

1ST ANNUAL 7TH GRADE MODEL UN

ENSURE HEALTHY LIVES AND PROMOTE
WELL-BEING FOR ALL AT ALL AGES

TUBERCULOSIS DEATHS
RISE FOR THE FIRST TIME SINCE 2005

Name:

Country:

Date:

You are all on a team of scientists hired by the UN to research the effect of Tuberculosis (TB) in different countries throughout the world, as well as research how antibiotics effect the infection, think organism-environment relationship.

As a group pick a country to report on at the conference on Friday (Tell Ms. Lemay which country you want when you know/no overlaps :)). Use a note sheet to help guide you in creating your poster.

Guided Research Questions:

What is the current rate of infection of TB in your country?

What steps is your country taking to combat TB? (Research, Resources available, Hospital space etc.)

If there is research being done, who is doing it? If there is no research being done what are constraints your country has in regards to being able to conduct research? If there is research being done what are constraints to the research? (List at least 2 constraints)

What makes TB successful in infecting so many people world wide and in your country? (Define antibiotic resistance in your answer)

Is the presence of antibiotics creating a positive, neutral, or negative environment for the bacteria?

Why did you choose your country?

Where is your country?

Any additional fun facts you want to tell me about your country:
