with a combination of theory and practice. Students are exposed to the history of Virtual Reality and hands-on experience in making VR and developing their own VR project. By introducing broad topics around VR, such as immersive

spectacle, virtual embodiment, sonic immersiveness, students will gain knowledge about cultural, historical, and practical perspectives of VR. Students will also learn technical skills in developing VR in Unity 3D. 3D modeling experience is not required in this class. This class is an integration of the production of 3D and 360 degree VR experience. Photogrammetry, 360 degree video production and editing, and other expressive media will also be introduced for advancing the development of VR.

ARTG 142 - Black Aesthetics: Interventions in Digital Media (5)

How do we conceptualize a Black Aesthetic in the realm of digital art and media? How do we re/define Black virtuality when, historically, computer graphics has failed to accurately render Blackness? This course looks at the field of digital media from a technological and cultural perspective, understanding the ways in which anti-Blackness has been embedded in our technology, from photography to video games. Concurrently, course examines the history of the Black Aesthetic as an interventionist art movement, and find ways to intervene in the contemporary digital media landscape.

Prerequisite: Enrollment is restricted to sophomore, junior, and senior art and design: games and playable media, and critical race and ethnic studies majors, and Black studies minors. Crosslisted as: Enrollment is restricted to sophomore, junior, and senior art and design: games and playable media, and critical race and ethnic studies majors, and Black studies minors.

ARTG 143 - Ecofutures (5)

Students study the fields of ecofeminist art, climate fiction, virtual environmental art, Afrofuturism, Latinx futurism and Indigenous futurism, and create digital art relevant to these fields. The dual global crises of climate change and COVID-19 have forced a reevaluation of the idea of the human through a confrontation with the realities and histories of global colonialism and white supremacy. In response, social movements and artists have created artistic strategies which can envision futures beyond the horizon of the imagination of capitalism.

Prerequisite: Enrollment is restricted to senior Art and Design: Games and Playable Media majors.

ARTG 145 - Non-Digital Game Design (5)

Looks specifically at the design of non-digital games. Surveys a variety of game types and designs. Students prototype card or board game, culminating in a final project that engages players on a socially relevant topic.

ARTG 170B - Design Studio I: Individual Track (5)

Course focuses on individual projects, supported by collaboration within a general working-group. Students create novel, interesting game concepts, and outline and refine game proposals for longer-term projects. Studio projects cover a range of creative practices, including concept ideation and storyboarding, prototyping, and presenting and/or exhibiting the game idea in a more finalized form. Can be taken as a single course or as part one of the art and design: games and playable media capstone requirement. Continuing with the capstone series via ARTG 171 will require team collaboration.

Prerequisite: Prerequisites: Satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior art and design: games and playable media majors.

ARTG 171 - Game Design Studio II (7)

Students craft the core loop of their yearlong game project. Students build the game, examine player feedback, and repeat the process to make the game better. This course places particular emphasis on advanced production techniques for working in teams, as well as software engineering practices for software design, software testing, and build management. This course is part two of the art and design, games and playable media capstone requirement.

Prerequisite: Prerequisite(s): ARTG 170. Enrollment is restricted to senior art and design: games and playable media majors.

ARTG 172 - Game Design Studio III (7)

Students scope and polish their final game designs. Students work towards releasing one specific game platform while coordinating across disciplinary boundaries to create and integrate all the necessary code, art, animation, and sound assets for their game. This course is part III of the art and design: games and playable media capstone requirement.

Prerequisite: Prerequisite(s): ARTG 171 or by instructor permission. Enrollment is restricted to senior art and design: games and playable media majors.

ARTG 176 - Game Design Collaborative (2)

Supports students who are collaborating with the ARTG/CMPM 170-series teams on the creation of their capstone game projects. Enrollment is restricted to students who are working with senior game-design project groups, and by permission of the instructor,

ARTG 180 - Personal Narrative in Play (5)

Explores how storytelling techniques can align with game mechanics to examine and provoke questions of identity and personal narrative. Drawing from games that express personal experience through autobiography, to games that question the relationship and separation between player and character, students develop exploratory prototypes in digital and/or nondigital formats around potential mechanics for personal narrative and expression. Course culminates in a final piece of interactive art as well as designing the exhibit and public documentation for this work.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to seniors majoring in art and design: games and playable media.

ARTG 181 - Portfolio (5)

Explores and presents multiple approaches and methods for documenting, describing and demonstrating a creative practice and a collection of creative work. Students will develop artist-centered narratives, curate and design portfolio materials, and investigate tools, media formats, and platforms useful for communicating an individual creative perspective and body of work. Portfolios and other descriptive materials will also be discussed from an interactive and playable framework, with an emphasis on both individual expression as well as viewer/audience experience.

Prerequisite: Prerequisite(s): Satisfaction of Entry Level Writing and Composition requirements, and completion of ARTG 10, ARTG 20, and one upper-division ARTG course. Seniors majoring in Art & Design: Games + Playable Media may enroll without course prerequisites.

ARTG 199 - Tutorial (5)

Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available on the program website.

ARTG 199F - Tutorial (2)

Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available on the program website.

ASTR - ASTRONOMY AND ASTROPHYSICS

Lower-Division

ASTR 1 - Introduction to the Cosmos (5)

Overview of the main ideas in our current view of the universe and how these ideas originated. Galaxies, quasars, stars, black holes, and planets. Students cannot receive credit for this course after receiving credit for ASTR 2.

ASTR 2 - Overview of the Universe (5)

An overview of the main ideas in our current view of the universe, and how they originated. Galaxies, quasars, stars, pulsars, and planets. Intended primarily for nonscience majors interested in a one-quarter survey of classical and modern astronomy. Students cannot receive credit for for ASTR 1 after receiving credit for ASTR 2.

ASTR 3 - Introductory Astronomy: Planetary Systems (5)

Properties of the solar system and other planetary systems. Topics include the Sun, solar system exploration, the physical nature of the Earth and the other planets, comets and asteroids, the origin of the solar system, the possibility of life on other worlds, planet formation, and the discovery and characterization of planets beyond the solar system. Intended for nonscience majors. ASTR 3, ASTR 4, and ASTR 5 are independent and may be taken separately or sequentially.

ASTR 4 - Introductory Astronomy: The Stars (5)

Stellar evolution: observed properties of stars, internal structure of stars, stages of a star's life including stellar births, white dwarfs, supernovae, pulsars, neutron stars, and black holes. Planet and constellation identification. Intended for nonscience majors. ASTR 3, ASTR 4, and ASTR 5 are independent and may be taken separately or sequentially.

ASTR 5 - Introductory Astronomy: The Formation and Evolution of the Universe (5)

The universe explained. Fundamental concepts of modern cosmology (Big Bang, dark matter, curved space, black holes, star and galaxy formation), the basic physics underlying them, and their scientific development. Intended for non-science majors. ASTR 3, ASTR 4, and ASTR 5 are independent and may be taken separately.

ASTR 6 - The Space-Age Solar System (5)

Scientific study of the Moon, Earth, Mercury, Venus, and Mars by the space program; history of rocket development; the Apollo program and exploration of the Moon; unmanned spacecraft studies of the terrestrial planets; scientific theories of planetary surfaces and atmospheres. Intended for nonscience majors.

ASTR 7 - Black Holes (5)

Examines the nature of black holes, including their creation and evolution; evidence for their existence from astronomical observations; and the role of black holes in the evolution of the universe. Also examines current ideas about the nature of space, time, and gravity.

ASTR 8 - Exploring the Universe with Astronomical Data (5)

Introduces how we use observational data to learn about stars, galaxies, planets, and cosmology. Covers astronomical data and experimental design and basic physics and statistical techniques, such as model fitting, regression, significance tests, and error estimation.

ASTR 9A - Introduction to Research in Physics and Astrophysics (2)

Introduction to research for first-year students interested in physics and astrophysics. Students complete projects in small groups with scientists. Introduces techniques for collaboration; science writing; physics careers. Continuing course spanning two quarters. Enrollment is restricted to first-year proposed astrophysics and physics majors and by permission of the instructor.

ASTR 9B - Introduction to Research in Physics and Astrophysics (3)

Introduction to research for first-year students interested in physics and astrophysics. Students complete projects in small groups with scientists. Introduces techniques for collaboration; science writing; physics careers. Continuing course spanning two quarters. Prerequisite(s): ASTR 9A. Enrollment is restricted to first-year proposed applied physics,

physics, and physics (astrophysics) majors and by permission of the instructor.

ASTR 10 - From the Big Bang to Planet Earth (5)

Broad scientific overview of the universe, from the Big Bang to planet Earth. Origin and content: Big Bang, dark matter, dark energy, galaxies, black holes, star systems, exoplanets. Solar system and properties of Earth in relation to other planets. Physics of planetary atmospheres and impact of human activity on Earth's climate. Possibility of terraforming and of life beyond the solar system. Fate of Earth, the solar system, and the universe. Active learning class with continuous assessment. Intended for non-science majors. No previous college-level math, physics, or astronomy required.

ASTR 12 - Stars and Stellar Evolution (5)

An introduction to the observational facts and physical theory pertaining to stars. Topics include the observed properties of stars and the physics underlying those properties; stellar atmospheres; stellar structure and evolution. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

ASTR 13 - Galaxies, Cosmology, and High Energy Astrophysics (5)

Introduction to modern cosmology and extragalactic astronomy. Topics include the origin of the universe, Big Bang cosmology, expansion of the universe, dark matter and dark energy, properties of galaxies and active galactic nuclei, and very energetic phenomena in our own and other galaxies. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

ASTR 15 - Dead Stars and Black Holes (5)

Course is primarily concerned with the structure, formation, and astrophysical manifestations of compact objects, such as white dwarfs, neutron stars, and black holes, and the astronomical evidence for their existence. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

ASTR 16 - Astrobiology: Life in the Universe (5)

Topics include the detection of extrasolar planets, planet formation, stellar evolution and properties of Mars, the exploration of our solar system and the search for life within it, and the evolution of life on Earth. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

ASTR 18 - Planets and Planetary Systems (5)

Our solar system and newly discovered planetary systems. Formation and structure of planets, moons, rings, asteroids, comets. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

ASTR 19 - Practical Programming for the Sciences (5)

Introduces how we use computer programming to solve scientific problems. Covers basic Python programming, code repositories, and scientific plotting and graphing. Introduces more advanced techniques through small projects featuring real data from throughout the sciences, with a focus on using programming to evaluate the statistical significance of scientific claims.

ASTR 21 - The Diverse Universe: Stars, Planets, and Galaxies (5)

Introductory course for students pursuing the astrophysics major (or who have a similar physics/math background). Course introduces students to current topics and research in a astronomy and astrophysics, and gives students the background necessary for success in the 100-level Astrophysics laboratory classes (PHYS 135 or ASTR 136). Class focuses on three central types of objects in modern astronomy: stars, planets, and galaxies, building off of our nearest examples, the Sun, solar system planets, and the Milky Way. The class differs from GE classes like ASTR 2 in that a higher level of math and physics experience is assumed.

Prerequisite: Prerequisite(s): PHYS 5A.

Upper-Division

ASTR 111 - Order-of-Magnitude Astrophysics (5)

Examines the most basic and direct connection between physics and astrophysics in order to derive a better understanding of astrophysical phenomena from first principles to the extent possible.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A; PHYS 5B or PHYS 6B; and previous or concurrent enrollment in PHYS 102.

ASTR 112 - Physics of Stars (5)

The leading observational facts about stars as interpreted by current theories of stellar structure and evolution. Spectroscopy, abundances of the elements, nucleosynthesis, stellar atmospheres, stellar populations. Final stages of evolution, including white dwarfs, neutron stars, supernovae.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A, PHYS 5B or PHYS 6B, and PHYS 102.

ASTR 113 - Introduction to Cosmology (5)

Physical examination of our evolving universe: the Big Bang model; simple aspects of general relativity; particle physics in the early universe; production of various background radiations; production of elements; tests of geometry of the universe; dark energy and dark matter; and formation and evolution of galaxies and large-scale structure.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A, PHYS 5B or PHYS 6B, and PHYS 102.

ASTR 117 - High Energy Astrophysics (5)

Theory and practice of space and ground-based x-ray and gamma-ray astronomical detectors. High-energy emission processes, neutron stars, black holes. Observations of x-ray binaries, pulsars, magnetars, clusters, gamma-ray bursts, the x-ray background. High-energy cosmic rays. Neutrino and gravitational-wave astronomy.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A, PHYS 5B or PHYS 6B, and PHYS 102.

ASTR 118 - Physics of Planetary Systems (5)

Determination of the physical properties of the solar system, its individual planets, and extrasolar planetary systems through ground-based and space-based observations, laboratory measurements, and theory. Theories of the origin and evolution of planets and planetary systems.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A; and PHYS 5B or PHYS 6B.

ASTR 119 - Introduction to Scientific Computing (5)

Introduction to solving scientific problems using computers. A series of simple problems from Earth sciences, physics, and astronomy are solved using a user-friendly scientific programming language (Python/SciPy).

Prerequisite: Prerequisite(s): MATH 11A or MATH 19A or MATH 20A or AM 15A.

ASTR 136 - Advanced Astronomy Laboratory (5)

Introduces the techniques of modern observational astrophysics at optical wavelengths through hands-on experiments and use of remote observatories. Students develop the skills and experience to pursue original research. Course is time-intensive and research-oriented.

Prerequisite: Prerequisite(s): ASTR 119 and PHYS 133. Enrollment is restricted to junior and senior astrophysics majors.

ASTR 136A - Advanced Astronomy Lab: Astrometry (2)

Students use the Nickel telescope at Lick Observatory to measure the astrometry, or position, of a solar system body across multiple nights. By measuring the body's motion, students determine its distance from the Earth using parallax. This course is part of the ASTR 136 collection of 2-credit advanced labs. Class meets in person over a three-week period and includes an overnight field trip to Lick Observatory.

Prerequisite: Prerequisite(s): PHYS 133, and one of the following: ASTR 119, ASTR 19, or CSE 20. Enrollment is restricted to senior physics-astrophysics majors, and juniors by permission.

ASTR 136B - Advanced Astronomy Lab: Galaxy Rotation Curves and Dark Matter (2)

Students use the Shane telescope at Lick Observatory to measure the rotation curve of a galaxy. Observations like this provide some of the best evidence for the existence of dark matter, and students evaluate that evidence in their observations. Course is part of the ASTR 136 collection of 2-credit advanced labs. Class meets in person over a three-week period and includes an overnight field trip to Lick Observatory.

Prerequisite: Prerequisite(s): PHYS 133, and one of the following: ASTR 119, ASTR 19, or CSE 20. Enrollment is restricted to senior physics-astrophysics majors, and juniors by permission.

ASTR 136C - Advanced Astronomy Lab: Stellar Photometry (2)

Uses archival data from the Hubble Space Telescope to create a color-magnitude diagram for a star cluster. Examines techniques for measuring and calibrating photometry and estimating the uncertainties on the measurements. Students identify the major features of the color-magnitude diagram, the corresponding stages of stellar evolution and what information can be learned about the age and distance of the cluster. Course is part of the ASTR 136 collection of 2-credit advanced labs and meets over a three-week period. The lab involves all archival data, there is no nighttime observing component.

Prerequisite: Prerequisite(s): PHYS 133, and either ASTR 119 or ASTR 19 or CSE 20. Enrollment is restricted to junior and senior physics (astrophysics) majors or by permission.

ASTR 136D - Advanced Astronomy Lab: Wavefront Measurement (2)

Students use a laboratory optics kit to create an optical system that models a telescope observing an astronomical object, and use a Shack-Hartmann wavefront sensor to measure the difference between aberrated and unaberrated wavefronts. Course is part of the ASTR 136 collection of 2-credit advanced labs. Class meets in person over a three-week period. All data acquisition will be in the laboratory, there is no nighttime observing component to this lab.

Prerequisite: Prerequisite(s): PHYS 133, and one of the following: ASTR 119, ASTR 19, or CSE 20. Enrollment is restricted to senior physics-astrophysics majors, and juniors by permission.

ASTR 136E - Advanced Astronomy Lab: Adaptive Optics (2)

Students use a laboratory optics kit to identify the major components of an adaptive optics system and explain the role of each one. Using a Shack-Hartmann wavefront sensor to examine aberrated and unaberrated wavefronts, students analyze the effect of closing the AO correction loop. Course is part of the ASTR 136 collection of 2-credit advanced labs. Class meets in person over a three-week period. All data acquisition will be in the laboratory, there is no nighttime observing component to this lab.

Prerequisite: Prerequisite(s): PHYS 133, and one of the following: ASTR 119, ASTR 19, or CSE 20. Enrollment is restricted to senior physics-astrophysics majors, and juniors by permission.

ASTR 136G - Advanced Astronomy Lab: Detectors (2)

Students use laboratory data to measure and calibrate data from a charged coupled device (CCD) detector in an imaging camera, characterize the detector dark current, the camera system flatfield response, and the readnoise. Students evaluate the impact of these detector parameters on the signal to noise of the measurement of flux from a point source and use them to make predictions for data quality. Course is part of the ASTR 136 collection of 2-credit advanced labs. Class meets in person over a three-week period. All data acquisition will be in the laboratory, there is no nighttime observing component to this lab.

Prerequisite: Prerequisite(s): PHYS 133, and one of the following: ASTR 119, ASTR 19, or CSE 20. Enrollment is restricted to senior physics-astrophysics majors, and juniors by permission.

ASTR 136H - Advanced Astronomy Lab: Fourier Optics (2)

Students use a laboratory optics kit investigate concepts of Fourier optics, investigate several Fourier filters, propose Fourier filters to implement specific output effects, and verify the results. Course is part of the ASTR 136 collection of 2-credit advanced labs. Class meets in person over a three-week period. All data acquisition will be in the laboratory, there is no nighttime observing component to this lab.

Prerequisite: Prerequisite(s): PHYS 133, and one of the following: ASTR 119, ASTR 19, or CSE 20. Enrollment is restricted to senior physics-astrophysics majors, and juniors by permission.

ASTR 192 - Dir Stu Teach (5)

Dir Stu Teach

ASTR 199 - Tutorial (5)

Graduate

ASTR 202 - Astrophysics I (5)

Survey of radiative processes of astrophysical importance from radio waves to gamma rays. The interaction of radiation with matter: radiative transfer, emission, and absorption. Thermal and non-thermal processes, including bremsstrahlung, synchrotron radiation, and Compton scattering. Radiation in plasmas. Enrollment is by permission of the instructor.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 204 - Astrophysics II (5)

Explores how physical conditions in astrophysical objects can be diagnosed from their spectra. Discussion topics include how energy flows determine the thermal state of radiating objects and how the physics of radiative transfer can explain the emergent spectral characteristics of stars, accretion disks, Lyman-alpha clouds, and microwave background. (Formerly Astrophysical Flows.)

Prerequisite: Enrollment is restricted to graduate students.

ASTR 205 - Introduction to Astronomical Research and Teaching (5)

Lectures and seminar-style course intended to integrate new graduate students into the department; to introduce students to the research and interests of department faculty; and to expose graduate students to teaching skills and classroom techniques. (Formerly Introduction to Astronomical Research.)

Prerequisite: Enrollment is restricted to graduate students.

ASTR 206 - Introduction to Research Mentoring (5)

For graduate students interested in mentoring undergraduate students through research. Graduate students design an original research project and lead a small group of undergraduates through it while learning how to adapt the project to the dynamic needs and skills of their students. This course creates a structured but realistic framework for graduate students to develop their mentoring skills, which is critical to their professional development. By needing to communicate the important aspects of conducting research, communicating results, and maintaining research integrity, students cultivate and strengthen their own values as a researcher. This is a continuing class that spans both winter and spring quarters, for a total of 10 credits. Because research projects will span both quarters, students must enroll in both quarters. Enrollment is restricted to graduate students and is by permission of the instructor.

ASTR 214 - Special Topics in Galactic and Extragalactic Astronomy (5)

Survey of some principal areas of research on the origin and growth of cosmic structures and galaxies: the dark ages; 21cm tomography; first galaxies; first stars and seed black holes; reionization and chemical enrichment of the intergalactic medium; the assembly of massive galaxies; quasi-stellar sources; interactions of massive black holes with their environment; extragalactic background radiation; numerical simulations and the nature of the dark matter; the dark halo of the Milky Way.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 215 - Research Practicum for Astrophysics (5)

Introduces graduate students to practical and efficient research methodology. Covers best practices in coding and code development, documentation of research, project management, preprint and journal article writing and submission, professional presentation preparation, and grant writing. Introduces more advanced techniques through experiential learning research projects developed in collaboration with the instructor. Prerequisite(s): ASTR 202, ASTR 204, ASTR 205, and ASTR 257. Students must take ASTR 215 from an instructor outside their Ph.D. specialty, and requires permission of the instructor to enroll.

ASTR 220A - Stars and Planets I (5)

Survey of stellar structure and evolution.Physical properties of stellar material. Convective and radiative energy transport. Stellar models and evolutionary tracks through all phases.

Brown dwarfs and giant planets. Comparison with observations. (Formerly Stellar Structure and Evolution.)

Prerequisite: Enrollment is restricted to graduate students.

ASTR 222 - Stars and Planets II (5)

Theory and observations of protoplanetary disks. Origin and evolution of the solar nebula. Formation and evolution of the terrestrial planets and the giant planets. (Formerly Planetary Formation and Evolution.)

Prerequisite: Enrollment is restricted to graduate students.

ASTR 225 - High-Energy Astrophysics (5)

High-energy astrophysics and the final stages of stellar evolution: supernovae, binary stars, accretion disks, pulsars; extragalactic radio sources; active galactic nuclei; black holes. (Formerly *Physics of Compact Objects*)

ASTR 230 - Diffuse Matter in Space (5)

Fundamental physical theory of gaseous nebulae and the interstellar medium. Ionization, thermal balance, theory and observation of emission spectra. Interstellar absorption lines, extinction by interstellar dust. Ultraviolet, optical, infrared, and radio spectra of gaseous nebulae.

ASTR 233 - Galaxies and Cosmology I (5)

Advanced survey of topics in cosmology and galaxy formation. Appropriate for graduate students and undergraduates with a significant background in physics and astronomy. Topics include modern physical cosmology, curved space-times, observational tests of cosmology, the early universe, dark matter, the emergence of cosmic structure and the formation and evolution of galaxies. Enrollment is by permission of the instructor.

ASTR 234 - Statistical Techniques in Astronomy (5)

Introduces probability and statistics in data analysis with emphasis on astronomical applications. Topics include probability, Bayes' theorem, statistics, error analysis, correlation, hypothesis testing, parameter estimation, surveys, time-series analysis, surface distributions, and image processing. Students learn to identify the appropriate statistical technique to apply to an astronomical problem and develop a portfolio of analytic and computational techniques that they can apply to their own research.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 240A - Galaxies and Cosmology II (5)

Structure and evolutionary histories of nearby galaxies. Stellar populations, galactic dynamics, dark matter, galactic structure and mass distributions. Peculiar galaxies and starbursting galaxies. Structure and content of the Milky Way. Evolution of density perturbations in the early universe. Hierarchical clustering model for galaxy formation and evolution. (Formerly Galactic and Extragalactic Stellar Systems.)

ASTR 257 - Observational Astronomy (5)

Introduction to observational astronomy, with a multi-day field trip to Lick Observatory. Students learn the fundamentals of: (1) planning and executing observational projects; (2) manipulating and interpreting raw astronomical data with standard tools and algorithms; (3) presenting their observations in a standard written format that is appropriate for publication; and (4) observatory operations and career-paths. Enrollment is restricted to astronomy graduate students. Non-astronomy graduate students may petition the instructor for enrollment approval.

Prerequisite: Designed for graduate students; available to qualified undergraduate astrophysics majors by instructor permission.

ASTR 260 - Instrumentation for Astronomy (5)

An introduction to astronomical instrumentation for infrared and visible wavelengths. Topics include instrument requirements imposed by dust, atmosphere, and telescope; optical, mechanical, and structural design principles and components; electronic and software instrument control. Imaging cameras and spectrographs are described. Offered in alternate academic years.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 289 - Adaptive Optics and Its Application (5)

Introduction to adaptive optics and its astronomical applications. Topics include effects of atmospheric turbulence on astronomical images, basic principles of feedback control, wavefront sensors and correctors, laser guide stars, how to analyze and optimize performance of adaptive optics systems, and techniques for utilizing current and future systems for astronomical observations.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 292 - Seminar (0)

Seminar attended by faculty, graduate students, and upper-division undergraduate students.

ASTR 293 - Current Literature in Astrophysics (2)

Training for following daily progress in astrophysical research to keep pace with the rapidly evolving scientific field. Students learn how to select and read interesting papers (that span a wide range of topics) efficiently and how to summarize their key results. Students have an opportunity to practice presentation skills in an informal group discussion setting.

Prerequisite: Enrollment is restricted to graduatestudents.

ASTR 294 - Pedagogy of Astrophysical Research (5)

Teaches fundamental skills for scientific research in the context of coursework. Course has two branches: an instructor-intensive hands-on research training in an area beyond the thesis; and an instructor-led literature review. The research branch involves short, quarter-long projects with

faculty that are designed to introduce skills and concepts broadly applicable to research but within a focused science domain. The literature branch involves short review projects for building expertise in evaluating literature, writing papers, refereeing articles, and reviewing grants and proposals.

Prerequisite: Enrollment is restricted to astronomy and astrophysics graduate students.

ASTR 297A - Independent Study (5)

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

ASTR 297B - Independent Study (10)

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

ASTR 297C - Independent Study (15)

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

ASTR 297D - Independent Study (2)

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

ASTR 299A - Thesis Research (5)

ASTR 299B - Thesis Research (10)

ASTR 299C - Thesis Research (15)

BIOC - BIOCHEMISTRY AND MOLECULAR BIOLOGY

Upper-Division

BIOC 100A - Biochemistry and Molecular Biology (5)

Fundamentals of molecular biology, structure and function of nucleic acids, and protein structure. Designed for students preparing for research careers in biochemistry and molecular biology.

Prerequisite: Prerequisite(s): CHEM 8B; and BIOL 20A. Enrollment is restricted to chemistry, biochemistry, and biomolecular engineering and bioinformatics majors, chemistry minors, and proposed chemistry, biochemistry, and biomolecular engineering majors.

BIOC 100B - Biochemistry and Molecular Biology (5)

Covers principles of protein function from ligand binding and enzyme mechanism, kinetics and regulation to membrane composition and membrane protein function. Lecture: 3-1/2 hours; discussion: 1-1/4 hours.

Prerequisite: Prerequisite(s): BIOC 100A.

BIOC 100C - Biochemistry and Molecular Biology (5)

Biochemistry: intermediary metabolism and bioenergetics. How enzymatically catalyzed reactions are organized and regulated; how energy from molecules is extracted for chemical work. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. (Formerly Biochemistry .)

Prerequisite: Prerequisite(s): BIOC 100B.

BIOC 110L - Advanced Biochemistry Laboratory (5)

An introduction to the major techniques used in the isolation and characterization of biological components. Laboratory: 8 hours; lecture: 1-3/4 hours. Students are billed a materials fee of $350.

Prerequisite: Prerequisite(s): BIOC 100B and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to chemistry majors in the biochemistry concentration. Other majors by permission.

BIOC 163A - Quantum Mechanics, Spectroscopy and Molecular Structure for Biochemistry and Molecular Biology (5)

Detailed introduction to molecular quantum mechanics and application of spectroscopic and diffraction techniques to problems involving biological macromolecules. Designed as an alternative to CHEM 163A for the biochemistry and molecular biology major requirement. Students cannot receive credit for this course and CHEM 163A.

Prerequisite: Prerequisite(s): CHEM 1B and CHEM 1C, or CHEM 3C, or CHEM 4B; and PHYS 5A and 5C, or PHYS 6A and 6C; and previous or concurrent enrollment in PHYS 5B or PHYS 6B.

BIOC 163B - Biochemical Thermodynamics and Statistical Mechanics for Biochemistry and Molecular Biology (5)

Detailed introduction to the fundamentals of classical and statistical thermodynamics and applications to problems involving biochemical equilibria, macromolecular structure and function. Course is designed as an alternative to CHEM 163B for partial fulfillment of the biochemistry and molecular biology major physical chemistry requirement. Students cannot receive credit for this course and CHEM 163B.

Prerequisite: Prerequisite(s): CHEM 1B and CHEM 1C, or CHEM 3C, or CHEM 4B; PHYS 6A or PHYS 5A; and previous or concurrent enrollment in BIOC 100A. .

BIOE - BIOLOGY ECOLOGY AND EVOLUTIONARY

Lower-Division

BIOE 16 - Introduction to Horticulture (2)

Surveys the production of indoor crops and landscape plants to gain a working knowledge of how light, temperature, water, fertilizers, and soilless media interact in a controlled environment. Also covers pest management and propagation.

Lectures and demonstrations are combined with activities in the UCSC Greenhouses and at the UCSC Arboretum to give students direct experience with horticulture practices and principles in controlled environments. The approach is to develop practical skills and familiarity with agricultural technology while mastering basic principles in plant biology. Emphasis is placed on indoor growth systems.

BIOE 19 - Biodiversity in the Age of Humans (5)

How can we better understand how humans have affected Earth and its inhabitants? Explores how DNA shed by organisms into the environment can be collected and used to study Earth's biodiversity, with applications in medicine, anthropology, agriculture, and conservation.

Prerequisite: Enrollment is restricted to first-year students, sophomores, and juniors.

BIOE 20B - Development and Physiology (5)

Topics in morphology, physiology, development, genetics, and endocrinology selected to exemplify current issues and perspectives in organismic biology.

Prerequisite: Prerequisite(s): BIOL 20A.

BIOE 20C - Ecology and Evolution (5)

Introduction to ecology and evolution covering principles of evolution at the molecular, organismal, and population levels. Evolutionary topics include genetic and phenotypic variation, natural selection, adaptation, speciation, and macroevolution. Also covers behavioral, population, and community ecology including applied ecological issues.

BIOE 20F - Field Biology in Practice (2)

Field-based, experiential course that explores local ecosystems, helps students develop nature observation skills and lead collaborative research, from formulating and testing hypotheses to sampling, data collection, analysis, interpretation, and presentation. The course builds peer and mentor networks and introduces a range of topics in ecology, conservation, and natural resource management. Some offerings include required weekend and/or overnight field trips. There are no course fees, and camping equipment is available if needed. Enrollment is by instructor permission.

BIOE 75 - Scientific Diving Methods (3)

Focuses on refining fundamental dive safety principles while introducing techniques in scientific diving. Coursework includes lectures, field practical training, confined water and ocean SCUBA dives. Topics include diving physics, physiology, decompression theory, dive planning, aquatic environment, navigation, search and recovery, blue water diving, emergency response/rescues, and subtidal sampling techniques. Course meets or exceeds AAUS standards and provides students an opportunity to become certified in scientific diving. Prerequisite for BIOE 161/L, and any SCUBA diving activities associated with BIOE 159A,B,C,D,E,F; BIOE 183/L; BIOE 193; and BIOE 195. AAUS Scientific Diving certification is required for all research SCUBA diving activities under the auspices of UCSC and is transferable to other academic institutions. Prerequisite(s): skill level equal to Advanced and Rescue Scuba Diver Certification, current AAUS/UCSC diving medical clearance, certifications in CPR/AED, First Aid and Oxygen Administration and minimum of 12 documented ocean dives; and interview: pass water skills evaluation. For details visit scientificdiving.ucsc.edu/course-info. Students are billed a materials fee of $100. (Formerly Scientific Diving Certification.)

BIOE 80S - Lies, Damn Lies, and Statistics (5)

Probability and statistics underlie much of our everyday experience and, as such, there is a fundamental need for an understanding of the use, and misuse, of statistics. This course is taught through case studies based in biology, politics, economics, crime, education, disease, conservation, and other fields of interest. For example, does a change in crime rate really affect your probability of being a victim of a crime? The goal is to provide all students with sufficient understanding probability and statistics to determine if everyday and often sensationalistic reporting of statistical results is meaningful.

BIOE 82 - Introduction to Field Research and Conservation (2)

A field-based course with overnight and day trips to regionally diverse areas throughout Central California. Field trips and lectures familiarize students with a wide variety of topics in the ecological, conservation, and environmental science as well as natural-resource management. Students are billed a materials fee of $100. Enrollment is by instructor permission.

BIOE 85 - Natural History of the UCSC Natural Reserves (5)

Lectures and field trips familiarize students with the flora and fauna of the UCSC Natural Reserves. Field trips focus on surveying and identifying vertebrates and plants at each UCSC Natural Reserve (Fort Ord, Campus Reserve, Big Creek, Younger Lagoon, and Ano Nuevo).

BIOE 95 - Seymour Center Docent Training (2)

Taught as a series of seminars, course provides a survey of marine sciences and the role of scientific research in understanding and conserving the world's oceans. Topics include: marine biology, ecology, conservation, coastal geology, and climate change. This series is intended to prepare students to interpret research and inform the public by leading tours at the Seymour Marine Discovery Center at the Long Marine Lab. Enrollment is by application and interview.

BIOE 99 - Tutorial (5)

Individual, directed study for undergraduates. Students submit petition to sponsoring agency.

Upper-Division

BIOE 106 - Principles of Genetics for EEB (5)

Provides students with a broad genetics background. Topics range from understanding the flow of genetic information within single-celled organisms to how genes and gene

products function within multicellular organisms. Students learn how genotype shapes phenotype and its role in evolution and ecology.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Enrollment is restricted to sophomores, juniors and seniors.

BIOE 107 - Ecology (5)

Focuses on physiological, behavioral, and population ecology, and on linking ecological processes to evolution. It includes basic principles, experimental approaches, concepts of modeling, and applications to ecological problems.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 108 - Marine Ecology (5)

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and BIOE 208.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, and BIOE 20C; BIOE 107 or BIOE 140 recommended. Enrollment is restricted to juniors and seniors.

BIOE 109 - Evolution (5)

An examination of the history and mechanisms of evolutionary change. Topics include molecular evolution, natural and sexual selection, adaptation, speciation, biogeography, and macroevolution.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOE 106 or BIOL 105.

BIOE 112 - Ornithology (5)

Introduction to the evolution, ecology, behavior, and natural history of birds, using exemplary case histories to illustrate key concepts in evolution, ecology, and behavior.

Prerequisite: Prerequisite(s): BIOE 107, BIOE 109, or BIOE 140. Concurrent enrollment in BIOE 112L is required.

BIOE 112L - Ornithology Field Studies (2)

Field trips introduce students to field identification skills and field investigation of census, foraging behavior, migration, social behavior, and communication. Examination of specimens in the laboratory will be used to highlight the diversity and taxonomy of birds. Some field trips may require students to provide their own transportation.

Prerequisite: Prerequisite(s): BIOE 107, BIOE 109, or BIOE 140. Concurrent enrollment in BIOE 112 is required.

BIOE 114 - Herpetology (5)

Lectures introduce students to evolution, development, physiology, behavior, ecology, and life history of reptiles and amphibians. The materials integrate with conceptual and theoretical issues of ecology, evolution, physiology, and behavior.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOE 107, BIOE 109, BIOE 110, or BIOE 140. Concurrent enrollment in BIOE 114L is required.

BIOE 114L - Field Methods in Herpetological Research (2)

Field trips introduce students to natural history, censusing techniques, physiological ecology, and behavioral analysis of reptiles and amphibians. Laboratories introduce students to techniques for analyzing behavior and physiology. Field studies culminate with a group project in a natural setting. Some field trips may be held on weekends due to weather considerations. Some field trips may require students to provide their own transportation, some transportation will be provided by UCSC. Students are billed a materials fee of $120.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOE 107, BIOE 109, BIOE 110, or BIOE 140. Concurrent enrollment in BIOE 114 is required.

BIOE 117 - Systematic Botany of Flowering Plants (5)

An examination of the taxonomy and evolution of flowering plants. Special topics include phylogenetics and cladistics, plant species concepts, and modern methods of systematic research.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 117L.

BIOE 117L - Systematic Botany of Flowering Plants Laboratory (2)

Weekly laboratory concerned primarily with California flora and plant families. Several field trips.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 117.

BIOE 118 - Plants and Society: the Biology of Food, Shelter, and Medicine (5)

Introduces plant biology as it affects human society. Topics include the origins of agriculture, the morphology and chemistry of food plants, the material uses of plant products, the biology of medicinal plants, and plant diversity and bioprospecting.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C; or ENVS 23 and ENVS 24.

BIOE 120 - Marine Botany (5)

An introduction to the biology of marine algae, fungi, and angiosperms with regard to form and function. Major boreal, temperate, and tropical marine plant communities. Lecture format.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 120L.

BIOE 120L - Marine Botany Laboratory (2)

One laboratory weekly and several field trips. Focuses on marine algae, fungi, and angiosperms.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 120.

BIOE 121 - Plants, Earth, Climate (5)

Explores how biotic and abiotic factors shaped the Earth’s biosphere and how climate change will challenge the resilience of plant life on the planet. By the end of the course, students will better understand the broader implications of plant function on the health of the planet. Topics include core plant physiological processes and how they feed into climate feedback loops, photosynthesis and the formation of the atmosphere, plants and the paleoclimate, plant adaptations and resilience, climate change mitigation through plants, and more.

BIOE 122 - Invertebrate Zoology (5)

An examination of invertebrates and their habitats. Lecture format.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 122L.

BIOE 122L - Invertebrate Zoology Laboratory (2)

An examination of invertebrates and their habitats. Weekly laboratories or field trips.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 122.

BIOE 124 - Mammalogy (5)

Introduces the biology of mammals, including their classification, evolution, behavior, reproductive strategies, and general ecology. Examines the diagnostic traits of mammals; provides a survey of the living orders along with their diagnostic features, physiological and behavioral specializations, and adaptations.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 124L is required.

BIOE 124L - Mammalogy Laboratory (2)

Focuses on the identification of mammals and their specific traits. Exercises provide hands-on experience at identifying mammal orders, families, and species. Field trip provides students with field techniques in mammalogy.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 124 is required.

BIOE 125 - Ecosystems of California (5)

A survey of the diversity, structure, and functioning of California's ecosystems through time and the ways they have influenced and responded to human activities and stewardship. Topics include: ecosystem drivers such as climate, soils, and land-use history; human and ecological prehistory; comparative marine, freshwater, and terrestrial ecosystem dynamics; and managed ecosystems such as range, fisheries, and agriculture.

Prerequisite: Prerequisite(s): BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to ecology and evolution, marine biology, plant sciences, and biology B.A. majors.

BIOE 126 - Biology of Large Marine Vertebrates (5)

Broad overview of the ecology, evolution, physiology, and behavior of marine mammals, birds, and turtles, with an emphasis on local Monterey Bay species.

Prerequisite: Prerequisite(s): BIOE 20B and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements.

BIOE 127 - Ichthyology (5)

An introduction to the biology of jawless, cartilaginous, and bony fishes--their classification, evolution, form, physiology, and ecology.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 127L.

BIOE 127L - Ichthyology Laboratory (2)

One laboratory session a week and several field trips to study the biology of fish.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 127.

BIOE 128L - Large Marine Vertebrates Field Course (7)

Lectures combined on fieldwork with large marine vertebrates in the laboratory and lectures with large marine vertebrates in the field (Monterey Bay, Ano Nuevo). Fieldwork familiarizes students with research methods, study design, and statistical approaches for research on large marine vertebrates (seals, birds, fish, and sharks). Research includes: animal tracking; physiology; behavior; foraging ecology; and energetics. Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements.

BIOE 129 - Biology of Marine Mammals (5)

A survey of cetaceans, pinnipeds, sirenians, and sea otters, including natural history, systematics, physiology, behavior, anatomy, and conservation.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; and satisfaction of the Entry Level Writing and Composition requirements. BIOL 110 is recommended.

BIOE 129L - Biology of Marine Mammals Laboratory (2)

Covers the basics of marine mammal taxonomy, anatomy, and field methods with an emphasis on local field identification and understanding of local species. Will include field trips to Long Marine Lab, Ano Nuevo, and Monterey Bay.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 129.

BIOE 131 - Animal Physiology (5)

Principles and concepts underlying the function of tissues and organ systems in animals with emphasis on vertebrate systems. Students cannot receive credit for this course and BIOL 130.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 131L - Animal Physiology Laboratory (2)

Experiments conducted with primary focus on quantitative physiological principles of organ systems and intact organisms. Students cannot receive credit for this course and BIOL 130L.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 131 is required.

BIOE 133 - Exercise Physiology (5)

An advanced-level course concerning physiological and biochemical processes associated with human performance. Emphasis is on the integration of organ systems for exercise. Topics include metabolism and fuel utilization, cardiovascular and respiratory dynamics during activity, and the effects of training. Requires a good understanding of basic physiological function and anatomy.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B and BIOE 20C. BIOE 131 is recommended. Concurrent enrollment in BIOE 133L is required.

BIOE 133L - Exercise Physiology Laboratory (2)

An introduction to basic measurement techniques used in assessing the physiological response of humans to exercise. Sessions cover oxygen consumption, respiratory rate, and heart rate monitoring during aerobic and anaerobic activity.

Prerequisite: Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C. BIOE 131 is recommended. Concurrent enrollment in BIOE 133 is required.

BIOE 134 - Comparative Vertebrate Anatomy (5)

Course focuses on vertebrate form and function: an integration of physiology and biomechanics. Topics include: the physiology and biomechanics underlying vertebrate locomotion; vertebrate feeding; and the morphological changes associated with different locomotion and feeding strategies through evolutionary time.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 134L is required.

BIOE 134L - Comparative Vertebrate Anatomy Laboratory (2)

Course focuses on the gross dissections all major clades of vertebrates: development, form, and diversity of organ systems and basic principles of evolution; vertebrate classification; and functional morphology, with emphasis on feeding and locomotion. Anatomical dissections integrated with the associated lecture material focusing on biomechanics, form, and function.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 134 is required.

BIOE 135 - Plant Physiology (5)

Cellular and organismal functions important in the life of green plants.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C; concurrent enrollment in BIOE 135L is required.

BIOE 135L - Plant Physiology Laboratory (2)

Weekly laboratory concerning the cellular and organismal functions of green plants.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C; concurrent enrollment in BIOE 135.

BIOE 136 - Environmental Physiology (5)

Explores how an organism's physiology interacts with its environment including molecular to whole organism-level processes. How do animals thrive in the most diverse regions of Earth and why are some more vulnerable to change than others?

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C.

BIOE 137 - Molecular Ecology (5)

This combination lecture/laboratory course explores the use of molecular (DNA and/or protein) data in ecological and conservation research. Topics covered include data collection; marker choice; estimating genetic diversity and population structure; the inference of mating systems; and environmental genomics.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOE 106 or BIOL105, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 137L is required.

BIOE 137L - Molecular Ecology Laboratory (2)

This combination lecture/laboratory course explores the use of molecular (DNA and/or protein) data in ecological and conservation research. Topics covered include data collection; marker choice; estimating genetic diversity and population structure; the inference of mating systems; and environmental genomics. Students are billed a materials fee of $110.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOE 106 or BIOL 105. Concurrent enrollment in BIOE 137 is required.

BIOE 138 - Modeling Evolution and Ecology (5)

Introduces students to how mathematical models can be used to ask and answer evolutionary and ecological questions. Methods covered include optimality theory, population genetics, population dynamic models, game theory, and dynamic state-variable models. Students learn to develop their own mathematical models and to use models to make predictions. Statistical methods for combining theory and data are not covered. Class focuses on learning by doing, using in-class activities, weekly problem sets and an independent project. Students cannot receive credit for this course and BIOE 238. Prerequisite(s): BIOE 107, BIOE 109 and by permission of the instructor. (Formerly BIOE 148B, Quantitative Methods in Ecology and Evolution.)

BIOE 139 - Mathematical Modeling and Data Science in Ecology and Evolution (5)

Teaches students how to build mathematical models and fit them to data to answer questions in ecology and evolution. Includes learning to write code in the R programming language to simulate models and perform statistical analyses. Topics include population and evolutionary dynamics, species interactions, and behavior. Students cannot receive credit for this course and BIOE 239. Prerequisite(s): BIOE 107, BIOE 109, and permission of instructor. (Formerly offered as BIOE 148A Quantitative Ecology.)

BIOE 140 - Behavioral Ecology (5)

An introduction to social and reproductive behavior. Emphasis on studies of vertebrates in their natural habitat. Ideas concerning the evolution of social behavior, mating systems, and individual reproductive strategies. Case histories of well-studied animals that illustrate key principles in courtship and mating, parental behavior, and food-getting behavior.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 141L - Behavioral Ecology Field Course (7)

A field-based course introducing students to concepts and methods for studying behavioral ecology in nature. Students will conduct observations and field experiments on various local model organisms including elephant seals, hummingbirds, sparrows, lizards, ants, bees, frogs, and salamanders.

Prerequisite: Prerequisite(s): BIOE 107 or BIOE 140 or BIOE 110; and satisfaction of the Entry Level Writing and Composition requirements.

BIOE 142L - Animal Behavior in the Wild (A Virtual Field Course) (5)

Online laboratory course with a remote (not in-person), virtual field component.Students learn about the scientific study of animal behavior from an ecological and evolutionary perspective through lectures, behavior videos, assignments, field observations, digital labs and final research project. The general goal, however, is to develop the ability to observe the natural world, design research, collect and interpret data, and communicate ideas.

Prerequisite: Prerequisites: BIOL 20A, BIOE 20B, and BIOE 20C. Students may benefit from taking BIOE 142L after or concurrently with BIOE 107 or BIOE 140.

BIOE 145 - Plant Ecology (5)

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptation to environmental conditions, reproductive ecology, life history, population dynamics, competition, herbivory, disease, community assembly, ecosystem responses to global change, plant conservation, and restoration. Lecture with discussions of original papers and independent field projects. Students cannot receive credit for this course and BIOE 245.

Prerequisite: Prerequisite(s): Either [BIOL 20A, BIOE 20B, and BIOE 20C], or ENVS 100; and satisfaction of the Entry Level Writing and Composition requirements. BIOE 107 is recommended. Enrollment is restricted to Ecology and Evolution, Plant Sciences, and ENVS majors during first pass enrollment.

BIOE 145L - Field Methods in Plant Ecology (5)

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions). Statistical analysis and scientific writing. One required weekend field trip. Students cannot receive credit for this course and BIOE 245L.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 145 is required. BIOE 107 is recommended.

BIOE 146 - Acoustic Ecology (5)

Survey of the way sound is used by various taxa (mammals, birds, amphibians) across different environmental landscapes. Through a combination of lectures, group discussions, and hands-on activities (i.e., experiential learning), students learn about the physics of sound in both air and water, the physiology of sound production (including mechanisms and drivers), the role of the physical environment in signal design, hearing and masking, and the use of acoustic signals during different life-history events in a variety of animals from beetles to blue whales. Students learn about how humans impact natural soundscapes, and how animals are affected and

respond to anthropogenic noise in the air and under the water's surface.

Prerequisite: Prerequisite(s): BIOL 20A, and BIOE 20B, and BIOE 20C. PHYS 6A/PHYS 6L or PHYS 7A/PHYS 6L or PHYS 1 recommended.

BIOE 147 - Community Ecology (5)

Develops the major themes of community biology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and BIOE 247.

Prerequisite: Prerequisite(s): BIOE 107, BIOE 108, BIOE 145, BIOE 155 or BIOE 159A; or ENVS 24 by permission of instructor.

BIOE 149 - Disease Ecology (5)

Focuses on the ecological and evolutionary processes that drive the transmission of pathogens between hosts; the impact of disease on host populations; and what causes the emergence of an infectious disease. Includes theoretical framework, description of field techniques, and discussion of wildlife and human diseases including malaria, West Nile virus, Lyme disease, HIV, avian influenza (bird flu), Chikungunya, tuberculosis, chytridiomycosis, and Ebola.

Prerequisite: Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C and BIOE 107.

BIOE 150 - Ecological Field Methods (5)

Lectures and laboratory computer exercises designed to familiarize students with research methods, study design, statistical approaches, and analysis tools for ecological research. Students cannot receive credit for this course and ENVS 104A.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 150L is required. BIOE 107, BIOE 108, BIOE 140, or BIOE 147 recommended.

BIOE 150L - Ecological Field Methods Laboratory (5)

Field-oriented course in the study of animal ecology and behavior. Combines overview of methodologies and approaches to field research with practical field studies.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 150 is required. BIOE 107, BIOE 108, BIOE 140, or BIOE 147 recommended.

BIOE 151A - Ecology and Conservation in Practice Supercourse: Ecological Field Methods (5)

An intensive, on-site learning experience in terrestrial field ecology and conservation, using the University of California Natural Reserves and other natural areas. Students study advance concepts in ecology, conservation, and field methods for four weeks, then experience total immersion in field research at the UC Natural Reserves and other natural areas. Lectures, field experiments, writing assignments, and computer exercises familiarize students with research methods, study design, statistical approaches, and analytical tools for ecological research. Students complete and communicate the results of short field projects in ecology, learn the natural history of the flora and fauna of California, and plan and execute a significant, independent field-research study at the end of the quarter. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, ENVS 24; and STAT 7 STAT 7L (formerly AMS 7 AMS 7L). Concurrent enrollment in BIOE 151B-BIOE 151C-BIOE 151D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, BIOE 150L, ENVS 104A or ENVS 196A.

BIOE 151B - Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory (5)

Field-oriented course in ecological research. Combines overview of methodologies and approaches to field research with practical field studies. Students complete field projects in ecology and also learn the natural history of the flora and fauna of California. Students are billed a materials fee of $1,450. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, ENVS 24; and STAT 7 STAT 7L (formerly AMS 7 & AMS 7L); satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 151A-BIOE 151C-BIOE 151D. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, BIOE 150L, ENVS 104A or ENVS 196A.

BIOE 151C - Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems (5)

From lectures and discussion of terrestrial community and ecosystem ecology, students work individually or in small groups to present an idea for a project, review relevant literature, develop a research question/hypothesis, design and perform an experiment, collect and analyze data, and write a report. The instructor evaluates the feasibility of each student's project before it begins. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, ENVS 24; and STAT 7 & STAT 7L. Concurrent enrollment in BIOE 151A-BIOE 151B-BIOE 151D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, BIOE 150L, ENVS 104A or ENVS 196A.

BIOE 151D - Ecology and Conservation in Practice Supercourse: Conservation in Practice (5)

Focuses on current issues in environmental and conservation biology and the emerging field methods used to address them.

From field-oriented lectures about current issues in environmental and conservation biology, students pursue research project as individuals and small groups to develop hands-on experience with field skills in conservation research and resource management. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, ENVS 24; and STAT 7 & STAT 7L (formerly AMS 7 & AMS 7L). Concurrent enrollment in BIOE 151A-B-C is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, BIOE 150L, ENVS 104A or ENVS 196A.

BIOE 153A - Introduction to Arctic Ecology (5)

Field-intensive course comprised of weekly classes in preparation for the field component. Focuses on issues relevant to the ecology of arctic regions including arctic ecology, arctic geology and paleontology, and arctic environmental change. Students are charged a materials fee of $2,570. Enrollment is by permission of the instructor. Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C; and concurrent enrollment BIOE 153B and BIOE 153C.

BIOE 153B - Arctic Ecology (5)

Field-intensive course focusing on issues relevant to the ecology of the arctic regions. Explores the changing arctic environment through lectures and hands-on research during an 18-day camping trip transecting the subarctic boreal forest to the high Arctic. Enrollment is by permission of the instructor. Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C; and concurrent enrollment BIOE 153A and BIOE 153C.

BIOE 153C - Disciplinary Communication for Biologists (5)

Writing-intensive course focusing on developing skills in scientific communication with an emphasis on communicating issues relevant to the ecology of arctic regions. Communication products are developed during an 18-day camping trip in the Arctic. Enrollment is by permission of the instructor. Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C; and satisfaction of the Entry Level Writing and Composition requirements; and concurrent enrollment BIOE 153A and BIOE 153B.

BIOE 155 - Freshwater Ecology (5)

Provides an overview of the physical, chemical, and biological processes that characterize inland waters such as lakes, streams, rivers, and wetlands. Also addresses relationships between humans and freshwater, and discusses these challenges in conservation.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 155L - Freshwater Ecology Laboratory (5)

Field and laboratory study of the ecology of freshwater systems including lakes, streams, and estuaries. Students gain experience sampling and identifying freshwater organisms, designing and analyzing ecological experiments, and writing scientific reports.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C and BIOE 155.

BIOE 157A - Evolution Field Class in Southern Africa (5)

Covers the fundamentals of evolution, including macro-evolution (the science of the evolution of organisms) and micro-evolution (the science of the evolution of populations, within a species). Field observations and field work is an integral part of the class, where demonstrations and examples are shown directly in the field. Students think, write, and report, on projects that will be elaborated and discussed with peers and faculty. Course is delivered in the field, and in person, visiting sites of archaeological importance pertinent to human evolution (caves of Sterkfontein, where hominid remains have been discovered), and national parks (Kruger National Park, Malawi National Park) where we will observe animal interactions, sexual selection, and kin selection. Students write daily journals with observations and reports.

Prerequisite: Prerequisite(s): equivalent of UCSC's BIOL 20A, BIOE 20B, and BIOE 20C; satisfaction of the Entry Level Writing and Composition requirements.

BIOE 157B - Ichthyology Field Class in Southern Africa (7)

Covers the fundamentals of ichthyology (fish biology), including taxonomy and classification, morphology, physiology, zoogeography and fisheries. Field observations and field work is an integral part of the class, where demonstrations and examples are shown directly in the field. Students think, write, and report, on projects that will be elaborated and discussed with peers and faculty. The course is delivered in the field, and in person, including visiting streams and rivers to learn about local fishes and hands-on approaches to studying the science of ichthyology. Research projects are done at Malawi National Park, a site with the greatest diversity of freshwater fishes in the world. Students write daily journals with observations and reports.

Prerequisite: Prerequisite(s): equivalent of UCSC's BIOL 20A, BIOE 20B, and BIOE 20C; satisfaction of the Entry Level Writing and Composition requirements.

BIOE 158L - Field Methods in Marine Ecology (5)

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses; (2) the design and implementation of experiments; (3) collection, analysis, and interpretation of data; and (4) write-up of an oral presentation.

Prerequisite: Prerequisite(s): BIOE 108; satisfaction of the Entry Level Writing and Composition requirements.

BIOE 159A - Marine Ecology Field Quarter: Marine Ecology with Laboratory (5)

Total immersion in marine ecology for very motivated students. Students develop a research project during first five weeks on campus and then spend five weeks of immersion in directed research without distraction in isolated locations off campus (past locations include the Gulf of California in Mexico and Moorea in French Polynesia). Not available

through University Extension. No other courses may be taken during this quarter. Students must sign a contract agreeing to standards of behavior outlined in the UCSC Rule Book and by the instructors. Students are billed a materials fee of $3500. Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology and analysis and discussion of experiments with these paradigms. Students carry out a complete research project, including the formation of hypotheses; the design and implementation of experiments; the collection, analysis, and interpretation of data; and the write-up and oral presentation of results. Admission by interview during previous winter quarter. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D are equivalent to BIOE 127, BIOE 127L, BIOE 108, and BIOE 158L for major requirements. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D must be taken concurrently.

BIOE 159B - Marine Ecology Field Quarter: Ichthyology with Laboratory (5)

An introduction to the biology of jawless, cartilaginous, and bony fishes—their classification, evolution, form, physiology, and ecology. Admission by interview during previous winter quarter. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D are equivalent to BIOE 127, BIOE 127L, BIOE 108, and BIOE 158L for major requirements. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D must be taken concurrently.

BIOE 159C - Marine Ecology Field Quarter: Methods in Field Ecology (5)

Students learn quantitative methods for field experiments and surveys. Emphasis will be on marine environments, but there will also be exposure to terrestrial systems. This is the lecture component to BIOE 159D. No text is required for this course; instead, readings from the current literature will be assigned. Students are evaluated on written independent field project proposals and class participation. Admission by interview during previous winter quarter. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D are equivalent to BIOE 127, BIOE 127L, BIOE 108, and BIOE 158L for major requirements. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D must be taken concurrently.

BIOE 159D - Marine Ecology Field Quarter: Methods in Field Ecology Laboratory (5)

This is laboratory portion of BIOE 159C. Students carry out independent field projects under the supervision of course instructors. All work is done during the 5-6 week off-campus portion of BIOE 159. Students are evaluated on field techniques, the final write-up of their independent field projects, and class participation. Admission by interview during previous winter quarter. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D are equivalent to BIOE 127, BIOE 127L, BIOE 108, and BIOE 158L for major requirements. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D must be taken concurrently.

BIOE 159E - Marine Ecology Field Quarter: Behavioral Ecology (5)

Study of animal behavior from an ecological and evolutionary perspective, using lectures, exercises, discussion, and research experience in the field. Emphasis on marine environments with exposure to extraterrestrial systems and laboratory studies. Focus on how scientists study animal behavior and what has been learned about evolution and ecology and ecology of animal behavior. Admission by interview during previous winter quarter. BIOE 159E is equivalent to BIOE 140 for major requirements. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159E must be taken concurrently.

BIOE 159F - Marine Ecology Field Quarter: Global Change Ecology (5)

Engages students in the evolving discipline of global change biology, which examines the relationships between organisms and their environment. Includes discussion of changes in the climate system and other human disturbances, as well as the effects of these changes on biology, from shifts in organismal performance to species distributions and the timing of biological events. Includes discussion and analysis of different lines of evidence for understanding biological responses to global change, including paleoecology, observations, experiments and modeling. Last, this course also focuses on topics in climate literacy and science communication. Admission by interview during previous winter quarter. BIOE 159A, BIOE 159C, BIOE 159D, and BIOE 159F must be taken concurrently.

BIOE 161 - Kelp Forest Ecology (5)

Study of organization of kelp forests as models for examining biological communities. The physical and biotic factors responsible for community organization of kelp forests are explored using original literature and data collected in BIOE 161L. Class meets one full morning each week. Prerequisite(s): by interview only; BIOL 20A, BIOE 20B, and BIOE 20C are required. Students must pass the University Research Diving Certification (contact the diving safety officer, Institute of Marine Sciences, for further information). Enrollment is restricted to seniors. BIOE 161L must be taken concurrently; BIOE 107, BIOE 120 & BIOE 120L, BIOE 122 & BIOE 122L are recommended.

BIOE 161L - Kelp Forest Ecology Laboratory (5)

Fieldwork using SCUBA to quantitatively and qualitatively examine the abundance and distribution of organisms in kelp forests, with additional laboratory work. Culminates with a directed individual research project. Class meets one full morning each week. Students are billed a materials fee of $500. Admission by interview. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; satisfaction of the Entry Level Writing and Composition requirements; BIOE 161 must be taken concurrently; BIOE 107, 120/L, 122/L are recommended. Students must pass the University Research Diving Certification (contact the Diving Safety Officer, Institute of Marine Sciences, for further information).

BIOE 163 - Ecology of Reefs, Mangroves, and Seagrasses (5)

Integrated treatment of coral reefs, sea grasses, and mangroves emphasizing interactions and processes through time. Major topics: biological and geological history, biogeography, evolution and ecology of dominant organisms, biodiversity, community and ecosystem ecology, geology, biogeochemistry, global change, human impacts.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 163L is required.

BIOE 163L - Ecology of Reefs, Mangroves, and Seagrasses Laboratory (2)

An interdisciplinary laboratory exploration of the anatomy, morphology, adaptations, diversity, evolution, and ecology of corals, mangroves, and seagrasses and of their physical, chemical, and geological environments.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 163 is required.

BIOE 165 - Marine Conservation Biology (5)

Initially undertakes an in-depth comparison of the biology and conservation of marine versus terrestrial ecosystems. With this foundation, course examines marine biodiversity loss resulting from overexploitation, habitat loss, species introduction, and pollution, with particular emphasis on the resulting trophic cascades, biodiversity losses, and climate change. Students cannot receive credit for this course and ENVS 120.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; OCEA 101 recommended.

BIOE 171 - Disciplinary Communication for Biologists (5)

Writing-intensive course focusing on developing skills in scientific communication, with an emphasis on communicating issues relevant to ecologists and evolutionary biologists. Presents the norms and standards of scientific communication spanning multiple genres Students cannot receive credit for this course and BIOE 271.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 172 - Population Genetics (5)

Basic population genetics and selected topics will be covered, including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and BIOE 272.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOE 106 or BIOL 105, and satisfaction of the Entry Level Writing and Composition requirements.

BIOE 173 - Contemporary Genetics (5)

Designed for the discussion and evaluation of current topics in genetics. Integrates information from multiple fields and focuses on how genetics continues to shape numerous areas, including new emerging areas. Focuses on topics of current interest in genetics and includes lectures, readings, and discussions. Students present on a current genetics' topic of interest in the last week of the class. This is a course that requires extensive readings, participation in discussions, written assignments, and oral presentations. This course also provides an opportunity for you to practice critical thinking, quantitative analysis, and cooperative learning. Throughout the semester, students will discuss the latest genetic technologies and their impact on society including ethical, economic, and environmental concerns.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOE 106 or BIOL 105; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to juniors and seniors.

BIOE 174 - Evolutionary Medicine (5)

Evolutionary processes and organismal evolutionary history have a profound impact in shaping the ways species develop disease susceptibility. As part of this class, students use evolution to critically evaluate human health, and explore how natural selection can shape behaviors and physiological responses. Uses concepts like trade-offs to understand how the evolution of mechanisms that were favorable under a set of conditions might seem damaging once those conditions are no longer present in modern societies. Course also extends these concepts to examine the evolution of disease susceptibility in other animals and plants providing a new tool to understand the world around us.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOE 106 or BIOL 105, and BIOE 109, and satisfaction of the Entry Level Writing and Composition requirements.

BIOE 175 - Conservation Genomics (5)

Students learn how to interact with genomic sequence data and how it is used as a conservation tool. Focusing on the genomic sequence of the banana slug (Ariolimax dolichophallus) students assemble the first chromosome-level de novo assembly for the species. Also investigates how this genome compares to other slug species and investigates its phylogenetic position within the Order Stylommatophora.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOE 106 or BIOL 105. Enrollment is restricted to sophomores, juniors, seniors, and graduate students.

BIOE 176 - Data Science for Ecology & Evolutionary Biology (5)

Practical introduction to the computational and statistical skills students in ecology and evolutionary biology need to know for working in our data-filled modern world. Topics include practices for reproducible science, scientific programming in R, and statistical reasoning with ecological

and evolutionary data. Course is taught as a flipped classroom with extensive hands-on practice so that students leave with the critical skills to continue on their own. A final project consists of analysis of a real dataset.

Prerequisite: Prerequisite(s): BIOE 107 or 109, or by permission of the instructor.

BIOE 182F - Exploring Research in EEB (2)

Provides undergraduate students with exposure to research in the laboratory of an Ecology and Evolutionary Biology (EEB) faculty member, affiliate, or adjunct. Students are not expected to do independent research but rather to assist in laboratory or field research projects under the supervision of the faculty mentor or appointed researcher. Prerequisite(s): Undergraduate research contract on file with the department. If supervised by different faculty or researchers, may be repeated for credit.

BIOE 183L - Undergraduate Research in EEB (3)

Designed to ensure that students are intellectually engaged in the planning or implementation of a supervised or independent research project, achieve a fundamental understanding of implementing the scientific method, and develop their scientific writing and and presentation skills. Prerequisite(s): concurrent enrollment in BIOE 183W and an Undergraduate Research Contract on file with the department.

BIOE 183W - Undergraduate Research in EEB--Writing (2)

Working in coordination with an Ecology and Evolutionary Biology (EEB) faculty member, affiliate or adjunct, students develop and write a formal research proposal or report and give a presentation on their research project. Includes weekly class meetings focused on the philosophy of science, basic statistics, library searches, inputting data, creating graphs, and preparing results for publication, posters, and talks.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and BIOE 107, BIOE 108, or BIOE 109; and an undergraduate research contract on file with the department.

BIOE 186 - Experimental Design and Data Analysis (7)

Students provided with the programming and statistical tools needed to undertake experimental design and data analysis in ecology and evolutionary biology—from data manipulation, exploration, and visualization to interpretation. Lectures and lab practicals provide a primer on: R programming, basic statistics and probability, hypothesis testing, linear regression, analysis of variance, multiple regression, and categorical data analysis. Students cannot receive credit for this course and BIOE 286. Enrollment is restricted to sophomore, junior, and senior biology, ecology and evolution, plant sciences, and marine biology majors and by permission of the instructor.

BIOE 189F - Special Topics Seminar Series: Ecology and Evolutionary Biology (2)

Through a special topic seminar series, students experience and discuss research in ecology, evolution, and conservation biology. Topics may include advanced concepts in our ecology and evolutionary biology (EEB) discipline, the intersections between diversity and ecology, research ethics. The goals are to advance understanding in EEB, professional development, networking, and community building.

BIOE 193 - Independent Research in EEB (5)

Continued undergraduate research on a project sponsored by an Ecology and Evolutionary Biology (EEB) faculty member, affiliate, or adjunct. Students are graded on the quality of their research and meeting the terms of their undergraduate research contract. Prerequisites: course 183W and an undergraduate research contract on file with the department.

BIOE 193F - Independent Research in EEB (2)

Continued undergraduate research on a project sponsored by an Ecology and Evolutionary Biology (EEB) faculty member, affiliate, or adjunct. Students are graded on the quality of their research and meeting the terms of their undergraduate research contract. Prerequisites: course 183W and an undergraduate research contract on file with the department.

BIOE 195 - Senior Thesis (5)

An individually supervised course, with emphasis on independent research. Students required to submit a senior thesis. Enrollment is restricted to majors in biology, ecology and evolution, marine biology, plant sciences, and the combined major with environmental studies. Students submit petition to sponsoring agency.

BIOE 197 - Summer Intensive Research in EEB (10)

Students conduct their own designed research projects in eight- to 10-week summer internships under the supervision and guidance of their principal investigator who will also be their research mentor. Students' research duties will take place in research labs at UC Santa Cruz or in the field. Students develop questions and conduct their research throughout the summer, culminating in a final research project. Enrollment is by permission of the instructor.

BIOE 198F - Independent Field Study (2)

Provides for two credits of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the coursework off campus. Students submit petition to sponsoring agency.

BIOE 199 - Tutorial (5)

Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency.

BIOE 199F - Tutorial (2)

Two-credit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency.

Graduate

BIOE 200A - Scientific Skills (5)

Exposes graduate students to teaching skills, understanding the scientific method, searching and organizing literature, grant proposal and scientific writing, data management and presentation, and scientific speaking. Students are evaluated on their participation and the quality of a written research proposal.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 200B - Advanced Organismal Biology (5)

Consists of lectures focusing on pivotal topics in ecology and evolution. Relevant background material is developed followed by a critical analysis of readings from the primary literature. Designed to give graduate (and advanced undergraduate) students direct contact with the major areas of research that are currently at the forefront of organismal biology.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 200C - Evolutionary Ecology (5)

Analysis of the ways in which evolution shapes the form and function of organisms including physiology, morphology, and behavior, as well as populations, species, and species interactions across landscapes. (Formerly BIOE 279, Evolutionary Ecology.)

Prerequisite: Enrollment is restricted to graduate students.

BIOE 200D - Foundations in Ecology & Evolutionary Biology (5)

Hones skills in graduate-level analysis and discussion of published research. Explores how to identify and relate your work to influential and “foundational” papers in your field. Examines how to develop a conceptual scaffold for research as a scientist, how to build and apply conceptual advances, and what makes a paper influential or important.

BIOE 203 - Introductory Seminar in Ecology and Evolutionary Biology (3)

Introduction to high-level analysis and discussion of published research papers in theoretical or applied ecology and evolutionary biology. Course consists of weekly meetings with extensive independent work outside of class. Course is required for all first-year graduate students and forms part of the graduate core curriculum. (Formerly offered as BIOE 293, Readings in Ecology and Evolution.)

Prerequisite: Enrollment is restricted to graduate students or by permission of instructor.

BIOE 208 - Marine Ecology (5)

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and BIOE 108.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 215 - Advanced Seminar in Ecology and Evolutionary Biology (3)

Intensive exploration of an advanced topic in theoretical or applied evolutionary biology, ecology, physiology, behavior, or conservation biology. Course consists of weekly meetings with extensive independent work outside of class, resulting in mastery of an area of innovation in the field, or in a comprehensive familiarity with an important body of work. Independent work generally culminates in independent or group projects and products. Course is targeted at students who already have reached a professional level of expertise in their field and advanced master's students. (Formerly offered as BIOE 295, Advanced Ecology and Evolutionary Biology Seminar.)

Prerequisite: Enrollment is restricted to graduate students, except by special permission.

BIOE 238 - Modeling Evolution and Ecology (5)

Introduces students to how mathematical models can be used to ask and answer evolutionary and ecological questions. Methods covered include optimality theory, population genetics, population dynamic models, game theory, and dynamic state-variable models. Students learn to develop their own mathematical models and to use models to make predictions. Statistical methods for combining theory and data are not covered. This class focuses on learning by doing, using in class activities, weekly problem sets and an independent project. Students cannot receive credit for this course and BIOE 138. Enrollment is restricted to graduate students. Enrollment is by permission of the instructor. (Formerly offered as BIOE 248B, Quantitative Methods in Ecology and Evolution.)

BIOE 239 - Mathematical Modeling and Data Science in Ecology and Evolution (5)

Teaches students how to build mathematical models and fit them to data to answer questions in ecology and evolution. Includes learning to write code in the R programming language to simulate models and perform statistical analyses. Topics include: population and evolutionary dynamics; species interactions; and behavior. Students cannot receive credit for this course and BIOE 139. (Formerly BIOE 248A, Quantitative Ecology.)

Prerequisite: Enrollment is restricted to graduate students.

BIOE 245 - Plant Ecology (5)

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and BIOE 145.

Prerequisite: Prerequisite(s): BIOE 107 or ENVS 24 or permission of instructor. Enrollment is restricted to graduate students.

BIOE 245L - Field Methods in Plant Ecology Laboratory (5)

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions), statistical analysis, and scientific writing. One required weekend field trip. Students cannot receive credit for this course and BIOE 145L.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 247 - Community Ecology (5)

Develops the major themes of community ecology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution, and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and BIOE 147.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 258L - Experimental Marine Ecology (5)

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses, (2) the design and implementation of experiments, (3) collection, analysis, and interpretation of data, and (4) the write-up of an oral presentation. Prerequisite(s): BIOE 208; and interview to assess ability to carry out field project.

BIOE 262 - Facilitating Change in Coastal Science Policy (5)

Skills-based course in effective leadership and communication, including stakeholder engagement, facilitation, conflict resolution, team building, and introduction to project management. Communication training includes identifying audiences and objectives (public, philanthropy, policymakers, managers, scientist practitioners) and leveraging non-traditional communication platforms. Enrollment is by application and restricted to graduate students.

BIOE 271 - Disciplinary Communication for Biologists (5)

Writing-intensive course focusing on developing skills in scientific communication, with an emphasis on communicating issues relevant to ecologists and evolutionary biologists. This courses presents the norms and standards of scientific communication spanning multiple genres. Students cannot receive credit for this course and BIOE 171.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 272 - Population Genetics (5)

Basic population genetics and selected topics are covered including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and BIOE 172.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 276 - Data Science for Ecology and Evolutionary Biology (5)

Practical introduction to the computational and statistical skills students in ecology and evolutionary biology need to know for working in our data-filled modern world. Topics include practices for reproducible science, scientific programming in R, and statistical reasoning with ecological and evolutionary data. The course is taught as a flipped classroom with extensive hands-on practice so that students leave with the critical skills to continue on their own. A final project consists of analysis of a real dataset.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 281A - Topics in Basic and Applied Marine Ecology (2)

Seminar focusing on concepts in basic and applied ecology. Structure rotates quarterly between graduate student research and readings of journal articles and textbooks.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281B - Topics in Molecular Evolution (2)

A discussion of current research and literature review on the subject of molecular evolution. Primary focus on recent results on molecular phylogenetics and molecular population genetics.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281C - Topics in Physiological Ecology (2)

An intensive seminar focusing on the interaction between physiological constraint and life history options and solutions employed by animals. Topics vary from comparative physiology to ecological theory. Participants are required to present results of their own research or review papers of interest.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281D - Topics in Global Change Ecology (2)

Focuses on fundamental concepts in global-change ecology, with emphasis on coastal and marine ecosystems and issues of sustainability. The seminar is devoted to reading and evaluating current and classic literature and discussing graduate student research.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 281E - Topics in Freshwater Ecology (2)

Current topics in freshwater ecology, eco-evolutionary dynamics, fisheries, and fish ecology.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission from instructor.

BIOE 281F - Ecological Research Topics (2)

Intensive research and discussions on plant-animal interactions. All students undertake a research project and meet weekly with the faculty sponsor to monitor progress. The group meets weekly to discuss experimental design and analysis, specific problems related to the students' research, relevant research papers, or manuscripts that the group members are writing. Each student gives a formal presentation of research plans or progress each quarter.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281G - Topics in Sexual Selection and Social Behavior (2)

Discussion of current topics, research, and methods in sexual selection and social behavior focusing on theoretical and empirical research and links between evolution and ecology. Students present and discuss their research, read and discuss current and classic literature, or read and discuss methods used in the field.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll by permission of the instructor.

BIOE 281H - Topics in Comparative Marine Physiology (2)

Intensive seminar on selected topics in marine physiology. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281I - Topics in Disease Ecology, Population Biology, and Conservation (2)

Selected topics in population biology and disease ecology. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor.

BIOE 281J - Topics in Evolutionary Genomics (2)

Weekly seminar course centered on reading and discussing selected publications along with peer review of research plans, grant proposals, manuscripts, lectures, and conference presentations. The overarching goal is to support the development and progress of graduate students in the Ecology and Evolutionary Biology Department whose thesis work and interests align with the course topic.

BIOE 281K - Topics in Plant Evolution (2)

Intensive seminar on selected topics in plant evolution. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor.

BIOE 281L - Topics in Behavioral and Evolutionary Ecology (2)

An intensive seminar on selected topics in behavioral and evolutionary ecology. Students are expected to discuss the current literature and present literature reviews, research proposals, and preliminary results from their ongoing research.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281M - Topics in Host-Microbe Population Genomics

Centers on reading and discussion of selected publications along with peer review of research plans, grant proposals, manuscripts, lectures, and conference presentations. The overarching goal is to support the development and progress of graduate students in the Ecology and Evolutionary Biology department whose thesis work and interests align with the course topics. Topics include: Reviewing innovative approaches to the study of host-microbiome interactions; Implementation of novel methods for the study of evolutionary demographics in populations using genomic data; Identifying signatures of selection mediated by pathogens and the environment.

BIOE 281N - Topics in Marine Vertebrate Ecology (2)

Seminar on the ecology of marine vertebrates. Topics vary from the factors that explain the distribution of marine predators to island biogeography and the ecosystem effects of introduced vertebrates on islands.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 281O - Topics in Plant-Water Relations (2)

Intensive seminar focusing on fundamental and evolutionary concepts in plant-water relations. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor.

BIOE 281P - Topics in Plant Population Ecology (2)

An intensive seminar on selected topics in plant ecology and population biology. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission from instructor.

BIOE 281Q - Topics in Molecular Evolutionary Genetics (2)

An intensive seminar on selected topics in molecular evolutionary genetics. Students are required to present results

from their own research projects, present a critical review paper at least once during the quarter, and submit a written research proposal.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduate students may enroll with permission of instructor.

BIOE 281R - Topics in Marine Ecology and Evolutionary Biology (2)

An intensive seminar series focusing on fundamental concepts in marine ecology. Emphasis changes quarter to quarter. At least one quarter per year is devoted to discussion of graduate student research. Other quarters involve reading and evaluating current and classic literature on marine ecology and evolutionary biology.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281S - Topics in Ancient DNA and Paleogenomics (2)

Topics in population genetics and genomics, focusing on work involving paleontological and archaeological material. Students present weekly written and oral reports of their research projects. Once each term, students critique a recent publication.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission from instructor.

BIOE 281T - Topics in Evolutionary Developmental Biology (2)

Centers on reading and discussion of selected publications along with peer review of research plans, grant proposals, manuscripts, lectures, and conference presentations. The overarching goal is to support the development and progress of graduate students in the Ecology and Evolutionary Biology Department whose thesis work and interests align with the course topics. Topics include: reviewing advances in the field of regeneration; applications of novel techniques in functional genomics; and comparative genomics in evolution, development, and regeneration. (Formerly Species Interactions and Coevolution.)

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281U - Topics in Invertebrate Biology (2)

An intensive study about concepts, theory, and techniques for graduate students conducting research on the ecology, genetics, evolution, systematics, or biodiversity of marine invertebrates.

Prerequisite: Enrollment is restricted to graduate students; advanced undergraduates may enroll with permission of instructor.

BIOE 281V - Topics in Behavioral Ecology (2)

A discussion of current topics in behavioral ecology including social information use, conceptual advances in understanding the evolution of animal signaling, and using a mechanistic approach to infer ecological processes from soundscapes.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281W - Topics in Exercise and Environmental Physiology (2)

A weekly seminar discussion on current research and techniques in mammalian exercise and environmental physiology. Areas covered include locomotor physiology, exercise testing and cardiovascular monitoring, and biomechanics. Oral presentation of ongoing research or current literature required from each student.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281X - Topics in Behavioral Ecology of Large Marine Vertebrates (2)

Weekly seminar course centering on reading and discussion of selected publications along with peer review of research plans, grant proposals, manuscripts, lectures, and conference presentations. The overarching goal is to support the development and progress of graduate students in the Ecology and Evolutionary Biology Department whose thesis work and interests align with the course topic (reviewing innovative approaches in marine mammal science, coupling physiological with ecological concepts using integrative tools, identifying ecological and evolutionary context of large marine vertebrate research).

Prerequisite: Enrollment is restricted to ecology and evolutionary biology graduate students; other students may enroll by consent of the instructor.

BIOE 281Y - Topics in Climate Change Biology (2)

This weekly seminar course centers on reading and discussing of selected publications along with peer review of research plans, grant proposals, manuscripts, lectures, and conference presentations. Students support the development and progress of graduate students in the Ecology and Evolutionary Biology Department whose thesis work and interests align with the course topics including: reviewing impacts of extreme climate events, inferring microevolutionary processes from genomic time series, and understanding community composition change in marine ecosystems.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of the instructor.

BIOE 281Z - Conservation Science in a Changing World (2)

Selected readings and guest speakers in conservation, climate science and the ecology of environmental change coupled with peer review of participants' research proposals, grant proposals, manuscripts and scientific presentations.

Prerequisite: Enrollment is restricted to ecology and evolutionary graduate students.

BIOE 286 - Experimental Design and Data Analysis (5)

Focuses on problems and designs in ecology and population biology. Topics include experimental design; exploratory data analysis; hands-on statistics; and graphical theory. Structured around a statistical analysis and graphics program to teach students to design surveys and experiments and analyze data. Previous work in statistics strongly recommended.

Prerequisite: Concurrent enrollment in BIOE 286L is required. Enrollment is restricted to graduate students.

BIOE 286L - Experimental Design and Data Analysis Lab (2)

Lab will focuses on hands-on statistical problem solving, graphical presentations and experimental design issues.

Prerequisite: Concurrent enrollment in BIOE 286 is required. Enrollment is restricted to graduate students.

BIOE 294 - Ecology, Evolutionary Biology Seminar (0)

Selected topics of current interest to ecologists and evolutionary biologists presented by weekly guest speakers.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 297A - Independent Study (5)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOE 297B - Independent Study (10)

Independent study for graduatestudents who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOE 297C - Independent Study (15)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOE 297F - Independent Study (2)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

BIOE 299A - Thesis Research (5)

Students submit petition to sponsoring agency.

BIOE 299B - Thesis Research (10)

Students submit petition to sponsoring agency.

BIOE 299C - Thesis Research (15)

Students submit petition to sponsoring agency.

BIOL - BIOLOGY MOLECULAR CELL AND DEVELOPMENTAL

Lower-Division

BIOL 15 - Undergraduate Research Reports (1)

Undergraduate students who work in faculty research laboratories present the results of their projects. Organized by the Minority Undergraduate Research Program and the Minority Access to Research Careers Program. Designed for students with membership in the above-mentioned programs. Prerequisite(s): qualifications as determined by instructor at first class meeting.

BIOL 20A - Cell and Molecular Biology (5)

Introduction to biochemistry, cell biology, molecular biology, and genetics.

Prerequisite: Prerequisite(s): CHEM 1A, CHEM 3A, or CHEM 4A. First pass enrollment restricted to proposed majors in the following: Biology BA, Biology BS, MCD Biology BS, Neuroscience BS, Ecology and Evolutionary Biology BS, Marine Biology BS, Plant Sciences BS, EEB/ENVS combined BA, Global and Community Health BS, Biochemistry and Molecular Biology BS, Microbiology BS, Science Education BS, Biomolecular Engineering BS, or Biotechnology BA.

BIOL 20L - Experimental Biology Laboratory (2)

Provides biology majors with the theory and practice of experimental biology. A wide range of concepts and techniques used in the modern laboratory are included in the exercises. Designed to satisfy the introductory biology lab requirement of many medical and professional schools.

Prerequisite: Prerequisite(s): BIOL 20A and previous or concurrent enrollment in BIOE 20B.

BIOL 21 - Genetics Preparatory Course (2)

Prepares students for BIOL 105, Introduction to Genetics. Core concepts in Mendelian and molecular genetics aree covered. These include mitosis, meiosis, the chromosome theory of inheritance, complementation, pedigree analysis, replication, and fundamental concepts in molecular biology.

BIOL 25 - Frosh/Soph Seminar in Neuroscience (1)

Overview of the field of neuroscience for students considering the neuroscience major or related academic programs. Talks by neuroscience faculty on research on nervous system function, approaches to understanding behavior, and neurological disorders/disease. Also, overview of

neuroscience careers and UC Santa Cruz's neuroscience major.

Prerequisite: Enrollment is restricted to freshman and sophomore proposed majors in biochemistry and molecular biology, biomolecular engineering and bioinformatics, cognitive science, ecology and evolution, global and community health (B.S.), marine biology, microbiology, molecular cell and developmental biology, neuroscience, biology B.A , biology B.S., biotechnology, or psychology.

BIOL 80A - Female Physiology and Gynecology (5)

Biochemical, medical, social, and clinical aspects of the female body. Emphasis will be on biological-chemical interactions in the female organs. Topics include female anatomy, cell physiology, endocrine functions, sexuality and intimacy, sexually transmitted diseases, puberty, pregnancy, menopause, birth control, abortion, immunity, cancer.

BIOL 80J - Biology of Emerging and Pandemic Diseases (5)

Designed to introduce non-biology majors to the biology of viruses, the human immune system, HIV/AIDS, and emerging viral pandemics. Also explores vaccine technology and viral mediated therapies. Social, political, and economic influences of HIV and other viral pandemics discussed.

BIOL 80N - Nutrition (5)

Provides an in-depth overview of human nutrition, focusing on the science of nutrients, their roles in the body, and the relationship between diet and health. Topics include macronutrients, micronutrients, metabolism, digestion, and the impact of nutrition on disease prevention and overall well-being. Course also coverd food safety, food equity and sustainability. Students gain practical skills for evaluating dietary patterns, understanding nutritional needs, and applying evidence-based practices in health promotion.

BIOL 81B - Global Seminar: Biochemistry of Sport (5)

Helps students connect course content to their career goals and builds knowledge in ways that reflect what is known about biochemistry of sports. Cooperative learning and problem solving is emphasized in lectures. Also seeks to understand complex topics by analyzing medical test results, discussing real-world dilemmas in teams, or reading scientific papers.

BIOL 86 - Research Deconstruction: MCD Biology (3)

Explores scientific principles and logic through research seminars in molecular, cellular, and developmental biology. Additional topics may include diseases, stem cell biology, and other medically relevant areas in biomedical research. Prerequisite(s): Mathematics 3 or equivalent (i.e., mathematics placement examination score), and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to first-year, sophomore, and junior students. Enrollment is by permission of the instructor.

BIOL 88 - Studies in Medicine: Its Art, History, Science, and Philosophy (5)

An interdisciplinary, multicultural, and historical perspective of medicine focused primarily upon therapy and practice to achieve better understanding of the scope, practice, and limits or medicine.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements.

BIOL 81A - Nutrition of Sport (5)

The classroom environment is designed to help students connect course content to their career goals and build knowledge in ways that reflect what is known about nutrition of sports. Cooperative learning and problem solving is emphasized in lectures. Course also seeks to understand complex topics by analyzing medical test results, discussing real-world dilemmas in teams, or reading scientific papers.

Upper-Division

BIOL 100 - Biochemistry (5)

Introduction to biochemistry including biochemical molecules, protein structure and function, membranes, bioenergetics, and regulation of biosynthesis. Provides students with basic essentials of modern biochemistry and the background needed for upper-division biology courses. Students who desire a more in-depth exposure to biochemistry should consider taking the BIOC 100A/BIOC 100B/BIOC 100C series as an alternative. Students cannot receive credit for this course after they have completed the BIOC 100A, BIOC 100B, and BIOC 100C sequence.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B; and CHEM 8B.

BIOL 100K - Introduction to Laboratory Research (2)

Introduction to authentic research in MCD Biology. Students learn a variety of methods and techniques, principles of lab safety and data analysis, how to work effectively in a group and to present their research to an audience. Intended for students new to the university. Prerequisite(s): BIOL 20A and BIOL 20L. May not be taken for credit after a student has received credit for BIOL 101L.

BIOL 100L - Biochemistry Laboratory (5)

Basic techniques and principles of laboratory biochemistry including isolation and characterization of a natural product, manipulation of proteins and nucleic acids to demonstrate basic physical and chemical properties; and characterization of enzyme substrate interactions.

Prerequisite: Prerequisite(s): BIOL 100 or BIOC 100A; BIOL 101L or BIOL 102L; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 100L after receiving credit with a 'C' or better in BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL

115L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 101 - Molecular Biology (5)

Covers the basic molecular mechanism of DNA replication and transcription, protein synthesis, and gene regulation in bacterial and eukaryotic organisms. The experimental techniques used to determine these mechanisms are emphasized.

Prerequisite: Prerequisite(s): BIOL 100. Enrollment is restricted to Biology B.S.; Global and Community Health B.S.; Human Biology B.S.; Molecular, Cell, and Developmental Biology B.S.; and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor.

BIOL 101L - Molecular Biology Laboratory (2)

Laboratory course providing hands-on experience with, and covering conceptual background in, fundamental techniques in molecular biology and biochemistry, including DNA cloning, PCR, restriction digest, gel electrophoresis, protein isolation, protein quantification, protein immunoblot (Western) analysis, and use of online bioinformatics tools.

Prerequisite: Prerequisite(s): BIOL 20L or BIOL 102J or BIOL 107J; and previous or concurrent enrollment in BIOL 101, BIOC 100A & BIOC 100B, or METX 140 is required. Students cannot receive credit for this course and BIOL 102L, BIOL 107L, BIOL 122K, CHEM 160K, or CHEM 161K. Enrollment is restricted to biochemistry and molecular biology; biology B.S.; microbiology; molecular, cell, and developmental biology; and neuroscience majors.

BIOL 102J - Toxic RNA Lab I (5)

Introduction to hypothesis-driven laboratory research. Students will create models of a unique uncharacterized disease causing mutation using site directed mutagenesis. An understanding of introductory molecular biology and genetics required. Students are billed a materials fee. Prerequisite(s): BIOL 20A. Enrollment restricted to biological sciences and affiliated majors with sophomore standing or higher. Enrollment by application and permission of instructor.

BIOL 102L - Toxic RNA Lab II (5)

Introduces hypothesis-driven laboratory research. Students create models of a unique uncharacterized disease causing mutation and determine how it impacts the process of pre-mRNA splicing. An understanding of introductory molecular biology and genetics is required. Students are billed a materials fee.

Prerequisite: Prerequisite(s): BIOL 20A; and BIOL 20L or BIOL 102J. Enrollment is restricted to sophomore, junior, and senior molecular, cell, and developmental biology B.S., Biology B.S., and biochemistry and molecular biology majors. Interested students should add to the waitlist. Application will be required. Inquire with Instructor.

BIOL 103L - Toxic RNA Lab III (5)

Introduces hypothesis-driven laboratory research. Students create models of a unique, uncharacterized, disease-causing mutation and determine how it impacts the process of pre-mRNA splicing. An understanding of introductory molecular biology and genetics is required.

Prerequisite: Prerequisite(s): BIOL 102L and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to sophomores, juniors, and seniors majoring in biology, molecular, cell, and developmental biology and biochemistry and molecular biology. Interested students should add to the waitlist. Application will be required. Inquire with Instructor. Students cannot enroll in BIOL 103L after receiving credit with a 'C' or better in BIOL 100L, BIOL 104B, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 129L, BIOL 121L, BIOL 186L or METX 119L.

BIOL 104A - Human Genetic Variation Laboratory I (5)

This course together with its companion course BIOL104A provide a supportive research immersion experience and training in computational and experimental approaches in cancer genomics. Instruction in cancer biology, genomics, and applications of genomic analysis for precision medicine is provided. Students work on their own projects to identify, visualize and interpret genetic variants that contribute to human cancers. BIOL104A focuses primarily on computational biology research, while BIOL104B focuses on experimental laboratory research.

Prerequisite: Prerequisite(s): BIOL 20L and BIOL 105. Enrollment is restricted to sophomore, junior, and senior molecular, cell, and developmental biology B.S., Biology B.S., and biochemistry and molecular biology majors.Interested students should add to the waitlist. Application will be required. Inquire with instructor.

BIOL 104B - Human Genetic Variation Laboratory II (5)

This course together with its companion course BIOL104A provide a supportive research immersion experience and training in computational and experimental approaches in cancer genomics. Instruction in cancer biology, genomics, and applications of genomic analysis for precision medicine is provided. Students work on their own projects to validate genetic variants found in short-read sequencing data in both DNA and RNA. BIOL104A focuses primarily on computational biology research (identification of variants from short-read sequencing data), while BIOL104B focuses on experimental laboratory research to validate these variants using classical molecular biology approaches. Students work on the same variants for both courses.

Prerequisite: Prerequisite(s): BIOL 104A and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to sophomore, junior, and senior biology B.S. molecular, cell, and developmental biology, and biochemistry and molecular biology majors. Interested students should add to the waitlist. Application will be required. Inquire with Instructor.

BIOL 104L - Introduction to Bioinformatics Lab (2)

Covers the fundamentals of bioinformatics and how to identify a computational solution or tool for a biological question. Studies how large biological data sets are generated, processed, analyzed, and how to generate questions to ask when working collaboratively with a trained bioinformatics colleague. Students gain experience using online and software-based bioinformatic tools and the use of protein modeling software to design testable hypotheses. (Formerly Coronavirus Bioinformatics Lab.)

Prerequisite: Prerequisites: BME 105 or BIOL 105; and BIOC 100A and 100B or BIOL 100; and BIOL 20L or BIOL 101L. It is assumed that students have minimal level exposure to bioinformatic/sequence analysis tools prior to this course. Enrollment is restricted to molecular, cell and developmental biology B.S., others by permission of instructor. Students cannot enroll in BIOL 104L after receiving credit with a "C' or better in BME 110.

BIOL 105 - Genetics (5)

Mendelian and molecular genetics; mechanisms of heredity, mutation, recombination, and gene action.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B.

BIOL 105A - CRISPR Laboratory I (5)

Investigates the groundbreaking CRISPR-Cas technology and its impact on immunology. Students explore the molecular mechanisms of CRISPR-Cas, its use in engineering immune cells for therapy, and the ethical implications. Covers immunology, genomics, and CRISPR targeting for gene function studies in immune cells. Students learn computational biology research relevant to their own project, which will target a novel gene using CRISPR to determine its role in immune responses. This course lays the theoretical foundation and initiates the experimental lab work which will be expanded in BIOL105B. Prerequisite(s): BIOL 20L and BIOL 105. Enrollment is restricted to sophomore, junior, and senior MCDB B.S., BIOL B.S., and BIOC B.S. majors. Enrollment is by instructor permission. Interested students should add to the waitlist. Application will be required. Inquire with instructor.

BIOL 105B - CRISPR Laboratory II (5)

Building on BIOL105A, course provides hands-on experimental research in CRISPR-Cas technology and immunology. Students apply molecular mechanisms to learn about engineering immune cells for therapeutic purposes, consider ethical implications, and use CRISPR targeting to investigate gene function. Students conduct their own project, targeting a novel gene to determine its role in specific immune responses. This course focuses on experimental laboratory research using CRISPR as a genetic engineering tool. Prerequisite(s): BIOL 105A and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to sophomore, junior, and senior biology B.S. molecular, cell, and developmental biology, and biochemistry and molecular biology majors. Enrollment is by instructor permission. Interested students should add to the waitlist. Application will be required. Inquire with instructor.

BIOL 105L - Eukaryotic Genetics Laboratory (5)

Classical and newly developed molecular-genetic techniques used to explore genetic variation in wild populations of the fruit fly Drosophila melanogaster. Topics include Mendelian fundamentals, mapping, design of genetic screens, bio-informatic and database analysis, genetic enhancers, and population genetics.

Prerequisite: Prerequisite(s): BIOL 100 or BIOC 100A; BIOL 101L or BIOL 102L; BIOL 105; and satisfaction of the Entry Level Writing and Composition Requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students may not enroll in BIOL 105L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 106L - Eukaryotic Genetic Engineering (5)

Lab course focusing on teaching students specific molecular genetic methods such as Phenotype analysis, Cloning, PCR, Expression analysis, CRISPR/Cas9-based Gene insertions, Protein Blots, etc., for the genetic manipulation of model organisms.

Prerequisite: Prerequisite(s): BIOL 100 or BIOC 100A; BIOL 101L or BIOL 102L; BIOL 105; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S. ; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 106L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 107J - Synthetic Gene Regulation Lab I (5)

Goal-driven research laboratory. Students collectively formulate a goal and design experiments to achieve their objectives. Students develop molecular tools and use these and other methods to investigate various aspects of gene silencing in eukaryotes. An understanding of introductory molecular biology is required. Prerequisites: CHEM 1B and BIOL 20A. Students who have taken BIOL 102J or BIOL 20L cannot enroll in BIOL 107J. Completion of BIOL 107J is required to enroll in BIOL 107L. Enrollment is by permission and is restricted to sophomores, juniors, and seniors.

BIOL 107L - Synthetic Gene Regulation Lab II (5)

The Synthetic Gene regulation course is a goal-oriented research laboratory. Students are given a project and discuss and design experiments to reach that aim. Students develop molecular tools and use these and other methods to investigate various aspects of gene silencing in eukaryotes. An

understanding of introductory biology and genetics is required. Prerequisite(s): BIOL 107J. Completion of BIOL 107L is necessary to enroll in BIOL 108L. Enrollment is by permission of the instructor and is restricted to sophomore, junior, and senior biology B.S., molecular, cell, and developmental biology, biochemistry and molecular biology majors and proposed majors.

BIOL 108L - Synthetic Gene Regulation Lab III (5)

The Synthetic Gene regulation course is a goal-oriented research laboratory. Students are given a project and discuss and design experiments to reach that aim. Students develop molecular tools and use these and other methods to investigate various aspects of gene silencing in eukaryotes. An understanding of introductory biology and genetics is required. Interested students should add to the waitlist. Application is required. Inquire with Instructor.

Prerequisite: Prerequisite(s): BIOL 107L and satisfaction of the Entry Level Writing and Composition is required. Students cannot enroll in BIOL 108L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 104B, BIOL 105L, BIOL 106L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 186L and METX 119L.

BIOL 109L - Yeast Molecular Genetics Laboratory (5)

Using budding yeast as a eukaryotic model organism, this laboratory provides practical experience in classic and modern molecular biology techniques and experimental genetic and epigenetic methods, alongside developing strong scientific analysis, interpretation and communication skills. Topics include mendelian genetics, linkage, gene replacement, chromatin immunoprecipitation and gene function assays.

Prerequisite: Prerequisite(s): BIOL 100 and BIOL 101; or BIOC 100A and BIOC 100B; and BIOL 101L or BIOL 102L or BIOL 107L; and BIOL 105. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 109L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L, and METX 119L.

BIOL 110 - Cell Biology (5)

Covers the structure, organization, and function of eukaryotic cells. Topics include biological membranes, organelles, protein and vesicular trafficking, cellular interactions, the cytoskeleton, and signal transduction. Requires a good understanding of basic biochemistry and molecular biology.

Prerequisite: Prerequisite(s): BIOL 100 and BIOL 101, or BIOC 100A and BIOC 100B; and BIOL 105; and BIOL 101L or BIOL 102L or BIOL 107L or BIOL 122K or CHEM 160K or CHEM 161K or BIOL 20L. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Global and Community Health B.S. (Biomedical concentration); Molecular, Cell and Developmental Biology, Human Biology, and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor.

BIOL 111A - Immunology I (5)

Principles and concepts of the innate and adaptive immune systems, with emphasis on mechanisms of action and molecular and cellular networks. The development, differentiation, and maturation of cells of the immune system are also discussed.

Prerequisite: Prerequisite(s): courses BIOE 20B, BIOL 20A, BIOL 105, and BIOL 110.

BIOL 111B - Immunology II (5)

The immune system in health and disease, including failures of host immune-defense mechanisms, allergy and hypersensitivity, autoimmunity, transplantation biology, the immune response to tumors, immune-system interactions with pathogens, and manipulation of the immune response.

Prerequisite: Prerequisite(s): BIOL 111A.

BIOL 112 - Principles of Virology (5)

Introduces students to basic principles of virology, including viral replication, transmission, and pathogenesis. Students apply knowledge of these basic principles to the development of interventions to prevent viral outbreaks and reduce the burden of viral disease. Formerly offered as Virology.

Prerequisite: Prerequisite(s): BIOL 110.

BIOL 113 - Principles of Epidemiology (5)

Epidemiology is the study of the distribution and determinants of health and disease across human populations; it is the basic science of public health. This course introduces students to the principles and methodologies of public health epidemiology. Students read, analyze, and discuss epidemiological data. This course is intended for undergraduate students majoring in global and community health.

Prerequisite: Prerequisite(s): STAT 5, or STAT 7 and STAT 7L.

BIOL 114 - Cancer Cell Biology (5)

Focuses on the molecular and cellular mechanisms behind cancer. Topics covered include oncogenes, tumor suppressor genes, cell growth genes, checkpoint genes, telomeres, and apoptosis. Students will gain experience in reading the primary scientific literature.

Prerequisite: Prerequisite(s): BIOL 110.

BIOL 115 - Eukaryotic Molecular Biology (5)

Covers eukaryotic gene and genome organization; DNA, RNA, and protein synthesis; regulation of gene expression;

chromosome structure and organization; and the application of recombinant DNA technology to the study of these topics.

Prerequisite: Prerequisite(s): BIOL 101 or BIOC 100A; and BIOL 105; and BIOL 101L or BIOL 102L or BIOL 107L or BIOL 122K or CHEM 160K or CHEM 161K. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor.

BIOL 115L - Eukaryotic Molecular Biology Laboratory (5)

A laboratory designed to provide students with direct training in basic molecular techniques. Each laboratory is a separate module which together builds to allow cloning, isolation, and identification of a nucleic acid sequence from scratch. Students are billed a materials fee of $160.

Prerequisite: Prerequisite(s): BIOL 100 and 101; or BIOC 100A and 100B; and BIOL 101L or BIOL 102L or BIOL 107L; and satisfaction of the Entry Level Writing and Composition Requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 115L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 117 - Global Health and Neglected Diseases (5)

Neglected tropical diseases afflict more than 1 billion of the poorest individuals on the planet. Course covers the molecular basis and pathology of the most prevalent neglected diseases and emerging strategies to combat these diseases.

Prerequisite: Prerequisite(s): BIOL 110. Enrollment is restricted to senior human biology, molecular, cell, and developmental biology, and neuroscience majors. Other majors by permission of instructor.

BIOL 118 - Principles of Human Genetics (5)

Overview of human and medical genetics covering the molecular basis of genetic disease, quantitative methodologies utilized in calculation of genetic risk, and genetic testing and counseling. Includes discussion of ethical issues in genetics and genomic medicine.

Prerequisite: Prerequisite(s): STAT 5, or STAT 7 and STAT 7L; BIOL 105 or BME 105; and BIOL 101 or BIOL 115. Enrollment is restricted to biology B.S.; human biology; neuroscience; and molecular, cell, and developmental biology majors. Other students may enroll with instructor permission.

BIOL 120 - Developmental Biology (5)

A description and analysis of selected developmental events in the life cycle of animals. Experimental approaches to understanding mechanisms are emphasized.

Prerequisite: Prerequisite(s): BIOL 110.

BIOL 120L - Development Laboratory (5)

Experimental studies of animal development using a variety of locally obtainable organisms. Approximately eight hours weekly, but it will often be necessary to monitor continuing experiments throughout the week.

Prerequisite: Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 101L or BIOL 102L; satisfaction of the Entry Level Writing and Composition requirements. Previous or concurrent enrollment in BIOL 120 is required. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 120L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 121L, BIOL 129L, BIOL 186L, and METX 119L.

BIOL 121L - Environmental Phage Biology Laboratory (5)

Introduction to hypothesis-driven laboratory research. Students isolate a unique bacteriophage and characterize its structure and genome. An understanding of molecular biology and basic genetics is required. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 101L or BIOL 102L; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Enrollment is by application and permission of instructor. Students are billed a materials fee of $170. Students cannot enroll in BIOL 121L after receiving credit with a "C" or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 122K - Phage Biology Lab I (5)

Hypothesis-driven research laboratory. Students isolate a unique bacteriophage from the environment and characterize its structure using electron microscopy and genome by restriction digest analysis. Students develop wet lab skills and use these skills and other methods to investigate various aspects of bacteriophage. An understanding of introductory molecular biology is required. Note that completion of this course, BIOL122K, is necessary to enroll in BIOL122L. Enrollment is by permission of the instructor. Prerequisite(s): CHEM1B, CHEM 3A, or CHEM 4A; and BIOL20A, BIOL20L, BIOL86. Enrollment is restricted to biology; biochemistry and molecular biology; and molecular, cell, and developmental biology majors. Students with credit for BIOL121L may not enroll in this course.

Prerequisite: Prerequisite(s): CHEM1B, BIOL20A, BIOL20L, and BIOL86. Enrollment is by permission of the instructor. Enrollment is restricted to biology; biochemistry and molecular biology; and molecular, cell, and developmental biology majors. Students with credit for BIOL121L may not enroll in this course.

BIOL 122L - Phage Biology Lab II (5)

Hypothesis-driven research laboratory. Students amplify unique genes from a bacteriophage genome and complete gene-function exploration, Students also develop wet lab skills including PCR, Tet expression plasmids, and immunity screens and use these skills and other methods to investigate various aspects of bacteriophage gene function. An understanding of introductory molecular biology is required. Students are billed a materials fee.

Prerequisite: Prerequisite(s): BIOL122K. Enrollment is restricted to biology, biochemistry and molecular biology; and molecular, cell, and developmental biology majors. Interested students should add to the waitlist. Application will be required. Inquire with instructor.

BIOL 124 - Optical Imaging for Biological Research (3)

Covers the theory and application of light microscopy in a non-mathematical way. Course starts with basic optics, introduces the working principles of various microscopes, and discusses recent innovations in imaging techniques with an emphasis on neuroscience applications.

Prerequisite: Prerequisite(s): PHYS 5B or PHYS 6B; and BIOL 110.

BIOL 125 - Introduction to Neuroscience (5)

The structure and function of the nervous system. Topics include elementary electrical principles, biophysics and physiology of single nerve and muscle cells, signal transduction at synapses, development of the nervous system, and neural basis of behavior. Requires a good understanding of basic biochemistry, cell biology, and molecular biology.

Prerequisite: Prerequisite(s): BIOL 20A, and BIOE 20B; and BIOL 100, or BIOC 100A and BIOC 100B.

BIOL 126 - Neural Plasticity and Cognitive Neuroscience (5)

Focuses on the dynamic aspect of the nervous system and how it subserves various cognitive functions. Starting with synaptic plasticity, students explore the neural circuit mechanisms underlying various cognitive functions and how they go astray in neurological disorders. Students cannot receive credit for this course and BIOL 226. (Formerly Advanced Molecular Neuroscience.)

Prerequisite: Prerequisite(s): BIOL 125. Enrollment is restricted to neuroscience majors and proposed majors.

BIOL 127 - Mechanisms of Neurodegenerative Disease (5)

Focuses on cellular and molecular processes that underlie neurodegenerative diseases. Includes lectures, student oral presentations, discussions, a term paper, and exams.

Prerequisite: Prerequisite(s): BIOL 110.

BIOL 128 - Developmental Neurobiology (5)

Covers the principles of nervous-system development from the molecular control of development, cell-cell interactions, to the role of experience in influencing brain structure and function. Students cannot receive credit for this course and BIOL 228.

Prerequisite: Prerequisite(s): BIOL 105 and BIOL 125. Enrollment is restricted to Neuroscience B.S. majors; other majors may enroll with the permission of the instructor.

BIOL 129A - Advanced Topics in System Neuroscience (5)

Covers the principles and applications of a wide spectrum of modern approaches in systems neuroscience. Students read and analyze the original literature describing these techniques and exemplary works that utilize the techniques to address important neurobiological questions.

Prerequisite: Prerequisite(s): BIOL 126, BIOL 129L; students cannot enroll in BIOL 129A after receiving credit with a 'C' or better in BIOL 129B. Enrollment is restricted to seniors and graduate students.

BIOL 129B - Advanced Topics in Developmental Neurobiology (5)

Covers current research topics and methods in the field of developmental neurobiology. Students read, analyze, and discuss original research articles related to the development of the nervous system. Intended for upper-level undergraduate students majoring in neuroscience.

Prerequisite: Prerequisite(s): BIOL 105, BIOL 125 and BIOL 128; students cannot enroll in BIOL 129B after receiving credit with a 'C' or better in BIOL 129A. Enrollment is restricted to seniors.

BIOL 129C - Advanced Topics in Nervous System Disorders (5)

Provides a basic introduction to the fundamental aspects of common diseases affecting the central nervous system and current methods used to treat them. Students read, analyze, and discuss original research articles related to nervous system disorders. To facilitate in-class discussion and presentation, enrollment is limited to 30 students.

Prerequisite: Prerequisite(s): BIOL 125; students cannot enroll in BIOL 129C after receiving credit with a 'C' or better in BIOL 129A or BIOL 129B. Enrollment is restricted to seniors majoring in neuroscience.

BIOL 129L - Neurobiology Lab (5)

Laboratory course giving students experience with electrophysiological, molecular, microscopic, and behavioral techniques used to analyze the function of nervous systems. Students gain experience with collecting and analyzing neurobiological data and presenting their results in written, oral, and visual presentation formats. Students also learn to critically read and analyze primary literature in neurobiology and to use the knowledge they gain to develop their own research proposal. Restricted to Neuroscience B.S. majors during first pass enrollment and Neuroscience B.S., MCD Biology B.S. and Biology B.S. majors during second pass enrollment.

Prerequisite: Prerequisite(s): either BIOL 100 and BIOL 101; or BIOC 100A and BIOC 100B; and BIOL 125; and STAT 5 or STAT 7 and STAT 7L. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 129L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 186L and METX 119L.

BIOL 130 - Human Physiology (5)

Function, organization, and regulation of the major organ systems of humans, with emphasis on integration among systems. Students cannot receive credit for this course and BIOE 131.

Prerequisite: Prerequisite(s): BIOL 110.

BIOL 130L - Human Physiology Laboratory (2)

Examines fundamental principles of systemic physiology focusing on the human. Students cannot receive credit for this course and BIOE 131L.

Prerequisite: Prerequisite(s): BIOL 110; BIOL 20L or BIOL 102J; and previous or concurrent enrollment in BIOL 130 is required.Satisfaction of Entry Level Writing and Composition requirements. Enrollment is restricted to biological sciences and affiliated majors; biology minors; other majors by permission.

BIOL 140 - The RNA World (5)

This active-learning course explores the origins, evolution, and functions of ribonucleic acid (RNA), including ribozymes, ribosomes, IRNAs, spliceosomes, riboswitches, messenger RNA, microRNAs, snRNAs, snoRNAs, and other guide RNAs, CRISPR, long noncoding RNAs, retrotransposons, and RNA viruses.

Prerequisite: Prerequisite(s): BIOL 105 or BME 105, and BIOL 101.

BIOL 186F - Undergraduate Research in MCD Biology (2)

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are also discussed. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 102J; and previous completion of the Disciplinary Communication requirement. Each enrolled student must have a committed MCD faculty sponsor by the first class meeting. Enrollment is restricted to biology and affiliated majors.

BIOL 186L - Undergraduate Research in MCD Biology (5)

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are also discussed. Prerequisite(s): Entry Level Writing and Composition requirements; BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 102J. Each enrolled student must have a committed MCD faculty sponsor by the first class meeting. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 186L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 129L, or METX 119L.

BIOL 186R - Undergraduate Research in MCD Biology (5)

Supervised undergraduate research in the laboratory of an MCD biology faculty member accompanied by weekly lectures on practical scientific issues. Topics include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; ethics and scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are discussed. Students cannot receive credit for this course and course 186L. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 102J; and previous completion of the Disciplinary Communication requirement. Each enrolled student must have a committed MCD faculty sponsor by the first class. Enrollment is restricted to MCD Biology-affiliated majors.

BIOL 188 - A Life in Medicine (3)

Students explore healthcare from the perspectives of both clinicians and patients. The class focuses on medicine's cognitive, emotional, and spiritual elements, with the goal of understanding the rewards and costs of healthcare practice.

Prerequisite: Enrollment is restricted to global and community health B.A., global and community health B.S., and human biology B.S. majors; other students may be admitted with the permission of instructor.

BIOL 189 - Health Sciences Internship (3)

Structured off-campus learning experience providing experience and pre-professional mentoring in a variety of health-related settings. Interns are trained and supervised by a professional at their placement and receive academic guidance from their faculty sponsor. Students spend 8 hours per week at their placement, participate in required class meetings on campus, and keep a reflective journal. Enrollment is by application. Students interview with health sciences internship coordinator; applications are due one quarter in advance to the Health Sciences Internship Office. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to global and community health B.S. and human biology majors.

BIOL 189W - Disciplinary Communication: Human Biology (3)

Writing-intensive course offered in conjunction with the health sciences internship. Weekly class meetings include academic guidance and mentoring as well as discussion of the mechanisms and conventions of academic writing about heath and health care. Students complete multiple writing assignments, culminating in a term paper in the format of a scholarly article. Enrollment is by application. Students interview with the health-sciences internship coordinator; applications are due one quarter in advance to the Health Care Sciences Internship Office. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Previous or concurrent enrollment in course 189 is required. Enrollment is restricted to human biology majors.

BIOL 195 - Senior Thesis Research (5)

An individually supervised course, with emphasis on independent research, to culminate in a senior thesis. Students submit petition to sponsoring agency.

BIOL 198 - Independent Field Study (5)

Provides for individual programs of study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the coursework off campus. With permission of the department, may be repeated for credit, or two or three courses taken concurrently. Students submit petition to sponsoring agency.

BIOL 198F - Independent Field Study (2)

Provides for two credits of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the coursework off campus. Students submit petition to sponsoring agency.

BIOL 199 - Tutorial (5)

Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency.

BIOL 199F - Tutorial (2)

Two-credit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency.

Graduate

BIOL 200A - Critical Analysis of Scientific Literature (5)

Development of critical thinking skills via discussion of research articles on a broad range of topics. Prepares students to critically evaluate research publications, and improves their ability to organize effective oral presentations and to evaluate the oral presentations of other scientists.

Prerequisite: Enrollment is restricted to graduate students in MCD biology, or by permission of instructor.

BIOL 200B - Advanced Molecular Biology (5)

An in-depth coverage of the structure, function, and synthesis of DNA, RNA, and proteins. Discussion of the roles of macromolecules in the regulation of information in the cell.

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students.

BIOL 200C - Advanced Cell Biology (5)

An in-depth coverage of topics in cellular and subcellular organization, structure, and function in plants and animals. Emphasis on current research problems.

Prerequisite: Prerequisite(s): BIOL 200B. Enrollment is restricted to graduate students.

BIOL 200D - Developmental Biology (5)

Key topics in developmental biology, including developmental genetics, epigenetics, stem cell biology, and developmental neurobiology. Lectures are accompanied by critical analysis and discussion of recent publications.

Prerequisite: Enrollment is restricted to graduate students in MCD biology, or by permission of instructor.

BIOL 200E - Experimental Design (3)

A multidisciplinary course that focuses on topics to consider when tackling biomedical research questions experimentally. Lectures highlight important issues to take into account, are coupled with group discussions and intensive analysis of primary literature, and involve case studies to practically demonstrate how how these considerations might be implemented.

Prerequisite: Concurrent enrollment in BIOL 200A is required.

BIOL 200F - Logic and Approaches to Scientific Discovery (5)

Multidisciplinary course with an emphasis on discussion of approaches and methods involved in the study of biological questions. Lectures focus on current gaps in our knowledge of topics and approaches to test models and hypotheses. Course focuses on current topics in RNA and DNA molecular biology, cell biology, developmental biology, stem cells, neurobiology, and genomics. Lectures coupled with small group discussions and written assignments.

Prerequisite: Prerequisite(s): BIOL 200A or METX 200 or CHEM 200A or BME 205. Enrollment is restricted to graduate students.

BIOL 201 - RNA Processing (5)

An advanced graduate-level course on biological aspects of RNA function and processing in eukaryotes. Lectures and discussions will be developed using the current literature.

Prerequisite: Prerequisite(s): BIOL 200B or permission of instructor. Enrollment is restricted to graduate students.

BIOL 203 - Ribosomes and Translation (5)

Covers the field of ribosome research in depth, including the structure and function of ribosomes and the molecular mechanisms of protein synthesis. Begins with historical review of the ribosome field and proceeds to the most recent findings. Focus is on central questions: (1) How is the accuracy of the aminoacyl-tRNA selection determined? (2) What is accommodation? (3) What is the mechanism of peptide bond formation (peptidyl transferase)? (4) What is the mechanism of translocation? (5) What are the mechanistic roles of the ribosome and translation factor EF-G in translocation? (6) To what extent is the mechanism of translation determined by RNA? (7) Why is RNA so well suited for the ribosome? (8) How did translation evolve from an RNA world?

Prerequisite: Prerequisite(s): BIOC 100A, BIOL 200B or permission of instructor. Enrollment is restricted to graduate students.

BIOL 204 - Chromatin (5)

Eukaryotic DNA is complexed with histones to form chromatin. This course focuses on the ways in which chromatin influences and is manipulated to regulate gene expression

Prerequisite: Prerequisite(s): BIOL 105 and BIOL 115; undergrads by permission of instructor. Enrollment is restricted to graduate students.

BIOL 205 - Epigenetics (5)

In-depth coverage of epigenetics focusing on how alterations in chromatin structure and DNA methylation establish and maintain heritable states of gene expression. Lectures are supplemented with critical discussion of recent publications.

Prerequisite: Prerequisite(s): BIOL 105 and BIOL 115, or permission of instructor. Enrollment is restricted to graduate students.

BIOL 206 - Introduction to Stem Cell Biology (5)

Fundamental concepts, experimental approaches, and current advances in stem cell biology, with consideration of key ethical issues. Topics include: self-renewal and differentiation; the microenvironment; epigenetics; cell-cycle regulation; and how basic research translates to medical therapeutics. Ethical, moral, and political issues surrounding stem cell research are discussed with lectures from philosophy and other relevant disciplines.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 206L - Current Protocols in Stem Cell Biology (5)

Provides students with hands-on experience in embryonic stem cell culture methods.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor.

BIOL 208 - Cellular Signaling Mechanisms (5)

All eukaryotic cells utilize intricate signaling pathways to control such diverse events as cell-cell communication, cell division, and changes in cell morphology. This course covers the molecular basis of these cellular signaling pathways, focusing on the most current research.

Prerequisite: Prerequisite(s): BIOL 105, BIOL 110, and BIOL 115. Enrollment is restricted to seniors and graduate students.

BIOL 214 - Advances in Cancer Biology (5)

Provides students with knowledge of the latest concepts in cancer biology and cancer therapeutics, and a general appreciation of the rapid advances being made in this area of biomedicine.

Prerequisite: Prerequisite(s): BIOL 200B or by permission of instructor. Enrollment is restricted to graduate students.

BIOL 215 - Applied Statistics for Molecular, Cell, and Developmental Biology (5)

For experimental biologists: focuses on resolving practical statistical issues typically encountered in molecular, cellular, and developmental biology lab research. No prior experience in statistics or programming is necessary.

Prerequisite: Enrollment is restricted to graduate students in molecular, cellular, and developmental biology.

BIOL 217 - Influence of Environment and Experience on Brain Development (5)

How environmental factors (animals' experiences, environmental toxins, etc.) affect the formation of neuronal circuits and brain function. Lectures and discussions use current literature.

Prerequisite: Prerequisite(s): BIOL 200A, BIOL 200B, BIOL 200C, and BIOL 200D, or by permission of the instructor. Enrollment is restricted to graduate students.

BIOL 218 - CRISPR/Cas Technologies (5)

Provides an overview of the continually emerging roles for CRISPR in biomedical research. Topics will include an overview of the CRISPR genome defense systems in bacteria, the mechanisms of DNA cleavage and repair, the many uses of CRISPR as a genome editing tool in model organisms, and discussions on the ethical use of the technology in precision medicine.

Prerequisite: Prerequisite(s): BIOL 200A, BIOL 200B, and BIOL 200C. Enrollment restricted to graduate students.

BIOL 220 - STEM Outreach (2)

Trains students how to plan, design, and develop STEM outreach programs. Outreach proposals focused on engaging communities from under-represented backgrounds.

BIOL 226 - Advanced Molecular Neuroscience (5)

Basis of neural behavior at the cellular, molecular and system levels. First half of course focuses on cellular, molecular, and

developmental aspects of the nervous system and covers two sensory systems: olfaction and auditory. Last half of course concerns higher-level functions of the nervous system, such as processing and integrating information. Discusses human diseases and disorders. Students cannot receive credit for this course and BIOL 126.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 228 - Developmental Neurobiology (5)

Covers the principles of nervous-system development from the molecular control of development, and cell-cell interactions, to the role of experience in influencing brain structure and function. Students cannot receive credit for this course and course 128. Enrollment is restricted to graduate students and by permission of the instructor.

BIOL 230 - Grant Writing in the Biomedical Sciences (5)

Introduction to the fundamentals of grant writing in biomedical research, including best practices for presentation of data and communication of research findings. Participants write and peer-edit most components of the NIH Ruth Kirschstein F31/F32 pre- or post-doctoral fellowship.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 247 - Stem Cell Research: Scientific, Ethical, Social, and Legal Issues (2)

Investigates the scientific, ethical, social, and legal dimensions of human embryonic stem-cell research, including the moral status of the embryo; the concept of respect for life; ethical constraints on oocyte procurement; creation of embryonic chimeras; federal policies; and political realities. (Also offered as Biomolecular Engineering 247. Students cannot receive credit for both courses.) Prerequisite(s): Course in stem cell biology (ex: BME 278 Stem Cell Research) or the equivalent knowledge. Enrollment is restricted to graduate students.

Prerequisite: Prerequisite(s): Course in stem cell biology (ex: BME 278 Stem Cell Research) or the equivalent knowledge. Enrollment is restricted to graduate students.

BIOL 280A - Topics in Research on Molecular Genetics of Yeast (2)

Intensive research seminar on the structure and function of the gene expression machinery in the simple eukaryote *Saccharomyces cervisiae* and its relationship to the human gene expression machinery.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with approval of instructor.

BIOL 280B - Chromatin Structure and Transcriptional Regulation (2)

Weekly seminar on structure and gene regulatory function of chromatin. Discusses research of participants and relevant scientific literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280C - Mammalian Brain Development (2)

Seminar covers research into the development of the mammalian brain.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280D - Muscle Biology and Gene Regulation (2)

Weekly seminar and group discussion on current topics in the study of muscle biology and gene regulation as it relates to transcriptional dynamics. Students present, review, and discuss relevant research pertaining but not limited to muscle development, epigenetics, and skeletal muscle adaptation. In addition to presenting and discussing published research, students present their own independent research and receive feedback from the instructor and other students.

Prerequisite: Enrollment is restricted to molecular, cell, and developmental biology graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280E - Meiotic Chromosome Dynamics (2)

Intensive course on the molecular mechanisms underlying homolog pairing, synapses, and recombination; and how they are regulated, coordinated, and monitored to ensure accurate meiotic chromosome segregation.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280F - Development of Vertebrate Neural Connections (2)

Intensive research seminar on molecular mechanisms by which neural connections are established during mouse development. Special focus on topographic maps and role of Eph receptors and ephrins in this process.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280G - Molecular Mechanisms of Behavioral Development and Evolution (2)

Weekly seminar and group discussion on current topics in the study of birdsong neurobiology and the development and evolution of the nervous system generally. Students present, review, and discuss relevant research pertaining but not limited to birdsong molecular and systems neurobiology, developmental gene regulatory mechanisms in the brain, and comparative neurobiology. In addition to presenting and discussing published research, students present their own independent research and receive feedback from the instructor and other students.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280H - Topics on Research into Chromatin and Transcription (2)

Seminar covering research into the effects of chromatin on transcription in yeast.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280I - Epigenetic Gene Silencing and Insulators (2)

Intensive course on molecular mechanisms by which insulator elements regulate epigenetic gene silencing.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280J - Structures of Macromolecular Complexes (2)

Focuses on structure and function of the spliceosome using electron microscopy and x-ray crystallography. Participants present results from their own research and relevant journal articles.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280K - Topics in Cell Cycle Research (2)

An intensive seminar focusing on current research on the molecular mechanisms that control cell division. Participants are required to present results of their own research or to review journal articles of interest.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280L - Development (2)

Seminar covering research into breast development and cancer.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 280M - Post-Transcriptional Control of Mammalian Gene Expression (2)

Intensive course on the molecular mechanisms by which RNA binding proteins regulate gene expression.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with the permission of the instructor.

BIOL 280N - Long Noncoding RNA and the Immune System (2)

Weekly seminar discussion of the current research and literature concerning the functions for long noncoding RNA in gene regulation within inflammatory signaling pathways.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of the instructor.

BIOL 280O - Cell type specific computations in neural circuits (2)

Introduces students to classic and current research in the area of systems neuroscience with specific focus on how different neural cell types shape the computations that are performed in neural circuits. Each week, a different student or the instructor will give a presentation and/or lead a discussion on a topic of their choosing. These topics can be the student's research project, a classic or current neuroscience journal article, or a tutorial on a new method. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280P - Quality Control in Gene Expression (2)

Intensive, discussion-based course concerning ongoing research in quality control and gene expression via analysis of published and unpublished observations and theories.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 280Q - Telomeres and Telomerase (2)

Weekly seminar and group discussion on current topics telomerase and telomere length regulation. Students present, review, and discuss relevant research on telomerase, regulation of telomere length equilibrium, analysis of telomere length data. In addition to presenting and discussing published research, students present their own independent research and receive feedback from the instructor and other members of the laboratory. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280R - Gene regulation in C. elegans and human parasitic namtodes (2)

Intense weekly seminar on the mechanisms of gene regulation, focusing on C. elegans and human parasitic nematodes.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with the permission of the instructor.

BIOL 280S - Stem Cell Genomics and Neurodevelopment (2)

Weekly seminar and group discussion on current topics related to the role of human genome variants, including retrotransposons and segmental duplications, on gene regulation and human brain development and disease. Students present, review, and discuss research pertaining, but not limited, to the evolution of retrotransposons and KZNF proteins and their effect on early embryonic gene regulatory programs as well as the development and characterization of pluripotent stem cell-derived brain organoid models. In addition to presenting and discussing published research, students also present their own independent research and

receive feedback from the instructor and other class participants.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280T - Cancer Stem Cell Biology (2)

Intensive, discussion-based course covering recent published and unpublished research in mechanisms regulating cancer stem cells and metastasis in breast cancer and their relationship with normal stem cells. Students also present their own research and solicit feedback from students and instructors. May be repeated for credit. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280U - Discussions on the Development of the <I>Drosophila</I> Embryo (2)

Involves a two-hour weekly meeting in which the students discuss topics concerning the cell cycle, early embryonic development, and the cytoskeleton. These discussions critically evaluate ongoing research in this area. Material is drawn from student research and recently published journal articles. Students are also expected to meet individually with the instructor two hours weekly. In addition to a three–five page research proposal, each student gives two one-hour oral presentations.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280V - Translational pediatric genomics (2)

Weekly discussion of the current research and literature on translational pediatric genomics. Specific patient cases may be discussed.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of the instructor.

BIOL 280W - Development, Connectivity, and Genetic Identity of Neural Circuits (2)

This seminar course will cover the current topics and progress of neuroscience research on neural circuit development, connectivity, function and genetics. (Formerly Membrane Proteins.)

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280X - RNA-mediated epigenetic inheritance (2)

Intensive research seminar about epigenetic inheritance and the role of small non-coding RNAs in the intergenerational inheritance of paternal environmental effects. Participants present their research results and report on related journal articles.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of the instructor.

BIOL 280Y - Activity-Dependent Synaptic Plasticity (2)

Research seminar covering the regulation of synaptic plasticity in the mammalian nervous system, focusing on how the activity regulates the structural and functional dynamics of synapses.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280Z - Prostate Development and Cancer Biology (2)

Weekly research seminar covering gene regulation, cellular interactions, and stem cell behaviors in mammalian prostate development and prostate cancer progression.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by the permission of the instructor.

BIOL 281A - Host Responses to Respiratory Viral Infections (2)

Weekly seminar and discussion of current research and literature concerning mechanisms by which the host immune response determines the severity of disease following a respiratory viral infection. Enrollment is limited to 10.

Prerequisite: Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 281B - Mucosal Immunology and Microbiology (2)

Weekly seminar covering current research and literature concerning the gut barrier and microbes, with particular emphasis on enteric viruses. Enrollment is limited to 10.

Prerequisite: Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 281C - Lentiviral Replication (2)

Weekly seminar and discussion on current research and literature related to lentiviral replication, evolution, and cross-species transmission as it relates to the host DNA damage response and antiviral innate immunity. Participants present their research results, report on relevant journal articles, and actively engage in group discussions on the topics.

Prerequisite: Enrollment is restricted to molecular, cell, and developmental biology graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 288 - Pedagogy in STEM (2)

Prepares graduate students to help teach university science courses. Weekly class sessions include activities and interactive discussions of diverse modes of learning, diverse ways of teaching, peer instruction, assessment of learning,

equity and inclusion, and professional ethics. Students also visit an active learning class and an active learning discussion section at UCSC, then write evaluations of the teaching strategies used in those classes. (Formerly Teaching Assistant Training.)

Prerequisite: Enrollment is restricted to graduate students.

BIOL 289 - Practice of Science (5)

Examination of ethical and practical scientific issues, including the collection and treatment of data, attribution of credit, plagiarism, fraud, and peer review. Career issues, including how to apply for grants and positions in industry or academia, will be discussed.

Prerequisite: Prerequisite(s): BIOL 200A or permission of instructor. Enrollment is restricted to graduate students; undergraduates may enroll with permission of the instructor.

BIOL 290 - Career Planning (2)

An important goal of graduate programs is to train students for diverse careers. Exposes molecular cell and developmental biology graduate students to diverse career options and helps them develop individual development plans to target their graduate training to their selected career goals.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 291 - Molecular, Cellular, and Developmental Biology Seminar (2)

Topics of current interest in molecular, cellular, and developmental biology are presented weekly by graduate students, faculty, and guest speakers.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 292 - MCD Seminar (0)

Various topics by weekly guest speakers.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 296 - Laboratory Research in Molecular, Cell, and Developmental Biology (5)

Independent laboratory research in molecular, cellular, and developmental biology. Students submit petition to sponsoring agency.

BIOL 297A - Independent Study (5)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOL 297B - Independent Study (10)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOL 297C - Independent Study (15)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOL 297F - Independent Study (2)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOL 299A - Thesis Research (5)

Students submit petition to sponsoring agency.

BIOL 299B - Thesis Research (10)

Students submit petition to sponsoring agency.

BIOL 299C - Thesis Research (15)

Students submit petition to sponsoring agency.

BIOL 299F - Thesis Research (2)

Students submit petition to sponsoring agency.

Prerequisite: Enrollment is restricted to graduate students.

BME - BIOMOLECULAR ENGINEERING

To view planned offerings for the current academic year, please visit this page.

Lower-Division

BME 1 - Introduction to Biomolecular Engineering Problem Solving (2)

Introduction to biomolecular engineering through identification of current problems and their solutions. Intended for any student interested in BME. Students critically read primary research articles, search scientific literature, and identify relevant, trustworthy sources of information. Students learn about the engineering design process and common experimental tools used in biomolecular engineering research. Major course assignments include writing assignments and a team presentation.

BME 5 - Introduction to Biotechnology (5)

Introduces the tools and applications of biotechnology in the fields of medicine, agriculture, the environment, and industry.

BME 18 - Scientific Principles of Life (5)

The principles of life as it exists on this planet and how they generalize. Darwinian evolution, genomes, scientific theories of life (mechanistic, thermodynamic, information theoretic). Future of life: Internet, machine learning and adaptation, artificial intelligence, genome editing, fully artificial life.

BME 21L - Introduction to Basic Laboratory Techniques (3)

Laboratory course providing hands-on training in fundamental techniques used to express, isolate, and analyze genes in prokaryotic cells. Introduction to common laboratory instruments and fundamental skills required for basic research in molecular biology and biomolecular engineering.

Prerequisite: Prerequisites: CHEM 1M or CHEM 3BL, or CHEM 4BL. Enrollment is restricted to bioengineering, bioinformatics, and biomolecular engineering and bioinformatics majors and proposed majors.

BME 22L - Foundations of Design and Experimentation in Molecular Biology (2)

Project-based laboratory course providing hands-on training in fundamental molecular biology and biomolecular engineering techniques used to manipulate expression of DNA and proteins in prokaryotic cells. Students are introduced to essential processes in experimental design. (Formerly Foundations of Design and Experimentation in Molecular Biology, Part I.)

Prerequisite: Prerequisite(s): BME 21L. Enrollment is restricted to bioengineering, bioinformatics, and biomolecular engineering and bioinformatics majors and proposed majors.

BME 23L - Foundations of Design and Experimentation in Molecular Biology, Part II (2)

Laboratory-based course extending the wet lab skills developed in the first two quarters of the BME 2x series with bioinformatics skills that form the foundation of biomolecular engineering. Focuses on sequencing of low-diversity environmental samples, including: field sampling, DNA extraction from those samples, library preparation, hands-on sequencing using a Nanopore device, base-calling of the raw data, assembly of contigs, quality assessment, contig assignment to species/bins, automated annotation of a single assemblage from collection genome publication.

Prerequisite: Prerequisites: BME 22L. Enrollment is restricted to bioengineering, bioinformatics, and biomolecular engineering and bioinformatics majors and proposed majors.

BME 35 - Strategies for a Successful Summer Internship (10)

Open only to UCSC students in the QB3 Summer Internship Program. Course provides hands-on experience working in a lab on campus or at an industry partner. It is designed for students to integrate an intensive research experience with their major and prior coursework. Enrollment is by permission of the instructor.

BME 51A - Applied Electronics for Bioengineers Part 1 (5)

Lab-based course that introduces measuring, modeling, and designing electronics circuits, emphasizing voltage dividers and complex impedance culminating in simple, negative-feedback op amp circuits for amplifying audio signals.

Prerequisite: Prerequisite(s): MATH 19A; or MATH 11A by consent of instructor. High school physics recommended. Enrollment is restricted to bioengineering and biomolecular engineering & bioinformatics majors and proposed majors; other majors by consent.

BME 51B - Applied Electronics for Bioengineers Part 2 (5)

Lab-based course that introduces designing, measuring, and modeling electronics circuits, emphasizing RC filters and negative-feedback amplifiers for various sensors circuits for amplifying audio signals, design of multi-stage amplifiers, instrumentation amplifiers, and class-D power amplifiers.

Prerequisite: Prerequisite(s): BME 51A.

BME 55 - Introduction to Lab Groups (2)

Course intended to assist second-year biomolecular engineering and bioinformatics undergraduates find research labs that they might join. Students sit in on different lab group meetings, read papers recommended by the lab groups, and report back to other students in the class both verbally and in writing. Course is offered for pass/no pass only.

Prerequisite: Enrollment is restricted to sophomore and junior proposed biomolecular engineering and bioinformatics majors, or by permission of the instructor.

BME 80G - Bioethics in the 21st Century: Science, Business, and Society (5)

Serves science and non-science majors interested in bioethics. Guest speakers and instructors lead discussions of major ethical questions having arisen from research in genetics, medicine, and industries supported by this knowledge.

BME 80H - The Human Genome (5)

Course will focus on understanding human genes. Accessible to non-science majors. Will cover principles of human inheritance and techniques used in gene analysis. The evolutionary, social, ethical, and legal issues associated with knowledge of the human genome will be discussed.

BME 94 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

BME 94F - Group Tutorial (2)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

BME 99 - Tutorial (5)

Students submit petition to sponsoring agency.

BME 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division

BME 101 - Molecular Biology for Biomolecular Engineers (5)

Provides an overview of the biochemistry of three types of biomolecules. Also covers how DNA is replicated and stores genetic information, how RNA is transcribed and transports genetic information, and how proteins are synthesized and perform a variety of functions. Focuses on genes and how they are regulated.

Prerequisite: Prerequisites: BIOL 20A.

BME 105 - Genetics in the Genomics Era (5)

Principles of genetics and genomics focusing on how sequencing technologies enable us to understand gene function, genotype to phenotype relationships, and genetic inheritance.

Prerequisite: Prerequisite(s): BIOL 20A. Enrollment is restricted to bioengineering, biomolecular engineering and bioinformatics, biotechnology, bioinformatics, and microbiology majors, and proposed majors; and bioinformatics minors.

BME 110 - Computational Biology Tools (5)

Hands-on lectures and laboratory geared to teach basic tools and skills used in computational biology (genome browsers, sequence database searching, motif analysis, multiple sequence alignment, gene finders, phylogenetics analysis, protein structure visualization, and others). Web-based tools/databases are used on student laptops. Open to all science students; no prior programming or Unix experience required.

Prerequisite: Prerequisite(s): BME 105, or BIOL 100, or BIOL 105, or BIOC 100A, or CHEM 103, or bioinformatics majors, or biomolecular engineering and bioinformatics majors.

BME 118 - Mathematics of the Mind (5)

Investigates the mind as an adaptive system, the evolutionary history of the brain, and mathematical theories of knowledge representation and learning in humans and machines. Students build Jupyter notebooks that interact with human cerebral cortex organoids to explore adaptive processes in neural circuits. Taught in conjunction with BME 218. Students cannot receive credit for this course and BME 218.

Prerequisite: Prerequisites: either MATH 19A and MATH 19B, or MATH 20A and MATH 20B; and MATH 21 or AM 10; and CSE 20, CSE 20 Testout, or BME160; or by permission of the instructor.

BME 122H - Extreme Environmental Virology (5)

Examines life in extreme environments with an emphasis on the viruses that live there. Integrates aspects of virology, molecular biology, and computational biology. Students investigate a high-salt, extreme environment at the Don Edwards National Wildlife Refuge, and use DNA extraction methods to find molecular evidence of the organisms that live there and describe the genetic content of viruses and the community living in those high-salt ponds.

Prerequisite: Enrollment is restricted to College Scholar Students, and or by permission of the instructor.

BME 123L - Long Read Sequencing (2)

Two-credit hands-on course in DNA sequencing, sequence assembly, and gene annotation. Students make use of low-diversity metagenomic samples drawn from environmental locations to follow all steps in sequence and the discovery of prokaryotic and viral life. For students who have already completed sequencing experience in BME 23L, please consult with the instructor prior to enrolling in BME 123L to determine eligibility and course availability.

Prerequisite: Prerequisite(s): BME 22L, and previous or concurrent enrollment in BME 122H or BME 130.

BME 123T - Senior Thesis Writing (5)

For bioengineering senior thesis students, guidance in preparing a draft manuscript describing their senior research project. Students also practice conference-style oral or poster presentation.

Prerequisite: Prerequisite(s): BME 185 or CSE 185E. Concurrent enrollment in BME 193F or BME 195F or BME 198F or CSE 193F or CSE 195F or CSE 198F or ECE 193F or ECE 195F or ECE 198F is required. Enrollment is restricted to senior biomolecular engineering and bioinformatics and bioengineering majors.

BME 128 - Protein Engineering (5)

For bioengineering, bioinformatics, and biology majors, focuses on engineering (i.e., changing) of proteins. Topics focus on practical aspects of protein engineering strategies that are crucial to modern biotechnology and biomedicinal applications.

Prerequisite: Prerequisite(s): BIOL 100 or BIOC 100A or CHEM 103, or by permission of instructor.

BME 128L - Protein Engineering Laboratory (2)

Students address a current scientific question about protein stability using structure-guided protein engineering. Specifically, Students use recombinant DNA technology to produce an engineered protein that is predicted to have enhanced stability. Students then assess its stability with differential scanning fluorimetry.

Prerequisite: Prerequisite(s): BME 22L; and previous or concurrent enrollment in BME 128. Enrollment is restricted to junior and senior bioengineering, biomolecular engineering, and bioinformatics majors; other majors by permission of instructor.

BME 129A - Project Design and Implementation in Biomolecular Engineering I (5)

First of a three-part series focused on senior design projects in biomolecular engineering. In this first part, students examine experiments that elucidated the function of biological

macromolecules at the Angstrom scale, and how technologies related to those functions were invented and implemented. Guided by these examples, each student develops a senior design project concept or small business proposal and defends its utility, plausibility, and inventiveness in a written document and an oral presentation.

Prerequisite: Prerequisite(s): BME 22L; BIOL 100 or BIOC 100A or CHEM 103 or BME 101; and previous or concurrent enrollment in BME 185 or CSE 185E or CSE 185S. Enrollment is restricted to junior and senior bioengineering and biomolecular engineering and bioinformatics majors or by permission of the instructor.

BME 129B - Project Design and Implementation in Biomolecular Engineering II (5)

Second part of a three-course sequence that is the culmination of the bioengineering program for students who chose a senior design group project to fulfill their capstone requirement. Students apply knowledge and skills gained in biomolecular engineering coursework to articulate, organize, and plan a senior design group project. Student groups complete research, specification, planning, and procurement for their project. Includes technical discussions, design reviews, and formal presentations.

Prerequisite: Prerequisite(s): BME 129A or BME 150. Enrollment is restricted to senior bioengineering or biomolecular engineering and bioinformatics majors.

BME 129C - Project Design and Implementation in Biomolecular Engineering III (5)

Final part of a three-course sequence that is the culmination of the bioengineering program for students who chose a senior design group project to fulfill their capstone requirement. Students apply knowledge and skills gained in biomolecular engineering coursework to articulate, organize, and plan a senior design group project. Student groups complete research, specification, planning, and procurement for their project. Includes technical discussions, design reviews, and formal presentations.

Prerequisite: Prerequisite(s): BME 129B or BME 230A. Enrollment is restricted to senior bioengineering or biomolecular engineering and bioinformatics majors.

BME 130 - Genomes (5)

Advanced elective for biology majors, examining biology on the genome scale. Topics include genome sequencing; large scale computational and functional analysis; features specific to prokaryotic, eukaryotic, or mammalian genomes; proteomics; SNP analysis; medical genomics; and genome evolution.

Prerequisite: Prerequisite(s): BIOL 105 or BME 105 or METX 140; or permission of the instructor.

BME 132 - Evolutionary Genomics (5)

Covers major recent advances in evolutionary genomics. Students learn to analyze and interpret scientific writing in depth. Students also present on work covered in the class and produce one research or review paper. Students cannot receive credit for this courses and course 232.

Prerequisite: Prerequisite(s): BME 105 or BIOL 105 or METX 140. Enrollment is restricted to juniors and seniors.

BME 140 - Bioinstrumentation (5)

Introduces the fundamental aspects of bioinstrumentation that are essential for beginning-level employment in clinical, pharmaceutical , and biotechnology laboratories. The advantages and disadvantages of several instruments are discussed and demonstrated, such as thermocycler, polymerase chain reaction (PCR), next-generation DNA sequencing platforms, pyrosequencing, fabless nanofabrication, ion-sensitive measurements, microarray fabrication, and fluorescent-activated cell sorter (FACS).

Prerequisite: Prerequisite(s): BME 5; or BME 51A and BME 51B; or ECE 101 and ECE 101L; or BIOL 100; or BIOC 100A.

BME 160 - Research Programming in the Life Sciences (6)

Teaches programming while exploring object-oriented design, use of high-performance data containers (dictionaries and sets), and team-based development—all with the goal of producing reliable and usable research tools. No programming experience is required, but basic computer and molecular biology understanding is assumed. Students without prior programming experience may benefit from taking CSE 20 in preparation for this course. Students learn programming in Python to manipulate biological data. Programming assignments comprise the majority of the assignments, and a final project using skills developed in this course is required. Lab section registration is required. BioPython and other modules are introduced for use in the final project.

Prerequisite: Prerequisite(s): BIOL 20A or BIOL 21A.

BME 163 - Applied Visualization and Analysis of Scientific Data (5)

Python and its Numpy, Scipy, and Matplotlib packages as well as Inkscape are used on scientific data to generate publication-quality figures. Students cannot receive credit for this course and course 263.

Prerequisite: Prerequisite(s): BME 160 or BME 205 or CSE 20. Prerequisites can be waived in cases where students have the required programming skills, or who have passed the CSE 20 test-out exam. Enrollment is restricted to juniors and seniors.

BME 175 - Entrepreneurship in Biotechnology (5)

Focuses on contemporary issues in commercializing biotechnology and genomics, emphasizing development of teamwork and communication skills. Topics include intellectual property management, fundraising, market analysis, and technology development as related to biotechnology start-ups. Students perform real-world tasks preparing for commercialization. Taught in conjunction with BME 275.

BME 177 - Engineering Stem Cells (5)

For bioengineering students interested in stem cells. Class uses project-based learning to discuss basic stem cell concepts and past breakthrough approaches to identify and design solutions for technological hurdles in stem cell research.

Prerequisite: Prerequisite(s): BIOL 20A or by consent of instructor. Basic knowledge of molecular and cellular biology is required.

BME 177L - Engineering Stem Cell Laboratory (2)

Introduces students to laboratory techniques for growing and differentiating embryonic stem cells, genetic manipulation of stem cells and imaging of stem cells. Students learn how to culture stem cells, count cells, transfect cells, image cells and analyze morphology of stem cells. In addition, students learn how to write lab reports and present their findings. Students are billed a materials fee of $175.

Prerequisite: Prerequisites: BME 22L; and previous or concurrent enrollment in BME 177. Enrollment is restricted to biomolecular engineering and bioinformatics majors or by permission.

BME 178 - Stem Cell Biology (5)

Basic concepts, experimental approaches, and therapeutic potential are discussed. Students gain experience in reading the primary scientific literature.

Prerequisite: Prerequisite(s): BIOL 110 or BME 101 or BIOC 100A or BIOL 100 or CHEM 103; BIOL 115 recommended.

BME 180 - Professional Practice in Bioengineering (2)

Seminar course where students develop a research proposal and the collaborative skills needed for independent research projects. Includes professional practice development in collaboration skills, project management, proposal development, and funding.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in BME 185 or CSE 185E. Enrollment is restricted to junior and senior bioengineering, biomolecular engineering and bioinformatics, and bioinformatics majors or by permission.

BME 185 - Technical Writing for Biomolecular Engineers (5)

Writing by biomolecular engineers, not to general audiences, but to engineers, engineering managers, and technical writers. Exercises include job application and resume, library puzzle, graphics, laboratory protocols, document specification, progress report, survey article or research proposal, poster, and oral presentation.

Prerequisite: Prerequisite(s): BIOL 20A; satisfaction of Entry Level Writing and Composition requirements; Enrollment restricted to junior and senior bioengineering, biomolecular engineering and bioinformatics, and biotechnology majors.

BME 188A - Synthetic Biology--Mentored Research A (2)

This two-credit course is the first of three courses in a 12-credit collaborative research project available to students in physical sciences, and biomolecular engineering intended to satisfy the capstone requirement. Provides a multidisciplinary, collaborative research experience working on a project in synthetic biology. Working with one or more research faculty, student teams complete a substantial project. Multiple oral/written presentations are required, including a formal conference presentation. Prerequisite(s): BME 180. Enrollment is restricted to juniors and seniors. Enrollment is by instructor permission.

Prerequisite: Prerequisite(s): BME 180. Enrollment is restricted to juniors and seniors. Enrollment is by instructor permission.

BME 188B - Synthetic Biology--Mentored Research B (5)

This five-credit course is the second of three courses in a 12-credit collaborative research project available to students in physical sciences and biomolecular engineering intended to satisfy the capstone requirement. Multiple oral/written presentations are required, including a formal conference presentation. Prerequisite(s): BME 188A. Enrollment is restricted to juniors and seniors. Enrollment is by instructor permission.

BME 188C - Synthetic Biology Mentored Research C (5)

Third of three courses in a 12-credit collaborative research project available to students in physical sciences and biomolecular engineering intended to satisfy the capstone requirement. Students in this course sequence may be participating in the annual IGEM (International Genetically Engineered Machines) competition. Course includes training in specific skills relevant to the specific sub-team and overall project, including lab-specific training (pcr, DNA electrophoresis, gel documentation, standard reagent prep, lab safety, lab equipment, project specifics). Prerequisite(s): BME 188B. Enrollment is restricted to juniors and seniors. Enrollment is by instructor permission.

BME 193 - Field Study (5)

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency.

BME 193F - Field Study (2)

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency.

BME 194 - Group Tutorial (5)

A program of study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency.

BME 194F - Group Tutorial (2)

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency.

BME 195 - Senior Thesis Research (5)

Students submit petition to sponsoring agency.

BME 195F - Senior Thesis or Research (2)

Students submit petition to sponsoring agency.

BME 198 - Individual Study or Research (5)

Students submit petition to sponsoring agency.

BME 198F - Individual Study or Research (2)

Students submit petition to sponsoring agency.

BME 199 - Tutorial (5)

For fourth-year students majoring in bioinformatics or bioengineering.

Graduate

BME 201 - Scientific Writing (3)

Covers effective writing styles for scientific communication for bio-science and engineering graduate students. Covers instruction for writing grant applications, scientific manuscripts, and thesis proposals. Students practice by preparing, editing, and evaluating each of these documents.

Prerequisite: Enrollment is restricted to graduate students.

BME 205 - Bioinformatics Models and Algorithms (5)

Covers bioinformatics models and algorithms: the use of computational techniques to convert the masses of information from biochemical experiments (DNA sequencing, DNA chips, and other high-throughput experimental methods) into useful information. Emphasis is on DNA and protein sequence alignment and analysis.

Prerequisite: Enrollment is restricted to graduate students. Undergraduates may enroll with prerequisite(s): BME 160 or CSE 30; and CSE 107 or STAT 131; and previous or concurrent enrollment in BIOC 100A or BME 101 or BIOL 100 or CHEM 103.

BME 215 - Applied Gene Technology (5)

Detailed insight into the techniques and technological trends in genomics and transcriptomics, building the necessary foundations for further research in genetic association studies, population genetic association studies, population genetics, diagnostics, medicine, and drug development. Students should already have a deeper understanding of the basic tools of molecular biotechnology than acquired in introductory courses in biotechnology, biochemistry, and molecular biotechnology.

Prerequisite: Enrollment is restricted to graduate students.

BME 218 - Mathematics of the Mind (5)

Investigates the mind as an adaptive system, the evolutionary history of the brain, and mathematical theories of knowledge representation and learning in humans and machines. Students build Jupyter notebooks that interact with human cerebral cortex organoids to explore adaptive processes in neural circuits. Taught in conjunction with BME 118. Students cannot receive credit for this course and BME 118.

Prerequisite: Enrollment is restricted to graduate students. Students should have knowledge of calculus, linear algebra, and Python programming.

BME 228 - Protein Design and Engineering (5)

Explore computational protein design approaches and engineering techniques. Students learn to engineer functional proteins, formulate a protein design project, and communicate research effectively for practical applications. Taught in conjunction with BME 128. Students cannot receive credit for this course and BME 128.

Prerequisite: Enrollment is restricted to graduate students.

BME 229 - Protein and Cell Engineering (5)

Focuses on established and novel strategies for protein and cell engineering. Explores concepts, design, and practical applications of engineered proteins, cells, and organisms as research tools and in therapeutic applications. Recommended for graduate students with interests in bioengineering.

Prerequisite: Enrollment is restricted to graduate students. Undergraduates by permission of instructor.

BME 230A - Introduction to Computational Genomics and Systems Biology (5)

Introductory and intermediate-level topics in computational genomics, DNA and RNA sequence analysis, mapping, quantification, detection of variants and their associations with disease. Covers topics in machine-learning, probabilistic graphical models, gene regulatory network inference, and single cell analysis. Students conduct related independent research.

Prerequisite: Prerequisite(s): BME 205. Enrollment is restricted to juniors, seniors, and graduate students.

BME 230B - Advanced Computational Genomics and Systems Biology (5)

Covers advanced topics in computational genomics, DNA and RNA sequence analysis, mapping, quantification, detection of variants and their associations with disease. Topics include machine-learning, probabilistic graphical models, gene regulatory network inference, and single cell analysis.

Students participate in teams in a computational analysis competition.

Prerequisite: Prerequisite(s): BME 230A. Enrollment is restricted to juniors, seniors, and graduate students.

BME 232 - Evolutionary Genomics (5)

Covers major recent advances in evolutionary genomics. Students learn to analyze and interpret scientific writing in depth. Students also present on work covered in the class and produce one research or review paper. Students may not receive credit for this course and course 132.

Prerequisite: Enrollment is restricted to graduate students. BME 105 or BIOL 105 or equivalent courses in higher-level genetic processes are highly recommended.

BME 237 - Applied RNA Bioinformatics (5)

Teaches methods for RNA gene discovery; gene expression quantification; probabalistic modeling, secondary structure/trans-interaction prediction; mRNA splicing; and functional analysis. Emphasis on leveraging comparative genomics and employing high-throughput RNA sequencing data. Includes lectures, scientific literature discussion, problem sets, and final gene-discovery project.

Prerequisite: Enrollment is restricted to seniors and graduate students.

BME 263 - Applied Visualization and Analysis of Scientific Data (5)

Python and its Numpy, Scipy, and Matplotlib packages as well as Inkscape are used to generate publication quality figures from scientific data. Students cannot receive credit for this course and course 163.

Prerequisite: Prerequisite(s): BME 160 or BME 205. Prerequisite(s) can be waived in cases where students have required programming skills. Enrollment is restricted to graduate students.

BME 272 - Precision Medicine (5)

Focuses on modern "precision" approaches to understanding human health, where every patient is unique. Explores basic and clinical discoveries and 'omics-based medicine for the prevention, diagnosis, and treatment of disease. Emphasis is on genomic approaches and applications to cancer.

Prerequisite: Enrollment restricted to juniors, seniors, and graduate students.

BME 273 - Stem Cell Epi/Genomics (3)

Course focuses on the application of epi/genomic technologies of stem cells. Topics include 'omics to interrogate pluripotency, cell lineages, hierarchies, trajectories, epigenomic reprogramming. Class includes hands-on computational analysis of epi/genomics data. For graduate/postdoctoral trainees engaged in stem cell research. Enrollment is restricted to graduate students and by permission of the instructor. Basic programming knowledge is recommended.

BME 275 - Entrepreneurship in Biotechnology (5)

Focuses on contemporary issues in commercializing biotechnology and genomics, emphasizing development of teamwork and communication skills. Topics include intellectual property management, fundraising, market analysis, and technology development as related to biotechnology start-ups. Students perform real-world tasks preparing for commercialization. Taught in conjunction with Biomolecular Engineering 175.

BME 278 - Stem Cell Biology (5)

Basic stem cell concepts, experimental approaches, and therapeutic potential are discussed. Students gain experience in reading and critically evaluating the primary scientific literature. Students cannot receive credit for this course and BME 178.

Prerequisite: Enrollment is restricted to graduate students in PBSE program (Program in Biomedical Science and Engineering: Biomolecular Engineering and Bioinformatics (BMEB), Microbial Biology and Pathogenesis (MICRO), Chemical Biology, Biochemistry and Biophysics (CB3), Molecular, Cell and Developmental Biology (MCDB)) or consent of instructor.

BME 280B - Seminar on Bioinformatics and Bioengineering (2)

Weekly seminar series covering topics of current research in computational biology, and bioinformatics. Current research work and literature in these areas are discussed. Short papers reflecting on presentations required. Available for Satisfactory/Unsatisfactory (or Pass/No Pass) grading only.

BME 281A - Seminar on Processive Enzymes and Nanopores (2)

Weekly seminar series covering experimental research in nanopore technology and single-molecule analysis of polymerase function. Current research work and literature is discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission of instructor.

BME 281C - Seminar in Cancer Genomics (2)

Presents current computational biology research to identify genomics-based signatures of cancer onset, progression, and treatment response. Examples of such investigations include: genetic pathway interpretation of multivariate high-throughput datasets; discovery of mutations in whole-genome sequence; identifications and quantification of gene isoforms, alleles, and copy number variants; and machine-learning tools to predict clinical outcomes. Students present their own research, host journal clubs, and attend lectures and teleconferences to learn about research conducted by national and international projects.

Prerequisite: Enrollment is restricted to graduate students.

BME 281D - Seminar on Protein Engineering (2)

Weekly seminar series covering experimental research in protein structure, function, and engineering. Current research work and literature in this area are discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students.

BME 281E - Seminar in Genomics (2)

Current topics in genomics including high-throughput sequencing, genome assembly, and comparative genomics. Students design and implement independent research projects. Weekly laboratory meetings are held to discuss these projects and related research in the field.

Prerequisite: Enrollment is restricted to graduate students.

BME 281F - Blood Cell Development (2)

Weekly seminar covering topics in current research on blood cell development and stem cell biology. Current research and literature in these areas discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students. Undergraduates may enroll with permission of instructor.

BME 281G - Seminar on Cell Fate Decisions (2)

Weekly seminar series covering experimental research in cell fate decisions. Current research work and literature in this area is discussed. Students lead some discussions and participate in all meetings. Available for Satisfactory/Unsatisfactory or Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to graduate students only; qualified undergraduate students may enroll with permission of the instructor.

BME 281H - Live Cell Biotechnology Seminar (2)

Weekly seminar series covering topics of current computational and experimental research in live cell biotechnology. Current research work and literature in this area are discussed. Students lead some discussions and participate in all meetings. (Formerly offered as Seminar in Comparative Genomics.)

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 281J - Seminar in Computational Genomics and Biomedicine (2)

Research seminar of the UCSC Computational Genomic Laboratory and Platform Teams. Students receive hands-on instruction in modern computational methods to address research questions. Topics include: genomic and transcriptomic sequence analysis methods, comparative and evolutionary genomics, big-data genomic analysis, biomedical data sharing, and precision medicine. Students attend and participate in monthly lab meetings, monthly all-hands meetings, where students give a quick report on their progress and the next month's goals, and a bi-weekly journal club, where pairs of students present and discuss a paper of their choosing with the lab. Students also participate in hands-on, active computational laboratory-based research. Student evaluation is based on suitable progress toward research goals and graduate program progress.

Prerequisite: Enrollment is restricted to graduate students.

BME 281L - Seminar in Computational Genetics (2)

Weekly seminar series covering topics and experimental research in computational genetics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 281M - Seminar on Chromosome Biology and Function (2)

Weekly seminar series covering experimental research in chromosome structure and repeat biology. Current research work and literature in this area is discussed. Students lead some discussions and participate in all meetings. Available for Satisfactory/Unsatisfactory or Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission of instructor.

BME 281N - Seminar in Transcriptomics (2)

Covers current topics in computational and experimental research in transcriptomics. Current research work and literature discussed. Weekly laboratory meetings held to discuss these projects and related research in the field.

Prerequisite: Enrollment is restricted to graduate students.

BME 281P - Seminar on Nanotechnology and Biosensors (2)

Weekly seminar covering topics of research in the development of new tools and technologies to detect and study genes and proteins. Latest research work and literature in these areas are discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 281R - Seminar in Stem Cell Genomics (2)

Weekly seminar series covering topics in research on stem cell genomics. Current research and literature in this area is discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment restricted to graduate students; qualified undergraduates may enroll with instructor permission.

BME 281S - Seminar in Computational Functional Genomics

(2)

Weekly seminar series covering topics of current computational and experimental research in computational functional genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 281T - Seminar in Neuroengineering and Systems Neuroscience (2)

Discusses research topics in 3D stem cell-derived brain organoid models, neuroengineering and systems neuroscience. Students lead some discussions and participate in all meetings. Available for Satisfactory/Unsatisfactory or Pass/No Pass grading only. Enrollment is restricted to graduate students; qualified undergraduate students may enroll with permission of the instructor.

Prerequisite: Enrollment is restricted to graduate students.

BME 281V - Immunogenomics Seminar (2)

Journal club and research presentations in immunogenomics. Enrollment is by consent of the instructor and is restricted to graduate students, juniors, and seniors.

BME 281X - Microbial Symbiosis (2)

Seminar course consisting of the Russell Lab's weekly meeting to cover lab business, present and discuss new results, practice presentations, and read recent scientific literature. May be repeated for credit. Enrollment is restricted to graduate students and is by permission of the instructor.

BME 281Y - Seminar on Protein Design (2)

Includes the Yeh Lab’s weekly group meeting to discuss new data, present research paper, pitch new scientific idea, cover lab business, and practice presentations. Available for Satisfactory/Unsatisfactory or Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to graduate students only; qualified undergraduate students may enroll with permission of the instructor.

BME 281Z - Seminar in Population and Evolutionary Genomics (2)

Covers major recent topics in evolutionary and population genomics. Consists primarily of discussions of recent literature and updates on group members' research. Enrollment is available only to members of the Corbett-Detig laboratory.

BME 293 - Seminar in Biomolecular Engineering (5)

Weekly seminar series covering topics of bioinformatics and biomolecular engineering research. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 296 - Research in Bioinformatics (5)

Independent research in bioinformatics under faculty supervision. Although this course may be repeated for credit, not every degree program accepts a repeated course toward degree requirements. Students submit petition to sponsoring agency.

BME 297A - Independent Study or Research (5)

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course toward degree requirements. Students submit petition to sponsoring agency.

BME 297B - Independent Study or Research (10)

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course toward degree requirements. Students submit petition to sponsoring agency.

BME 297C - Independent Study or Research (15)

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course toward degree requirements. Students submit petition to sponsoring agency.

BME 297F - Independent Study or Research (2)

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course toward degree requirements. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

BME 299A - Thesis Research (5)

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements.Students submit petition to sponsoring agency.

BME 299B - Thesis Research (10)

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements.Students submit petition to sponsoring agency.

BME 299C - Thesis Research (15)

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements.Students submit petition to sponsoring agency.

CHEM - CHEMISTRY AND

BIOCHEMISTRY

Lower-Division

CHEM 1A - General Chemistry (5)

An integrated study of general chemistry. Covers a range of topics including the atomic structure of matter; molecules; chemical reactions; acids and bases; gases; and equilibria in the gas and liquid phase. Students are expected to use algebra to solve problems. General Chemistry is articulated in a full-year series. Partial transfer credit is not allowed for the A,B,C series.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in MATH 3, AM 3, or equivalent, or a mathematics placement score of 300 or higher. Enrollment is restricted to sophomores, juniors, and seniors.

CHEM 1C - General Chemistry (5)

An integrated study of general chemistry. Coverage includes thermodynamics; oxidation-reduction and electrochemistry; liquids and solids; intermolecular forces and solutions, including colligative properties; and nuclear chemistry. General Chemistry is articulated in a full-year series. Partial transfer credit is not allowed for the A,B,C series.

Prerequisite: Prerequisite(s): CHEM 1A. Concurrent enrollment in course 1N is recommended. Enrollment is restricted to sophomores, juniors, and seniors.

CHEM 1M - General Chemistry Laboratory (2)

Laboratory sequence illustrating topics covered in CHEM 1B and CHEM 1C and important experimental techniques.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in CHEM 1B or CHEM 4A is required. Enrollment is restricted to sophomores, juniors, and seniors.

CHEM 1N - General Chemistry Laboratory (2)

Laboratory sequence illustrating topics covered in CHEM 1B and CHEM 1C, respectively, and important experimental techniques.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in CHEM 1C or CHEM 4B is required. Enrollment is restricted to sophomores, juniors, and seniors.

CHEM 3A - General Chemistry (5)

The first course in UCSC's three-quarter introductory chemistry series. Topics in this quarter include atomic theory and structure, the periodic table, chemical bonding, molecules and their structure, intramolecular forces, and chemical reactions and stoichiometry.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in MATH 2, or a mathematics placement (MP) score of 200 or higher.

CHEM 3B - General Chemistry (3)

The second course in UCSC's three-quarter introductory chemistry series. Topics in this quarter include chemical equilibrium, acids and bases, solution pH, buffers and chemical kinetics. Course consists of in-person lecture and a secondary active learning discussion section. In addition to the lecture, students are required to enroll and attend one discussion section.

Prerequisite: Prerequisite(s): CHEM 3A with grade of C or better, & previous or concurrent enrollment in CHEM 3BL (or CHEM 1M). Previous or concurrent enrollment in MATH 3 or placement score of 300+ required. Students cannot enroll in CHEM 3B after a 'C' or better in CHEM 1A. .

CHEM 3BL - General Chemistry Lab (2)

Focusing on science skills building with an emphasis on the general chemistry lab setting, course provides an introduction to important concepts and practices related to lab safety, fundamental experimental techniques, chemical handling, waste disposal, data collection/analysis, scientific writing/communication, and small-group collaboration. Coursework includes in-person experiments/lab time as well asynchronous work to be completed in Canvas and WebAssign.

Prerequisite: Prerequisite(s): CHEM 3A and previous or concurrent enrollment of CHEM 3B or CHEM 1A.

CHEM 3C - General Chemistry (3)

The third course in UCSC’s three-quarter introductory chemistry series. Topics in this quarter include the first and second laws of thermodynamics, redox reactions, electrochemistry, phase changes, and physical properties of solutions. Course consists of in-person lecture and a secondary active learning discussion section. In addition to the lecture, students are required to enroll and attend one discussion section.

Prerequisite: Prerequisite(s): CHEM 3B, and previous or concurrent enrollment in CHEM 3CL (or CHEM 1M).

CHEM 3CL - General Chemistry Lab (2)

The second in the general chemistry series, course focuses on science skills building with an emphasis on the general chemistry lab setting. Provides an introduction to important concepts and practices related to lab safety, fundamental experimental techniques, chemical handling, waste disposal, data collection/analysis, scientific writing/communication, and small-group collaboration. Coursework includes in-person lab experiments/work as well as asynchronous assignments to be completed in Canvas and Webassign.

Prerequisite: Prerequisite(s): completion of CHEM 3A and CHEM 3B; prior or concurrent enrollment in CHEM 3C.

CHEM 4AL - Advanced General Chemistry Lab (2)

Focuses on science skills building with an emphasis on the general chemistry lab setting. Provides an introduction to important concepts and practices related to lab safety,

fundamental experimental techniques, chemical handling, waste disposal, data collection/analysis, scientific writing/communication, and small-group collaboration. Course work includes in-person lab experiments/work as well as asynchronous work completed in Canvas and Webassign. This course taken with CHEM 4BL provides an advanced alternative to the CHEM 3BL/CHEM 3CL series.

Prerequisite: Prerequisite(s): prior or current enrollment in CHEM 4A.

CHEM 4B - Advanced General Chemistry: Molecular Structure and Reactivity (5)

The second course of the two-quarter accelerated general chemistry series. Coverage includes thermodynamics; kinetics, oxidation-reduction, and electrochemistry; liquids and solids; intermolecular forces and solutions, including colligative properties; and nuclear chemistry.

Prerequisite: Prerequisite: CHEM 4A. Concurrent enrollment in CHEM 4AL is required.

CHEM 4BL - Advanced General Chemistry Lab (2)

Focuses on science skills building with an emphasis on the general chemistry lab setting,. Provides an introduction to important concepts and practices related to lab safety, fundamental experimental techniques, chemical handling, waste disposal, data collection/analysis, scientific writing/communication, and small-group collaboration. Coursework includes in-person lab experiments/work as well as asynchronous work completed in Canvas and Webassign. This course taken with CHEM 4AL provides an advanced alternative to the CHEM 3BL/CHEM 3CL series.

Prerequisite: Prerequisite(s): Prior or concurrent enrollment in CHEM 4B.

CHEM 8A - Organic Chemistry (5)

Introduces organic chemistry, with an emphasis on bonding and reactivity of organic compounds.

Prerequisite: Prerequisite(s): CHEM 1B and CHEM 1C, or CHEM 3C, or CHEM 4B.

CHEM 8B - Organic Chemistry (5)

Introduction to organic chemistry, with an emphasis on reactivity and synthesis of organic compounds.

Prerequisite: Prerequisite(s): CHEM 8A.

CHEM 8L - Organic Chemistry Laboratory (2)

Laboratory experience in organic chemistry associated with CHEM 8A. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours.

Prerequisite: Prerequisite(s): CHEM 1C and CHEM 1N, or CHEM 3C and CHEM 3CL, or CHEM 4B and CHEM 4BL. Previous or concurrent enrollment in CHEM 8A is required.

CHEM 8M - Organic Chemistry Laboratory (2)

Laboratory experience in organic chemistry associated with course 8B. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours.

Prerequisite: Prerequisite(s): CHEM 8A and CHEM 8L and previous or concurrent enrollment in CHEM 8B is required.

CHEM 8N - Honors Organic Chemistry Lab (2)

Honors laboratory experience in organic chemistry associated with course CHEM 8B. Designed to introduce the exceptional student to many of the techniques associated with organic chemistry while taking part in an active organic chemistry research experience. Laboratory: 6 hours per week minimum. Prerequisite(s): CHEM 8A and CHEM 8L; concurrent enrollment in CHEM 8B is required. Enrollment is by permission of the instructor. Students must pass safety training to begin research. Students may only receive credit for one of the following: CHEM 8M or CHEM 8N. This class may only be taken as Pass/No Pass, which cannot be converted to a letter grade.

Prerequisite: Prerequisite(s): CHEM 8A and CHEM 8L concurrent enrollment in CHEM 8B is required.

CHEM 80H - Introduction to Wine Science and Chemistry (5)

A glimpse of the science and technology of wines through critical analysis. Students gain an appreciation of the scientific method and are be exposed to data from chemistry, biology, viticulture, and enology. This analysis is extended to examine commonly accepted practices used by scientists vs. non-scientist to assess and describe wine quality. (Formerly Introduction to Wines and Wine Chemistry.)

CHEM 99 - Tutorial (5)

Students submit petition to sponsoring agency.

CHEM 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division

CHEM 103 - Biochemistry (5)

Introduction to biochemistry including biochemical molecules, protein structure and function, membranes, bioenergetics, and regulation of biosynthesis. Provides students with basic essentials of modern biochemistry. Students who plan to do advanced work in biochemistry and molecular biology should take the Biochemistry and Molecular Biology (BIOC) 100 series. Students cannot receive credit for this course after they have completed any two courses from the BIOC 100A, BIOC 100B, and BIOC 100C sequence.

Prerequisite: Prerequisite(s): CHEM 8B.

CHEM 109 - Intermediate Organic Chemistry and Applications

to Biology (3)

Integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to biological sciences.

Prerequisite: Prerequisite(s): CHEM 8B or equivalent.

CHEM 110 - Intermediate Organic Chemistry with Emphasis on Synthesis and Analytical Methods (5)

An intermediate study of organic chemistry, including synthetic methods, reaction mechanisms, and application of synthetic chemistry techniques.

Prerequisite: Prerequisite(s): CHEM 8B. Enrollment is restricted to chemistry majors, minors and proposed majors.

CHEM 110L - Intermediate Organic Chemistry Laboratory (2)

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds, and make use of modern as well as classical techniques.

Prerequisite: Prerequisite(s): CHEM 8M and previous or concurrent enrollment in CHEM 110.

CHEM 110N - Honors Organic Chemistry Lab (2)

Honors laboratory experience in organic chemistry associated with CHEM 109 or CHEM 110. Designed to introduce the exceptional student to many of the techniques associated with organic chemistry while taking part in an active organic chemistry research experience. Laboratory: 6 hours per week minimum. Prerequisite(s): CHEM 8A, CHEM 8B and CHEM 8L and either CHEM 8M or CHEM 8N and and previous or concurrent enrollment in CHEM 109 or CHEM 110 is required. Enrollment is by permission of the instructor. Students must pass safety training to begin research. Students may only receive credit for one of the following: CHEM 110L, or CHEM 110N. This class may only be taken as Pass/No Pass, which cannot be converted to a letter grade.

Prerequisite: Prerequisite(s): CHEM 8A, CHEM 8B and CHEM 8L and either CHEM 8M or CHEM 8N and CHEM 160; previous or concurrent enrollment in CHEM 109 or CHEM 110 is required.

CHEM 122 - Principles of Instrumental Analysis (5)

A laboratory course designed to develop familiarity with techniques and instrumentation used in analytical chemistry, emphasizing determination of trace inorganic species. Primary emphasis on applications utilizing the absorption or emission of electromagnetic radiation and on voltammetry. Topics include molecular UV-visible absorption and fluorescence spectrometry; atomic absorption, emission and fluorescence spectrometry; and various forms of voltammetry. Lecture: 2 hours; laboratory: 8 hours.

Prerequisite: Prerequisite(s): CHEM 110 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior chemistry (B.S.) majors.

CHEM 124 - Bioanalytical Chemistry (4)

Introduces modern measurement science for biomolecules. DNA, proteins, and specialized metabolites and the methodologies for measuring them, both qualitative and quantitative, are covered. Techniques are presented with the basic framework and concepts, and modern applications are covered in lecture followed by a hands-on lab component. Provides students with the necessary framework to design and execute their own research-based bioanalytical experiments. Group lab reports are prepared as a "Letter" to Analytical Chemistry to report the findings from the laboratory-based experiments. Tests cover the material from the lecture prior to the test day and are not cumulative in nature, however, concepts may build on one another.

Prerequisite: Prerequisite(s): CHEM 8B, and satisfaction of the Entry Level Writing and Composition requirements.

CHEM 139 - Chemical Problem Solving: Learning to Think Like a Scientist (5)

Students actively develop the skills and strategies required to become proficient problem solvers in both upper-division science classes and in scientific research. The focus is on systematic problem solving and scientific creativity. (Formerly CHEM 139A, Chemical Problem Solving I: Learning to Think Like a Scientist.)

Prerequisite: Prerequisite(s): CHEM 1C, CHEM 3C, or CHEM 4B; and MATH 11A or MATH 19A.

CHEM 143 - Organic Chemical Structure and Reactions (5)

Advanced topics such as the chemistry of terpenes, steroids, synthetic polymers, alkaloids, reactive intermediates, and reaction mechanisms are treated. Lecture: 4 hours.

Prerequisite: Prerequisite(s): CHEM 110.

CHEM 144 - Catalysis In Organic Synthesis Using Metals and Metalloids Based Reagents (5)

Designed to introduce Junior/Senior undergraduates to the field of catalysis in organic synthesis. Course acquaints students with the chemistry, with relevant techniques of metals and metalloid chemistry, and focuses on new advancements in organoborane field. Also provides knowledge of the methods to use chemistry to address synthetic challenges in organic chemistry. Students become familiar with the concepts and approaches in the current field of chemical biology.

Prerequisite: Prerequisite(s): CHEM 110.

CHEM 146A - Advanced Laboratory in Organic Chemistry (3)

Exposes students to advanced laboratory techniques in organic chemistry. Designed for students without previous research background in organic chemistry. Experiments carry a research-like format and cover the areas of natural products and reaction chemistry. Modern methods of organic analysis are emphasized including chromatographic methods and organic structure determination by spectroscopy. Laboratory: 8 hours.

Prerequisite: Prerequisite(s): CHEM 110 and CHEM 110L; satisfaction of Entry Level Writing and Composition requirements. Enrollment is restricted to chemistry majors. Minors by permission of instructor.

CHEM 146B - Advanced Laboratory in Inorganic Chemistry (3)

Designed to expose students to advanced synthetic and spectroscopic techniques in inorganic chemistry. Examples include anaerobic manipulations, characterization of inorganic materials through spectral assignments and synthesis of coordination and organometallic complexes. Lecture: 1-1/4 hours; laboratory: 8 hours. Students billed a materials fee of $240.

Prerequisite: Prerequisite(s): CHEM 151A and CHEM 151L; CHEM 163A; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to chemistry majors. Minors by permission of instructor.

CHEM 146C - Advanced Laboratory in Physical Chemistry (5)

Provides advanced laboratory experience in the areas of nanomaterial synthesis and characterization; spectroscopy; fabrication and measurements energy-conversion devices; and soft lithography techniques and instrumentation. Lecture: 1-1/4 hours; laboratory: 4 hours.

Prerequisite: Prerequisite(s): CHEM 163B and CHEM 164; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to chemistry majors. Minors by permission of instructor.

CHEM 151A - Chemistry of Metals (5)

Fundamental topics of inorganic chemistry are presented at the level of the standard texts of field. Special emphasis is given to maintain breadth in the areas of metallic, nonmetallic, and biological aspects of inorganic chemistry. Lecture: 3-1/2 hours; discussion: 1-1/4 hours.

Prerequisite: Prerequisite(s): CHEM 8B and CHEM 8M and CHEM 163A. Concurrent enrollment in CHEM 151L is required.

CHEM 151B - Chemistry of the Main Group Elements (5)

Fundamental aspects of inorganic chemistry of main group elements are discussed. The emphasis is placed on the chemistry of nontransition elements including noble gases and halogens. In addition, students are exposed to the concepts of extended structures, new materials, and solid-state chemistry. Lecture: 3-3/4 hours.

Prerequisite: Prerequisite(s): CHEM 8B and CHEM 8M and CHEM 163A. Recommended for chemistry majors.

CHEM 151L - Inorganic Chemistry Laboratory (2)

Laboratory experience in inorganic chemistry. Experiments involve the preparation, purification, and characterization of inorganic compounds. In addition, experiments are designed to illustrate fundamental principles in inorganic chemistry and are coordinated with lectures in CHEM 151A. Laboratory: 4 hours per week. Laboratory lecture: 1 1/4 hours per week.

Prerequisite: Prerequisite(s):CHEM 8B and CHEM 8M and CHEM 163A. Concurrent enrollment in CHEM 151A is required.

CHEM 156C - Materials Chemistry (5)

Advanced topics in inorganic chemistry and an introduction to solid-state chemistry. Synthesis and structure of materials discussed as well as their influence on properties for modern devices and applications. Recent developments in area of material science also explored. Taught in conjunction with CHEM 256C.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in CHEM 151A. Enrollment is restricted to seniors.

CHEM 160J - Biochemistry Research Laboratory (5)

Introduction to hypothesis-driven laboratory research. Students collectively design and execute a novel research project that addresses a question about macromolecular structure, function, or regulation. Working individually and in small groups, students learn aspects of experimental design, literature and public data base research, data analysis and interpretation, and scientific collaboration. Learned laboratory techniques include molecular cloning, recombinant protein expression and purification, and biochemical assay implementation.

Prerequisite: Prerequisite(s): CHEM 8L and completion of or enrollment in BIOC 100A, BIOL 100, or CHEM 103.

CHEM 160K - Biochemistry Research Laboratory (5)

Introduction to hypothesis-driven laboratory research. Students collectively design and execute a novel research project that addresses a question about macromolecular structure, function, or regulation. Working individually and in small groups, students learn aspects of experimental design, literature and public data base research, data analysis and interpretation, and scientific collaboration. Learned laboratory techniques include molecular cloning, recombinant protein expression and purification, and biochemical assay implementation.

CHEM 160L - Biochemistry Research Laboratory (5)

Introduction to hypothesis-driven laboratory research. Students collectively design and execute a novel research project that addresses a question about macromolecular structure, function, or regulation. Working individually and in small groups, students learn aspects of experimental design, literature and public data base research, data analysis and interpretation, and scientific collaboration. Learned laboratory techniques include molecular cloning, recombinant protein expression and purification, and biochemical assay implementation.

Prerequisite: Prerequisite(s): CHEM 160K, satisfaction the Entry Level Writing and Composition requirements.

CHEM 161J - Chemical Biology Research Laboratory (5)

The first of a three-course research-based series for students in chemistry or biochemistry and molecular biology degree programs. This lab series introduces undergraduates to the emerging field of chemical biology. There is no laboratory guide with pre-designed experiments and results; instead, students develop a hypothesis and work toward understanding a novel system at the interface of multiple biological and chemical subdisciplines. Students gain technical skills related to these areas by designing experiments, researching primary literature, using public databases, and applying various software programs to aid in data analysis and interpretation.

Prerequisite: Prerequisites: successful completion of CHEM 8B and CHEM 8M; and previous or concurrent enrollment in BIOL 100, BIOC 100A, or CHEM 103. Enrollment is by permission of the instructor.

CHEM 161K - Chemical Biology Research Laboratory (5)

The second of a three-course research-based series for students in chemistry or biochemistry and molecular biology degree programs. Introduces undergraduates to the emerging field of chemical biology. There is no laboratory guide with pre-designed experiments and results; instead, students develop a hypothesis and work toward understanding a novel system at the interface of multiple biological and chemical subdisciplines. Students gain technical skills related to these areas by designing experiments, researching primary literature, using public databases, and applying various software programs to aid in data analysis and interpretation.

Prerequisite: Prerequisite(s): CHEM 161J.

CHEM 161L - Chemical Biology Research Laboratory (5)

The third of a three-course research-based series for students in chemistry or biochemistry and molecular biology degree programs. Introduces undergraduates to the emerging field of chemical biology. There is no laboratory guide with pre-designed experiments and results; instead, students develop a hypothesis and work toward understanding a novel system at the interface of multiple biological and chemical subdisciplines. Students gain technical skills related to these areas by designing experiments, researching primary literature, using public databases, and applying various software programs to aid in data analysis and interpretation.

Prerequisite: Prerequisite(s): CHEM 161K, and Entry Level Writing and Composition requirements.

CHEM 163A - Quantum Mechanics and Basic Spectroscopy (5)

A detailed introduction to quantum theory and the application of wave mechanics to problems of atomic structure, bonding in molecules, and fundamentals of spectroscopy. Students cannot receive credit for this course and BIOC 163A.

Prerequisite: Prerequisite(s): CHEM 3C or CHEM 4B or CHEM 1C; and PHYS 5B or PHYS 6B; and previous or concurrent enrollment in PHYS 5C or PHYS 6C; and MATH 22 or MATH 23. MATH 22 or MATH 23B is waived for declared Biochemistry & Molecular Biology students.

CHEM 163B - Chemical Thermodynamics (5)

Fundamentals of thermodynamics and applications to chemical and biochemical equilibria. Students cannot receive credit for this course and BIOC 163B.

Prerequisite: Prerequisite(s): CHEM 1C, CHEM 3C, or CHEM 4B; and PHYS 6A or PHYS 5A; and either MATH 22, MATH 23B, or AM 30.

CHEM 163C - Statistical Thermodynamics and Kinetics (5)

Statistical mechanics, kinetic theory, and reaction kinetics and topics in spectroscopy. (Formerly Kinetic Theory and Reaction Kinetics, Statistical Mechanics, Spectroscopic Applications.)

Prerequisite: Prerequisite(s): CHEM 163A and CHEM 163B, or BIOC 163A and BIOC 163B.

CHEM 164 - Physical Chemistry Laboratory (5)

Provides laboratory experience and data analysis in the areas of thermodynamics, kinetics, and spectroscopy. Lecture: 1.75 hours; experimental laboratory: 4 hours; computer laboratory: 2 hours.

Prerequisite: Prerequisite(s): CHEM 1C, CHEM 3C, or CHEM 4B; and PHYS 5A and PHYS 5B and PHYS 5C, or PHYS 6A and PHYS 6B and PHYS 6C; and either MATH 22, MATH 23B, or AM 30. CHEM 163A is recommended.

CHEM 169 - Chemistry and Biology of Drug Design and Discovery (5)

An overview of the central elements of drug discovery, including target selection and validation; computational or virtual screening; high-throughput screening; fragment-based methods; and pharmacokinetics.

Prerequisite: Prerequisite(s): CHEM 103 or BIOC 100A.

CHEM 171 - Chemical Biology (5)

Covers methods and techniques for the field of chemical biology. Brings together methods in chemistry, biochemistry, and genetics to study the interaction of small molecules with biological systems. Students cannot receive credit for this course and course CHEM 271.

Prerequisite: Prerequisites: CHEM 8B, and CHEM 103 or BIOC 100A or BIOL 100. Enrollment is restricted to senior chemistry, biochemistry or related life science majors and minors. BIOL 101 and CHEM 110 recommended but not required.

CHEM 186L - Research Communication and Practice (5)

Complements undergraduate research experience in chemistry and biochemistry with skill development in communicating science and discussion of the responsible practice of science. Students complete written summaries and presentations describing their original research. Additional topics include record keeping, research funding and grant writing, scientific publishing, and ethics and misconduct. Students must be sponsored by a research mentor. Prerequisite(s): CHEM 8M.

Students must have active mentorship from department faculty. Enrollment is by permission of the instructor.

CHEM 192 - Dir Stu Teach (5)

Dir Stu Teach

CHEM 194 - Senior Essay (5)

An individually supervised course with emphasis on reviewing the current scientific literature. Students are required to submit a summary and a critique of a scientific paper in the form of a senior essay. Students submit a petition to the sponsoring agency. This course may not be repeated for credit.

CHEM 195A - Thesis Research (5)

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. (Formerly offered as Senior Research.)

CHEM 195B - Thesis Research (5)

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. (Formerly offered as Senior Research.)

CHEM 195C - Thesis Research (5)

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. (Formerly offered as Senior Thesis.)

CHEM 199 - Independent Research (5)

Students submit petition to sponsoring agency. (Formerly offered as Tutorial.)

CHEM 199F - Independent Research (2)

Students submit petition to sponsoring agency. (Formerly offered as Tutorial.)

Graduate

CHEM 200A - Advanced Biochemistry: Biophysical Methods (5)

An introduction to the theory, principles, and practical application of biophysical methods to the study of biomolecules, especially proteins and nucleic acids. Emphasis on spectroscopic techniques. Topics include magnetic resonance, optical spectroscopy, fast reaction techniques, crystallography, and mass spectrometry.

CHEM 200B - Advanced Biochemistry: Macromolecular Structure and Function (5)

A detailed discussion of nucleic acid and protein chemistry, ranging from the structure, thermodynamics, and folding to the relationship between structure and function, and encompassing the methods used to determine such information.

CHEM 200C - Advanced Biochemistry: Enzyme Mechanisms and Kinetics (5)

A study of enzyme kinetics, mechanisms, and factors involved in enzymic catalysis. Lecture: 3-1/2 hours.

CHEM 222 - Career Success in Industrial Science/ Engineering (2)

Provides skills for the transition from academia into industrial research careers, addressing presentation skills, project prioritization, teamwork, salary-benefit expectations, intellectual property, performance reviews, Myers-Briggs profiles, and career planning. Participant teams will analyze the commercialization of a technical innovation.

Prerequisite: Enrollment is restricted to Physical and Biological Sciences and School of Engineering graduate students who have completed one consecutive year. Undergraduates may enroll on a space available basis by permission of instructor.

CHEM 230 - Grant Writing in Biomedical Research (5)

Introduces the fundamentals of grant writing in biomedical research, including best practices for presentation of data and communication of research findings. Students write and peer-edit most components of the NIH Ruth L. Kirschstein F31 predoctoral fellowship. Course is designed for students in their second year or later of graduate study.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 234 - Bioinorganic Chemistry (5)

The role played by transition metals in biological systems is discussed through application of the principles of coordination chemistry and inorganic spectroscopy. Topics include metalloproteins involved in oxygen binding, iron storage, biological redox reactions, and nitrogen fixation, as well as metal complexes of nucleic acids. Lecture: 4 hours.

Prerequisite: Prerequisite(s): CHEM 151A, CHEM 151L, CHEM 163A, and BIOC 100A; or graduate students.

CHEM 238 - Topics in Biophysical Chemistry (5)

A discussion of the application of selected topics in biophysical chemistry to contemporary problems in biochemistry and molecular biology. Lecture: 3-1/2 hours.

CHEM 242A - Modern Physical Organic Chemistry (5)

Covers molecular structure and bonding, strain, and non-covalent binding forces. Other topics include acid-base chemistry, kinetics, thermodynamics, catalysis, organic reactions and mechanism, and quantum mechanical approaches to the analysis of organic molecules.

Prerequisite: Enrollment is restricted to seniors who have taken CHEM 143, and graduate students.

CHEM 242B - Modern Synthetic Methods in Organic Chemistry (5)

Presents concepts in bond formation, conformation, selectivity, and stereocontrol in modern organic synthesis. Focuses on understanding reaction mechanisms. Culminates with strategy in designing multi-step synthesis of complex targets.

Prerequisite: Enrollment is restricted to seniors who have taken CHEM 143, and graduate students.

CHEM 242C - Spectroscopy and Applied Analytical Methods (5)

Presents strategies in organic structure elucidation, including nuclear magnetic resonance (NMR) and mass spectrometry. Provides theory and practical elements of structure elucidation and modern analytical methods for organic molecules.

Prerequisite: Enrollment is restricted to seniors who have taken CHEM 143, and graduate students.

CHEM 244 - Organic Free Radical Chemistry (5)

Explores organic free radicals. Fundamental principles in physical chemistry provide an understanding of free-radical transformations in organic synthesis, polymerization, and some examples of free radicals in biology. For students who have a firm grounding in organic chemistry.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 247 - Using DFT Computational Methods to Study Molecular Structure and Reactivity (5)

This course is fully hands-on, highly interactive, and project-based. Students receive extensive training on the DFT program Gaussian and are then offered the opportunity to deepen their knowledge, tailored to their specific research projects. Students have the option to bring in their own molecules of interest from their research laboratories.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 256A - Advanced Topics in Inorganic Chemistry (5)

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry.

Prerequisite: Enrollment is restricted to graduate students or previous enrollment in CHEM 151A, CHEM 151L, and CHEM 146B.

CHEM 256B - Advanced Topics in Inorganic Chemistry (5)

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry.

Prerequisite: Enrollment is restricted to graduate students or previous enrollment in CHEM 151A, CHEM 151L, and CHEM 146B.

CHEM 256C - Advanced Topics in Inorganic Chemistry (5)

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry.

Prerequisite: Enrollment is restricted to graduate students or previous enrollment in CHEM 151A, CHEM 151L, and CHEM 146B.

CHEM 256D - X-ray Crystallography (5)

Course in chemical crystallography focuses on the needs of small-molecule, single-crystal diffraction studies. Includes diffraction theory, space-group analysis, data collection, structure solution, and refinement. Practical component: use of diffraction equipment and solution/refinement software.

Prerequisite: Enrollment is restricted to graduate students and seniors who have taken CHEM 151A, CHEM 151L, and CHEM 163A.

CHEM 261 - Foundations of Spectroscopy (5)

The basic theory of time-dependent processes is covered at an advanced level. The interaction of electromagnetic radiation and matter is described using both semiclassical and quantum field formulations. A variety of modern spectroscopic techniques are discussed both in terms of the basic processes and their use in the elucidation of chemical structure and dynamics.

Prerequisite: Enrollment is restricted to chemistry graduate students or previous enrollment in CHEM 163A.

CHEM 262 - Statistical Mechanics (5)

Theory and concepts of statistical mechanics with applications to ideal gases, condensed systems, phase transition, and non-equilibrium thermodynamics. Lecture: 3-1/2 hours.

Prerequisite: Enrollment is restricted to chemistry graduate students or previous enrollment in CHEM 163A.

CHEM 263 - Quantum Mechanics (5)

A rigorous introductory course: the Schrödinger equation, operator formalism, matrix mechanics, angular momentum, and spin. Perturbation and other approximate methods. Applications to atomic and molecular problems. Lecture: 3-1/2 hours.

Prerequisite: Enrollment is restricted to chemistry graduate students or previous enrollment in CHEM 163A, PHYS 116A, and PHYS 116C.

CHEM 264 - Computational Materials (5)

Introduction of quantum mechanical simulations of materials at the atomistic level. This includes introduction of solid-state electronic structure formulated with density functional theory and plane-wave basis, calculations of spectroscopic and transport properties for solids and condensed phases from first-principles. Basic calculations of electronic structure, lattice dynamics with phonon dispersion and dielectric properties, treatment of electron correlation for open-shell systems with linear and non-linear magnetism. Advanced topics include calculations of excited-state spectroscopy with many-body interaction, ab-initio molecular dynamics, Wannier function and topological properties, and electron-phonon coupling for superconductivity and carrier transport.

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students; undergraduates who have completed PHYS 102 or CHEM 163A may enroll.

CHEM 265 - Computer Simulation in Statistical Mechanics (5)

A detailed introduction of the use of computer simulation methods in physical and biophysical chemistry. Includes review of thermodynamics and statistical mechanics, molecular mechanics, molecular dynamics, and Monte-Carlo methods. Applications to liquid structure, reaction dynamics, and protein dynamics.

CHEM 268 - Solid State and Materials Chemistry (5)

Topics include synthesis of solid-state materials and their characterization using experimental techniques: XRD, TEM spectroscopy, NMR, and their applications in technologies. Emphasis on new materials, e.g., polymer, biopolymers, nanomaterials, organic/inorganic composites, ceramics, superconductors, electronic, magnetic, and opto-electronic materials.

Prerequisite: Enrollment is restricted to chemistry graduate students or students previously enrolled in CHEM 163A and CHEM 163B.

CHEM 269 - Electrochemistry (5)

Designed to introduce basic principles and applications of electrochemistry to students at upper undergraduate and lower graduate levels in various fields including analytical, physical, and materials chemistry.

Prerequisite: Enrollment is restricted to seniors and graduate students.

CHEM 271 - Chemical Biology (5)

Methods and techniques for the field of chemical biology. Brings together methods in chemistry, biochemistry, and genetics to study the interaction of small molecules with biological systems. Students cannot receive credit for this course and CHEM 171.

Prerequisite: Enrollment is restricted to chemistry graduate students.

CHEM 272 - Mass Spectrometry: Fundamentals and Applications (5)

Lecture and lab course introducing graduate students to mass spectrometry. Begins with the basic framework and concepts in mass spectrometry to break down modern instrumentation to build toward utilizing modern biomedical applications of the technology. Course focuses on biological molecules (amino acids to proteins). Interpretation of organic mass spectra is only be briefly covered. Provides students with the necessary framework to design and execute their own research-based mass spectrometry experiments. Two weeks are dedicated to hands-on experiments using modern mass spectrometers and preparing short technical notes based on the Journal of the American Society for Mass Spectrometry (JASMS) to report findings from laboratory base experiments.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 274 - Proseminar in Synthetic and Polymer Chemistry (5)

Weekly meetings devoted to study of synthetic organic chemistry and controlled polymer design for applications in nanotechnology. Topics drawn from current literature and research interests of participants.

CHEM 275 - Proseminar in Biological Inorganic Chemistry (5)

Weekly meetings devoted to biological inorganic chemistry and biochemistry. Topics are drawn from current literature. Papers and reviews are discussed, and participants give short seminars on their research interests.

CHEM 280 - Proseminar in Materials Chemistry (5)

Weekly meetings devoted to materials and inorganic research. Topics are drawn from current literature. Papers and reviews are discussed. Participants also give short seminars on topics of their research interests.

CHEM 282 - Proseminar: Synthetic Methods (5)

Weekly meetings devoted to the study of asymmetric and/or enantio-selective synthesis of optically active organic compounds of biological and medicinal significance. Topics drawn from the current literature and the research interests of the participants.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 284 - Proseminar in Synthetic Organic Chemistry (5)

Weekly meetings devoted to the study of synthetic organic chemistry. Topics drawn from the current literature and the research interests of the participants.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 285 - Proseminar: Photobiochemistry and Photobiology (5)

A detailed study of molecular mechanisms of light energy conversion and light-signal transduction processes in biological systems. Student participation in critical discussion of current literature examples are emphasized. Two-hour lecture and two-hour seminar weekly.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 286 - Proseminar in Natural Products Chemistry (5)

Weekly meetings devoted to the study of natural products. Topics drawn from the current literature and research interests of the participants.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 288 - Proseminar in Bioinorganic Chemistry (5)

Weekly meetings devoted to inorganic and bioinorganic research. Topics are drawn from current literature. Papers and reviews are discussed. Participants also give short seminars on topics of their research interests.

CHEM 291 - Chemistry and Biochemistry Research Seminar (2)

A weekly chemistry and biochemistry seminar series covering recent developments and current research, led by experts from other institutions, as well as local speakers. Open to chemistry and biochemistry graduate students.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 292 - Seminar (2)

Prerequisite: Enrollment is restricted to graduate students or approval of the graduate adviser.

CHEM 296 - Teaching Chemistry (2)

University-level pedagogy in chemistry; examines the role of preparation, assessment, and feedback in teaching chemistry discussion and laboratory sections. Effective classroom techniques and organizational strategies discussed; oral presentations analyzed critically. Required of entering chemistry graduate students.

Prerequisite: Enrollment is restricted to chemistry graduate students.

CHEM 297A - Independent Study (5)

A topic will be studied with faculty tutorial assistance to satisfy a need for the student when a regular course is not available. Students submit petition to sponsoring agency.

CHEM 297B - Independent Study (10)

A topic will be studied with faculty tutorial assistance to satisfy a need for the student when a regular course is not available. Students submit petition to sponsoring agency.

CHEM 299A - Thesis Research (5)

Thesis Research

CHEM 299B - Thesis Research (10)

Thesis Research

CHEM 299C - Thesis Research (15)

Thesis Research

CHIN - CHINESE

Lower-Division

CHIN 1 - First-Year Chinese (5)

Instruction in elementary spoken and written Chinese (Mandarin), beginning with the sounds of Chinese and their representation in the pinyin romanization system. Conversation, structural analysis, and an introduction to character texts. The first-year sequence (1-2-3) begins only in the fall quarter. Students interested in learning Chinese who are uncertain about where they should enter the sequence should meet with the instructor prior to the first class meeting.

CHIN 2 - First-Year Chinese (5)

Continuation of Chinese 1, which assumes that students are familiar both with the pinyin romanization system and approximately 150 basic characters.

Prerequisite: Prerequisite(s): CHIN 1 or placement by assessment, orby consent of instructor.

CHIN 3 - First-Year Chinese (5)

Continuation of Chinese 2, which assumes that students are familiar both with the pinyin romanization system and approximately 300 basic characters.

Prerequisite: Prerequisite(s): CHIN 2 or placement by assessment, or by consent of instructor.

CHIN 4 - Second-Year Chinese (5)

Instruction in intermediate spoken and written Chinese (Mandarin). Conversation, composition, and the reading of modern texts. The second-year sequence (4-5-6) begins only in the fall quarter.

Prerequisite: Prerequisite(s): CHIN 3 or placement by assessment, or by consent of instructor.

CHIN 5 - Second-Year Chinese (5)

Continuation of Chinese 4. Conversation, composition, and the reading of modern texts.

Prerequisite: Prerequisite(s): CHIN 4 or CHIN 4H or placement by assessment, or by consent of instructor.

CHIN 6 - Second-Year Chinese (5)

Continuation of Chinese 5. Conversation, composition, and the reading of modern texts.

Prerequisite: Prerequisite(s): CHIN 5 or CHIN 5H or placement by assessment, or by consent of instructor.

CHIN 80 - Chinese for Traveling: Introduction to Spoken Chinese and the Cultures of the Chinese-Speaking World (5)

For individuals with little or no prior knowledge of Chinese culture and language. Taught primarily in English, the course introduces cultural and linguistic aspects of travel discourse in Mandarin-speaking regions (including Taiwan, Hong Kong,

and Singapore), presented in English. The target audience is students who plan to study abroad or are interested in Chinese culture knowledge and wish to learn a few phrases in Chinese Mandarin. The curriculum introduces a basic Chinese Alphabet spelling system (pinyin) and popular travel and social topics.

CHIN 94 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

CHIN 99 - Tutorial (5)

Students submit petition to sponsoring agency.

CHIN 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division

CHIN 103 - Advanced Chinese: Language and Society (5)

Designed to enhance the students' ability to understand, analyze, and discuss authentic Chinese reading materials. Chinese linguistic and cultural aspects are introduced.

Prerequisite: Prerequisite(s): CHIN 6 or placement by assessment, or by consent of instructor.

CHIN 104 - Advanced Chinese: Readings in Literature (5)

Close readings in Chinese vernacular literature of recognized merit from contemporary and modern writers as wells as from models from the traditional period. Student are introduced to the basic critical issues, in Chinese, relating to narrative and drama, revealed by the works under discussion.

Prerequisite: Prerequisite(s): CHIN 103 or CHIN 105 or CHIN 107 or CHIN 108; or by consent of instructor.

CHIN 105 - Advanced Chinese: Readings in History (5)

Offers an appreciation of some of the central issues in Chinese history as defined by Chinese historians of the 20th century. Through readings of graduated difficulty, the vocabulary, style, and form of modern Chinese historical writing are introduced.

Prerequisite: Prerequisite(s): CHIN 103 or CHIN 104 or CHIN 107 or CHIN 108; or by consent of instructor.

CHIN 107 - Introduction to Classical Chinese Prose (5)

Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Reading from the Han and pre-Han era is featured.

Prerequisite: Prerequisite(s): CHIN 103 or CHIN 104 or CHIN 105 or CHIN 108; or by consent of instructor.

CHIN 108 - Introduction to Classical Chinese Poetry (5)

Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Classical poetry and lyrics are featured.

Prerequisite: Prerequisite(s): CHIN 103 or CHIN 104 or CHIN 105 or CHIN 107; or by consent of instructor.

CHIN 194 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

CHIN 199 - Tutorial (5)

Students submit petition to sponsoring agency.

CHIN 199F - Tutorial (2)

Students submit petition to sponsoring agency.

CLNI - COLLEGE NINE

Lower-Division

CLNI 1 - Academic Literacy and Ethos: International and Global Perspectives (5)

Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Addresses large-scale political, cultural, and economic issues to inform global citizenship.

Prerequisite: Enrollment is restricted to college members.

CLNI 1A - Introduction to University Life and Learning (1)

Orientation to and exploration of the nature of the liberal arts, and of learning at research universities. Topics include: academic planning for upper-division coursework; enrollment processes; and understanding pathways to degree completion; UCSC resources that support health and well-being strategies for academic success; the cultivation of just communities; the prevention of sexual harassment and violence; campus conduct policies; awareness of risks associated with drug and/or alcohol use; and an introduction to traditions of community-engaged learning, ground-breaking research, and interdisciplinary thinking that define a UC Santa Cruz degree. This course can be taken for Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to entering first-year College Nine students.

CLNI 30 - (H)ACER Undergraduate Community Internship (2)

Student Internship through the Apprenticeship in Community Engaged Research (H)ACER Program at College Nine and John R. Lewis College. The (H)ACER Program joins community engagement with critical reflexive components of qualitative research to support transformative learning and strengthen community-university partnerships. Students will

be placed at a variety of internships and work with our community partners such as Calabasas Elementary School classroom teachers, Calabasas Elementary School After School Program, Calabasas Community Garden, and Watsonville High School classroom teachers. Students also may propose internships if they already have strong ties with a community partner and receive approval from the (H)ACER Director. Requires students to read selected readings on critical service learning, community learning, qualitative research methods and a variety of texts relevant to the history, context and activities at the sites where they will intern. Internships will take place primarily in Watsonville. Enrollment by permission of the instructor. (Formerly JRLC 30.)

CLNI 35 - Knowledge For Justice (5)

Introduction to the (H)ACER program at College Nine and John R Lewis College. (H)ACER trains students in participatory research methodologies and creates opportunities for students to work in real-world contexts addressing issues such as social, economic, educational, and environmental injustice. Students gain a foundation in understanding the context of the research university and developing critical research methods for working with communities. Students grapple with questions of how to conduct research in an ethical way and to build relationships that both recognize and are not foreclosed by histories of violence, with particular attention to race, class, gender, and nationality. (Formerly offered as JRLC 35.)

CLNI 45 - Undeclared Scholars Discovery Lab (2)

The Undeclared Scholars Discovery Lab offers a framework for personal and intellectual exploration to help guide thoughtful consideration of potential majors. Considers careers and jobs within the context of selecting a major and reflects on personal, cultural, and social ideas about the importance of work in giving life meaning. Through readings, exercises, advising activities, and guest visits, students focus on the question of what makes a life meaningful and how different majors—and the wide range of opportunities associated with them—resonate with our thinking. To support a capacious approach to major exploration, students also learn about habits of mind that encourage discovery as an ongoing, iterative process that sustains our lifelong development.

Prerequisite: Enrollment is restricted to College Nine and John R. Lewis College members.

CLNI 55 - Undeclared Scholars Program: Opportunities Lab (2)

The Undeclared Scholars Opportunity Lab is intended to offset obstacles to student engagement opportunities by providing a framework to help students understand common obstacles, develop skills and strategies for overcoming them, and learn about many of the research and extracurricular opportunities available at UCSC. Students have a structured way of learning about and "sampling" a range of opportunities while also developing a tool box of professional skills.

CLNI 65 - Learning to DJ (2)

Introduces students to the art of DJing. Becoming a skilled DJ requires many things: a deep love of music, the ability to read one's audience, technical skill, and knowledge of DJ cultures and their histories. Students learn to DJ using both vinyl and digital formats, as well as how to organize events centered around dance music.

CLNI 70 - College Nine and John R. Lewis College Community Garden (2)

Students in this course design and build a new community garden at Colleges Nine and Ten. Students engage in a collaborative design process with campus stakeholders; learn hands-on skills and community gardening best practices; and build regenerative social and ecological systems. (Formerly Colleges Nine and Ten Community Garden)

CLNI 80 - International Feminist Perspectives (2)

Offers perspectives on feminist movements, both historical and contemporary, across Asia, Africa, Europe, and the Americas. Students explore the values of specific movements from around the world that align with larger international trends, as well as the culturally unique tenets and organizing structures of the movements. Assignments encourage students to critically analyze the motivating factors in the creation of feminist movements and the complications in transnational feminist spaces.

CLNI 85 - Global Action (2)

Workshop facilitated by peer instructors. Students learn about current international and global issues through interactive exercises, small-group discussions, and faculty presentations. Students develop an action plan to raise awareness about one or more of these concerns and take practical steps to create positive change in the world.

CLNI 90 - Intercultural Understanding (2)

Provides an opportunity to enhance the intercultural experience, increase cultural competency, promote further understanding, and examine the various trends facing a uniquely diverse community. Geared toward U.S. and international students affiliated with the International Living Center. Enrollment by instructor permission.

CLNI 92 - Breaking Stereotypes (5)

Supports the development of cross-cultural understanding and media literacy to navigate diverse perspectives, examining how U.S. media portrays Muslim, Arab, North African, and Middle Eastern identities, analyzing the construction, reinforcement, and challenge of stereotypes across film, news, television, and social media.

Upper-Division

CLNI 110 - Storytelling for Social Impact (5)

Stories are fundamental to what it means to be human. This course introduces students to the history, social context and techniques of storytelling and takes students through the

research, writing and performing process of storytelling from the personal to the communal, with an emphasis on social impact storytelling, purposeful stories that drive action on social issues. Students engage with the model of “The Moth” radio hour and podcast by listening to and analyzing a wide array of stories told before a live audience, as well as writing and performing three stories during the quarter, using techniques learned in class and from skilled storytellers and theater faculty.

CLNI 120 - Practical Activism Conference Planning and Development (2)

Offers an applied experience of collaborative planning, production, and leadership. Students plan workshops and other event components; conduct outreach and publicity; and address all aspects of educational event planning. Enrollment restricted to members of the spring volunteer Practical Activism planning group. Enrollment by permission of the instructor.

CLNI 191 - Teaching Global Action (5)

Undergraduates at upper-division level participate in teaching discussion groups for CLNI 85 (W). Prerequisite(s): permission of instructor: essay describing interest in becoming course assistant, copies of evaluations, and letter of recommendation from faculty member and/or college staff member. Enrollment is restricted to College Nine juniors and seniors.

CLNI 199 - Tutorial (5)

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment is restricted to upper-division College Nine members.

CLNI 199F - Tutorial (2)

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment is restricted to upper-division College Nine members.

Lower-Division

Upper-Division

CMMU - COMMUNITY STUDIES

Lower-Division

CMMU 10 - Introduction to Community Activism (5)

Surveys different strategies of community activism including charity, volunteering, labor and community organizing, and recently emerging global activism with goal of demonstrating how certain strategies challenge existing social relations and arrangements while others typically (and often by design) reproduce them.

CMMU 12 - Field Study Placement (1)

The heart of the community studies major is the field study experience. Through this series of courses, students prepare for, complete and reflect on six months of immersive, full-time experiential learning with a community-based or social change organization. This process culminates in the production of original qualitative research that builds new knowledge about the processes and conditions that facilitate social change. In this 1-credit preparatory course, students develop and articulate their intellectual, professional, and personal goals for field study. They research and communicate with potential field study sites, and locate organizations with which they can complete it.

Prerequisite: Prerequisite(s): CMMU 10. Enrollment is restricted to sophomore, junior, and senior community studies majors and proposed majors. .

CMMU 20 - Media and Social Movements (5)

From #BlackLivesMatter to #MeToo, from the Women's March on Washington to the March for Our Lives following the Stoneman Douglas High School shooting, a new generation of activists is using media to advance social justice goals. From the perspectives of sociology, psychology, and political science, course explores how contemporary activists harness a diverse range of media tools and platforms for social change and how contemporary strategies are rooted in and/or diverge from historical practices of using media to effect social and political change. Defines "media" broadly to include social media and legacy media forms, such as radio, television, and print journalism.

CMMU 30 - Numbers and Social Justice (5)

Relates simple lessons of quantitative thinking to topical materials that are accessible and relevant to working for justice and social change. Students learn practical techniques to distinguish credible statistical evidence from misleading statistical claims.

CMMU 93 - Field Study (5)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 93F - Field Study (2)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 93G - Field Study (3)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 99 - Tutorial (5)

Individual directed study for lower-division undergraduates.

CMMU 99F - Tutorial (2)

Individual directed study for lower-division undergraduates.

Upper-Division

CMMU 101 - Communities, Social Movements, and the Third Sector (5)

Engages with crosscutting ideas and concepts central to the major including constructions of community in social-change efforts and the institutionalization of social movements in third-sector organizations. Deepens students' understanding of the opportunities and obstacles embedded in various avenues of social action.

Prerequisite: Enrollment is restricted to sophomore, junior, and senior community studies majors and proposed majors.

CMMU 100 - Preparation for Field Studies (5)

A praxis-based practicum that prepares students for both the professional and research aspects of their six-month field study. Prerequisite(s): CMMU 10; or concurrent enrollment in CMMU 20C; satisfaction of the Entry Level Writing and Composition requirements; Enrollment is restricted to proposed and declared community studies majors. (Formerly CMMU 102.)

CMMU 103 - Field Study Practicum (2)

A practicum in social change work in which the students works for a social change organization on a part-time basis. Concurrent enrollment in CMMU 102 is required.

CMMU 105A - Field Study (5)

Full-time independent field study in an approved off-campus setting with onsite supervision by the sponsoring organization and regular distanced supervision by campus faculty. Enrollment is restricted to community studies majors upon completion of the required preparatory coursework. Prerequisite(s): CMMU 102. (Formerly CMMU 198, Independent Field Study.)

CMMU 105B - Field Study (5)

Full-time independent field study in an approved off-campus setting with onsite supervision by the sponsoring organization and regular distanced supervision by campus faculty. Enrollment is restricted to community studies majors upon completion of the required preparatory coursework. Prerequisite(s): CMMU 102. (Formerly CMMU 198, Independent Field Study.)

CMMU 105C - Field Study (5)

Full-time independent field study in an approved off-campus setting with onsite supervision by the sponsoring organization and regular distanced supervision by campus faculty. Enrollment is restricted to community studies majors upon completion of the required preparatory coursework. Prerequisite(s): CMMU 102. (Formerly CMMU 198, Independent Field Study.)

CMMU 107 - Analysis of Field Materials (5)

A seminar for students who have completed a full-time field study. Devoted to the systematic analysis of field materials, integrating appropriate concepts and relevant literature, as well as utilizing the experience of other students.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, CMMU 198. Enrollment is restricted to community studies majors.

CMMU 130 - Community Organizing Principles and Practice (5)

Community organizing brings people together in pursuit of self-determination in one or several realms of their lives. This course explores the history, philosophy, goals and accomplishments of community organizing and introduces students to practical community organizing skills.

CMMU 132 - American Cities and Social Change (5)

Examines the historical development of and contemporary conditions within U.S. cities by focusing on social and economic restructurings of cities, cultural and political transformations, and spatial reorganizations of the urban landscape. Goal is understanding the changing nature of urban experience.

CMMU 133 - Making California: Landscapes, People, Politics, Economy (5)

Examines key moments in the development of California to provide understanding of the challenges and opportunities facing California today. Particular focus is given to abiding tensions around wealth and poverty, opportunity and exclusion, and progressive and conservative politics.

CMMU 134 - No Place Like Home (5)

Examines the class and race dynamics of the housing market and public policy, asking what kinds of housing get built, where it gets built, and for whom it is (or is not) built--and, crucially, why. Questions how homelessness became normalized in contemporary society.

CMMU 137 - Communities and Climate Change (5)

For many communities the impacts of global warming, rising sea levels and environmental degradation compound already existing systemic racial, class, and gender inequalities. How do we understand the relationships between people and the environment? How are movements for social and ecological justice (dis)connected? This class considers how and why communities, activists and organizations press for alternatives through case studies from the U.S. environmental justice movement and related local and global struggles for food sovereignty, Indigenous rights and climate justice.

CMMU 141 - Economic Justice in Theory and Practice (5)

Examines how markets operate within the political economy of contemporary capitalism to generate myriad and often

chronic forms of economic and social inequality in the United States. Explores different approaches to addressing inequality within the multi-faceted economic justice movement. (Formerly Political Justice in Theory and Practice.)

Prerequisite: Enrollment is restricted to community studies majors and proposed majors during First Pass enrollment.

CMMU 143 - Wal-Mart Nation (5)

Examines origins and growth of Wal-Mart stores as powerful guides to understanding dynamics of contemporary global political economy and, relatedly, the changing fortunes of global social classes.

CMMU 145 - Global Capitalism: a History of the Present (5)

Provides an overview of the history of capitalism in order to understand current crises within the global political economy. Gives particular attention to the origin, character, and consequences of neoliberalism. (Formerly Globalization and Its Discontents.)

CMMU 148 - The Problem with Solutions (5)

"Solutionism" encourages college students to tackle the world "grand challenges" in areas such energy and resources, food and agriculture, education and literacy, or global health, with "innovative" technologies or program design. Rarely, however, are they encouraged to learn more about the problems they are trying to solve. Course examines contemporary solutionism, with a specific focus on agriculture and food, in order to recognize and understand its contexts, cultures, and consequences for social and ecological justice.

CMMU 149 - Political Economy of Food and Agriculture (5)

Examines key concepts in agrarian political economy; the historical development of the world food system; and a selection of contemporary issues related to food production, consumption, distribution, and regulation.

CMMU 151 - Sex, Race, and Globalization (5)

Examines globalization by attending to shaping forces of sexuality, gender, and race. Foregrounds Third World feminist theories, social movements. Topics include sexual and racial dynamics of free trade and labor fragmentation; global sex trades; HIV/AIDS politics in the South and North; transnational LGBT/queer politics.

CMMU 156 - Politics of Food and Health (5)

Critically examines contemporary debates about market and policy approaches to improve nutrition and dietary health and to address issues, such as food insecurity, obesity, and malnutrition.

CMMU 157 - Ageism and Activism (5)

Introduces students to gerontology, the study of aging. Taking a multidisciplinary approach, critically examines the theories, stereotypes, and realities of worldwide demographic transition and considers the many interesting implications for organizing social and personal life.

CMMU 160 - Public Health (5)

Examination of community activism to address health issues: examples are drawn from a range of concerns, e.g., environmental racism, prison conditions, feminist health matters, the AIDS epidemic, violence, and alcoholism. Special attention is given to the social frameworks of health and to the utilization of social and political strategies for improving community well-being.

CMMU 161 - Gender Health and Justice (5)

Critically examines concrete aspects of health in U.S. social and political contexts, emphasizing how gendered interpretations and practices construct and affect health equity and the practices of health care.

CMMU 162 - Community Gardens and Social Change (5)

Examines history, theory, and practice of community gardening, emphasizing contemporary garden projects using the transformative power of direct contact with nature to effect social change. Aims include understanding the nonprofit sector's response to social problems with novel programs and practices.

CMMU 163 - Health Care Inequalities (5)

Examines system and non-system that is American health care with special attention to inequalities in access, financing, and quality of care. Covers concepts such as equality, fairness, and need as well as community organizing and community building for health.

CMMU 164 - Health Justice in Conflict (5)

Explores three case studies to address critical themes of healthcare inequalities in the context of conflict: the legal battle of Ecuadorians against Texaco/Chevron; the struggle of comfort women during World War II; and chemical saturation in Iraq.

CMMU 165 - Community Analysis for Global Health (5)

Practical, skill-building course that starts from the premise that while all communities value health, different communities develop distinctive understandings of what health means to them and how best to achieve it given their specific environments and economies. Course focuses on health justice from a political economy perspective, analyzing how health is shaped by the interaction of multiple societal forces, including who holds power and what steps marginalized groups have taken to achieve more just distributions of resources. By studying community health, across multiple communities in a variety of locations, students learn how to be effective agents of global health equity.

CMMU 167 - Special Topics in Health Equity (5)

Special topics course in the field of health equity that offers focused content and/or perspectives within a field of study already central to the community studies curriculum, in this case public health and health equity. Specific course content varies with instructor.

CMMU 186 - Food and Agriculture Social Movements (5)

Examines the primary ways in which activists are attempting to resist, provide alternatives to, and/or transform aspects of the food system using social and environmental justice frameworks to evaluate such activism. Topics explored include organic farming, food charity, fair trade, relocalization, and farmworker organizing.

CMMU 189 - Mentoring in Community Studies (5)

Each student serves as a facilitator for small discussion groups in connection with core community studies courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May not be counted toward upper-division major requirements. Prerequisite(s): prior course work in the major.

CMMU 191 - Student Volunteer Internship (3)

Course bridges Santa Cruz and university communities through students organizing volunteer opportunities and charitable events. Students contribute 10 hours per week on and off campus, including outreach, event-planning, and database maintenance; supplemented by reading and biweekly discussions. Enrollment is by permission of instructor after application and interview.

CMMU 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar, course 42, under faculty supervision. Students submit petition to sponsoring agency. Approval by the Committee on Educational Policy the prior quarter.

CMMU 193 - Field Study (5)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 193F - Field Study (2)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 193G - Field Study (3)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 195A - Senior Thesis (5)

Individual study with a faculty member to complete the senior thesis.

CMMU 195B - Senior Thesis (5)

Individual study with a faculty member to complete the senior thesis.

CMMU 195C - Senior Thesis (5)

Individual study with a faculty member to complete the senior thesis.

CMMU 199 - Tutorial (5)

Advanced directed reading and research for the serious student.

CMMU 199F - Tutorial (2)

Advanced directed reading and research for the serious student.

Graduate

CMMU 297 - Independent Study (5)

Either study related to a course being taken or a totally independent study. Designed for graduate students. Students submit petition to sponsoring agency.

CMPM - COMPUTATIONAL MEDIA

To view planned offerings for the current academic year, please visit this page.

Lower-Division

CMPM 15 - Research Explorations (1)

Students explore ideas with like-minded peers and position themselves to join research labs. They read, present, and discuss research ideas in low time-commitment reading groups related to an active research area of UCSC faculty, diving into the creative, societally impactful, and cutting-edge aspects of technology. Course is designed for students of all backgrounds and majors, those just starting undergraduate work, about to graduate, considering research, or simply curious. To browse themes, visit the Exploratory Reading Groups website (see Class Notes in the Schedule of Classes).

CMPM 17 - Design Build Experience (3)

Introduction to design thinking and the engineering design cycle via a design-build-evaluate-iterate process, resulting in a functional artifact. Students work in groups while learning discipline-specific standards of good engineering practice. Specific project details and disciplines explored vary with instructor. No prerequisites or prior learning required.

Prerequisite: Enrollment is restricted to sophomores and frosh. Seniors and juniors may enroll by permission of the instructor.

CMPM 20 - Climate Resilience, Health, and Wellbeing (5)

We live in a rapidly changing world with the climate crisis and interrelated global crises (“the polycrisis”). Students gain invaluable personal and social resilience skills including mindfulness and collaborative high-impact projects to navigate and build a meaningful future. To help students build transformational resilience, students learn through both educational content as online video lectures and reading, and experiential classroom sessions. (Formerly Psychosocial and Planetary Resilience in the Age of the Climate Crisis.)

CMPM 25 - Introduction to 3D Modeling (5)

Introduces theory and techniques of 3D computer graphics. Topics include: capabilities of modern graphics hardware; 3D coordinate spaces; modeling with polygons; NURBS and subdivision surfaces; applying textures and materials; lighting; and simple effects. Students develop proficiency in 3D modeling via lectures and assignments focused on the use of a 3D modeling tool.

CMPM 26 - Introduction to 3D Animation (5)

Introduces theories and techniques of 3D computer animation. Topics include: character animation; rigging; simulation of cloth, liquids, and fire; motion capture; rendering; and editing animated scenes. Students develop proficiency in 3D animation via lectures and assignments focused on the use of a 3D animation tool and use of motion-capture software.

Prerequisite: Prerequisite(s): CMPM 25.

CMPM 27 - Fundamentals of Substance Designer and Painter (5)

Introduction to the development of physically based materials in Substance Designer and Substance Painter. These are then applied to a range of character and machine models within either the Blender or Maya 3D modeling applications.

Prerequisite: Prerequisite(s): CMPM 25 or by permission of the instructor.

CMPM 35 - Data Structures for Interactive Media (5)

Introduction to common data structures, algorithms that operate on them, and techniques for implementation. Uses digital authoring of interactive media as a frame to motivate asymptotic (big-O) analysis of design scalability. Students will program in a strongly typed language.

Prerequisite: Prerequisite(s): CSE 30.

CMPM 80A - Accessible Games (5)

Overview of the physical, psychological, cultural, and psychosocial aspects of disability and how they impact game play. Discusses implications for universal and accessible game design.

CMPM 80H - Human-Centered AI (5)

As AI technologies start to integrate and permeate our everyday lives, we become aware of how they impact our lives and the biases inherent in these systems. Course introduces Human-Centered AI, investigating humanistic values and issues of a variety of current AI systems, including those in your car, on your phone (e.g., Siri), on public streets (delivery robots), and at different vendors. Introduces various societal, economic, and humanistic issues such as bias, trust, and accountability, and delves into methods that can be used to design more human-centered AI systems.

CMPM 80I - Introduction to Human Computer Interaction (5)

Introduces students to Human Computer Interaction (HCI) as a field, using their everyday experience with technology as a starting point. Students learn key HCI concepts and concerns in lectures, and try out HCI design techniques in sections.

CMPM 80J - Games as Technical Culture (5)

Examines games as technical and cultural artifacts—shaped by society and, in turn, shaping it. Core topics are traced over time, including social, technical, and artistic topics (for example: conceptions of war, platform affordances, and genre evolution).

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements.

CMPM 80K - Foundations of Video Game Design (5)

Explores how video games (and games broadly) shape experiences and express ideas. Students develop novel games, interpret games, and survey related topics. No programming experience is required. All offerings support students with required synchronous section meetings and optional synchronous events.

CMPM 80L - Entrepreneurial Organization and Leadership (5)

Provides a framework for leadership in entrepreneurial organizations. Topics include leading with authenticity, motivation and personality, storytelling, teamwork and management, organizational culture and processes. Learning is integrated with practice through deep engagement with entrepreneurial leaders and a time-intensive entrepreneurial project. (Formerly Technology and Information Management 80L.)

CMPM 94 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency.

CMPM 94F - Group Tutorial (2)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency.

Upper-Division

CMPM 110 - Writing for Game Technologies (5)

Game writers create worlds, characters, and stories—and also craft computational systems so players can experience these fictions interactively. This course covers the fundamentals of authoring fictions and systems that work together toward powerful player experiences. All offerings support students with required synchronous section meetings.

Prerequisite: Prerequisite(s): CMPM 120, or by permission of the instructor.

CMPM 115 - Lead by Design: Experiential Learning

Collaborative (5)

Students work in teams to develop a template for a 10-week-long engineering design project. Teaches teamwork, leadership skills, inclusive team practices, Agile process, engineering ethics, and identity formation in engineers.

Prerequisite: Enrollment is restricted to juniors and seniors.

CMPM 115A - Lead by Design: Design-Build Collaborative (2)

Students work in teams to develop a template for a significant engineering project and document their collaborative process. Over the course of 10 weeks, students work together to design, develop, and iterate on the proposed prototype to showcase specified technical and professional engineering skills. In parallel, teams experientially learn and practice teamwork, project management, and professional communication skills. Project topics are based on approval through application only. Enrollment is restricted to juniors and seniors, and by permission of the instructor only.

CMPM 115B - Lead by Design: Experiential Curriculum Development (3)

Student-leaders work in teams to develop experiential learning content for a 3-credit design-build experience, a skill-building course where learners are set up to complete a significant engineering artifact. Student-leaders practice active learning that facilitates learners in traversing the engineering design cycle with room for iteration and to learn and recover from failure. CMPM 115B employs professional skills learned in CMPM 115A: teamwork, leadership, inclusive practices, Agile processes, and engineering ethics. Topics developed are accepted by proposal from the student-leaders.

CMPM 118 - Collaborative Research Experience in Engineering (5)

Guides small student teams through the performance of a quarter-long research project. Provides an overview of the process of performing research, research communities, and processes for finding and presenting research results.

CMPM 120 - Game Development Experience (5)

Teaches the concrete programming and collaboration skills associated with making a digital game from start to finish, including but not limited to: establishing a team, concepting, storyboarding, prototyping, producing, and testing a game for release. Students are organized into groups and work together to create and produce a playable game.

Prerequisite: Prerequisite(s): CMPM 80K; and FILM 80V; and CSE 15 and CSE 15L or CSE 30 or CMPM 35; and ARTG 80G or ARTG 80H or ARTG 80I; and concurrent enrollment in ARTG 120. Enrollment is restricted to juniors and seniors or by permission of the instructor.

CMPM 121 - Game Development Patterns (5)

Advanced game programming focused on software design patterns and refactoring. Introduces classic software design patterns, as well as game programming patterns. Introduces software refactoring, including code smells and widely used refactoring patterns.

Prerequisite: Prerequisite(s): CMPM 120.

CMPM 122 - Business of Games (5)

Ten-week course to provide instruction on important business topics for videogame creators—many related to the games themselves and others for pursuing success in bringing the games to customers: publishing, distribution, marketing, funding, operations, and more.

CMPM 123 - Advanced Programming (5)

Course introduces students to current and emerging advanced programming methods used in building complex, high-performance, and networked interactive media systems. Students use tools like debuggers and profiles to inspect and resolve software performance bottlenecks in a compiled language.

Prerequisite: Prerequisites: CSE 101 or CMPM 35.

CMPM 125 - Game Technologies (5)

Introduction to construction of games using game engine technology, using a specific game engine as a focus. Covers major game engine features: input, collision, animation, model import, lighting, camera, rendering, textures, particle systems. Introduction to a specific game scripting language, custom game logic, game programming patterns. (Formerly offered as CMPM 121.)

Prerequisite: Prerequisite(s): CMPM 120.

CMPM 130 - User Interface and User Experience Design (5)

Students develop skills and interactive prototypes for addressing three communication challenges: first, software itself communicating with interactors; second, developers of software communicating about the design of the software's interactions and users' experiences; and third, communicating results of design processes.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to computer science: computer game design majors.

CMPM 131 - User Experience for Interactive Media (5)

Theories and practices for approaching the design problems of interactive media holistically, beyond usability and accessibility. Includes hands-on learning, application of human-centered design and evaluation skills in group projects, and peer critique. This class is asynchronous online, with secondary sections offered as in-person meetings.

Prerequisite: Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 132 - Interaction Design Studio (5)

Practice-based interaction design studio course. Students learn about design-led approaches to Human-Computer Interaction through participating in group projects. Course offers

introductions to design methods and actionable strategies to do interaction design work and design-led technology research.

Prerequisite: Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 146 - Game AI (5)

Examines the use of artificial intelligence (AI) in games. Covers core AI technologies for search, control, and learning, and the application of AI to improve game design, development, and game play. Examines the AI content in multiple commercial games. This is an online class; most lectures are asynchronous. The weekly lab is synchronous, focused on Q&A and group discussion of work in progress.

Prerequisite: Prerequisite(s): CSE 101 or equivalent; familiarity with python a plus, though not required. Enrollment is restricted to sophomores, juniors, seniors, and graduate students.

CMPM 147 - Generative Design (5)

Introduces generative methods for design. Uses algorithmic techniques to generate and evaluate game content (images, sounds, map designs) along with mechanics and progression systems. Search-based and learning-based techniques with connections to artificial intelligence are also covered.

Prerequisite: Prerequisite(s): CMPM 120.

CMPM 148 - Interactive Storytelling (5)

Covers a range of design approaches and technologies including storytelling in games, interactive fiction, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, students explore the theoretical positions, debates, and technical and design issues arising from these approaches.

Prerequisite: Prerequisite(s): CSE 101 or CMPM 35. Enrollment is restricted to juniors and seniors.

CMPM 150 - Creating Digital Audio (5)

Introduces digital sound recording and editing technologies, sound synthesis, and concepts in sound design for media production. Covers the basics of sound capture, microphones, audio manipulation and editing, effects, sound formats, mixing and dynamics, synthesizers, audio software, and game audio.

Prerequisite: Enrollment is restricted to sophomores, juniors, and seniors.

CMPM 151 - Algorithmic Music for Games (5)

Introduces compositional techniques and procedural audio as exhibited in the sound and music of video games. Surveys different styles of music implemented in video games and associated compositional approaches. Students develop skill in procedural audio via a series of workshops and assignments.

CMPM 152 - Musical Data (5)

Surveys the relationship between music and data as exhibited in industry and research implementations of sonification and music information retrieval. Students introduced to various styles and algorithms of sound analysis and modeling and develop skills to program unique approaches in this area.

Prerequisite: Prerequisites: CMPM 35 or CMPM 120 or CMPM 150 or CMPM 151 or by permission of instructor. Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 163 - Game Graphics and Real-Time Rendering (5)

Introduces real-time, hardware-accelerated graphics programming suitable for game development, visual effects, and interactive multimedia projects. Emphasizes contemporary shader-programming techniques and developing custom effects using game engines and multimedia software.

Prerequisite: Prerequisite(s): CMPM 120 (exceptions granted in special cases with permission of the instructor).

CMPM 164 - Game Engines (5)

Covers the graphic elements in computer games. Topics include modifying, optimizing, adding components, and building a game engine. Course evaluation based on exams and several programming projects, including a game built using the student's game engine.

Prerequisite: Prerequisite(s): CMPM 163 or CSE 160. Concurrent enrollment in CMPM 164L is required.

CMPM 164L - Game Engines Lab (2)

Provides hands-on experience in using, designing, and building game engines. Students also explore different special effects, such as particle systems, spring systems, and game physics.

Prerequisite: Prerequisite(s): CMPM 163 or CSE 160. Concurrent enrollment in CMPM 164 is required.

CMPM 169 - Creative Coding (5)

Surveys seminal and contemporary artworks and interactive installations that utilize and critically analyze new media, new technologies, and new algorithms. Students introduced to creative coding practices and encouraged to emulate existing digital arts techniques and to develop their own computational arts projects.

Prerequisite: Prerequisites: CMPM 35 or CMPM 120 or CMPM 163 or by permission of instructor. Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 170 - Rapid Prototyping (5)

Working in multiple small teams, students practice multiple cycles of the interactive media design process. Cycles involve ideation, research, prototyping, release, and reflection. Students will understand how to follow the design process as a way to build knowledge, understanding, and empathy for a

system's users rather than just as a means to produce those systems. The course draws on design philosophies from inside and outside of the computer games industry. (Formerly Game Design Studio I.)

Prerequisite: Prerequisite(s): CMPM 120 and CMPM 121 (Game Development Patterns, if taken Fall 2023 or later). Enrollment is restricted to senior computer science: computer game design majors or by permission of the instructor.

CMPM 171 - Game Design Studio (7)

Students work in teams to create a fully-functional subset ("vertical slice") of an interactive, playable software system. Focus is on experience design, systems design, integrating assets (visual, auditory, and written), testing, and project management. May be repeated for credit. (Formerly offered as Game Design Studio II.)

Prerequisite: Prerequisites: CMPM 121 (Game Development Patterns, if taken Fall 2023 or later) and CMPM 130 and CMPM 170 and CMPM 176.

CMPM 172 - Game Production Studio (7)

Students work in teams to produce fully functional games based on previously developed game subsets. Focus on production including scaling, long-term player experience, teaching mechanics through interaction, developing multi-stage narratives/scenarios, and varying gameplay as players develop new understandings and abilities. Prerequisite(s): CMPM 171, or by instructor permission. Enrollment is by permission of the instructor. Formerly offered as Game Design Studio III.

CMPM 176 - Game Systems (5)

Presents game design as the interplay of multiple interacting game systems. Surveys various game systems: movement, combat, reward, economic, logistics, quest, information visibility, narrative. Students explore systems via study, design, and play of board, card, and computer games.

Prerequisite: Prerequisite(s): CMPM 80K.

CMPM 177 - Creative Strategies for Designing Interactive Media (5)

Surveys tactical, structural, contextual, and other methods to enhance creativity and innovation in the design of games and other interactive media. Investigates strategies for creativity and innovation drawn from diverse fields, including interactive affordances, narrative and poetics, biology, contextual inquiry, and design research. To innovate in a field of fixed genres is challenging: the allure of modeling exemplars is strong. Although imitation can be successful in the marketplace, the most creative action occurs on the leading edge of change. Innovation benefits from strategies and methods that are directly aimed at exploring new perspectives and structures to learn through the process of discovery.

Prerequisite: Enrollment is restricted to juniors and seniors.

CMPM 178 - Human-Centered Design Research (5)

Students move through a rigorous design-research process involving skills and principles in human-centered design research as well as selected formal research methods. They learn to use tools for ideation, human-centered qualitative research, domestic probes, mock-ups, and prototypes.

Prerequisite: Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 179 - Game Design Practicum (5)

Provides the opportunity to practice the creation of novel computer games. Students learn a new game-making technology, then create three games using this technology.

Prerequisite: Prerequisite(s): CMPM 120 and CMPM 80K.

CMPM 180 - Topics in Computational Media (5)

Allows students to explore topics in the computational media field and practice design in a wide variety of applications and areas, including but not limited to interactive computational experiences, AI and poetry, smart cities and game design, ethics and computational media, and computational media culture. Course presentation and assessment will vary by topic and instructor.

CMPM 181 - Games for Impact Studio I (5)

Students work in teams to develop serious games. Course involves multiple aspects of game development, with an emphasis on identifying the topic and goal for the game, initiating research on the topic, and developing an initial concept design. The concept design phase will include several iterations and experimentation with various techniques and game elements toward addressing the goal established. The process also involves identifying assessment and efficacy measures given the goal identified. These measures are theory-based and will be developed based on the initial research conducted. The outcome should be a concept design and prototype. Taught in conjunction with CMPM 255. Students cannot receive credit for this course and CMPM 255.

CMPM 182 - Games for Impact Studio II (5)

Students work in teams to polish and assess their games. This is a continuation of the Games for Impact Studio series from Studio I. The course will involve aspects of (I) game production, with an emphasis on tuning the design and polishing it, and (II) assessment, where students develop their methods for assessment, which include usability testing, as well as goal assessment based on metrics development, data collection, and analysis. The outcomes are: the game is polished and tested, as well as a report on the evaluation of the game. Taught in conjunction with CMPM 256. Students cannot receive credit for this course and CMPM 256.

Prerequisite: Prerequisite(s): CMPM 181.

CMPM 194 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency.

CMPM 194F - Group Tutorial (2)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency.

CMPM 195 - Senior Thesis Research (5)

Students submit a petition to the sponsoring agency.

CMPM 195F - Senior Thesis Research (2)

Intended for majors. Students submit a petition to the sponsoring agency.

CMPM 198 - Individual Study or Research (5)

Students submit petition to sponsoring agency.

CMPM 198F - Individual Study or Research (2)

Intended for majors. Students submit petition to sponsoring agency.

CMPM 199 - Tutorial (5)

For fourth-year students majoring in computational media. Students submit a petition to the sponsoring agency.

CMPM 199F - Tutorial (2)

For fourth-year students majoring in computational media. Students submit a petition to the sponsoring agency.

Graduate

CMPM 201 - Introduction to Computational Media (5)

Provides a broad foundation in the history, theory, and contemporary practice of computational media, examining its roots in a variety of fields and current structures of participation. Also covers a selection of key critical lenses for understanding computational media.

Prerequisite: Enrollment is restricted to computational media graduate students, or by permission of the instructor.

CMPM 202 - Computation Media Research (5)

Overview of computational media research strategies. Includes case studies of how particular projects were defined and completed and how interdisciplinary concerns have been successfully integrated. Considers the expressive and authorial affordances of different system architecture approaches.

Prerequisite: Prerequisite(s): CMPM 201, or by permission of the instructor. Enrollment is restricted to graduate students.

CMPM 203 - Computational Media Methods (5)

Overview of major methods in computational media research. Includes non-numerical methods such as playtesting, arts critique, ethnographic observation, and humanistic interpretation. Also includes numerically oriented methods such as survey instruments, data mining, user experiments, and characterizing expressive/generative spaces.

Prerequisite: Enrollment is restricted to Computational Media graduate students.

CMPM 204 - Computational Media Project Definition (5)

Students define the topic, approach, and scope for an M.S. thesis or project. Includes discussion of successful past projects and theses, visits from faculty presenting open problems, reviews of related literature, topic and timeline presentations, and critiques.

Prerequisite: Enrollment is restricted to computational media graduate students, or by permission of the instructor.

CMPM 205 - Bridging the Disciplines: Writing and Synthesis for Computational Media (5)

Focuses on developing students' abilities to do research across multiple disciplines. Discusses multidisciplinary epistemologies and methodologies toward developing research voice and ability across the disciplines. Students engage with diverse sources and media, analyzing how information from computer science, media studies, design, and social sciences can converge in computational contexts. Students are encouraged to integrate and synthesize knowledge from multiple fields and develop a structured argument, building their view within computational media.

Prerequisite: Enrollment is restricted to Ph.D. students in computational media.

CMPM 206 - Computational Media Research Preparation (5)

Covers skills for finding relevant literature for a novel research topic, integrating that literature, and communicating the results. Also covers how to select work for a research portfolio, present that work, and describe contributions. Enrollment is by permission of the instructor. Prerequisite(s): CMPM 201, CMPM 202, and CMPM 203 for an understanding of media creation and computer programming; good standing in the Ph.D. program. Enrollment is restricted to graduate students.

CMPM 230 - Data Science in Computational Experiences (5)

Introduces the topic of data science in computational experiences such as games, digital apps, and social media. Students develop methods to model behavioral patterns using data with the goal of supporting user research goals and/or improving the user experience. Covers the tools, methods, and principles of data science, including knowledge discovery, data collection, feature extraction and selection, pattern recognition, visualization, and reporting. Also covers analytics across computational media forms, e.g., games, digital apps, and social media. Enrollment is restricted to graduate students in Computational Media, and by permission

of the instructor. Students must have a computational background to enroll. Enrollment is by permission of the instructor. (Formerly Game Data Science.)

CMPM 232 - Psychology of Play (5)

Psychology plays an important aspect in users' engagement and understanding psychological aspects that can affect users as they interact with technology. This course discusses theories of motivation, perception, emotions, personality, and preferences. Also discusses how such theories affect users' interaction with technologies, such as games, social media, mobile application, and other common technologies used today. Also reviews new papers and results showing the types of models affecting users engagement and their influence and use in the different phases of design or development.

Prerequisite: Enrollment is restricted to graduate students in games and playable media, serious games, human computer interaction, and computational media programs, or by permission of the instructor.

CMPM 235 - User Evaluation of Technology (5)

Presents a variety of evaluation methodologies to assess usability, acceptance, and effectiveness of technology with the intended users. Combines lectures and exercises for students to gain firsthand experiences of these methodologies with real users.

Prerequisite: Enrollment is restricted to graduate students. Seniors may enroll with completion of CSE 165.

CMPM 237 - Advanced Topics in Human-Robot Interaction (5)

Study of current topics in human-robot interaction design and research. Topics vary, but are expected to include how people think, act, and behave around robotic agents; telepresence and teleoperated robotics; applications of human-robot systems; collaborative robotics; and social robotics.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 243 - Social Computing Research: Design, Algorithms, and Incentives (5)

Provides an interdisciplinary view of computational systems and human interaction, with an emphasis on human-computer interaction and algorithmic economics. Students learn about seminal and cutting-edge research contributions and methodologies, and carry out a quarter-long research project. (Formerly Technology and Information Management 243.)

Prerequisite: Prerequisite(s): A background in either mathematical proofs or user-centered design and programming. Enrollment is restricted to graduate students; undergraduates may enroll by permission.of the instructor.

CMPM 244 - Artificial Intelligence in Games (5)

The use of AI techniques to enable new player interactions, game mechanics, and genres. Combines elements from academic AI and machine learning with industry game AI techniques. Includes lecture and paper discussions as well as AI programming exercises and projects.

Prerequisite: Enrollment is restricted to graduate students; others by permission.

CMPM 248 - Interactive Storytelling (5)

Covers wide range of practices including hypertext, interactive fiction, embedded narratives in games, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, explores the theoretical positions, debates, and technical and design issues arising from these different approaches.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 255 - Games for Impact Studio I (5)

Students work in teams to develop serious games. Course involves multiple aspects of game development, with an emphasis on identifying the topic and goal for the game, initiating research on the topic, and developing an initial concept design. The concept design phase will include several iterations and experimentation with various techniques and game elements toward addressing the goal established. The process also involves identifying assessment and efficacy measures given the goal identified. These measures are theory-based and will be developed based on the initial research conducted. The outcome should be a concept design and prototype. Taught in conjunction with CMPM 181.

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students in computational media.

CMPM 256 - Games for Impact Studio II (5)

Students work in teams to polish and assess their games. This is a continuation of the Games for Impact Studio series from Studio I. The course involves aspects of (I) game production, with an emphasis on tuning the design and polishing it; and (II) assessment, where students develop their methods for assessment, which include usability testing, as well as goal assessment based on metrics development, data collection, and analysis. The outcomes are: the game is polished and tested, as well as a report on the evaluation of the game. Taught in conjunction with CMPM 182. Students cannot receive credit for this course and CMPM 182.

Prerequisite: Prerequisite(s): CMPM 255. Enrollment is restricted to graduate students in computational media.

CMPM 265 - Generative Methods (5)

In-depth exploration of algorithms for the automated generation of 2D and 3D models and content. Covers multiple approaches, including noise, grammars, genetic algorithms and programming, parametric design, and answer-set programming. Includes application of techniques to computer-game content and level design.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 268 - Immersive Analytics (5)

Investigates how new immersive display technologies and interaction techniques can support analytical reasoning and decision making in a variety of contexts.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 269 - Machine Learning for Creativity and Design (5)

Introduces contemporary techniques in deep learning focusing on the application of these techniques to a range of tasks related to art and design outputs.

Prerequisite: Prerequisites: CMPM 202 or by permission of the instructor. Enrollment is restricted to graduate students.

CMPM 280C - Computational Media Seminar (2)

Graduate seminar with speakers from academia and industry. Covers state of the art research and industry trends in Computational Media and related areas.

Prerequisite: Enrollment is restricted to computationalmedia and games and playable media graduate students.

CMPM 280F -
Seminar in Creative Coding and Computational Media (2)

Covers advanced topics and current research in creative coding as it intersects computational media. Focuses on student presentations and seminar participation. Enrollment is restricted to graduate students and by permission of instructor. This class can be taken for Satisfactory/Unsatisfactory credit only.

CMPM 280G - Seminar in Generative Methods (2)

Weekly seminar covering advanced topics and current research in generative methods--the field focused on algorithms for creation of 2D and 3D models and content.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280H - Seminar in Human-Computer Interaction and Computational Media (2)

Covers advanced topics and current research in human-computer interaction as it intersects computational media. Focuses on student presentations and seminar participation. Enrollment restricted to graduate students and by permission of the instructor.

CMPM 280I - Human Computer Interaction Seminar (2)

Ongoing participatory seminar toward staying informed about the current state of the art in Human Computer Research, both within the Computational Media department, as well as in the broader field. Course consists of weekly lectures and discussion. Graduate students will take part in giving presentations.

Prerequisite: Enrollment restricted to computational media and games and playable media graduate students.

CMPM 280K - Seminar in Interactive Systems for Individuals with Special Needs (2)

Covers advanced topics and current research in interactive systems for individuals who have special needs. Focuses on student presentations and seminar participation.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280P - Seminar in Player Experience and Modeling (2)

Covers advanced topics and current research in player experience and modeling. Delves into topics related to: artificial intelligence, psychology, data science, as well as computer human interaction as they intersect with games and player experience. Course is conducted as a studio/seminar, where students read and analyze previous research within this area. Students are asked to present and discuss current state of the art of research in the area of player experience and modeling and then develop their own research within this area. Through interaction with the instructor and other colleagues within the class, students work toward refining their research. This course can be taken for Satisfactory/Unsatisfactory credit only.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280R - Topics in Human-Robot Interaction (2)

Focuses on human-centered design and research approaches to the development of robotic technologies. Students read primary research papers, examine prototype robotic systems, and build upon those materials to lead group discussions, propose research projects, and conduct HRI research.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280S - Seminar Topics (2)

Weekly seminar series of current research on a special topic in information systems and technology management. The theme of research presented throughout the course selected by the instructor. Topics may include, but are not limited to, knowledge planning, new product development and management of technology. Enrollment with permission of instructor. (Formerly Technology and Information Management 280S.)

CMPM 280W - Seminar in Digital Media (2)

Covers advanced topics and current research in digital media—the interdisciplinary field at the intersection of computer science, media authoring, and models of interpretation from the humanities and social sciences. Focuses on student presentations and seminar participation.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280X - Expressive AI (2)

Weekly seminar covering topics of current research in artificial intelligence applied to interactive art and entertainment, including computer games. Enrollment by permission of instructor. Enrollment restricted to graduate students.

CMPM 290A - Topics in Computational Media (5)

Students learn about a current research area in computational media and make a contribution. Each course offering focuses on a different aspect of technical, creative, and/or interpretive work in the field.

Prerequisite: Enrollment is restricted to computational media and human computer interaction graduate students.

CMPM 290J - Playable Media (5)

Focuses on media, such as computer games, that invite and structure play. Work includes building and critiquing a series of prototypes; studying major examples in the field; and discussing both theoretical and practice-oriented texts. Enrollment by permission of instructor. Enrollment restricted to graduate students.

CMPM 290K - Social and Emotional Approaches to Human Computer Interaction (5)

Focuses on enhancing social and emotional capabilities and qualities in interactive systems. Students read research, look at sample systems, and engage in evaluation, design, and prototyping exercises. A research project and helping to lead class discussions are also required.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 290P - Topics in Computational Cinematography (5)

Focuses on discussion of recent advances in visual storytelling in graphical environments. Major topics covered are: intelligent camera control, shot-compositions, lighting design, interactive storytelling, and computational techniques associated with these applications. Class consists of in-class discussions and student presentations of research papers and a final student project.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 296 - Masters Project (5)

Students work on their master's project with a faculty supervisor. Students submit petition to sponsoring agency. Assessment is done based on project goals and the ability of the student to apply his/her knowledge and skills accumulated through the master's classes into the project.

CMPM 297A - Independent Study or Research (5)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 297B - Independent Study or Research (10)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 297C - Independent Study or Research (15)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 297F - Independent Study or Research (2)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 297G - Independent Study or Research (1)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 299A - Thesis Research (5)

Thesis research conducted under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 299B - Thesis Research (10)

Thesis research conducted under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 299C - Thesis Research (15)

Thesis research conducted under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

COWL - COWELL COLLEGE

Lower-Division

COWL 1 - Academic Literacy and Ethos: Imagining Justice (5)

Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Examines the emergence and development of key concepts of justice including procedures, rights, and reparation.

Prerequisite: Enrollment is restricted to college members.

COWL 1A - Introduction to University Life and Learning (1)

Orientation to and exploration of the nature of the liberal arts, and of learning at research universities. Topics include: academic planning for upper-division coursework; enrollment processes; and understanding pathways to degree completion; UCSC resources that support health and well-being strategies for academic success; the cultivation of just communities; the prevention of sexual harassment and violence; campus

conduct policies; awareness of risks associated with drug and/or alcohol use; and an introduction to traditions of community-engaged learning, ground-breaking research, and interdisciplinary thinking that define a UC Santa Cruz degree. This course can be taken for Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to entering first-year Cowell College students.

COWL 80 - Dungeons & Dragons &...Yokai!? Global Transformations of Japanese Fantasy (5)

Explores adaptations of Japanese fantasy across media forms and national boundaries. Argues that the genre of Japanese fantasy emerged through a network of trans-cultural and trans-media adaptations which inform each other to shape understandings of the genre today. Exploration of the fantasy genre includes the transnational circulation of folklore, historical romance, high fantasy, dark fantasy, sword and sorcery, cosmic horror, and secondary world fantasy. The learning objectives of this course are obtained through group projects, theorizing collaboration, and tabletop role-playing games, including Dungeons & Dragons and The Call of Cthulhu.

COWL 88 - Preparing for Historical Fieldwork on the Shikoku Pilgrimage (2)

Preparation for those students who have successfully applied to join the Shikoku Pilgrimage super class in the fall of 2025. The Shikoku Pilgrimage is a physically and mentally challenging 1200 km trek through mountainous terrain. While doing that difficult task, students will be doing 20 credits of academic fieldwork in a very different cultural and linguistic setting as well. This 2-credit summer course is designed to prepare students for this difficult but hugely rewarding experience, laying the foundation for deep learning about Japanese society and about their own selves. Enrollment is restricted to sophomores, juniors, and seniors. Enrollment is by instructor permission. Students must successfully apply in a written application and an interview with the instructor.

COWL 10 - How to Win at College (5)

This is a course about the modern college classroom. Specifically, this is a course about finding your place in the classroom, about honing skills that can help you be the most successful student you can be. Using concrete tools and techniques, students tackle everything from managing email inboxes to effectively communicating with professors. Includes time exploring larger, more philosophical topics in education. What does it mean to be a student at this moment in time? What are mentors and how do you find them? How do you meet your goals while still remaining compassionate to yourself? (Formerly Becoming a Successful Student.)

Prerequisite: Enrollment is restricted to first-year students, sophomores and juniors.

COWL 11A - Leading from Within (2)

First in a three-part sequence that builds the foundation for aspiring leaders, although anyone can join the sequence at any time. Students explore personal leadership through self-awareness, emotional intelligence, and values-driven activities, build key leadership theories, reflect and assess their strengths and opportunities for growth, and develop a leadership mindset. Through interactive experiential learning activities such as self-assessments, reflective journaling, and case studies, students use new ways of thinking as leadership principles are applied to real-world scenarios. (Formerly Experiential Leadership Program Core Course: Tools for Leadership and Conflict Resolution.)

COWL 11B - Leading and Empowering Others (2)

The second in a three-part sequence that builds the foundation for aspiring leaders, although anyone can join the sequence at any time. This part sets the foundation to learn how to lead teams, groups, and committees. Students gain experience and confidence working with others in an effective way, and using their leadership mindset to grow so they can serve others and be a change agent and catalyst in our community. (Formerly ELP Core Course: Leadership From the Inside Out, Networking and Professionalism.)

COWL 11C - Leading with Intention: From Influence to Impact (2)

The third course in a three-part collaborative leadership sequence that builds the foundation for aspiring leaders, although anyone can join the sequence at any time. Focuses on leading with intention to make a meaningful impact in the communities and systems. Students learn how to lead with clarity, communicate your vision, and influence change within complex systems. By engaging in real-world application and reflective practice, students strengthen their ability to lead with purpose and be a catalyst in our community. (Formerly ELP Core Course: Tone-Setting and Leading with Cultural/Emotional Intelligence.)

COWL 11D - ELP Elective Course: Risk Management and Social Justice Through the Lens of Outdoor Leadership (2)

Although applicable to any setting, this Experiential Leadership Program (ELP) course explores topics of risk management and social justice through the lens of outdoor leadership. Students gain tools and insights to cultivate a safe and inclusive environment. Includes a weekend backpack trip (funding dependent). No experience necessary.

COWL 11E - Leadership Spring Break Intensive: Backpacking the Canyons of Southern Utah (2)

Experiential Leadership Program course focusing on tools to build a high functioning team that has the confidence and skill to work together, solve complex problems, and navigate challenges to achieve a shared goal. Includes a 10-day wilderness expedition as a testing ground to practice and apply new team skills. Includes leadership development, and learning about good expedition and team behavior. Enrollment is by instructor permission. (Formerly offered as STEV 13.)

COWL 11F - Slug Ambassador (3)

Develop the leadership and professional skills and confidence that will enable you to make a difference in your personal,

academic, and professional life. Course offers students the opportunity to give back by sharing their stories and successes, engaging in networking events, and serving as role models for fellow students. Course limited to students participating in the Slug Ambassador program. Enrollment is by permission of the instructor.

COWL 12 - Public Speaking (5)

This introductory level seminar is designed to reduce anxiety and increase competence and confidence in a variety of public speaking situations. While providing some theory, this seminar emphasizes the practice of composing and delivering speeches, including formal, informal, and extemporaneous occasions.

Prerequisite: Enrollment is restricted to college members during priority enrollment.

COWL 50 - Library Skills for the Digital Age (2)

Intended to enhance students' skills in using the most powerful learning tool in any university: the library. Topics: organization of the library; how to begin researching; search engine and database use; judging the quality of sources; using sources responsibly. Disciplinary focus changes from quarter to quarter.

Prerequisite: Enrollment is restricted to first-year and sophomore college members, or by permission of instructor.

COWL 52 - Personal Finance and Investing (5)

Overview of the financial responsibilities that young adults take on after college. Topics include: taxes, budgeting, student loans, credit, and investing in the stock market. Ubiquitous terms, such as 401(k), are defined, and financial principles are used to develop a framework for personal financial decision-making.

COWL 64 - Social Justice: Issues and Debates (2)

Focused followup on social justice topics and readings introduced in the Cowell core course. Allows first-year students to pursue social justice themes in greater depth. Students must have previously taken a Cowell core course (or equivalent).

Prerequisite: Enrollment is restricted to first-year students.

COWL 66 - Introduction to Systems Theory (5)

Multidisciplinary overview of the problem-solving methodology known as Systems Theory. The word “system” is used every day, but few people understand what a system really is. What do different systems—from a digestive system to a legal system to a solar system—have in common? What are the laws that govern how systems operate, and how do problems arise? Our goal is to appreciate the fundamental roles that systems play in making daily life functional, in order to diagnose problems better and to generate novel and functional solutions.

COWL 65 - Meaning, Paradox, and Love (5)

Mary Holmes--legendary founding faculty member of UCSC, keen observer, painter of mythic images, and profound thinker--had a visionary's insight into the mysteries of love, paradox, and meaning. This course explores her art, teaching, and wisdom.

COWL 70A - Introduction to Book Arts (5)

Students learn techniques of bookbinding, construction, and design, and fundamentals of letterpress printing. Enrollment is by permission of instructor.

COWL 70B - Intermediate Book Arts (5)

Learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text.

Prerequisite: Prerequisite(s): COWL 70A or by permission of instructor.

COWL 70C - Advanced Book Arts (5)

Students learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text.

Prerequisite: Prerequisite(s): COWL 70B or by instructor permission.

COWL 86 - Leading Social Change (2)

Offers students the knowledge and skills required to lead diverse teams. Topics include the social-change model of leadership and principles of collaboration. Geared toward Cowell and Stevenson Residential Assistants, but students interested in the topics may take the course with permission from the instructor.

COWL 89 - Faculty Research Colloquium (2)

Introduction of UCSC as a research university, our notable researchers, and their work. Weekly discussions with UCSC faculty from a variety of disciplines.

Prerequisite: Enrollment is restricted to participants in the first-year scholars program.

COWL 93 - Field Study (5)

Various topics to be arranged. Students submit petition to sponsoring agency.

COWL 93F - Field Study (2)

Various topics to be arranged. Students submit petition to sponsoring agency.

COWL 94 - Group Tutorial (5)

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency.

COWL 94F - Group Tutorial (2)

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency.

COWL 99 - Tutorial (5)

Various topics to be arranged. Students submit petition to sponsoring agency.

COWL 99F - Tutorial (2)

Various topics to be arranged. Students submit petition to sponsoring agency.

Upper-Division

COWL 111 - Mock Trial Workshop (2)

Offers opportunities to improve students' public speaking and communication skills through weekly exercises which challenge a student's ability to think quickly, organize information effectively and speak persuasively. Students also learn and practice courtroom procedures and legal argument styles. Each week students learn about a facet of mock trial. Students focus on different speaking skills weekly. Speakers of all skill levels are welcome and receive constructive criticism both from peers and the teachers and participate in debates within a small team.

COWL 118B - Words & Music: Poetry, Musical Theater, Opera (5)

Study of significant texts enhanced by music for performance. Topics vary annually. Course compares original texts in English translation with their adaptation to musical theater (My Fair Lady, Oklahoma, etc.) and opera (Carmen, etc.)

COWL 122 - United Nations Contemporary Issues (2)

Introduces the Model United Nations through discussion of contemporary issues. Students learn parliamentary procedures and U.N. protocols, as well as how to work collaboratively to research and to present position papers. Students learn resolution writing, alliance building, and persuasive speech.

COWL 130 - Living Harmoniously: Philosophy for Healing (5)

Many religious, philosophical, and cultural traditions emphasize diverse paths and understandings to the strikingly similar goal for humans to live harmoniously amongst each other in society and in the natural world. This seminar focuses on exploring and examining such ideas across history from around the world with a particular focus on ideas that offer paths to healing for readers and practitioners. The course doesn't presume to heal students, but rather to point out the tools provided by the philosophical process toward this individual end, as well as equipping students for interpersonal and community efforts at collective, cooperative healing.

COWL 132 - Hope (5)

Interdisciplinary examination of the concept of hope, with particular emphasis on philosophical, psychological, and artistic approaches to the concept. Students consider viewpoints for and against hope as a human strength, and a variety of accounts of what constitutes hope.

COWL 135 - The Path of Forgiveness (5)

Explores forgiveness as both interpersonal relationships and political questions in a broader historical context. The thesis of the course is that forgiveness is a radical act and a major theme in philosophy and religion where it serves as a necessary step toward social solidarity in our contemporary moment of hyperpolarization. Explores how forgiveness can heal social divisions such as those constructed around religion, political affiliation, and identity. The course closes with historical examples of forgiveness in action, such as reparations and prison abolitionist movements.

COWL 138A - The Place of Higher Education in a Democratic Society (5)

Centers around interviews of alumni and involves a reflective term paper on a specific topic having to do with the role of higher education in a democratic society. Teaches students how to conduct interviews.

Prerequisite: Prerequisite(s): COWL 80A or COWL 80B.

COWL 140 - Designing Your Life (5)

Do you ever think, "I want to make a difference!" but don't know where to start? In this class, students learn design thinking theory and methods and apply them to their lives, specifically to the question of what to do after college. Students build deeper awareness of their values and goals, define areas of life and work they want to grow in, ideate multiple life paths, prototype elements of careers of interest, and take small steps to try these out. This is an experiential class that asks students to try new ways of thinking and step outside comfort zones as they learn a creative problem-solving approach applicable in many contexts. (Formerly offered as CLNI 140.)

Prerequisite: Enrollment is restricted to juniors and seniors.

COWL 140A - Designing Your Life with the Cowell Alumni (2)

How does one make decisions about those "big life" questions? From deciding "what the right thing to do to" is to how to have a career that enriches your life, how does one choose what to do? In this course, Cowell Alumni discuss how they made those "big life" decisions in the hopes that it can guide others. Course is designed to expand on the topics covered in COWL 140, Designing Your Life.

Prerequisite: Previous or concurrent enrollment in COWL 140 is required.

COWL 156M - Medical Ethics (5)

How do we understand pain? How do we make ethical decisions on topics like organ transplantation and reproduction? What is the role of genetic technology in the future of medicine? What are the ethics of healthcare? What does climate change have to do with bioethics? In this interdisciplinary course, students delve into the morality and

ethics of medicine, using bioethical frameworks to take on important scientific and human questions. This course is suitable for everyone, but in particular those interested in medical anthropology, pre-med, environmental studies, sociology, history of science, and philosophy. (Formerly Medical Ethics and Justice in Literature and Film.)

COWL 158A - Special Topics: Oral History (5)

Introduction to the theory, practice, technology, and ethics of conducting oral history. Readings and expert guest speakers offer both theoretical and practical insights. Students plan and implement oral history projects in accordance with professional standards.

Prerequisite: Enrollment restricted to sophomores, juniors, and seniors.

COWL 161G - Delicious: The Cookbook as Literature (5)

Proposes an aesthetic approach to the cookbook. Students read from a series of cookbooks, and prepare a series of meals described in or inspired by the cookbooks read. Our interdisciplinary approach to food will allow us to interpret and analyze food as cultural storytelling, while also cultivating the spirit of hospitality through shared meals.

COWL 165 - Fundraising Practicum (3)

Covers the fundamental skills, ethics, and practices of crowd-sourced fundraising in the liberal arts. Students build a project portfolio that includes mission statement, donor-cultivation tools, and action reports. Enrollment is by permission of the instructor. Meet with the instructor to verify enrollment in a Giving Day campaign with liberal arts focus.

COWL 168 - Social Change (2)

How do you change the world, working alone and in concert with others? To find out students spend the quarter learning about how one non-profit organization of their choosing creates change in their community. Students research an agency, focusing on who is served, how funding works and how real change is created.

Prerequisite: Enrollment is restricted to college members.

COWL 174 - Global Leadership (3)

Students learn about leadership styles, how leaders work with constituent groups, build cooperation, and develop implementation plans. Students learn to consider how decision making is done, and what is best practice for best working in a variety of communities and cultures. Enrollment is restricted to those participating in Virtual Global Internships.

COWL 184A - Leadership and Institution Building (2)

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment is restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Students submit applications winter quarter for the following academic year.

COWL 184B - Leadership and Institution Building (2)

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment is restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Students submit applications winter quarter for the following academic year.

COWL 184C - Leadership and Institution Building (2)

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment is restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Students submit applications winter quarter for the following academic year.

COWL 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar under faculty supervision. (See COWL 42.) Upper-division standing required and a proposal supported by a faculty member willing to supervise.

COWL 193 - Field Study (5)

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment is restricted to juniors and seniors.

COWL 193F - Field Study (2)

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment is restricted to juniors and seniors.

COWL 194 - Group Tutorial (5)

A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency.

COWL 194F - Group Tutorial (2)

A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency. Enrollment is restricted to juniors and seniors.

COWL 195 - Senior Thesis (5)

Students submit petition to sponsoring agency.

COWL 198 - Independent Field Study (5)

Provides for college-sponsored individual study programs off campus, for which faculty supervision is not in person (e.g., supervision is by correspondence.) Up to three such courses may be taken for credit in any one quarter. Approval of student's adviser, certification of adequate preparation, and approval by provost required.

COWL 199 - Tutorial (5)

Various topics to be arranged. Students submit petition to sponsoring agency.

COWL 199F - Tutorial (2)

Various topics to be arranged. Students submit petition to sponsoring agency.

CRES - CRITICAL RACE AND ETHNIC STUDIES

To view planned offerings for the current academic year, please visit this link.

Lower-Division

CRES 10 - Critical Race and Ethnic Studies: An Introduction (5)

Examines the concept of race, followed by an investigation of colorblindness, multiculturalism, and post-racialism. Race and ethnicity are examined as historically formulated in relationship to the concepts of gender, sexuality, class, nationalism, indigeneity, citizenship, immigration, and inequality.

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing requirement.

CRES 12 - Science and Justice: Critical Intro (5)

Students learn to critically analyze the entanglements of technoscience with systemic injustice. Our collective task is to creatively imagine and practically enact new ways of producing knowledge—including new approaches to science and technology—that support the mutual flourishing of the broadest possible range of lives. Course asks: What is the relationship between science, technology, and social justice? What power structures and systems of inequality do science and technology produce and uphold?

CRES 14 - Center for Racial Justice Service Learning (5)

Supplemented by invited guest speakers and field activities, this Center for Racial Justice-sponsored course is facilitated by an activist-in-residence. Through critical readings, discussions, and situated learning, students take part in an experiential learning project and contribute service hours to a community-based organization.

CRES 15 - Resource Centers Service Learning Course (5)

This service learning course offers students of all majors the opportunity to intern at UCSC Resource Centers. Students organize educational community-oriented programs and projects to address retention and equity issues in higher education. Through this course, students develop critical thinking, problem-solving, project planning, and writing skills by combining theoretical concepts and experiential learning experience. Students explore texts that highlight resiliency of minoritized communities through the study of trans, queer, Asian American/Pacific Islander, Black, American Indian, Chicanx/Latinx, undocumented, and feminist political thought.

CRES 25 - Race / Land / Property (5)

Provides a long historical account of the accumulation of land through logics of dispossession within the system of racial capitalism. Students explore the historical methods of claiming private property as a racialised project. Questions of settler-colonialism, imperialism, indigeneity, place and placelessness as well as claims to land and sovereignty are key to our inquiry. Focus is on the legacies of the transatlantic slave trade, specifically through examples in England, the Caribbean and North America.

CRES 45 - Pilipinx Historical Dialogue (5)

Examines the history, politics, and cultural expressions of the Pilipinx community, in the Philippines and the diaspora, with an emphasis on Pilipinx and Pilipinx-American activism.

CRES 60E - Blackness and Indigeneity in Europe (5)

What are the contours of Black Europe? This course emphasizes a range of disciplinary approaches to the concepts of blackness and indigeneity, introducing and questioning Black Europe as a field, a culture, and a set of ideologies.

CRES 68 - Approaches to Black Studies (5)

Provides a diasporic approach to the field of Black Studies in the modern era, with a focus on histories of dispossession and resistance.

CRES 70B - Black Radical University? (5)

Course emerges from a collaboration with the Black Student Union around Black student organizing and Black liberationist pedagogies. Students explore and archive histories of Black student organizing on the UC Santa Cruz campus and beyond (locally, nationally, and globally), as well as Black liberationist pedagogy (e.g., decolonial thought in the Third World, freedom schools in the U.S. South, Black Panther Party liberation schools, Black feminist pedagogies). Course is offered for pass/no pass grading only.

CRES 70S - Introduction to the Sikhs (2)

Introduces the Sikh community, including its origins, history, belief system and contemporary challenges. Other topics include Sikh music, art, literature, and aspects of Sikh society. Specific attention is paid to the Sikh diaspora community in the United States, and in California in particular, including

comparative perspectives with respect to other minority communities.

CRES 70U - (Un)docu Studies (5)

Deconstructs the common perception of immigration as strictly a Latinx issue in order to develop solidarity among different groups of students and to explore a range of narratives surrounding undocumented status and migration with the aim of empowering us as agents of transformative social change. Legal papers, as a violent affirmation of settler sovereignty, do not capture the complexities of who we are, much less all our relations—to each other, to place, to life worlds. By exploring those complexities, we strive to create a communal space where we courageously articulate self, community, and relationality in ways that state documents must disavow. Course is offered for Pass/No Pass grading only.

CRES 94 - Group Tutorial (5)

A lower-division group tutorial, led by a faculty member, that focuses on various problems within critical race and ethnic studies. Topics to be chosen by the instructor and undergraduate student participants. Enrollment is restricted to critical race and ethnic studies majors.

CRES 94F - Group Tutorial (2)

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. Enrollment is restricted to critical race and ethnic studies majors.

CRES 99 - Tutorial (5)

Students submit petition to sponsoring agency.

Upper-Division

CRES 100 - Comparative Theories of Race and Ethnicity (5)

Examines race and ethnicity as categories of lived identity intersecting with gender, sexuality, class, and culture; historical discourses of difference underwriting social inequalities and movements to redress those inequalities; and concepts critical to the understanding and reshaping of power and privilege.

Prerequisite: Prerequisite(s): CRES 10 and satisfaction of the Entry Level and Composition requirements.

CRES 101 - Research Methods and Writing in Critical Race and Ethnic Studies (5)

Introduces students to tools, conceptual frameworks, keywords, and methods for research and writing in critical race and ethnic studies. Drawing from ethnic studies, Asian American studies, Arab American studies, Black studies, Indigenous studies, Latinx studies, feminist studies, and queer studies, students analyze how scholars do the work of studying the effects of and resistance to U.S. colonialism, capitalism, empire, war, globalization, and migration. Examines questions of settler colonial state practice, dispossession, diaspora, incarceration, and the ethics of research methods. Students practice the craft of writing about race, colonialism, state violence, and the manifold movements that imagine alternative, decolonized futures.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to sophomores, juniors, and seniors.

CRES 112 - AsianAm Enviro Justice (5)

Explores the concept of environmental racism in a transnational framework, focusing on the shaping of Asian American and Pacific Islander communities in the United States and in the current and former territories of U.S. empire in the Pacific. Students explore environmental racism within the historical contexts of U.S. militarism and imperial warfare, empire and settler colonialism, disasters and disaster aid, and climate change refugeehood.

CRES 113 - Music and Performance (5)

Considers issues of race, place, gender, power, and identities through the converging fields of Black studies and performance studies. Emphasizes global diasporic histories of broad music production and performance from the 14th century onward with an emphasis on the making and performance of global Black social life. Primarily creative in nature, the course allows students to practice creative processes and allows opportunities to produce music and generate performance art.

CRES 115 - Frantz Fanon: Resistance, Revolution, and Decolonization (5)

Students immerse themselves in the intellectual, political, and critical thought of 20th-century Martiniquan psychoanalyst, writer, and revolutionary Frantz Fanon. Students closely read several of Fanon’s most noted works, including Black Skin, White Masks, A Dying Colonialism, and The Wretched of the Earth, as well as thinkers Fanon studied and engaged in these works. Class also engages contemporary interpretations of Fanon’s transnational, emancipatory thought and practice from scholarly, aesthetic, and political organizing perspectives.

CRES 118 - Abolitionist Futures (5)

Grounded in local, national, and global prison abolition movements, this course explores through feminist political frameworks creative strategies that imagine and work to end all systems of domination and exploitation. Looks at California's prisoner organizing and abolition movements, along with other historic and contemporary social movements which deepen our understandings of the ways in which carceral systems are shaped by and through capitalist formations of race, gender, sexuality, and disability. Also examines strategies such as disability justice and transformative justice which demonstrate expansive and liberatory visions of abolition, extending far beyond the prison system itself.

CRES 120 - Third World Feminisms (5)

Places the thought and praxis developed and pursued by Third Worldist women, queer, and gender nonconforming peoples at the center of a conversation on the conditions of coloniality and pursuits of liberation from the entwined tyrannies of imperial, racial, and gendered oppressions. Course asks how African, Asian, Caribbean, and other Third Worldist women activists, artists, and scholars imagined and defined what liberation might have looked like in the 20th century, and what it might mean today.

CRES 121 - The Struggle for K-12 Ethnic Studies (5)

Critical analysis of the movement for K-12 ethnic studies in historical and contemporary time periods with a particular focus on the Liberated Ethnic Studies Model Curriculum. Students read, discuss, and analyze past and present K-12 ethnic studies research, policy, and practice to deepen their knowledge and strengthen their ability to critique issues in K-12 ethnic studies education while reflecting on how the concepts and questions that arise relate to their own educational experiences and lives.

CRES 122 - Decolonial Intersectionality: Gender, Race, Indigeneity (5)

Applies the concept of intersectionality within feminist thinking to an exploration of the limits and possibilities of decolonization and the ways in which gender, race, and indigeneity inform both colonial domination and resistance.

CRES 123 - Introduction to Native American & Indigenous Studies (5)

Explores the emergence of Native American and Indigenous Studies as well as the theories, methods, and contemporary issues that inform the field. Centers key concepts and central themes from over the last half century of academic scholarship, and activist organizing, for Indigenous peoples and the decolonization of settler occupied lands.

CRES 127 - Indigenous Environmentalisms From Oceania to Native California (5)

Examines Indigenous environmentalist struggles and contemporary movements to protect land and water in California and in Oceania. Course examines three Indigenous women-led movements to protect land and water: Run4Salmon, Sogorea Te Land Trust, and Protect Mauna Kea. Also examines their transnational collaborations with Aotearoa/New Zealand and West Papua.

CRES 129 - Black Marxism (5)

Marxism has been a foundational framework for the Black radical tradition. This course offers a theoretical framework to key texts in Marxism, and an overview to the problems, insights, contexts, and interventions that Black intellectuals have deployed in conversation with it.

CRES 131 - Black Freedom Movements (5)

Examines the development of Black freedom movements ranging from resistance to slavery to contemporary movements for Black power in Jackson, Mississippi. Interdisciplinary in scope, course examines a variety of materials ranging from novels, to autobiographies, to political manifestos in order to understand fully the broad scope of Black freedom movements.

CRES 132 - Black Speculations (5)

Traces the heterogenous historic, material, and ephemeral manifestations of Blackness and the Black radical imaginary in science fiction, fantasy, horror, and visionary literary, sonic, and visual cultural forms. Identifies how Black speculative aesthetic, cultural, and political practices reorients understanding of the past, recalibrates elation to the present, remaps assumptive notions of space and time, and allows us to reimagine our futures. Class collectively identifies, interprets, and puts into conversation the meaning-making speculative practices of Black diasporic writers, musicians, artists, filmmakers, abolitionists, even in genres and traditions seldom thought of as speculative. Class pays particular attention to Black diasporic/international contributions to these genres.

CRES 134 - The Black "Middle East" (5)

This course accounts for the racial heterogeneity of the “Middle East.” Ranging from the Maghreb, the Levant, and Gulf, the Middle East is also a political construct of myriad histories and processes of enslavement, displacement, racialization, domination, and resistance. Many of these processes precede European colonization, merged with imported Euro-American racial ideologies, and continue to reverberate in the region. This class focuses specifically on how blackness as a racial, cultural, and political identity is forged, understood, and contested along this vast terrain, attending to how articulations of Black being and blackness continue to be translated and lived to this day.

CRES 140 - Latina/o/x Geographies (5)

Explores questions like: Who is Latinx? What communities does this include/exclude? How extensive of a geography does Latinidad cover? What is the political usefulness of Latinidad in the face of overwhelming heterogeneity? How does Latinx Geographies reckon with or overcome the anti-Black and de-Indigenizing nationalist projects of Latinidad in Latin America and in the U.S.? Students learn how to define Latinx geographies and evaluate its disciplinary boundaries and assess the work of Latinx geographers and their ability to negotiate historic tensions within academia and Latinx studies.

Prerequisite: Prerequisite(s): CRES 10.

CRES 144 - Introduction to Black Poetry (5)

Introduction to the literary, social, activist, and experimental traditions of Black Poetry from the 18th century through the present. With an emphasis on poets of the Americas and the Caribbean, course explores a range of lyrical works by poets of the African Diaspora whose poetry expresses the enduring mental, emotional, and physical consequences of slavery.

CRES 150 - Race, Gender and Algorithms (5)

Algorithms shape race and gender today, yet algorithms are older than digital media and can be understood as recipes or rituals. Course engages with the emerging field of trans of color poetics by studying readings in women of color feminism, transgender studies, and decolonial theory. Digital media art grounds the discussion, including works from queer and trans artists of color working in digital games, anti-surveillance fashion and performance art. Students create digital media projects in response to the ideas of the course, in the medium or platform of their choice, including video prototypes, web sites, Scalar books, Twine games, podcasts and/or video channels, the technical aspects of which will be covered in class.

CRES 151 - After Man: Race, Gender and Technology (5)

As Sylvia Wynter and many of the other authors to be read this quarter point out, the definition of the human has historically excluded racialized peoples, gender non-conforming people, indigenous people, disabled people, and even at times cisgender women. This class examines the intersection of science and justice to understand how the border of the human is used to reinforce anti-blackness, xenophobia, transphobia and many other forms of social oppression.

CRES 153 - A Radical History of the Korean War (5)

Against dominant framings of the Korean War, which left 4 million Koreans dead, as the freeing of the Korean people by the United States from the forces of global communism, this course reconsiders the war, which has never formally ended, from below and to the left, namely, through the lenses of multigenerational people's struggles against fascism and imperialism. Through collaborative, participatory research, students materialize from the ashbin of history what might be called a people's archive of the Korean War.

CRES 159 - Latinxs and the History of U.S. Policing (5)

How does the criminal justice system make itself felt in the everyday lives of Latinxs? From border enforcement, to stop and frisk, to the phenomenon of mass incarceration, many Latinxs find themselves and their communities enmeshed within a dense web of surveillance, punishment, and detention. This interdisciplinary course examines the historical, political, economic, and social factors that have, in many ways, criminalized Latinidad and rendered Latinxs illegal.

CRES 160 - Latina/o/x Geographies (5)

Explores questions like: Who is Latinx? What communities does this include/exclude? How extensive of a geography does Latinidad cover? What is the political usefulness of Latinidad in the face of overwhelming heterogeneity? How does Latinx Geographies reckon with or overcome the anti-Black and de-Indigenizing nationalist projects of Latinidad in Latin America and in the U.S.? Students learn how to define Latinx geographies and evaluate its disciplinary boundaries and assess the work of Latinx geographers and their ability to negotiate historic tensions within academia and Latinx studies.

Prerequisite: Prerequisite(s): CRES 10.

CRES 161 - The Racial and Gendered Economies of Housing (5)

Explores the political and libidinal economic dimensions of the housing market and their relation as analytics to explain the development of the housing market over the 20th and 21st centuries. Explores the interdependence of political and libidinal factors in influencing the operation and management of housing markets from public and private entities. Course pays special attention to the role of race (in addition to other determinants of difference: gender, class, etc.) in structuring housing’s libidinal and political economies. Students cannot receive credit for this course and CRES 261.

Prerequisite: Prerequisite(s): CRES 10, and satisfaction of the Entry Level Writing and Composition requirements.

CRES 170 - Intro to Arab American Communities (5)

Situates Arab American studies and the study of Arab and Muslim diasporic communities originating from the region within a broader global racial order and through an intersectional approach. This course can be used to satisfy the CRES Transnational or Social Movement requirement if completed with a C/P or better. (Formerly Arab Diasporic Communities.)

CRES 171 - Arab Feminist Visions (5)

Examines how global and historical factors contribute to the manufacturing of gender as a social construction of power in the Arab World. Draws on lived experiences of Arab/Muslim women and illuminates the ways in which they articulate gender and feminism, providing a community-centered alternative narrative on such questions. This course can be used to satisfy the CRES Transnational requirement if completed with a C/P or better.

CRES 172 - Arab Uprising: Movements, Revolutions, and Praxis (5)

Situates the historical and present conditions, through a multiplicity of local, regional, and global configurations of power, that work to repress and mobilize the Arab masses. Course centers 20th- and 21st-century movements and revolutions with the aim of understanding these uprisings in their given contexts and analyzing what we can learn about praxis through them. This course can be used to satisfy the CRES Transnational or Social Movement Requirement if completed with a C/P or better.

CRES 173 - Palestine: A History from Below (5)

Offers a chronological trajectory of more than 100 years of Palestinian history from the diverse perspectives of Palestinians as knowledge producers in transnational community.

CRES 174 - Palestine Through Ethnic Studies Lens (5)

This course offers Palestinian perspectives and contexts for themes in ethnic studies. Analyzes Palestinian subjectivity by drawing on ethnic studies frameworks of colonialism, carcerality, borders, race and more.

CRES 179A - Critical Filipinx Poetics: A Workshop for Reading and Writing Poetry (5)

Writing workshop exploring the aesthetic and critical engagements of Filipina/o/x poets. Students analyze authors' prosody and craft, and explore thematization of migration, family, violence, culture, history, and agency. How do Filipinx poets address racialization, gendering, sexuality, class, and citizenship? What are their commitments to place, the divine, multilingualism, and the natural world? Students also write and workshop poems. Assignments: portfolio of three poems, in-class writing exercises, revised poem drafts, peer review comments, and performance of poems in class and at one public reading.

CRES 179C - Artivist Creative Nonfiction Workshop (5)

Students create compelling nonfiction essays combining personal experience, research, and narrative craft. How do we address settler occupation, colonial extraction, carceral violence, migrant dehumanization, climate crisis, misogynist assaults, and anti-trans and anti-queer hatred, while also celebrating solidarity, culture, and connection? Course examines creative nonfiction forms such as the flash essay, memoir, braided essay, reported essay, and hybrid essay. Assignments include in-class writing exercises, a text presentation, annotated bibliography, initial and revised essay drafts, and peer feedback.

CRES 183 - A Black Lyric (5)

In-depth study of literary, social, activist, and experimental Black Poetry of the Americas, the Caribbean, and the African Diaspora. Focuses on either a single era (i.e., specific time period), a social movement (i.e., Black Arts Movement), an aesthetic style (i.e., experimental poetry), or a combination of these areas from the 18th century through the present.

CRES 185 - Race, Gender, and Science (5)

What does science say about who we are? How does it script what bodies can mean? Can scientific knowledge be produced under occupation? How has science featured in struggles for racial and sexual liberation? This course investigates the relationship between scientific discourse and global ideas of race and gender. Students build literacy in different ways of scientific knowing, while reflecting on their social, political, and ethical ramifications. Also inquires into ongoing efforts to decolonize science. No prior science experience is required.

CRES 188A - Topics in Transnational Asian American and Pacific Islander Studies (5)

Focuses on a particular topic in Asian American and Pacific Islander studies. Topics vary with each offering but might include approaching racial and ethnic formations through a range of disciplinary and interdisciplinary perspectives, with a focus on a transnational critique of intellectual histories, political movements, cultural expressions, lived experiences and critical theories of Asian Americans and Pacific Islanders.

CRES 188B - Topics in Black Studies (5)

Focuses on a particular topic in black studies. Topics vary with each offering but might include approaching racial and ethnic formations through a range of disciplinary and interdisciplinary perspectives, with a focus on the intellectual histories, political movements, cultural expressions, lived experiences, and critical theories of peoples throughout the Black diaspora and Africa.

CRES 188M - Topics in Critical Migration Studies (5)

Focuses on a particular topic in migrant and migration studies. Topics vary with each offering but might include examining the intersections of race, gender, and citizenship through a variety of disciplinary and interdisciplinary perspectives, intellectual histories, and political movements as they relate to labor and capital, imperialism and neoliberalism, the racialized criminalization of movement, detention and deportation, and violence against migrant workers.

CRES 188S - Topics in Settler Colonial Critique (5)

Focuses on a particular topic in settler and colonial studies. Topics vary with each offering but might include examining the intersections of race and racism through a variety of disciplinary and interdisciplinary perspectives, intellectual histories, and political movements as they relate to empire, racial capitalization, colonial occupation and dispossession, mass incarceration and concepts of property and accumulation.

CRES 188T - Topics in Race, Science and Technology (5)

Focuses on a particular topic in race and science/technology. Topics vary, but focus on the history and politics of scientific inquiry and technological development within legacies and realities of racism and colonialism, including in the areas of public health, migration, labor, and reproductive rights.

CRES 188X - Topics in Critical Race and Ethnic Studies (5)

Focuses on a particular topic in critical race and ethnic studies. Topics vary with each offering but might include approaching racial and ethnic formations through a range of disciplinary and interdisciplinary perspectives, including indigenous studies, Black studies, Latinx studies, Asian American studies, queer critique, gender studies, transgender studies, performance studies, human rights studies, mixed race studies, legal studies, critical area studies, war and empire studies, environmental studies, science studies, and critical university studies.

CRES 190A - Critical Race Feminisms (5)

Focuses on key learning outcomes of humanistic research and writing: developing a method for critical race feminist analysis, identifying objects and fields of study, formulating an appropriately narrow topic and thesis, identifying and critiquing sources, and completing well-structured written argumentation. Readings offer key theoretical models in

critical race and ethnic studies, feminist studies, and queer theory.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190B - Critical Migration Studies (5)

Focuses on critically analyzing public representations of migration. Exploring key scholarship in migration and diaspora studies, including recent writings on "border crises," students develop an individual research project exploring a controversy, archive, cultural text, or historical debate in research on a specific migrant or diasporic group. The focus is on key learning outcomes of humanistic research and writing: developing a method for studying migration attentive to critical race analysis; identifying objects and fields of study, formulating research questions, organizing an appropriately narrow thesis, identifying and critiquing sources, and completing well-structured written argumentation.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190C - The Black Transnational (5)

Senior seminar focusing on the transnational circulation of Black political and cultural thought and practice in the 20th century. Explores the dynamics of Black transnational circulations beyond (and often in spite of) imposed national and international borders that have historically and continue presently to dictate, criminalize, or otherwise obstruct or limit the free movement of Black peoples. Aims to permit students to trace the multidirectional, radical imaginary of such Black diasporic circulations, cataloguing the possibilities that Black transnational political and cultural thought and practice engendered alongside the differences and contestations these formations might reveal.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to critical race and ethnic studies majors.

CRES 190D - Black Geographies and the Imperative of Abolition (5)

Far from a recent development, abolitionist demands to defund the police are actually central to a 400-year legacy of Black struggle. In the wake of the 2020 Black Lives Matter uprisings that erupted in response to several high-profile police murders, this senior seminar takes an interdisciplinary look at the burgeoning field of Black geographies to help us understand the renewed urgency of these calls in our current moment by engaging with works of activism, speculative fiction, and multimedia, including videos, podcasts, music, websites, and graphics.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190E - Thinking Through Palestine (5)

This senior seminar centers concepts, theories, and frameworks central to the field of ethnic studies that are advanced by examining the Palestinian context. (Formerly Thinking Palestine.)

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190F - Black Queer Film (5)

Students critically examine public representations of Black queer and trans communities. Work is grounded in analysis of Black feminist, Black queer, and Black trans thought in relation to critical media studies.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190L - Comparative Settler Colonial Studies (5)

Discusses the characteristics of settler colonialism and the politics of comparison in the study of global settler colonialism. Looks at settler colonial state practice across multiple different sites, including Santa Cruz, as students craft their own research projects. (Formerly offered as HIS 194C.)

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Crosslisted as: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

CRES 190N - Science/Fiction and the Possible (5)

Where are the limits of our imaginations around science and technology? How does existing science fiction reimagine the same old kinds of science, technology, and social and political relations between people? How do they wildly reimagine all these categories? This senior seminar analyzes and creates short pieces of speculative fiction that imagine new political configurations capable of giving rise to different forms of science and technology than those currently on offer. Class collates these into an anthology, and culminate the course with a public reading of our work.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190P - Trans of Color Performance and Media (5)

Trans of color poetics is a decolonial method of study and creation that decenters Western conceptions of gender, race, and identity. Students study trans of color performance and media art, and create performance art in response. Trans of

color poetics is an emerging field that is in dialog with queer of color theory and women of color feminism. Students also read trans of color theory and learn about these genealogies, and read performance studies and watch performance artworks to understand the genres of performance and media art as artistic movements where artists make art with bodies in time and space. Assignments include performances on video and photo, as well as writing assignments.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190S - From Slavery to Precarity: Race, Logistics and Globalization (5)

Over the past half-century, there has been a profound transformation in the way that goods are produced and moved about the world resulting in what has been referred to as the "logistics revolution". Course examines the ways in which this "revolution" in mass circulation of goods necessitates a radical thinking of race and racial politics in the context of contemporary capitalist globalization.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190T - The War on Terror: Imperialism Past and Present (5)

Senior seminar focusing on the theoretical underpinnings of U.S. imperialism from a global perspective, from the annexation of the Philippines in 1898 to the current War on Terror. Drawing on the history of U.S. settler-colonialism and liberal empire as racial projects, the course investigates contemporary forms of racialization surrounding the Muslim as figure for foreign enemy. Utilizing a diverse range of media, course considers various theoretical texts in critical race and ethnic studies, visual studies, gender and queer studies, history, and literature.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190X - Racial Capitalism (5)

Overview of the history and conceptualization of racial capitalism. Students study recent works in critical race and ethnic studies that analyze capitalism as a specifically racial phenomenon, and evaluate their contribution in a historical lens.

CRES 190Y - Solidarity (5)

Considers different moments in movement work—for example, solidarity with Palestine, #NODAPL, Mauna Kea, Black freedom struggles, ACT UP, trans liberation, and beyond—and explores the failures and liberatory potential of solidarity. Students read theoretical meditations on solidarity, thinking through what it means to study solidarity, and also consider how solidarity can require risk, danger, and loss. Most importantly, course studies what it means to craft horizontal networks of care in the face of the ceaseless demands to (re)produce hierarchical ones.

Prerequisite: Prerequisite(s): CRES 10, CRES 100, and CRES 101; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar by an upper-division student under faculty supervision. (See CRES 42.)

CRES 194 - Group Tutorial (5)

Group tutorial, led by a faculty member, that focuses on various problems within critical race and ethnic studies. Topics to be chosen by the instructor and undergraduate student participants. Enrollment restricted to critical race and ethnic studies majors.

CRES 199 - Tutorial (5)

Students submit a petition to the sponsoring agency.

CRES 199F - Tutorial (2)

Individual study in areas approved by sponsoring instructors. May not be counted toward upper-division major requirements. Student submits petition to sponsoring agency. Enrollment is restricted to critical race and ethnic studies majors.

Graduate

CRES 124 - Demilitarizing the University (5)

With a principal focus on the Cold War and post-9/11 U.S. research university as the object of our collective study, studentrs inquire into its lethal centrality to the military/security-industrial complex, from the development of the atomic bomb to the present day. Course also examines insurgent efforts, including mass student mobilizations, to demilitarize the university.

CRES 200 - Black Studies Methods (5)

Exploration of interdisciplinary research methodology—a broader set of scientific beliefs, approaches, inquiries, theories, and analytics—relevant to the study of Black communities. Students read, explore, and engage in particular methods—approaches to data collection and analyses—emphasizing various forms of ethnographic research. Course also examines other approaches to the study of Blackness, such as historical/archival, cultural studies and discursive analyses, and mixed methods.

Prerequisite: Enrollment is restricted to graduate students.

CRES 201 - Exile & Diaspora (5)

Explores "subaltern" narratives of diaspora exile in order to interrogate the condition of exile and its interwoven, often contradictory relations to many diasporic formations that endure in the 20th and 21st centuries. Students explore the various origins of diaspora and forms of exile emergent from chattel slavery, colonialism, war, racism, xenophobia, political dissidence, and dispossession, informing an understanding of these broader global machinations, and the experiences of those exiled and in diaspora themselves.

Prerequisite: Enrollment is restricted to graduate students.

CRES 202 - Ecopoetics and Ecoaesthetics (5)

Considers theories of race, place, gender, and climate through the overlapping burgeoning fields of ecopoetics and ecoaesthetics. Reflects on how the environment, climate crises, and various ecologies inform contemporary experimental poetry, film, music, dance, visual art, performance, and community activism of the 20th and 21st centuries.

Prerequisite: Enrollment is restricted to graduate students.

CRES 203 - Black Studies Theories

Exploration of interdisciplinary research and theoretical frameworks relevant to the study of the global black communities. Examines multiple theoretical approaches to the study of Blackness, drawing from a wide array of ethnographic, historical/archival, cultural studies and discursive analyses. Designed to help students develop a research tool kit, one that is rigorous, flexible, practical, ethical, grounded, and self-reflexive.

CRES 204 - Decolonial Futures (5)

Critical examination of anti-colonial social movements, Indigenous thought and praxis, and the possibilities and limits of the concept of decolonization.

CRES 205 - Critical Indigenous Studies (5)

Examines a variety of theories and methods relevant to Indigenous studies through a sustained critical engagement with key concepts and salient themes and by tending to questions of power and resistance in the context of anti-colonial struggle and Indigenous resilience as exercised among communities across Turtle Island and Oceania, but also beyond.

CRES 206 - Studying with Ancestors (5)

This seminar is an experiment in reclaiming a small patch of the university as a space for studying with ancestors. Reflects on how practices of ancestral relation have informed anti-colonial rebellions and subsequent struggles against racial capitalism. Also investigates how European colonial modernity reproduces itself through the brutal regulation of ancestral knowledge. A transnational archive of art, seed, film, and social theory guides students in thinking collectively about their own practices of study—and how they might channel or divert the currents of the past.

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students.

CRES 217 - Indigenous Politics (5)

Examines key questions in Indigenous studies through a variety of methods, theories, histories, and issues regarding Indigenous peoples and a critical study of power in the context of anti-colonial struggle across Turtle Island and Oceania, but also beyond.

CRES 222 - Experimental Language Poetry (5)

In-depth study of 20th- and 21st-century poetry emerging in and expanding from experimental movements of the 1960s-1970s and onward. Focuses on works by clusters of poets (i.e. press mates, regional, literary movements), on a particular theme (i.e. ecological, racial, sexual), using a particular poetic practice (i.e. ritual, transmission, divination), or a combination of these areas. The course involves reading poetry, talking about poetry, writing poetry, and discussing your own original poetry with peers in generative writing workshops.

Prerequisite: Enrollment is restricted to graduate students.

CRES 227 - From Oceania to Native California: Indigenous Environmentalisms (5)

Examines Indigenous environmentalist struggles and contemporary movements to protect land and water here in California and in Oceania. We look at three Indigenous-women-led movements to protect land and water: Run4Salmon, Sogorea Te Land Trust, and Protect Mauna Kea.

Prerequisite: Enrollment is restricted to graduate students.

CRES 261 - The Racial and Gendered Economies of Housing (5)

Explores the political and libidinal economic dimensions of the housing market and their relation as analytics to explain the development of the housing market over the 20th and 21st centuries. Explores the interdependence of political and libidinal factors in influencing the operation and management of housing markets from public and private entities. Course pays special attention to the role of race (in addition to other determinants of difference: gender, class, etc.) in structuring housing’s libidinal and political economies. Students cannot receive credit for this course and CRES 161.

Prerequisite: Enrollment is restricted to graduate students.

CRES 297A - Independent Study (5)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

CRSN - CARSON COLLEGE

Lower-Division

CRSN 1 - Academic Literacy and Ethos: Environment and

Society (5)

Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Engages students in Rachel Carson's intellectual tradition of investigating relationships between environment and society.

Prerequisite: Enrollment is restricted to college members.

CRSN 1A - Introduction to University Life and Learning (1)

Orientation to and exploration of the nature of the liberal arts, and of learning at research universities. Topics include: academic planning for upper-division coursework; enrollment processes; and understanding pathways to degree completion; UCSC resources that support health and well-being strategies for academic success; the cultivation of just communities; the prevention of sexual harassment and violence; campus conduct policies; awareness of risks associated with drug and/or alcohol use; and an introduction to traditions of community-engaged learning, ground-breaking research, and interdisciplinary thinking that define a UC Santa Cruz degree. This course can be taken for Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to entering first-year Rachel Carson College students.

CRSN 10 - Academic Success (2)

An interactive course providing students with the opportunity to assess and revise methods of and purposes in studying. Critical, effective approaches to reading, writing, participating in lectures and sections, taking exams, balancing competing responsibilities, and utilizing campus resources are all explored. Enrollment by permission of college adviser.

CRSN 15 - Strategies to Jump Start Your STEM Learning (2)

Introduces tips and techniques to supplement and expand a student's existing repertoire of science/mathematics problem-solving skills for science, technology, engineering, and mathematics (STEM) classes. The material covered is intended to aid development as a confident learner and future expert in the student's major.

Prerequisite: Enrollment is restricted to first-year through third-year students. Others may enroll with instructor permission.

CRSN 15A - STEM Essentials (2)

Introduces tips and techniques to supplement and expand a student's existing repertoire of science/mathematics problem-solving skills for science, technology, engineering, and mathematics (STEM) classes. The material covered is intended to aid development as a confident learner and future expert in the student's major.

CRSN 20C - The Water Environment: Literature of the Sea (2)

Students consider the representation of the sea in selected texts, noting how it becomes the focal point for the fears, hopes, and prejudices of Western civilization. Students write critical papers and their own narratives.

Prerequisite: Enrollment restricted to first-year and sophomore college members.

CRSN 20D - College Students' Lives (2)

Students understand their peers and themselves better through an exploration of issues that affect the daily life of college students. Topics include campus/student cultures, the academic system, and other critical issues. Overview of campus resources also provided.

Prerequisite: Enrollment restricted to first-year and sophomore College members.

CRSN 20F - Justice on Earth (3)

Examines issues of oppression, privilege, and social justice within a global and environmental context through self-reflective and group work. May include an optional service-learning component requiring travel during spring break.

CRSN 20G - Peregrine Falcons Return (2)

A case study of the 1970s-1990s UC Santa Cruz effort to restore a nearly extinct peregrine falcon population including reviews of the Endangered Species Act, falcon physiology, and the innovative conservation biology techniques that led to success.

CRSN 28 - Peer Leadership in Higher Education (3)

Overview of theories of student development, critical student issues, and skills needed for appropriate peer leadership interventions. Utilizes a variety of learning modes including readings, discussions, case studies, lectures, and group projects. Interview only: approval of instructor; Resident Assistant (RA) pre-employment training course.

CRSN 55 - Rachel Carson College: Service Learning Practicum (2)

Introduces service-learning theory and practice for students engaging in service-learning work in the college, college-related projects, community service organizations, or public agencies.

Prerequisite: Enrollment restricted to college members until after priority enrollment.

CRSN 56 - Media Internships for Sustainability (2)

Students develop and work on media projects related to the college theme of Environment and Society in film, on television, in print, and on the Internet. Students work in groups with specific instructors and project leaders. Enrollment by application and instructor consent.

CRSN 61 - Education for Sustainable Living Program (2)

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow

engagement with aspects of ecological and social sustainability.

CRSN 81C - Designing a Sustainable Future (5)

Introduces key technological solutions to environmental problems; discusses their underlying principles; and examines their societal dimensions. Topics include: conventional and renewable energy; emerging technologies for transportation, energy efficiency clean water; planetary engineering; and lean manufacturing.

Prerequisite: Prerequisite(s): CRSN 80A or CRSN 80B. Enrollment restricted to first-year and sophomore college members.

CRSN 82 - Environment and Society in Film (2)

Students write about and discuss a variety of films and articles about environment and society. Topics may include water, food systems, wilderness, wildlife, pollution, global warming, nuclear energy, conservation, and environmental activism.

Prerequisite: Enrollment restricted to college members.

CRSN 90 - Cultivating Food Justice and Sustainability (1)

Learn sustainable, ecologically sound horticulture, permaculture, and small-scale organic agricultural practices through hands-on gardening experience. This outdoor interdisciplinary course operates within a food justice framework. (Formerly Rachel Carson College Garden Internship.)

Prerequisite: Enrollment restricted to college members. Other students by permission of the instructor.

CRSN 93 - Field Study (5)

CRSN 99F - Tutorial (2)

Individual study for lower-division students directed by a faculty member affiliated with the college. Students submit petition to sponsoring agency.

Upper-Division

CRSN 128 - Advanced Peer Leadership Practicum (3)

Advanced practicum for the application of skills and theoretical knowledge studied in course 28. Uses many learning modes including readings, discussions, case studies, lectures, and group projects. Prerequisite(s): CRSN 28. Enrollment by permission of instructor.

CRSN 151A - Sustainability Praxis in the Natural and Built Environment (5)

Introduces the concepts, methods, practices, and tools of the trade for conceptualizing and conducting research in sustainability praxis in the built and natural environment, and the quantitative and analytical tools required to conduct such analysis and research.

CRSN 151B - Innovation and Professionalization for Sustainability Designers, Engineers, and Entrepreneurs (5)

Teaches how to become innovators and entrepreneurs, develop projects and enterprises, and adopt professional practices. Focuses on sustainability for students in Sustainability Studies, especially in connection with students' research and interests.

CRSN 151C - Sustainability Laboratory Tools, Techniques, and Applications (3)

Introduces the concepts, skills, and strategies fundamental to the successful development of sustainability-related projects appropriate to the Sustainability Lab. Provides access to functional and living laboratory space, equipment, professional development, and technical training.

CRSN 151S - Sustainability Field Laboratory Tools, Techniques, and Applications (5)

Introduces the concepts, skills, and strategies fundamental to the successful development of sustainability-related projects in the field, for community and ecosystem development. Provides technical and professional training in quantitative and qualitative methods for data accumulation using laboratory and field equipment for resource assessment, data analysis, and efficiency in water and energy systems.

CRSN 152 - IDEASS Laboratory Practicum (3)

Laboratory designed to advance sustainability education with real-world impact. Enables students to develop as change agents and to make valued contributions to sustainable-design projects that advance new technologies or strategies and bring about societal and environmental change.

Prerequisite: Enrollment is restricted to sophomores, juniors, seniors and graduate students.

CRSN 155 - Rachel Carson College Sustainability Internship (2)

For students undertaking sustainability-oriented service-learning work in the college (college-related projects, community service organizations, or public agencies). Students are supervised by the instructor and project supervisor, and determine the content of their internship with the instructor and supervisor.

Prerequisite: Enrollment restricted to college members or by permission of instructor.

CRSN 155S - Innovation & Sustainability for Global Impact Practicum (3)

Centered around an internship, students learn how to use design thinking and lean innovation tools to research global sustainability problems, design innovative solutions, prototype and test them, and launch them in the real world. These tools will help students initiate and develop sustainability innovation projects in companies, non-profit organizations, startups, government, and more, with the intention to make a positive impact on people and the environment. This course fulfills a requirement for the

sustainability minor, and is also open to any students from other minors and majors.

CRSN 160 - Developing Leadership to Facilitate Environmental Education (5)

Prepares students to facilitate working groups for Sustainable Living (courses 61/161) during the spring quarter. The skills acquired during this course include: facilitation skills; problem-solving; syllabus planning; curriculum building; experiential learning techniques; leadership skills; cultural competence; and non-violent communication training. Enrollment by interview only. Enrollment restricted to sophomores, juniors, and seniors.

CRSN 161 - Education for Sustainable Living Program (5)

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow engagement with aspects of ecological and social sustainability.

CRSN 162 - Sustainability Internship Practicum (5)

Introduces students to sustainable practices and state, local, and UC-wide policies through projects. Matches students with UCSC staff partners to work collaboratively on projects that integrate sustainability into aspects of campus operations. Supports students to develop the competencies necessary to become effective environmental professionals through learning models including hands-on work experience; professional skills training; guest lectures; reading, and discussion; and peer-to-peer advising. In addition to project deliverables, students complete and present a portfolio of their work upon completion of their project. Enrollment limited to Sustainability Office Interns and by instructor permission; an interview, resume, and cover letter are required.

CRSN 193 - Field Study (5)

CRSN 193F - Field Study (2)

Provides for individual programs of study sponsored by the college and performed off campus. Must be sponsored by college faculty. Approval of the student's adviser and the academic preceptor is needed to enroll. May be repeated three times for credit. Students submit petition to sponsoring agency.

CRSN 195 - Senior Thesis (5)

CRSN 198 - Independent Field Study (5)

CRSN 199 - Tutorial (5)

CRSN 199F - Tutorial (2)

Individual study for upper-division students directed by a faculty member affiliated with the college. Students submit petition to sponsoring agency.

CT - CREATIVE TECHNOLOGIES

Lower-Division

CT 1 - Creative Interventions: A Colloquium in Contemporary Media (2)

Online community colloquium on topics in contemporary creativity and creative practices. How does creative work address its most challenging problems, both in the arts and in broader social and professional contexts? How does creative labor intersect with other forms of labor to address power and inequity in society? Guest lecturers address the critical contexts—including racism, ableism, patriarchy, and other structures of power—for cultural work, and how those contexts, which are inseparable from the discipline of art-making and curation in 21st-century technological contexts, can be transformed. (Formerly CT 1B, Imagination and Intervention: a Creative Technologies Colloquium.)

Prerequisite: Enrollment is restricted to junior and senior creative technologies majors.

CT 10 - Understanding Digital Design (5)

Introduction to digital design practices. How do contemporary design technologies and applications shape creative practice and expressive work? Students explore digital design tools and working methods, across a range of formats and mediums, through a project-centered framework. Technologies and projects are presented in conversation with visual design fundamentals, and a wide variety of historical and contemporary art and design works. Digital technologies for publishing and exhibiting work online are also introduced.

Prerequisite: Enrollment is restricted to junior and senior creative technologies majors.

CT 11 - Digital Media Perspectives (5)

The proliferation of digital media since the early 2000s has shaped the way that we engage with every aspect of society. New social, political, economic, and creative forms have emerged, and so have our ways of relating to technology and each other. This course surveys a variety of digital media works, learning to analyze the expressive potential of a wide range of creative technologies. By the end of this course, students will have gained a deep understanding of the digital media landscape and its capacities (and limitations) toward creativity and social impact. (Formerly Issues in Digital Expression.)

Prerequisite: Enrollment is restricted to junior and senior creative technologies majors.

CT 20 - Introduction to Creative Coding (5)

Introduction to basic programming skills, including computer language tools and visual-interface programming tools for creative expression. Introduction to web authoring, image creation and editing, sound editing, and user experience design fundamentals, through skills acquisition-focused approach to individual and/or collaborative creative project(s). The final project is a work of playable media art/design,

documentary media, interactive journalism/pedagogy/curation, or multi-media art/performance. Languages and applications will vary by instructor.

Prerequisite: Prerequisite(s): CT 10. Enrollment is restricted to junior and senior creative technologies majors.

Upper-Division

CT 100 - Digital Platforms: Observations and Practices (5)

Explore media technologies by directly engaging digital platforms, transmission, and storage, as direct rather than indirect practices. Topics covered, through lenses of both theory and practice, include global circulation of media—emphasizing the contemporary digital image, relations between sound and mobile-technology media and the environment, and the technical infrastructure of digital interfaces and data visualization. Critiquing data collection, representation, and curation, student projects build a vocabulary for critical engagement with cultural production and conditions.

Prerequisite: Prerequisites: CT 10, 11, and 20. Enrollment is restricted to junior and senior creative technologies majors. Crosslisted as: Enrollment is restricted to proposed and declared art majors.

CT 101 - Persuasion and Resistance: Power in Contemporary Digital Media (5)

The study of power in contemporary media environments. How do audience, genre, medium, and other contexts impact our reception of a message? Explores contemporary theory and practice of media, applied to commercial and institutional promotion, advertising, and activism. Enables critical views of media in social, cultural, and political contexts. Projects combine scholarship and creative work to invite students' imagination of a media world in which learning, dialogue, contemplation, fun, and play can help enable flourishing and just communities.

Prerequisite: Prerequisite(s): CT 11, CT 20, and CT 100; and satisfaction of the Entry Level Writing and Composition requirements, Enrollment is restricted to junior and senior creative technologies majors.

CT 110 - Sensors, Signals, and Interaction (5)

Introduction to computing for physical and sensory interaction, including machine-based sensors for audio, vision, and motion, and their uses in designed participatory experiences. How do sense-like functions in hardware and software compare and relate to the physiology of sensation and perception on which they are modeled? What are the implications of sensory interaction, ableism, disability, and accessibility? Student projects explore collaborative approaches to the production of interactive digital art and design.

CT 120 - Intermediate Creative Coding (5)

Project-driven practicum in arts and design applications of computer languages. Students apply new approaches to ongoing individual and collaborative projects. Students learn to code "from scratch," rather than through the modification of prototype examples. Explore how programming languages function not only as tools but as institutional frameworks, sometimes invisibly shaping social norms and contemporary art and design practices; learn conscientious uses of code that can contribute to accessible technology and the empowerment of audiences, users, and media consumers.

CT 125 - Collaborative Production Practicum (5)

Project-driven practicum in technology-engaged creative collaboration in a range of hardware, software, and media contexts. Students develop a project while reimagining and questioning assumed relationships between technology and application. Course materials traverse creative collaboration comprehensively: from envisioning a project scope, to grant-writing and other fundraising. Students may use their final project in this course as a basis for their “capstone” project in the Senior Studio Production course.

CT 161 - Narration and Participation: Modes of Representation in Media (5)

Story-building, participatory creativity, and performance in a wide range of time-based arts and design. Models for storytelling are drawn from film, television, music, theater, gaming, and other media, including collective improvisatory practices, mixed transmission environments from game-based narration to hip-hop. Special emphasis is placed on activist, experimental, and counter-hegemonic narration, Black, Indigenous, feminist, and queer contributions to contemporary arts, design, and performance practices.

CT 163 - Queer Art (5)

Explores the state’s vital queer art communities as a cultural phenomena, primarily through one-on-one interviews with contemporary queer artists in California. In the face of rising homophobia and transphobia in many parts of the country, this course centers and makes visible the work of BIPOC LGBTQIE+ artists, including those with disabilities, and many others. Course develops literacy and comprehension of queer artists and their artworks. Through a combination of lectures, visual presentations, films, readings, short quizzes and discussion boards, students gain the skills and knowledge to become conversant in queer art. For their final project, students conduct their own interview with a queer artist of their choosing, collectively developing their own queer art archive.

CT 195 - Creative Technologies Senior Studio (5)

Students culminate the creative technologies degree by assembling artist/designer statements, curating their portfolio, learning a range of professional practices in the presentation of a body of work. Prepares graduating seniors to share creative findings, voice, and vision, commencing public life as artists, designers, and curators who take leadership in the

complex communities and information landscapes of the 21st-century.

CRWN - CROWN COLLEGE

Lower-Division

CRWN 1 - Academic Literacy and Ethos: Ethical and Societal Implications of Emerging Technologies (5)
